KELLY, *Presiding Examiner*: The parties named in the above caption have all filed applications for certificates of public convenience and necessity authorizing them to make sales of natural gas for resale in interstate commerce to United Gas Pipe Line Company (United) from production in North Louisiana. United owns and operates a pipeline for the transportation and sale of natural gas for resale in interstate commerce. Each Applicant has obtained from the Commission temporary authorization to make the sale covered by his application and each has delivered gas into the pipeline of United pursuant thereto.

Each Applicant except Pan American Petroleum Corporation (Pan American) seeks a permanent certificate authorizing his sale to United. Counsel for Pan American announced at the opening of the hearing that his company had delivered natural gas pursuant to the temporary authorization given by the Commission but that the gas contracted to be sold to United had become "depleted"; and that, therefore, Pan American would not offer testimony but would rely upon that presented by the other Applicants. There was no further participation in the hearing by Pan American and it filed no brief. United, the purchaser, has not challenged the statements made by counsel for Pan American, nor has the Commission staff nor any intervener. In view of the information given to the record by counsel for Pan American, no permanent certificate could issue to it; but the temporary authorization issued to Pan American by the Commission in Docket No. G–17028, which is still outstanding and in effect, should be properly terminated by order of the Commission. Section 7(b) of the Natural Gas Act (Act) requires that a natural gas company obtain the permission and approval of the Commission before abandoning any sale being made pursuant to temporary authorization from the Commission. Pan American has not sought such permission and approval. In the circumstances, no action is here taken upon Pan American's application, but it is referred to the Staff of the Commission for such action as it may deem advisable in view of the outstanding temporary authorization issued, as aforesaid, to Pan American. When the Applicants are hereinafter referred to collectively, the reference will not include Pan American.

Each Applicant has filed with the Commission a rate schedule covering the sale of natural gas here involved. Each such schedule calls for the payment of the initial base price of 18.5 cents per Mcf, provided by the contract with United, with the exception of those filed pursuant to temporary authorizations from the Commission which imposed a condition lowering the contract base price to 17.0 cents per Mcf. Appendix A hereto is a list of all Applicants and dockets in these consolidated proceedings, with the dates of the respective contracts with United and of the temporary authorizations from the Commission, and with the base price now being collected pursuant to the terms of such authorizations. In addition to the base price per Mcf, United is required to make reimbursement of a severance tax of 1.75 cents per Mcf to the seller of the natural gas. Thus, United is required by the gas purchase contracts here involved to pay 20.25 cents per Mcf.

736–330—64——38

Eight of the sales here involved are of gas produced in the Ada Area of Bienville Parish and the sellers and docket numbers are as follows:

The Ohio Oil Company, *et al.* (Ohio)	G–15,385
Southwest Natural Production Company (Southwest)	G–15,460
James R. Nowery & B. M. Nowery, Jr. (Nowerys)	G–16,190
L. L. Robinson, *et al.* (Robinson)	G–16,457
Hunt Oil Company (Hunt Company)	G–16,737
Pan American Petroleum Corporation (Pan American)	G–17,028
Monsanto Chemical Company (Monsanto)	G–17,519
The Atlantic Refining Company (Atlantic)	G–18,572

The Applicants, Norman V. Kinsey, *et al.*, (Kinsey) Docket No. G–16278, and Hassie Hunt Trust (Hunt Trust), Docket No. G–16763, have their production in the Bryceland Area of the Bear Creek-Sailes Field in Bienville Parish. Applicant Jack W. Grigsby, Operator, *et al.* (Grigsby), Docket No. G–19705, produces gas from the Bear Creek Field of Bienville Parish.

The Applicants, Southwest Natural Production Company (Southwest), Docket No. G–19112, and T. L. James & Company, Inc. (James), Docket No. G–19408, have their production in the Calhoun Field of Ouachita Parish. Applicant Robert F. Roberts (Roberts), Docket No. G–19810, produces gas in the Simsboro Area in Lincoln Parish.

The Commission permitted intervention by United, Southern Natural Gas Company (Southern), The Philadelphia Electric Co. (Philadelphia), and the Arkansas Louisiana Gas Company (Arkansas). The first three named interveners actively participated in the hearing and have filed briefs. After being granted intervention, Arkansas filed a formal pleading by which it gave notice of the withdrawal of its petition to intervene. United supported all applications for certificates and it has urged by brief that they all be granted without condition. Philadelphia opposes all applications and urges the attaching of price conditions if certificates are issued. Southern opposes only the application of Jack W. Grigsby, Operator, *et. al.* (Grigsby), Docket No. G–19705 and urges that if a certificate is granted to this Applicant, a condition should attach to it requiring a considerably lower initial price.

All of the dockets shown in the above caption were consolidated by notice of the Secretary of the Commission of January 21, 1960, after there had been issued to all Applicants temporary authorizations to make the sales called for in their contracts with United, and a hearing upon the applications was set by this notice for April 11, 1960. Upon requests made by certain Applicants, there were two postponements of the hearing, which was finally begun on September 6, 1960, and concluded on November 17, 1960, after five days of hearing. Testimony and exhibits in support of the applications were received from the Applicants and from United. The Staff of the Commission presented evidence in support of its position that the certificates should be conditioned so as to lower the initial prices. Southern presented testimony in support of its position stated above in regard to the application of Grigsby in Docket No. G–19705. Philadelphia offered the testimony of an expert witness, together with an exhibit, in opposition to the applications, but the evidence was rejected by the Presiding Examiner because it was objectionable in form.

Initial briefs were received from the Applicants and United in support of the applications. Opposition briefs were received from the Staff, Philadelphia and Southern. Final reply briefs were received from the Applicants and United on April 17, 1961. A joint initial brief (Joint Brief) was filed in behalf of all Applicants except Kinsey, Monsanto and Atlantic which filed separate initial briefs.

Kinsey and Atlantic also filed separate reply briefs; but Monsanto joined in the Joint Reply Brief filed by all other Applicants. Grisby joined in both joint briefs, and also filed a separate reply to the brief filed by Southern.

Upon the basis of the record, it is found that the natural gas proposed to be sold by the Applicants is now being sold and delivered to United for transportation and resale in interstate commerce. The Commission has issued to United budget-type certificates, under which it has constructed and is operating the necessary facilities to receive into its pipeline the gas being sold to it by the Applicants, under their temporary authorizations from the Commission. It is found that the natural gas here involved is needed by United to meet its present and future consumer demands, although such need was not urgent at the time United entered into the contracts with the Applicants here under consideration. There is but one real issue here, namely, whether the Applicants have sustained their burden of proof to show that the public convenience and necessity require that permanent certificates should be issued to the Applicants authorizing their proposed sales to United at the initial base price of 18.5 cents, plus present tax reimbursement of 1.75 cents, for a total initial price of 20.25 cents per Mcf.

It is specifically found that the Applicants are "able and willing properly" to supply, sell and deliver, natural gas to United pursuant to their respective contracts, and "to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder." It is also found that the proposed sales of natural gas by the Applicants to United, at some initial price probably not excessive, are and will be "required by the present or future public convenience and necessity." Therefore, it must be determined upon the basis of this record whether the Applicants have sustained their burden of proof and have established by substantial evidence that their initial price under their contracts of 20.25 cents, including severance tax reimbursement, is required by the public convenience and necessity to be authorized in these consolidated certificate proceedings. If they have failed to sustain this burden, the applications should either be denied or the issued certificates should be conditioned at a lower initial price.

The Issue and the Law

In making a determination of the aforesaid single issue, it is imperative that one look first for a fair measure by the public interest of an initial rate to be authorized in the certification by the Commission of a sale of natural gas in interstate commerce under Sections 7(c) and 7(e) of the Act. What formula is to be applied in determining the amount of the initial price that "is or will be required by the present or future public convenience and necessity," in the sense of the Act? The Courts have made it very plain that the conditioning of a certificate authorizing a sale, so as to make the initial lawful rate less than the contractual initial price, is lawful when done to protect the consuming public against what may be an excessive rate while the justness and reasonableness of such contract price is being determined in a different proceeding under Sections 4 and 5 of the Act.[1] It may be said, therefore, that the public convenience and necessity require that the protection of the consuming public should be such as to make reasonably certain that no excessive rate be imposed upon it during the period necessary for the conducting of a rate proceeding, wherein all relevant evidence may be considered in relation to standards and formulas by which a determination may be made of the justness and reasonableness of the contractual price.

---

[1] Atlantic Refining Co. v. F.P.C. *et al.*, 360 U.S. 378, 392 (Catco) Texaco, Inc., *et al.*, v. F.P.C., 290 F. 2d 149. (Texaco).

The Courts have said also that no meticulous application of rate-making standards and formulas need be made in a proceeding upon an application under Section 7 of the Act for a certificate authorizing a sale of natural gas.[2] In discussing the importance of a "most careful scrutiny and responsible reaction to initial price proposals of producers under § 7" by the Commission, the Supreme Court held in Catco that "a permanent certificate should not be issued" whenever the record in a certificate case "signals the existence of a situation" concerning an initial price proposal of a producer "that *probably* would not be in the public interest."[3] It may be logically inferred from this quoted language that the Commission may attach a rate condition to the certification of a sale of gas whenever the record in the proceeding discloses the mere probability of the excessiveness of a proposed rate. If no standards of rate making are to be applied in a certificate case, nothing more than the probability of unlawfulness, because of excessiveness, is possible of determination.

It is concluded, therefore, that whenever the situation reflected by the record of a certificate proceeding is such as to show the *probable* excessiveness of a producer's initial price proposal, it is the duty of the Commission to protect the consuming public either by denying the certificate applied for, or by conditioning it at a lower rate which is *probably* not excessive. This lower rate may be a judgment figure based upon the entire record. In this manner is accomplished the principal aim of the Act, namely, to protect the consuming public against exploitation; and the requirements of public convenience and necessity are met.

The independent producer who makes a contract for the sale of gas for resale in interstate commerce, has no vested right under the Act to collect his contractual initial price. He cannot legally begin deliveries under his contract until the Commission has temporarily authorized or certificated his sale either at the initial price provided in the contract or at a price at a lower level deemed necessary to protect the public interest. If the Commission so lowers his contractual initial price, he has the right to reject the permanent certificate tendered to him, unless he has begun delivery under his contract pursuant to temporary authorization from the Commission. Having the contractual right, as between himself and the buyer, to receive the contractual initial price, the producer may accept the Commission's certificate, by which the initial rate is lowered, file with the Commission his rate schedule calling for the lower rate, and then immediately file a proposed change in rate, under Section 4(d) of the Act calling for his contractual initial price.[4] As a regulated natural gas company he then has the right to obtain an adjudication by the Commission of the issue of the lawfulness of his proposed change in rate in the sense of Section 4(a).

Inasmuch as the independent producer has this right, under the Act, to a later determination of the issue of the lawfulness of his contractual initial price, it would appear to be quite futile to apply the complex standards, formulas, or criteria, used in measuring for lawfulness a rate for a sale by a producer, in a certificate proceeding under Sections 7(c) and 7(e). The problem of determining the lawfulness of an independent producer rate has been judicially said to be "a difficult one at best."[5] The finding of the Commission in such a certificate proceeding is only that the rate certificated is required by the public convenience and necessity; and if it be a lowered rate, its certification is in no sense an adjudication that the contractual initial price is unjust and unreasonable. Such

an adjudication is not necessary under the Act in order to lower the contractual price in a certificate proceeding. It must be remembered that there may be numerous factors, in addition to initial price, to be considered in making a determination, under Section 7 of the Act, of whether a sale of gas is required by the public convenience and necessity. If there is to be an early decision upon an application for certification of a sale of gas, it cannot be made into a rate proceeding as well as a certificate proceeding.

It is quite understandable why the independent producer seeks vigorously to have his sale certificated at the contractual initial price. If it be so certificated, he is given a decided advantage over the consuming public, in that his rate may not be attached except in a lengthy proceeding under Section 5(a) of the Act, as explained in Catco. During the pendency of such proceeding, he collects his contractual price without any possibility under the Act of the consuming public ever recovering any excessive part thereof. It is to protect against this that the Supreme Court has said that the Commission may lawfully lower a proposed initial price when certificating a jurisdictional sale whenever such price appears to be *probably* excessive. A reading of the cases in the appellate courts concerning the propriety of attaching rate conditions to certificates, leaves no doubt that the Commission is not required under the Act, to make a meticulous measuring of a proposed price in a certificate proceeding, and it need only consider the probability of its lawfulness.[6]

The independent producer has the right under the Act to enter into a contract for the sale of natural gas at an agreed price. However, such price and other provisions of the contract are subject to review by the Commission.[7] In making such a review the Commission must endeavor to balance producer and consumer interests. Such a balancing cannot be accomplished fairly and satisfactorily without making a determination of whether the contractual rate is just and reasonable in the sense of Section 4(a) of the Act. This section of the Act gives the only measure of lawfulness for a rate for a jurisdictional sale of gas. In exercising its authority to review a proposed initial price for a sale, it would appear indeed to be advisable for the Commission to bring about a determination of the lawfulness of such price as quickly as possible. Such determination cannot lawfully be made in a certificate case under Section 7 of the Act; and the sooner a rate proceeding under Sections 4 and 5 can be instituted the more quickly will such determination be made.

It will be entirely impossible for such a determination to be made at an early date after application is filed for a certificate authorizing a producer sale, if both the certificate proceeding and the rate proceeding are to be encumbered by the complexities encountered in measuring independent producer rates so as to attain a balancing of producer and consumer interests. One of the obvious and most important purposes of the Act is not to treat unfairly either the consuming public or the producer. The producer will always feel that he is entitled to the price for which he has bargained in the open market. But the Act says that all rates must be regulated as provided therein. If the Commission believes that there is probability of the proposed initial price being unjust and unreasonable, it has the authority and positive duty, in a certificate case, to lower the proposed initial price pending the institution and completion of a rate proceeding in which the contractual price may be properly measured and regulated so as to treat unfairly neither the consuming public nor the producer. If such rate proceeding is then had, the true measure of what the producer is entitled to as a lawful rate

[6] Catco and Texaco.

[7] United Gas Pipe Line Co. v. Mobile Gas Service Corporation and F.P.C., 350 U.S. 332.

may be arrived at by lawful rate-making criteria, which should truly balance his interests and those of the consuming public.

There are, and always will be, controversies between the producer and the consumer concerning the rates for the sale of natural gas in interstate commerce; and the deciding of such controversies is one of the functions of the Commission under the Act. Such decisions should be made with complete objectivity and with the dual aim of preventing the exploitation of the consumer and providing a fair return to the producer in the operation of his business. As pointed out hereinbefore, the consumer may be protected from exploitation by the imposition of a rate condition upon the certificate authorizing the producer to sell gas in interstate commerce, whenever there exists the probability of excessiveness of the producer's proposed initial price. There should likewise be a way of protecting the producer against loss in the event that his contractual initial price is found ultimately by the Commission in a rate proceeding to be just and reasonable after having been reduced by a conditioned certificate.

When a producer has on file with the Commission a lawful rate schedule, and then files a notice of an increased rate, which is made pursuant to the price provisions in his contract of sale, such proposed increased rate may not become effective for 30 days unless the Commission allows it to become effective sooner. In fact, the notice of the increased rate must be given at least 30 days prior to the proposed effective date thereof. During this period of 30 days the Commission may suspend the proposed increased rate for a period of not more than five months from the proposed effective date of such rate, after the expiration of which the increased rate may become effective, on motion of the producer, subject to the requirement that he make refund of any portion of such increased rate found not justified by decision of the Commission. The length of the period of the suspension of the increased rate, not to exceed five months, is a matter within the discretion of the Commission. The length of such suspension may be as little as one day. In the rate proceeding, the producer is not prevented from collecting his full contractual price, subject to refund as aforesaid, except during the 30 days required for the notice of change in his rate, and during the period of the suspension thereof. If his contractual price is ultimately found to be just and reasonable, he loses the difference between his existing filed rate and the proposed increased rate during both the period of notice and the period of suspension.

There is no way, under the Act, of avoiding such loss in said two periods when the producer seeks to increase a rate which is being collected under a rate schedule lawfully on file with the Commission. It is the apparent legislative intent that the natural gas company not be permitted to collect an increased rate during said two periods even under bond. However, it is within the statutory power of the Commission to make the period of suspension as short as it deems equitable in the circumstances presented by the record before it. Where the Commission attaches a rate condition to a certificate authorizing a sale of gas by a producer, it may well in proper circumstances recognize in its certificate order the right of the producer to file immediately, under Section 4(d), a schedule calling for an increase of his conditioned rate to the level of his contractual initial price. Of course, the 30-day notice of such change in rate must be given "to the Commission and to the public" as required by Section 4(d). The certificate may well also provide, in proper circumstances, that if the producer exercises such right and makes such filing under Section 4(d), the operation of his schedule for the increased rate will be suspended by the Commission, under Section 4(e), for a period of only one day.

If the producer does exercise such right, then, after the period of notice and the short period of suspension, he loses no part of his contractual price except such part as may be ultimately found not to be justified by the Commission decision in the rate proceeding. The consuming public is protected against exploitation, first, by the attachment of the rate condition to the certificate in the manner described above, and later, by the requirement that the producer furnish bond to refund any part of the contractual price found not to be justified; and the possibility of loss by the producer of any lawful portion of his contractual price is limited to that which may occur during the 31 days of the notice period and the short suspension period combined. By following such procedure, there will occur an earlier determination of that inevitable issue of whether the producer's contractual price is just and reasonable by rate-making standards and formulas and, if it is not, what is the lawful rate he is entitled to collect from the consuming public.

In the unanimous opinion of the Court of April 14, 1961, in the Texaco case,[8] which involved a rate conditioned certificate of the Commission, it was said:

> However, we think it appropriate to say that we find no authority for holding that a producer does not have the right immediately to file a proposed rate increase of 20 cents per Mcf after complying with the condition that it file a new schedule carrying an initial price of 17.7 cents in lieu of the 20 cent rate in the contract. (Slip Copy, p. 14)

This quotation is given in support of the position taken above that a rate proceeding, under Sections 4 and 5 of the Act, is inevitable any time that a contractual initial price is reduced by a rate condition attached to a certification of a jurisdictional sale of gas, if the seller pursues his right, as a regulated natural gas company, to have a determination made of whether his contractual price is a just and reasonable rate in the sense of Section 4(a) of the Act. If a rate case is inevitable, it is so utterly futile to waste time in a certificate case by receiving the type of financial evidence that is absolutely necessary as a basis for a determination of whether a contractual initial price is just and reasonable in such sense. And yet, what other than a just and reasonable rate is, in the ultimate, required by the public convenience and necessity? Therefore, it is found that in this, and in other similar certificate cases, where there remains for decision only the single issue discussed above, and where a price condition is indicated by the record, the public convenience and necessity require that an order be entered fixing the certificated rate sufficiently low to protect the consuming public against exploitation, and prescribing the procedures outlined above, for the protection of the rights and interests of the producer applicants. Such order should be supported by a finding that such procedures are required by the public convenience and necessity.

Keeping in mind the great number of cases pending, and to be pending, before the Commission in which certification of jurisdictional sales is sought, the public convenience and necessity indeed require that such procedure be adopted Where there is no doubt of the propriety of certificating a sale except in relation to initial price, it should be possible to dispose quickly of the certificate case and to enter upon a rate case in such manner as to protect both the producer and the consumer against any unnecessary loss. While any decision in a proceeding under Section 7 of the Act must be based entirely upon the requirements of the public convenience and necessity, it may indeed be decided in the certificate case that the public interest definitely requires the procedures herein prescribed

[8] Texaco.

as a means of shortening the administrative process—most frequently entirely too long—and at the same time preserving and protecting the rights of all.

The Applicants here are hereinafter given the opportunity to have a balancing of their interests with those of the consumer, in the manner above discussed. It is found upon the basis of the record that the Applicants have not sustained their burden of proof to show that the public convenience and necessity require that their proposed sales of natural gas should be certificated at the rate provided in their contracts of 20.25 cents per Mcf, including severance tax. The certification of the sales here involved is not denied but it is made with a rate condition attached. The amount of the lower rate here certificated is arrived at in the manner hereinafter shown, and no attempt is here made to measure such lower rate by the standards and formulas used in rate proceedings to measure the lawfulness of a rate in the sense of Section 4(a) of the Act. There is, in fact, in the record here no evidence by which such measure could be made.

It is deemed justified in these consolidated proceedings that the condition attached to the certificate here issued, requiring a rate lower that the contractual price, should include a recognition of the right of the Applicants to file for their contractual initial price under Section 4(d) immediately after the proper acceptance of, and compliance with, such certificate. It is justified also that there be attached to the acceptance by the Applicants of such certificate the condition that if and when such rate filing is made by the Applicants, the operation of the new rate schedule will be suspended by the Commision, under the provisions of Section 4(e), only for one day from its proposed effective date, after which the Applicants may move that the contractual initial price go into effect immediately upon the Applicants furnishing bond to refund any part thereof found not justified by the Commission decision following a hearing concerning the lawfulness of such rate.

The Evidence

The record evidence consists of testimony with exhibits, and of documents received by reference to them in the files of the Commission. Officers or representatives of 10 of the 12 Applicants who participated in the hearing, appeared as witnesses. A Vice-President of United testified in support of the applications. A Supervising General Engineer of the Commission gave testimony with an exhibit showing initial rates for sales of gas in North Louisiana which had been certificated or temporarily authorized by the Commission, for which the basic contracts were executed in 1957, 1958 and 1959. Southern, an intervener, presented testimony in opposition to but one application, namely, that of Jack W. Grigsby, Operator, et al., Docket No. G–19705. Southern's position is discussed separately hereinafter. The facts herein found are based upon this record evidence.

Before discussing the evidence in detail, as it relates to the single issue for decision, certain specific findings should be made of facts which appear to be uncontroverted. There is no affiliation whatever between United and any of the Applicants, and all negotiations for the contracts here involved are found to have been conducted at arm's lgneth. No prices being paid for gas by United will be "triggered" by the provisions of the contracts here, but this is not a finding that the contracts here do not affect the prices in subsequent contracts for the purchase of natural gas in North Louisiana, a matter hereinafter discussed.

United's brief speaks of its "main line high pressure 20" and 24" looped lines extending from the Carthage Field in East Texas to a point near Monroe, Louisiana," adjacent to which are located the five areas or fields producing the natural gas here involved. The gas in the Ada Area of Bienville Parish became available in 1958, and in "early April" of that year United began negotiations to obtain some of this "new gas" from The Ohio Oil Company (Ohio), one of the principal owners of natural gas in the Ada Area. United sought this gas to increase its reserves to which it was continually adding to meet its consumer demands. It is United's position that the Carthage Field has been declining in delivery capacity for some years, due to the large quantities of gas withdrawn therefrom, and the company needed sources of supply in new areas to help offset its withdrawals there. The practice of continually adding reserves in this manner is a part of the company policy of United. United is a large interstate pipeline company with a consumer demand in excess of 1.3 billion cubic feet of gas per annum. It is found specifically that United had no such urgent need for the natural gas here involved as would justify the payment by it of two cents more per Mcf than was being paid in North Louisiana in 1958 by any other interstate pipeline company, as hereinafter shown.

United's "Established" Price

The negotiations between United and Ohio resulted in the contract executed by them on June 10, 1958, by which the initial base price of 18.5 cents per Mcf was agreed upon. Thereafter, negotiations were had with other owners of gas, including certain Applicants here, whose production was in the Ada Area, and United made contracts with them also at 18.5 cents per Mcf. By the execution of these gas purchase contracts the price of 18.5 cents per Mcf became "established for gas to be purchased for the high pressure main line between Carthage (Field) and Monroe", according to the testimony of United's Vice President; and contracts were then made at this price in other areas of North Louisiana adjacent to said main line. United agreed in all of these contracts to pay the existing Louisiana severance tax which amounts to 1.75 cents per Mcf, making the total price to United of 20.25 cents per Mcf. The dates of execution of all of these contracts here involved are shown in Appendix A hereto. Deliveries were first made, under the contracts of earlier date, on January 29, 1959; and the dates of commencement of subsequent deliveries followed respectively the dates of the temporary authorizations shown in Appendix A.

Comparisons by Applicants

The Applicants presented no evidence concerning the prices which were being paid for natural gas in North Louisiana in "early April" 1958, when United began its first negotiations with Ohio which resulted in a gas purchase contract providing for 18.5 cents per Mcf. There is a controversy here as to whether this price is "in line" or "out of line" with other prices paid in North Louisiana. The Applicants introduced evidence only of certain selected prices contracted for in 1958 and 1959, for both jurisdictional and non-jurisdictional sales, with which, they claim, their price is "in line" and all of these are discussed hereinafter. The price which United "established" for gas to be received into its pipeline, and the selected prices aforesaid, are all higher than any prices that were being paid in North Louisiana in 1957 and early 1958, so far as is shown by this record. The fact that the price of 18.5 cents was agreed upon after bargaining by the parties at arm's-length in the open market, does not establish that this price is just and reasonable, or that it is required by the public convenience and necessity to be certificated as the initial rate. Quite to the contrary, these increased prices

indeed indicate or signal that they should be scrutinized with care to determine whether they are justified in any sense of the provisions of the Act.

The Staff's Exhibit

The Commission Staff has presented an exhibit which sets forth certain provisions, including the purchase price, of the contracts of the Applicants, and of other contracts for jurisdictional sales of natural gas in North Louisiana which were executed in 1957, 1958 or 1959. The sales provided for in these other contracts had all been either permanently certificated or temporarily authorized by the Commission before September 6, 1960, the date upon which the hearing began in these proceedings. Including the contracts of the Applicants here involved the Staff exhibit shows 77 sales so authorized. With the exception of the sales to United at its "established price" of 18.5 cents, there were only nine contracts listed in this exhibit for prices in excess of 16.5 cents per Mcf. Of these nine, eight provide for a price of 17 cents and one for 21.5 cents per Mcf. The price of 21.5 cents was for gas not planned to be delivered for some six or seven years after the date of the contract, October 10, 1958, and this is discussed separately hereinafter as a price with which the Applicants claim their price to be "in line". The eight contracts for a base price of 17 cents were all executed between June and October of 1959 and seven of them are for gas produced in the Calhoun Field in Ouachita Parish, in which United has contracted to pay 18.5 cents under three contracts which were executed in July and August, 1959. Two of said three contracts last mentioned are with Applicants here and are involved in these proceedings.

The Staff exhibit shows that 28 sales were authorized by the Commission in the period covered at a base price of 16.5 cents. Three of these sales contracts were executed in 1957, 11 in 1958 and 14 in 1959. In these three years there were six contracts executed for prices between 14 and 16 cents, and there were 18 contracts for less than 14 cents. The Staff exhibit does not include any contracts executed in the period which called for less than 12 cents per Mcf. The contract prices discussed above as being taken from the Staff exhibit are all base prices which are exclusive of the severance tax.

The evidence shows that in early 1958 the highest base price being paid in North Louisiana by an interstate pipeline company for natural gas was 16.5 cents per Mcf. In June of 1958 and the immediately following months, United "established" a price for its pipeline in this area 2 cents higher than such highest price. The Staff's exhibit shows that the next highest price being paid by an interstate pipeline company, as of September 6, 1960, was 17 cents, and no contract for this price was entered into prior to June 18, 1959. United entered into 16 contracts with producers in North Louisiana at the price of 18.5 cents, between June 10, 1958, and October 14, 1959. Each such contractual price is, of course, "in line" with the other 15; but each is as well "out of line" with every other price being paid by an interstate pipeline company in North Louisiana. The certification of United's "established" pipeline price as an initial rate certainly cannot be said to be required by the public convenience and necessity merely because United has executed contracts for this price with 16 sellers in North Louisiana, of whom all except two are Applicants here.

The Competition in North Louisiana

In his discussion of the negotiations between United and Ohio leading to their contract of June 10, 1958, United's Vice President made the statement that "United was aware of other offers for gas in this area, including not only offers being made by interstate pipeline companies, but offers being made by industrial consumers desiring to purchase gas in the North Louisiana area and having

it transported to their own markets." To this he later added that "United felt that the 18½ cent price which United made with Ohio at Ada was the lowest price at which United could buy this gas." The evidence of the Applicants establishes that there are six major interstate pipeline companies within a radius of about ten miles from the Ada area. The evidence establishes that at least five of these companies evinced an interest in purchasing the gas in this area. The record does not establish that the location of the natural gas reserves acquired by United was any more advantageous to it than to any other of these pipeline companies. However, there is no evidence in this record of any other pipeline company having made a specific offer of more than 16.5 cents for such gas prior to the date of United's contract with Ohio of June 10, 1958. There is testimony to the effect that United started negotiations with Ohio at a price of 17 cents. Furthermore, there was no other sale to an interstate pipeline company above 16.5 cents per Mcf in North Louisiana until June 18, 1959, when the first of several contracts were made at 17 cents.

From the evidence contained in the Staff exhibit, it may be most logically concluded that it "probably would not be in the public interest" to issue permanent certificates authorizing these sales to United at the initial base rate of 18.5 cents per Mcf. This price was 2 cents higher than any price being paid for present deliveries in North Louisiana by any interstate pipeline company at the time it was "established" by United in 1958. It remained 2 cents higher than any such price until June 18, 1959, when the first sale at 17 cents was made in North Louisiana to a pipeline company; and it then became higher by 1½ cents instead of 2 cents per Mcf. And it has so remained, at least until September 6, 1960, the date upon which the hearing began in these proceedings. It must be remembered also that 11 gas sales contracts were made to interstate pipeline companies in North Louisiana in 1958 at 16.5 cents per Mcf, and that 14 such were made in 1959. It is found, on the basis of the record now before the Commission, that any price for gas in a jurisdictional sale in North Louisiana above 16½ cents per Mcf was suspect in 1958 when temporary authorizations for sales at 18½ cents were first issued to some of the Applicants here. On the basis of all the evidence, such price is still suspect and definitely signals that it should not be permanently certificated as an initial rate.

It is true, no doubt, that the provisions in the 77 contracts reflected in the Staff exhibit vary to some extent. However, there is no showing made in this record that the contracts of the Applicants contained provisions so advantageous to United as to warrant its paying 2 cents more per Mcf than any offer made by any of the other six interstate pipeline companies, said by the Applicants to be within a radius of 10 miles of the Ada Field gas. By making the contracts to purchase this "new gas" which was adjacent to its pipeline, United acquired some considerable quantities of natural gas*; but the other six pipelines in the area did not see fit to offer more than 16.5 cents per Mcf for such quantities of gas at the time the price of 18.5 cents was established by United in 1958, so far as this record shows.

Contentions of Applicants

The briefs of the Applicants seek to justify the permanent certification of their sales to United at 18.5 cents per Mcf upon various grounds. Important among

*The estimates by United of the dedicated reserves were: Ada Area, 42 billion cubic feet; Bear Creek-Sailes Area, 5 billion; Bear Creek Area, 6 billion; Simsboro Area, 11 billion; and Calhoun Area, 10 billion. Counsel for Ohio said in an opening statement, at the beginning of the hearing, that the quantities of gas here involved "while in themselves perhaps are not great quantities, are significant for the North Louisiana market." Tr. 6

these is the contention of the Applicants that their said price is not "out of line." It has been pointed out above that the price of 18.5 cents "established" by United is definitely quite "out of line" with about 60 prices agreed upon in contracts executed in the calendar years of 1957, 1958 and 1959, for the sale of gas to interstate pipeline companies in North Louisiana. One brief of the Applicants asserts, concerning the price of 18.5 cents, that "Comparable jurisdictional gas is being sold under permanent certificate authorization at this price, nonjurisdictional gas is being sold in excess thereof." All of such sales cited by the Applicants have been given consideration and are hereinafter discussed.

United's Sixteen Contracts

It is shown hereinbefore that United has entered into 16 contracts to purchase gas in North Louisiana at its "established" price of 18.5 cents per Mcf. Fourteen of the dockets covering respectively the applications to the Commission for authority to make these sixteen sales were consolidated for hearing by the Commission order of January 21, 1960, discussed above. In one of the other two such dockets, G–19209, the Commission, on September 3, 1959, issued a temporary authorization to Union Producing Company (Union) to make the sales called for by its contract with United, at the price of 18.5 cents per Mcf. By letter of September 4, 1959, Union accepted said temporary authorization subject to the conditions therein stated. The gas so authorized to be sold by Union is produced in the Calhoun Field in Ouachita Parish. No further action has been taken in Docket No. G–19209. In the other of the two aforesaid dockets, not consolidated with these proceedings, the Commission, on July 8, 1959, issued to Gulf Oil Corporation (Gulf) a permanent certificate in Docket No. G–16745, authorizing the sale of gas under its contract with United at the initial rate of 18.5 cents per Mcf, exclusive of Louisiana tax.

There is no explanation in the record of why Docket No. G–19209, covering said sale by Union to United was not consolidated with the other 14 dockets here involved. The natural gas involved is produced in the Calhoun Field of Ouachita Parish, just as is the gas in Docket Nos. G–19112 and G–19408, which are consolidated in these proceedings. These two consolidated dockets cover contracts with United, both of which are dated July 10, 1959, and the Union contract with United was dated August 5, 1959. Temporary authorizations had issued in all three of these dockets well in advance of the Commission's consolidation order of January 21, 1960, two in September and one in October 1959. No conjecture is here made as to the reason for the omission of Docket No. G–19209 from the consolidation here; and the contract involved is discussed only because it is shown by the Staff's exhibit to be one of the 16 contracts made by United with producers in North Louisiana. The temporary authorization in this docket of the price of 18.5 cents per Mcf, left without further action upon it since it issued on September 3, 1959, has no probative force with relation to the single issue here presented.

The Certification of the Gulf Sale

Each brief filed by the Applicants stresses the fact that a permanent certificate was issued to Gulf by the Commission on July 8, 1959, authorizing the sale of gas to United at 18.5 cents per Mcf. It is argued by them that the Gulf sale is of gas produced from the Ada field of Bienville Parish, just as are 8 of the 14 sales here involved, and that their contractual initial price being the same, should be permanently certificated by the Commission, as was Gulf's rate. There is evidence to the effect that Gulf would not begin the delivery of gas to United until its sale was permanently certificated by the Commission; and it was so certificated more than 6 months before the consolidation order of January

21, 1960, covering these proceedings. The Gulf rate is, of course, one of the prices selected by the Applicants to show their rate not to be "out of line."

Gulf is a large integrated oil company which makes sales of natural gas in interstate commerce under numerous contracts. On February 12, 1959, the Commission issued an order which instituted a rate investigation against Gulf in Docket No. G–17813, and which consolidated with said docket 43 then pending rate cases of Gulf and Gulf (Operator). These consolidated proceedings may be identified by Docket No. G–9520, et al. The consolidation was made upon Gulf's motion, in which it was stated "that the evidence it proposes to present at the hearing commencing February 17, 1959, is on a company-wide basis, and would be in support of proposed increases in all dockets, those proposed to be consolidated as well as those now consolidated." Gulf's sale to United is covered by its Rate Schedule No. 147 which is definitely under consideration in the Gulf rate proceeding.

In said order of consolidation it was found:

> (2) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that an investigation be instituted by the Commission, upon its own motion, into and concerning all rates, charges, or classifications demanded, observed, charged, or collected by Gulf Oil Corporation in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges, or classifications.

In the said order the Commission ordered:

> (A) An investigation of Gulf Oil Corporation is hereby instituted under the provisions of the Natural Gas Act, particularly Sections 5 and 15 thereof, for the purpose of enabling the Commission to determine whether, with respect to any transportation or sale of natural gas, subject to the jurisdiction of the Commission, made or proposed to be made by Gulf, any of the rates, charges, or classifications demanded, observed, charged or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications are unjust, unreasonable, unduly discriminatory, or preferential.
>
> (B) If the Commission, after a hearing has been had, shall find with respect to Gulf that any of its rates, charges, classifications, rules, regulations, practices, or contracts, subject to the jurisdiction of the Commission are unjust, unreasonable, unduly discriminatory, or preferential, the Commission will thereupon determine and fix by order or orders just and reasonable rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force.

The foregoing order of the Commission is all inclusive, insofar as are concerned Gulf's rates for sales of natural gas in interstate commerce, subject to the Commission's jurisdiction. All of Gulf's such rates are being tested in its consolidated rate proceeding. There exists the legal presumption that these rates are there being tested by proper rate-making criteria and standards under the Act. Like all of Gulf's rates, the rate provided in its Rate Schedule No. 147, covering the aforesaid sale to United, is a challenged rate; and being "in line" with any such rate is no justification for holding that a rate is required by the public convenience and necessity.[10] This is very much the case in the light of the evidence presented by the Staff.

---

[10] United Gas Improvement Co. v. F.P.C. (CA 9) 283 F. 2d 817; Public Service Commission of New York v. F.P.C. (CADC), 287 F. 2d 146; U.G.I. Co. v. F.P.C. (CA 5), 290 F. 2d 133.

Gulf was issued its aforesaid permanent certificate by order of the Commission of July 8, 1959, by which there were also issued 32 other certificates to various producers authorizing sales of natural gas in interstate commerce in Louisiana, Texas, Oklahoma, New Mexico, West Virginia and Pennsylvania. The Commission order was issued, according to statements therein, after a public hearing, held "pursuant to due notice", at which "no appearances other than staff counsel were entered upon the record and no evidence offered in opposition to the granting of the applications." The transcript of the hearing so held shows that no evidence was received in relation to Gulf's sale to United except "the application filed by Gulf Oil Corporation in Docket No. G–16745." There was no evidence in the record there which would provide any reasonable basis for a finding that Gulf's price of 18½ cents per Mcf, was, or was not, required by the public convenience and necessity. The proceeding was conducted in the manner of all ordinary uncontested cases before the Commission. Being "in line" with said Gulf rate gives no virtue to the price of 18.5 cents paid by United to the Applicants here. It cannot be said that there was given by the Commission in Docket No. G–16745, that "most careful scrutiny and responsible reaction to" Gulf's initial price proposal, which Catco said was required in such certificate proceedings.

Sales in South Louisiana

One brief of the Applicants states that "gas produced in Allen Parish, Louisiana, which, in all physical respects was comparable to the gas produced in Ada Field, is being sold at the initial base price of 18.5 cents per Mcf." To this is added, "These sales of gas in Allen Parish were negotiated in the same period as were sales of Ada Field gas, and all have been permanently certificated." An examination of the testimony cited at this point in the brief shows that there were four such sales in Allen Parish, each of which was "permanently and unconditionally certificated" by the Commission. Allen Parish is south of the "dividing line for the Northern and Southern Louisiana areas" fixed by the Commission on October 11, 1960, when it made public certain information concerning its General Policy Statement No. 61–1 of September 28, 1960; and sales from this area were not reflected in the Staff's exhibit which set forth the 77 sales in North Louisiana, hereinbefore discussed.

These four sales in Allen Parish were permanently certificated by the Commission at a base rate of 18.5 cents per Mcf. Each such sale was to United at United's "established" price. Each sale was certificated in an uncontested case, in which no real showing was made by record evidence that the certificate was, or was not, required by the public convenience and necessity. At the public hearing on the certificate application in each case, no appearances were made except by the Staff; and the only evidence received at each hearing in support of the application was the application itself. The proposed initial rates by the Applicants are "in line" with the Allen Parish rates in the same sense that they are "in line" with each other; and they were two cents higher than any other rate being paid by an interstate pipeline company in North Louisiana as heretofore shown. There is nothing about the permanent certification of the Allen Parish rates which gives weight to the contention of the Applicants that their proposed initial rates should be permanently certificated.

Sale to Texas Gas Transmission Company

The Applicants point to the sale by T. L. James and Co., Inc. (James), one of the Applicants here, to Texas Gas Transmission Company (Texas Gas) at an initial base price of 17 cents per Mcf, which has been permanently certificated by the Commission; and it is contended that the gas involved there was delivered at the tailgate of a processing plant in the Calhoun Field of

Ouachita Parish, and "it was determined by negotiations than an 18½-cent price from United would be necessary to meet the Texas Gas price of 17 cents." The sale by James to Texas Gas was permanently certificated in Docket No. G-19407 on July 14, 1960, in an order covering certificates issued in more than 100 dockets. There was no opposition to the issuance of the certificate in any one of this large number of dockets. No evidence was received in the uncontested hearing which had any probative force in relation to the issue of whether or not any of the numerous certificates were required by the public convenience and necessity. The contract between James and Texas Gas was not executed until July 22, 1959, about a year after United had "established" its price of 18.5 cents for gas purchased for its pipeline. The contract between James and United, at this established price was dated July 10, 1959. Attention is again called to the fact that there were 14 gas purchase contracts executed at 16.5 cents in North Louisiana in 1959. This permanently certificated rate of 17 cents per Mcf, in the sale by James to Texas Gas, certainly gives no validity to the contention of the Applicants that their rate of 18.5 cents is not "out of line."

The Sale by The California Company

The one other permanently certificated sale in North Louisiana selected as evidence by the Applicants was by The California Company (California) to Southern Natural Gas Company (Southern) by contract of October 10, 1958. The sale was of gas produced in the Lake St. John Field in Concordia and Tensas Parishes, which are on the Mississippi border, and the contract called for an initial contract base price of 21.5 cents per Mcf. The permanent certification of this sale was ordered on August 7, 1959, in Commission Opinion No. 325 in the proceeding entitled South Georgia Natural Gas Company, *et al.*, Docket Nos. G-9892 *et al.*, in which 12 dockets were consolidated for hearing. The California sale was covered by Docket No. G-16680. Concerning this sale the Commission had the following to say in its Opinion No. 325:

> As to the Lake St. John gas, the present authorization of this sale may be attended by unusual benefits. Southern does not plan on receiving deliveries of this gas until some six years hence, when the recycling operations are completed, although there is no question but that The California Company has firmly dedicated this gas to Southern. Under The California Company contract, the sale from both the Cranfield and the Lake St. John fields is a single sale and the price provisions of the contract apply to gas from either or both. However, if the Commission postpones issuance of a certificate for the Lake St. John field until deliveries from that field are about to commence, The California Company would have an immediate right to cancel the 1958 contract with respect to the Lake St. John field. Thus, certification of the Lake St. John sale now will determine at this time what will be the maximum price The California Company can charge for Lake St. John gas some six or seven years hence, a measure of consumer protection against the possibility of increased prices which is by no means insignificant.

There is no evidence in this record by which the sale by California to Southern can be held to be comparable to the sales here involved, which provide for prompt deliveries after Commission authorization and the construction of the necessary facilities to effect delivery. The situation in the California case in no way establishes that the sales here are not "out of line" with a great majority

of the prices contained in contracts executed for the sale of gas in North Louisiana during 1957, 1958, and 1959.

Nonjurisdictional Sales

The Joint Brief states that "numerous nonjurisdictional sales of significant quantities of gas are being made in the North Louisiana area", and cites pages of the transcript of the hearing at which appears testimony concerning such sales. Examination of this testimony shows that three sales of gas were made from production in Bossier and Webster Parishes, which are on the Arkansas border, to Reynolds Aluminum Company (Reynolds) for transportation and use in its plant in that State. The gas sold to Reynolds in Webster Parish was said to be only about 40 miles from the gas produced by the Applicants in the Ada Area of Bienville Parish. The prices under the three contracts with Reynolds ranged from about 18 cents to about 19.5 cents per Mcf at 15.025 psia, excluding tax allowance. These prices were claimed by one witness to be indicative of the "going price" in North Louisiana.

A price of 18.5 cents per Mcf, or 19.5 cents, cannot be classified as the "going price" when contracts for the sale of gas produced in the same general area are being regularly executed at 16.5 cents practically simultaneously. It has been pointed out hereinbefore that in 1958 there were 11 contracts executed in North Louisiana at 16.5 cents while United executed 10 at its "established" price of 18.5 cents. In 1959, while United was executing six contracts at 18.5 cents, there were 14 contracts executed in North Louisiana at 16.5 cents, and eight at 17 cents. The true "going price" was certainly no more than 16.5 cents per Mcf in North Louisiana in 1958, when United "established" its price of 18.5 cents, particularly when there was no evidence of any offer above 16.5 cents for the Applicants' gas by any other regulated pipeline company buying gas in the area. The "established" price of United no doubt was a factor in bringing about the price of 17 cents in the area for some of the sales executed in 1959. The Staff exhibit shows a good number of sales contracts executed in North Louisiana in 1957, 1958 and 1959, lower than 15 cents, some as low as 12 and 13 cents. In this period of time there were four contracts made for sales of gas at 12.5 cents per Mcf in Bossier Parish, where Reynolds contracted to pay 19.5 cents in 1958.

The Reynolds sales were all nonjurisdictional, in that the purchased gas, although transported across a State line, was not to be resold. Unregulated gas sales may not be held out as a measure for a proposed initial rate for a regulated sale. Of course, the contractual prices of unregulated sales may affect prices in the unregulated market place, but the market cannot lawfully ever be substituted for the regulation of rates under the Act. The sales to Reynolds may not be regarded as affecting the "line" beyond which no sale should be certificated. It has been held that "the only justification for giving the Commission the duty to regulate prices was the determination by Congress that the producers have a supply that is so restricted in relation to the demand that they have the economic power to bargain for prices that will be injurious to the public." [11]

Monsanto's Rates

Monsanto filed a separate initial brief, but joined in the Joint Reply Brief. Its initial brief referred to the Joint Brief with approval and then discussed its separate position. There appears in Monsanto's initial brief the following:

> The Commission's staff has conducted an investigation of Monsanto's costs as they related to all of Monsanto's rates and charges—*including the*

[11] United Gas Improvement Co. v. F.P.C. (CA 5), 290 F. 2d 133, 135.

instant rate to United. On the basis of this investigation, the Commission's staff concluded that Monsanto's rates, on a cost of service basis, and upon the basis of the staff's own costing methods and procedures, are not unreasonable and unjust. As a result the staff moved to dismiss the Commission's Section 5(a) investigation into all of Monsanto's rates and to vacate numerous suspensions, under Section 4(e), of Monsanto's rate change proposals. *Monsanto Chemical Company*, 22 FPC 1077 (December 18, 1959).

The motion to terminate was granted by the Examiner on November 18, 1959. This decision was affirmed by the Commission on December 18, 1959 (22 FPC 1077, 1078).

It is then related that a number of rate increases, then being collected by Monsanto subject to refund, were consolidated for hearing. It is claimed that at such hearing "Its presentation *on a cost of service basis, prepared in accordance with Commission precedents*, conclusively demonstrated that Monsanto's rates were just and reasonable (22 FPC 1078, 1079)", and that after such presentation a recess was taken, during which the Commission instituted an investigation of all of Monsanto's rates under Section 5(a) of the Act. The brief states that the Staff of the Commission then "made a field examination of Monsanto's books and records and as a consequence thereof moved to terminate the proceedings (22 FPC 1078, 1079)." After some discussion of the Staff's motion sustained by the Presiding Examiner and the Commission, the Monsanto brief asserts:

> In short, the Commission has investigated the 18½ cents per Mcf and has found that the rate was not unjust and unreasonable. Therefore, no possible basis exists for denying Monsanto's application or conditioning approval thereof on any revision of the 18½ cents per Mcf rate.

The proceedings so referred to by Monsanto, which involved its suspended rate increases, were in Docket Nos. G–9681, *et al.* The rate investigation, instituted by the Commission under Section 5(a) of the Act, was in Docket No. G–18318, which was consolidated with Docket No. G–9681 and the other dockets by order of the Commission of April 21, 1959. It is deemed advisable to set forth herein the pertinent parts of the Staff's motion to terminate such consolidated proceedings and the Presiding Examiner's decision thereon. Under that part of the motion entitled "Basis for Motion for Termination" it is stated:

> The Commission's staff has conducted an investigation of Monsanto's operations and has reviewed its expenditures and revenues shown on the company's books and records of its Lion Oil Company Division (Lion Oil). This investigation has followed the usual staff methods of analysis. One predominant factor emerged which contributed to an unusually high cost pattern overall. The staff's study revealed that the exploration and development program of Lion Oil greatly increased after its merger into Monsanto on September 30, 1955. Whereas before the merger Lion Oil had a ratio of exploration and development expenditures to revenues of 27% for the years 1953–55, as a division of Monsanto the comparable ratio has risen to over 50% for the 1956–58 period.
>
> The staff has, therefore, evaluated and given extended study and consideration to Monsanto's (Lion Oil Division) exploration and development program. It has concluded that whereas the company has launched into a greatly expanded leasing, seismographic, and drilling program, its production and sale of natural gas have not thus far increased sufficiently to provide increased revenues adequate to offset these increased costs. Furthermore, other costs, as allocated by Monsanto and recorded on the company books, appear to be questionable. However, because of the relatively large explora-

tion and development costs, the application of staff methods to such other costs would not appreciably affect final unit costs of gas. Under staff's costing methods, including tentative adjustments, the costs applicable to the sales under 31 out of 34 filed rate schedules were found to be substantially greater than the revenues derived from sales under those rate schedules in the test year 1957. In those three instances in which revenues exceeded costs only nominal amounts were involved.

In the next few years Monsanto may achieve a significant increase in revenues and a much lower expenditure ratio as a result of its expanded exploration program. In any event, it is clear to the staff that Monsanto's pattern of exploration operations has undergone a major change and has not been established sufficiently long to provide a basis for determining its rates and charges in these consolidated proceedings.

Consequently, in view of its investigation of Monsanto's records and operations, the staff takes the position that it will not present any evidence or otherwise proceed in these matters. However, it does not approve or adopt either Monsanto's presentation in favor of proposed increased rates in these proceedings or the prices contained in its filed rate schedules.

The basis for his order terminating the consolidated proceedings is given by the Presiding Examiner in his decision of November 18, 1959, as follows:

The first two formal findings of fact proposed by Staff Counsel and Monsanto are identical. Moreover, each of these parties agreed (with only differences as to language to be adopted) that the proceedings should be terminated. Monsanto asks however that additional findings be made to the effect that Monsanto has sustained its burden of proof to show that its rates are just and reasonable, and that the Staff's investigation of all said Monsanto rates admittedly provides no basis for a finding that such rates are unjust and unreasonable. Since there have been no hearings held since the consolidation with and addition of the investigative proceedings under Section 5(a) of the Act, we find it impossible to agree to the proposed finding as to burden of proof. Monsanto's other proposed additional finding is almost wholly in accord with the language of Staff Counsel's motion. We have reconciled the slight difference by adding a limitation of its application to the present time, and (with that addition) have adopted the said finding, as our own. We have also adopted Monsanto's language as to the final finding as being slightly more specific in application than that proposed by Staff Counsel.

* * * * * * *

Since the order herein does, in fact, give approval to the present and past use by Monsanto of the rates and charges contained in the suspended rate increase filings, as well as to the continuation for the present, at least, and until further Commission action, of the other rates included within the scope of the investigation heretofore initiated in Docket No. G–18318, we cannot adopt the portion of Staff Counsel's proposed Paragraph (C), which would withhold approval of these matters. We do feel however, that to the extent that matters of company accounting procedures or methods are involved, we should withhold approval here, since this is more or less a matter of decision by default, and the Staff of the Commission appear to have based their proposal to terminate these proceedings upon studies carried on and determinations reached by the use of the Commission Staff's own accounting procedures and methods rather than upon the basis of the accounting methods or procedures heretofore utilized by Monsanto either in the keeping of its permanent accounts or in the preparation of the testimony and exhibits

presented in this case. Moreover, no evidence was presented in regard to Docket No. G–18318 (the 5(a) investigation) as such, or in regard to the matters involved in the three rate increase proceedings (Docket Nos. G–14858, G–16807 and G–16808), added and consolidated by Commission order of April 21, 1959 and there is no record upon which affirmative findings of fact can be made as to these four parts of the consolidated proceedings.

The Presiding Examiner ordered that the hearing be concluded and the record closed, and his decision was adopted by the Commission on December 18, 1959. He made a specific finding that the proposed rate increases of Monsanto "should be permitted to continue in effect without being subject to refund." This was followed by another specific finding and an order reading, respectively, as follows:

(3) Staff's investigation of all of Monsanto's rates admittedly provides no basis for a finding that the rates of Monsanto are presently unjust and unreasonable.

* * * * * * *

(E) This order is without prejudice to any findings or orders which have been or may be made by this Commission in any proceeding now pending or hereafter instituted by or against Monsanto.

The only possible way the uncertificated initial rate of 18.5 cents, covering the sale by Monsanto to United here involved, could have been considered at all in the proceedings in Docket Nos. G–9681, *et al.*, was under the broad investigation instituted there by the Commission order of April 21, 1959. In the quotations above from the record there, it is shown that no evidence whatever was adduced in connection with the general investigation of all of Monsanto's rates under Section 5(a) of the Act. The only evidence in the record there was presented by Monsanto in its case-in-chief in support of its rate increases under Section 4(e) of the Act and all of this was adduced prior to the Commission order of April 21, 1959.

Under the peculiar circumstances recited in the Staff Motion as the basis for its request that said consolidated rate proceedings be terminated, there is nothing which persuades that it is required by the public convenience and necessity that a permanent certificate should issue in these proceedings, authorizing the initial rate of 18.5 cents, to Monsanto or any other Applicant here. In the face of the fact that said rate of 18.5 cents was two cents higher than most of the jurisdictional rates effected by contracts executed in 1957, 1958, and 1959, which indicates the reasonable probability of its unlawfulness under Section 4(a) of the Act, it cannot be found that the action of the Commission at Docket No. G–9681 shows that said rate is probably just and reasonable.

No Triggering

In their argument that their rate of 18.5 cents should be permanently certificated, the Applicants point to the fact that no rates are triggered by the contracts with United here involved. So far as the evidence in this record shows, no rate for gas being delivered under contract will be increased under the terms thereof merely by the payment of United's "established price" of 18.5 cents. However, this is not to say that the permanent certification of the initial prices here proposed by the Applicants would have no inflationary effect upon the price of natural gas in North Louisiana. This proposed initial price of 18.5 cents per Mcf is two cents higher than most of the contracts in this area executed in the period covered by the Staff exhibit. If this price is permanently certificated for

all the Applicants here, it would indeed be difficult for any interstate pipeline to purchase gas in North Louisiana for any less.

Production in North Louisiana

The Applicants presented evidence concerning the difficulties encountered in the exploration for new reserves by any producer in North Louisiana. These difficulties appear from the testimony to be general in this area and it is asserted in the Joint Brief that these "tend to increase the risk element of North Louisiana drilling to such an extent that the possible gain from investment in this area is not sufficient to offset the risk." Evidence was presented to show that exploration in North Louisiana is more difficult than that in South Louisiana where prices are higher. A somewhat dire picture is painted of the lot of the producer in North Louisiana, who Applicants contend, is confronted with peculiarly difficult situations in his exploration activities. No need is seen to set forth herein an enumeration of such difficulties, claimed by the Applicants to exist, as they would in no way point out where the "line" is, beyond which no rate should be permanently certificated in North Louisiana. Furthermore, there is nothing in the record to show that the North Louisiana producer who was contracting in 1958 and 1959 to sell his gas at 16.5 cents and considerably less, had not been confronted with the same difficulties of exploration and production as had been the Applicants here.

The contention is made by the Applicants that, because of these production difficulties, a steady decline has occurred in North Louisiana exploration and production, and that "a greater incentive to encourage exploration" for "new gas reserves" is there required. "Greater" than what must this "incentive" be? The Applicants claim that increased exploration and production activity has resulted in North Louisiana since United "established" its rate of 18.5 cents in 1958. It is elementary in economics that the higher the price of a product, the greater will be the incentive to produce it. It is also elementary in this field of regulation that the greater the authorized initial rate for the sale of natural gas in interstate commerce, the greater may be the exploitation of the consuming public. This "incentive" of 18.5 cents for North Louisiana is found to be beyond the "line" to be held while it is being tested by rate-making standards under Sections 4 and 5 of the Act.

The Increment of Incentive

The Fifth Circuit Court of Appeals remanded to the Commission the El Paso rate case [12], and its opinion concluded with this statement:

> Upon such remand the Commission will receive such evidence as may be necessary to enable it to fix a just and reasonable rate to permit a fair return on the well-mouth investment and provide the incentive necessary to attract capital to the exploration and development activites of the company.

It is beyond question that a producer of oil and natural gas should be allowed this incentive to explore. It must be made commensurate with the risks he takes, while balancing his interests with those of the consumer. However, this incentive must be measured by some rate-making standards so that it will not exceed what is needed as such.[13] This is not accomplished by accepting the price arrived at by such negotiations in the open market where the producer, being human, will endeavor to obtain "all the traffic will bear" for his natural gas, the supply of which "is so restricted in relation to demand" [14] that he has

[14] See footnote 11.

an enormous advantage in the market. Furthermore, the Act calls for the regulation of rates by the Commission, which has authority to impose, under Section 5(a) of the Act, the "lowest reasonable rates"; and such regulation is not brought about by permitting the market to control prices.[15]

Hereinafter an order is made which will give the Applicants the opportunity to have their proposed initial rate of 18.5 cents measured in a way to balance their interests with those of the consuming public. As regulated natural gas companies, they have the right to have this measure of their contractual price made in a subsequent proceeding under Sections 4 and 5 of the Act. It is only in such a proceeding that a proper determination can be made of whether the rate of 18.5 cents is no more than is reasonably necessary to effect "a fair return on the well-mouth investment and provide the incentive necessary to attract capital to the exploration and development activities" of the Applicants. The primary aim here is to respect and carry out the mandate of Catco and "hold the line" while such determination is being made. The "line" would not be held if a rate is certificated here which is two cents higher than most of the rates contracted in 1958 and 1959 by other pipeline companies to be paid for natural gas produced in North Louisiana.

The Southern-Grigsby Controversy

Southern intervened in these proceedings to oppose only the application of Grigsby in Docket No. G–19705. Grigsby is the only Applicant here selling gas to United from what is known as the Bear Creek Field in Bienville Parish. Southern claims to own "a substantial portion of the reserves" in this field, by reason of gas purchases and its own production there. Southern contends that to certificate Grigsby's proposed initial rate of 18.5 cents, "would increase the prevailing market price in the field", and that this would in turn, "increase the amounts Southern must pay its royalty owners and would result in increased costs" to its consumers.

Southern argues that if the prevailing market price is increased in Bear Creek Field, it must pay these increased royalties to its royalty owners under Louisiana law; and it gives in its brief citations to Louisiana and Federal Court decisions claimed to support this argument. Southern has presented evidence to show the extent of its increased royalty payments if the market price should be so increased. Grigsby's reply brief challenges Southern's position. If the public convenience and necessity required the certification of rates higher than the prevailing market price, an incidental increase in royalty payments would just have to be paid.

Southern also contends that Grigsby's proposed initial rate is "out of line" with prices being currently paid for gas produced in the Bear Creek Field. An examination of the Staff's exhibit shows that this sale by Grigsby to United was the only jurisdictional sale from this field for which a contract was executed in the 3-year period from 1957 to 1959, inclusive. It is believed that it would be fairer to judge Grigsby's price in relation to the prices in North Louisiana as a whole rather than in relation to prices in a single field in that area. Bear Creek Field is in Bienville Parish as is the Ada Field, where 9 of the 16 sellers to United produce their gas. Southern presented evidence to show its going price and that of two other interstate pipeline companies paid in the Bear Creek Field, but it may be assumed that these going prices were contracted for prior to 1957, as the Staff exhibit shows only the Grigsby sale from this field during the three years covered by it. Southern's brief does not "propose any specific

[15] City of Detroit v. F.P.C., 230 F. 2d, 810; and Bel Oil Corporation v. F.P.C., 255 F. 2d, 548.

level at which a price condition should be imposed in Grigsby's certificate," stating that the fixing of such level "is a function of the Examiner and the Commission in the exercise of that responsible reaction required by Catco."

TEMPORARY AUTHORIZATIONS

When an application is filed for a certificate of public convenience and necessity authorizing the sale of natural gas in interstate commerce by an independent producer, Section 7(c) of the Act requires that "the Commission shall set the matter for hearing and shall give such reasonable notice of the hearing thereon to all interested persons as in its judgment may be necessary under rules and regulations to be prescribed by the Commission." This is a most important requirement, if the primary aim of the Act is to be accomplished. Those who will pay for the gas, which is the subject of the sale, and who are not parties to the gas purchase contract, are entitled to this notice in order that they may have opportunity to defend against the payment by them of an initial rate which may be excessive, and to oppose the approval by the Commission of any other provision of the contract which may be detrimental to their interests. These payers of the gas bills are indeed comparable to a defendant or a respondent against whom a money judgment is sought, and no such judgment would be valid without notice to such defendant or respondent who is within the territorial jurisdiction of the Court.

The Congress carefully provided in Section 7(c) that such reasonable notice of the application to all interested parties should not be denied except "in cases of emergency" due to the existence of which "the Commission may issue a temporary certificate * * * to assure maintenance of adequate service or to serve particular customers." This is an emergency power of the Commission which is validly exercised by it only after a finding by it, based upon substantial proof presented, that there exists an emergency such as would justify in the sense of the statutory language, the issuance of a temporary certificate without notice to all interested parties.[16] The fact that the certificate is only to be temporary "pending the determination" of the application for a permanent certificate does not in any way lessen the statutory requirement that what is authorized by the temporary certificate must be required by the public convenience and necessity. If the temporary certificate is to authorize a sale of natural gas by an independent producer, all of the terms and conditions of the temporarily authorized sale must indeed be required by the public convenience and necessity. While the proposed initial rate is not required to be measured by intricate rate-making standards before it may be temporarily authorized, the Catco rule for holding the line is just as applicable to the issuance of a temporary certificate as to the issuance of a permanent certificate. There is no conceivable emergency, in the sense of the Act, which would justify ignoring this Catco rule in the issuance of a temporary certificate authorizing a sale of natural gas by an independent producer. This is particularly true because the payers of the gas bills are not being given opportunity to defend against the payment by them of what may be an excessive initial rate.

The emergency power of the Commission to issue temporary certificates is discussed in the Algonquin case. The question there was whether certain authorization sought by Algonquin "would be within the Commission's statutory authority to 'issue a temporary certificate in cases of emergency, to assure maintenance of adequate service or to serve particular customers without notice

[16] Algonquin Gas Transmission Co. v. F.P.C., 208 F. 2d, 334. (Algonquin).

or hearing, pending the determination of an application for a [permanent] certificate' ". Concerning this question, the Court stated that the "crucial phrases are 'to assure maintenance of adequate service' and 'to serve particular customers' ". Following this last quoted statement in the opinion is a reference to a footnote in which the Court asserted: "It is for the Commission to find as a matter of fact whether the requisite emergency exists." This is elementary in the law. If an agency of Government is given authority to do certain things in the presence of an emergency, the "requisite emergency" must be shown by a specific finding of the agency to exist before the agency may exercise such emergency authority. The finding that the emergency exists is necessary to create the power to act summarily and without public hearing and due notice thereof to all interested parties, when emergency authorization is sought under the Act. It is just not lawful to issue temporary authorizations of jurisdictional sales of gas as a routine matter without the required consideration being given, first, to whether an emergency exists which requires summary action and, second, what summary action is required by the public convenience and necessity, particularly in the sense of Catco line holding.

Eight of the fourteen Applicants here were issued temporary authorizations to sell natural gas at the full contract price of 18.5 cents per Mcf, without any provision whatever for refunding any part of such price which might ultimately be found not justified by the Commission. An examination of the formal files in all of said dockets, discluses that no action whatever by the Commission was taken in relation to any of the eight temporary authorizations. So far as is disclosed by these formal files, there was no finding made in any case that an emergency existed which made the temporary authorization of the sale necessary or even justified. There is no finding made in any of these dockets that the public convenience and necessity required the issuance of temporary certificates authorizing sales to be made by these eight Applicants at 18.5 cents per Mcf. Pan American, one of the eight Applicants holding such temporary authorizations, is no longer selling to United because its gas has been depleted, as hereinbefore shown. The other seven such Applicants have all been collecting for about three years 18.5 cents per Mcf from United for their gas, and there is apparently no way to obtain a refund of such part of this initial rate as exceeds the initial rate found herein to be required by the public convenience and necessity.

By Order No. 193, issued November 20, 1956, the Commission promulgated what is now Section 157.28 of its "Regulations under the Natural Gas Act," which is entitled "Temporary authorizations." Sections 157.23 to 157.27 were previously in effect and covered applications for certificates of public convenience and necessity by independent producers, without provision for temporary authorizations. In reading Section 157.28 it must be kept in mind that a "temporary certificate" may only be issued by the Commission itself in the exercise of its emergency power given in Section 7(c) of the Act. And yet, Section 157.28 makes it possible for an independent producer to "initiate the sale" of gas which "may proceed forthwith," upon the Secretary's "acceptance of the rate filing and the statements made under this section." The "statements made under this Section" refer to the requirements of the Section for the contents of the application filed for a certificate authorizing the particular sale. Such requirements as are pertinent here are set forth in paragraph (c) of Section 157.28 as follows:

> (c) As part of its application hereunder, or separately, the applicant independent producer must file or have on file (1) a statement of intention to invoke this section, setting forth the facts constituting the emergency requiring such action, which emergency may include, *inter alia*, drainage,

threatened loss of lease, flaring, economic hardship resulting from payment of shut-in royalties, or similar situations; and (2) a statement identifying the contract tendered as the rate schedule intended to be effective for the sale or transportation under this temporary authorization.

There was used to indicate the Secretary's "acceptance of the rate filing and statements made under this Section," a printed form which was designated as "F.P.C. Form No. 443 (Rev.)." The first two paragraphs of this form, which is addressed to the applicant, and signed by the Secretary, read as follows:

> Your statement, filed pursuant to Section 157.28(c)(1) of the Commission's Regulations, of your intention to invoke said Section and initiate the service proposed in the amendment to the certificate application, Docket No. G– is hereby accepted.
>
> You are also advised that the related rate schedule, identified by your statement pursuant to Section 157.28(c)(2) of the Regulations and listed at the bottom of this letter, has been accepted for filing to be effective on the date of initial delivery. Please advise this Commission of the date of initial delivery of gas thereunder. This acceptance of the rate schedule for temporary service is no assurance that it will be accepted by the Commission for permanent service.

While the form states that the "acceptance of the rate schedule for temporary service is no assurance that it will be accepted by the Commission for permanent service," it nevertheless authorizes the collection of the contractual initial price "pending the determination" of the application for the permanent certificate without any protection for the consumer against exploitation by the collection of a temporary rate which may exceed the initial rate found to be required by the public convenience and necessity when such "determination" is made. The form, which is for the signature of the Secretary, concludes with the following paragraph:

> This constitutes all requisite temporary authorization to commence the sale of gas, but such authorization and acceptance of the rate schedule are without prejudice to such final disposition of the certificate application, as amended, as the record may require and, furthermore, once service is commenced under this authorization it may not be discontinued without permission of the Commission issued pursuant to the provisions of the Natural Gas Act.

Temporary authorizations with no rate condition were issued to Ohio, Southwest (G–15460), Nowerys, Kinsey, Hunt Company, Hunt Trust, Pan American and Monsanto, between July 14, 1958 and January 29, 1959. Six of such temporary authorizations were upon the printed form described above and were signed by the Secretary. The temporary authorization issued to Kinsey was essentially the same as said form except that it contained the condition that this Applicant would make refund of a certain part of the Louisiana tax if the law imposing the tax were held to be invalid. The temporary authorization issued to Monsanto was, like all the eight authorizations here discussed, issued by the Secretary pursuant to Section 157.28 of the Regulations; but it was not upon said form and it contained no rate condition. In these eight dockets temporary authorizations have been issued routinely without a finding by the Commission that an emergency existed requiring this summary action and, without, so far as the record shows, any consideration being given to the question of whether the temporarily authorized sales, in all of their terms including price, were required by the public convenience and necessity. In none of the eight temporary authorizations issued by the Secretary to the Applicants named above, was there any indication that the issuance thereof was "by direction of the Commission," as was

indicated in later authorizations issued by the Secretary to the other six Applicants. It is true that each application averred the existence of one of the types of emergency enumerated in Section 157.28(c) of the Regulations, but such averment of an emergency does not constitute the requisite finding by the Commission that an emergency exists. Furthermore an "acceptance" by the Secretary cannot lawfully be substituted for Commission action upon a request of it for the exercise of its emergency power.

When a temporary authorization was issued to the Applicant Robinson on March 16, 1959, it was indicated above the signature of the Secretary thereon that it was issued "by direction of the Commission," and a rubber stamp thereon shows that it was "approved by the Commission" on March 16, 1959. It was stated in the first paragraph of this authorization that it was "conditioned on L. L. Robinson, *et al.*, refunding to United any amounts in excess of the amount resulting from the rate finally determined to be proper in Docket No. G–16457." When a temporary authorization was issued to Atlantic on July 8, 1959, it was certified therein, over the signature of the Secretary, that it was issued "by direction of the Commission," and had been "approved by the Commission." This contained the same condition as that imposed in the Robinson authorization, namely, that Atlantic would refund to United "any amounts in excess of the amount resulting from the rate finally determined to be proper in Docket No. G–18572." It is ordered hereinafter that the Applicants Robinson and Atlantic make refunds in accordance with the rate condition imposed in their temporary authorizations.

The original application in Docket No. G–19112 was filed by Southwest on July 27, 1959. On September 9, 1959, a temporary authorization was issued to Southwest, which was signed by the Secretary and it showed that it was "by direction of the Commission." A notation shows that it was approved by the Commission. This temporary authorization contained a condition that the initial rate "shall not exceed 17 cents per Mcf at 15.025 psia, plus applicable tax reimbursement." A letter from Southwest to the Secretary of September 11, 1959, requested reconsideration of its application and the issuance of a temporary authorization without rate condition. This request was denied by the Secretary on November 25, 1959. The temporary authorization of September 9, 1959 was finally accepted by Southwest by letter of March 4, 1960. On June 10, 1960, the temporary authorization was amended in certain respects based upon the request in the supplemental application filed by Southwest on April 25, 1960, but the amendment did not change the rate condition. There were two subsequent supplemental applications filed, upon the basis of which temporary authorizations were issued. Each such contained a rate condition that the price to United "shall not exceed 18.75 cents per Mcf including any tax reimbursement," which made the base rate remain at 17 cents per Mcf.

A temporary authorization was issued to James on October 23, 1959, upon the condition that the price to be paid by United "shall not exceed 17 cents per Mcf at 15.025 psia plus applicable tax reimbursement." This authorization was not accepted by James within the 10 days given for this purpose. On March 9, 1960, James requested that the time for such acceptance be extended, and this request was granted by the Commission on April 1, 1960, which made effective the acceptance of the temporary authorization transmitted by James with its letter of March 9, 1960. There was filed with the Commission on October 10, 1960, a supplemental application by James for authority to dedicate additional acreage to United, to be covered by its existing sales contract. A second temporary authorization was issued to James on December 1, 1960, upon the condition that the price to be paid by United "shall not exceed 18.75 cents per Mcf at 15.025 psia

including tax reimbursement." This condition required that base rate not exceed 17 cents, the tax being 1.75 cents. This second authorization was accepted by the letter from James of December 7, 1960. A second supplemental application was filed by James in the same docket, covering additional acreage in the Calhoun Field, on February 23, 1961, and a third temporary authorization was issued to James in this docket on March 30, 1961, which was accepted by its letter of April 6, 1961. This authorization contained the same rate condition as that imposed in the authorization of December 1, 1960. All three of the temporary authorization issued to James were shown to be "by direction of the Commission."

Grigsby filed his original application on October 12, 1959. On November 6, 1959, the Secretary issued to Grigsby, by direction of the Commission, a temporary authorization containing the condition that the price to United "shall not exceed 17 cents per Mcf at 15.025 psia plus applicable tax reimbursement." This authorization was accepted by Grigsby by letter of November 13, 1959. A second temporary authorization, based upon an amendment to the original application, was issued to Grigsby on November 3, 1960, and was amended by the Secretary on March 1, 1960. It contained the same rate condition as that in the original authorization.

Upon the basis of an original and supplemental application, there was issued to Roberts on January 14, 1960, a temporary authorization which contained the condition that the price to be paid by United "shall not exceed 17 cents per Mcf at 15.025 psia plus applicable tax reimbursement." The acceptance of this authorization by Roberts was dated January 18, 1960.

It has been shown above that there were 8 of the 14 Applicants in these consolidated proceedings who were issued temporary authorizations by the Secretary, pursuant to Rule 157.28, without rate condition; and with the exception of Pan American, these Applicants have been collecting from United for about three years the base rate of 18.5 cents per Mcf. Two Applicants, Robinson and Atlantic, have accepted temporary authorizations containing the condition that they make refunds to United of "any amounts in excess of the amount resulting from the rate finally determined" in their respective certificate applications here consolidated. Four Applicants, Southwest (G–19112), James, Grigsby and Roberts, accepted temporary authorizations conditioned to require the payment of a base rate of only 17 cents per Mcf. For reasons hereinbefore stated, refunds may only be ordered to be paid by Robinson and Atlantic.

In no single docket of the 14 here consolidated is there a finding by the Commission that an emergency existed which made necessary or even advisable that a temporary authorization be issued for a sale of natural gas without notice to the ultimate payers of the sale price. Furthermore, there was no finding in any of these dockets, so far as the formal files show, that the issuance of the temporary authorization was required by the public convenience and necessity. Section 7 of the Act contemplates the issuance of no other kind of certificate than one that "is or will be required by the present or future public convenience and necessity," be it temporary or permanent.

Rate Condition

All of the Applicants, of course, contend that the certificates sought by them should be issued without condition so as to authorize their sales of gas at the contractual base price of 18.5 cents per Mcf plus tax reimbursement. United likewise so contends. The Applicants have failed to sustain their burden of proof to show that the public convenience and necessity require the issuance of certificates to them as applied for. The record evidence indicates clearly that

the initial rate should be fixed at less than the contractual initial price in each certificate issued to the Applicants.

Philadelphia urges in its brief that "the Grigsby sales from reservoirs common to wells of Southern Natural Gas Company should be continued at 10.35 cents per Mcf and all other Grigsby sales and sales by other Applicants should be continued at the Commission ceiling for 'old' gas (14 cents per Mcf plus tax)." The second figure refers to the rate of 14 cents per Mcf at 15.025 psia fixed for "increased rates" for North Louisiana in Appendix A to Statement of General Policy No. 61–1. (No. 61–1) This specific request of Philadelphia is denied, and the rates for Grigsby and all Applicants are set at a higher amount than 14 cents for reasons shown herein.

The brief of Staff Counsel asserts that although the evidence presented by it "shows the preponderance of permanently certificated sales in the North Louisiana area have initial prices at 16.5 cents per Mcf (exclusive of tax reimbursement), it is noted the initial price level established by the Commission in its Statement of General Policy No. 61–1, issued September 28, 1960, as amended, is 17.0 cents per Mcf" at 15.025 psia exclusive of tax reimbursement. The brief then states, that in view of the aforesaid price fixed by the Commission, "it is the recommendation of the Staff that the issuance of certificates in these proceedings be subject to condition that the base initial price shall not exceed 17.0 cents per Mcf at 15.025 psia for pipeline quality gas and that the total initial price for such gas, including partial reimbursement for present taxes, as provided for in the contracts, shall not exceed 18.75 cents per Mcf." No. 61–1 speaks of Appendix A thereto as containing "maximum acceptable rates," and it is said that in ordinary circumstances "proposed initial sales of natural gas by independent producers which include rates higher than those indicated in the appendix attached to this statement shall be denied a certificate or certificated only upon the condition that lower rates be filed." No. 61–1 is not construed to mean that, in proceedings under Section 7 of the Act for the certification of a sale, the initial rate may not be made lower than the "initial service rates" there specified for an area, if the public convenience and necessity require a lower rate upon the basis of the evidence.

The evidence in the record has been discussed extensively herein. Based upon all of the record evidence, it is found that the public convenience and necessity require that there be attached to each certificate issued in these consolidated proceedings the condition that each Applicant shall file a rate schedule with the Commission providing for a rate not exceeding 16.5 cents per Mcf at 15.025 psia plus appropriate tax reimbursement, for gas sold to United under the gas purchase contracts here involved. The evidence in this record very definitely would not justify the permanent certification of an initial base rate in excess of 16.5 cents per Mcf, while taking into consideration the CATCO mandate "to hold the line awaiting adjudication of a just and reasonable rate."

It is here reiterated that the attachment of this rate condition to the certificates here issued is not a holding that the contractural initial base price of 18.5 cents is unjust and unreasonable. The holding is that the sales here involved at this base price of 18.5 cents per Mcf are not required by the public convenience and necessity in these proceedings under Section 7 of the Act. The initial base rate of 16.5 cents per Mcf plus tax here certificated is the rate authorized to be charged by the Applicants "awaiting adjudication" of whether the contractural initial base price of 18.5 cents per Mcf is just and reasonable in the sense of Section 4(a) of the Act. Opportunity is herein given to all Applicants to bring about the prompt institution of a rate proceeding in which such adjudication may be made.

The condition hereinafter attached to the acceptance of the certificates here issued and to the compliance therewith by the filing of rate schedules calling for the initial base rate of 16.5 cents per Mcf, plus appropriate tax reimbursement, is that each Applicant will thereafter have the right to file, under Section 4(d) of the Act, a rate schedule calling for an increased rate of 18.5 cents per Mcf, plus appropriate tax reimbursement, 30 days prior to the proposed effective date thereof, and upon the expiration of such period of notice, the operation of such newly filed rate schedule will be suspended for only one day and the new rate may then, upon motion of such Applicant, become effective subject to refund, with bond given. The consuming public will then be protected against loss from the payment of such part of the base rate of 18.5 cents as may ultimately be found not justified by the Commission, according to rate-making standards.

All findings of fact or conclusions of law requested by any party to these proceedings, which have not been made hereinbefore either specifically or in substance, are hereby denied.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) Certificates of public convenience and necessity be, and they are hereby, issued respectively to all of the Applicants whose names are set forth in the caption hereof, with the exception of Pan American Petroleum Corporation, Docket No. G–17028, authorizing the sale by them of natural gas to United Gas Pipe Line Company for resale in interstate commerce, as set forth in their respective applications in the docket numbers set opposite their names respectively in the caption hereof, and as shown in the record of these proceedings, and further authorizing the construction and operation of any facilities used by them in making such sales which are subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued in Paragraph (A) hereof are granted upon the express condition and requirement that each of the Applicants referred to in Paragraph (A) shall file a rate schedule with the Commission within 30 days from the issuance of this order, providing for a rate not exceeding 16.5 cents per Mcf at 15.025 psia plus appropriate tax reimbursement for natural gas sold and delivered to United Gas Pipe Line Company, pursuant to the contracts here involved; and no sale to this pipeline purchaser shall be lawful after 30 days from the issuance of this order, which is not made pursuant to such rate schedule filed as hereby required.

(C) The acceptance of these certificates issued to the specified Applicants in Paragraph (A) hereof, as conditioned in Paragraph (B) hereof, and the compliance therewith, are upon condition that the Applicants receiving the certificates so conditioned, shall have the right thereafter to file under Section 4(d) of the Act, a rate schedule calling for the rate of 18.5 cents per Mcf at 15.025 psia plus appropriate tax reimbursement, 30 days prior to the proposed effective date thereof; and upon the further condition that, if such filing is made, the operation of such rate schedule will be suspended for a period of one day following the expiration of such 30-day period of notice, and thereafter, upon motion of the filer of such rate schedule, the rate provided therein may become effective subject to refund with interest at 7 percent per annum, under proper bond given as required by Commission order, of any portion of such increased rate which is ultimately found not justified by the Commission, under rate-making standards.

(D) The Applicants L. L. Robinson *et al.*, Docket No. G–16457 and The Atlantic Refining Company, Docket No. G–18572, shall, within 60 days of the time when this decision becomes the official action of the Commission, refund to United, with interest at 6 percent per annum from the date of payment by United to the date of refund, the excess of the total amounts charged and collected for all sales to United at the base rate of 18.5 cents per Mcf, made under the contracts here involved, over the total amounts which would have been charged at the base rate of 16.5 cents per Mcf, which initial base rate is found herein to be required by the public convenience and necessity. All expense incident to making these refunds will be borne respectively by these Applicants.

DANIEL J. KELLY,
Presiding Examiner.

APPENDIX A

Name of Applicant	Docket No.	Date of contract	Commission authorization	Authorized base price
The Ohio Oil Company, Operator, et al.	G–15385	June 10, 1958	July 14, 1958	18.5
Southwest	G–15460	July 3, 1958	Aug. 21, 1958	18.5
Southwest	G–19112	July 10, 1959	Sept. 9, 1959	17.0
Nowery	G–16190	July 24, 1958	Sept. 23, 1958	18.5
Kinsey	G–16278	Aug. 15, 1958	Sept. 29, 1958	18.5
Robinson	G–16457	July 23, 1958	Mar. 16, 1959	18.5
Hunt Company	G–16737	Sept. 23, 1958	Oct. 31, 1958	18.5
Hunt Trust	G–16763	Sept. 30, 1958	Nov. 5, 1958	18.5
Monsanto	G–17519	Oct. 27, 1958	Jan. 29, 1959	18.5

SOUTHWEST GAS CORPORATION, DOCKET NO. CP62–110

ORDER ADOPTING DECISION OF PRESIDING EXAMINER

(Issued March 21, 1962)

*Syllabus**

1. Merger found in the public interest since (1) evidence shows there is not now and has never been competition between the two companies; (2) Combined system would be considerably strengthened financially and thus enabled to more readily secure financing for needed expansion; (3) opportunities for improvement in load factor would increase; and (4) cost savings would be realized, which under Commission regulation, should ultimately be reflected in lower rates. P. 590.
2. Commission *issues* certificate of public convenience and necessity under Section 7 of the Natural Gas Act, authorizing merger. P. 592.

Ezekiel G. Stoddard and *Charles H. McCrea* for Southwest Gas Corporation.

David S. Lichtenstein for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

The decision of the Presiding Examiner in the above-captioned proceeding was issued on February 19, 1962. No exceptions have been filed to the decision. The Commission has considered the entire record before the Presiding Examiner.

*Initial decision appears on page 584.

The Commission finds:

In view of the foregoing, and after due consideration, the aforesaid decision should be adopted as the opinion of the Commission, with a more specific reference, however, in the ordering part of the Examiner's decision to the vesting in Southwest Gas Corporation (Southwest) of the certificates of public convenience and necessity heretofore issued to Nevada Natural Gas Pipe Line Company (Nevada).

The Commission orders:

(A) The decision of the Presiding Examiner in Southwest Gas Corporation, Docket No. CP62-110 issued on February 19, 1962, be adopted as the Opinion of the Commission.

(B) The Decision referred to in (A) above be effective as the Opinion of the Commission as of the date of issuance of this order.

(C) Southwest is hereby vested, as provided in paragraph (B) of the order of the Presiding Examiner, with all rights, and charged with all obligations and responsibilities of Nevada under the following rescinded certificates of public convenience and necessity:

	Docket Nos.	
1	G-1888	Order issued June 23, 1952, as amended March 9, 1953, November 13, 1953, and May 20, 1954.
2	G-8997	Order issued November 25, 1955, as amended January 2, 1958.
3	G-9436	Order issued June 8, 1956.
4	G-10522	Order issued December 27, 1956.

DECISION

UPON APPLICATION PURSUANT TO SECTION 7(C) OF THE NATURAL GAS ACT

(Issued February 19, 1962)

MARSH, *Presiding Examiner:* This proceeding is upon the application filed by Southwest Gas Corporation (Southwest) on October 30, 1961, and supplements thereto filed on November 3, November 14, November 21, and December 6, 1961, respectively, pursuant to the provisions of Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to acquire by statutory merger and to operate all of the facilities of Nevada Natural Gas Pipe Line Company (Nevada).

Pursuant to the notice of application and date of hearing issued by the Secretary of the Commission on December 29, 1961, the matter came on for hearing, and was heard, on January 25, 1962, with the undersigned presiding. The matter had originally been set down as a noncontested hearing pursuant to Section 1.30 of the Commission's Rules of Practice and Procedure. Although the Secretary's notice of December 29, 1961, made provision therefor, no protests or petitions to intervene have been filed herein. On January 12, 1962, the Commission issued an order defining the issues herein to assure that the policies and provisions of the anti-trust laws be taken into account.

At the conclusion of the presentation of evidence, counsel for the Applicant moved for the waiver of the intermediate decision procedure which such motion was immediately transmitted to the Commission for its consideration and disposition. On February 12, 1962, the Commission issued an order denying the motion. Briefs have been filed and the matter is now ready for decision.

Southwest Gas Corporation is a corporation duly organized and existing under the laws of the State of California and is authorized to transact business in the

States of Arizona, California and Nevada. The principal office of the Applicant is located in Las Vegas, Nevada. Southwest is a public utility engaged in the distribution of natural gas at retail in Las Vegas, Nevada and its environs, the districts of Barstow and Victorville in California and the districts of Coolidge, Casa Grande and Clifton-Morency in Arizona. It operates under certificates of public convenience and necessity issued by the Arizona Corporation Commission, the California Public Utilities Commission and the Nevada Public Service Commission, respectively. Southwest provides public utility natural gas service to approximately 40,000 customers divided almost equally between the three states above named. Applicant has not heretofore engaged in the transportation in interstate commerce for the sale in interstate commerce for resale of natural gas. Southwest makes no city gate sales to distributors and no sales of natural gas for resale. Applicant purchases all gas for resale to its customers in Arizona from El Paso Natural Gas Company, all gas for resale to its customers in California from Pacific Gas and Electric Company and all gas for resale to its customers in Nevada from Nevada Natural Gas Pipe Line Company. Southwest, with respect to the transportation, distribution and sale of natural gas in the State of California, has been declared exempt from the provisions of the Natural Gas Act. (*Southwest Gas Corporation*, Docket No. G–9693, 15 FPC 1104).

For the period October 1, 1960, through September 30, 1961, Southwest's sales totaled 10,683,365 Mcf of which 2,756,776 Mcf were sold through Applicant's distribution systems serving Nevada, 1,942,657 Mcf through its distribution systems in California and 5,983,932 Mcf through its distribution systems in Arizona. As of August 31, 1961, Southwest's total assets amounted to $15,660,159. Its total operating revenues for the 12 months ended August 31, 1961, were $8,401,230.

Nevada Natural Gas Pipe Line Company is a corporation duly organized and existing under the laws of the State of Nevada, having its principal office in Las Vegas, Nevada. Nevada owns and operates approximately 223 miles of main transmission lines, 32½ miles of sales laterals, and other appurtenant facilities. Included among its facilities are two parallel transmission lines extending about 114 miles from a connection with El Paso Natural Gas Company near the Arizona-Nevada State line, in a northerly direction through a portion of California to the Las Vegas, Nevada area where it sells gas to Southwest for resale in that community and to California-Pacific Utilities Company for resale in Henderson, Nevada and to Boulder City, Nevada for resale therein.

El Paso delivers natural gas to Nevada at two delivery points, one on the California-Arizona State line and one on the Nevada-Arizona State line. Nevada transports this gas through its two pipelines to Southwest's franchise area in and around Las Vegas. The pipeline facilities owned by Nevada in the State of Arizona are leased to El Paso, and Southwest has been certificated by the Arizona Corporation Commission to provide the purely local distribution service from taps on this main line in the State of Arizona.

Nevada is principally engaged in the transportation and sale of natural gas to certain public utility and industrial customers in the vicinity of Las Vegas, Nevada. It has no production of natural gas and obtains all of its supply of gas from El Paso Natural Gas Company.

For the 12 months ended November 30, 1961, Nevada's total sales were 15,302,515 Mcf. Of this total, 3,109,738 Mcf were sales to natural gas utilities, 4,831,472 Mcf were firm industrial sales and 7,361,305 Mcf were interruptible sales to Nevada Power Company.

As of August 31, 1961, Nevada had total assets of $8,485,631 and for the 12 months ended August 31, 1961, its total operating revenues were $6,645,165.

The record shows that Nevada owns all the outstanding stock of the Utility Financial Corporation and the Carson Water Company.

Nevada is a natural gas company within the meaning of the Natural Gas Act and operates under certificates of public convenience and necessity granted by the Commission in an order dated June 19, 1952, in Docket No. G–1888 and Opinion and Order No. 289 dated November 25, 1955, in Docket No. G–8997.

The physical facilities of the two companies are "end to end." Southwest and Nevada perform entirely different functions, one that of distribution, the other that of transmission. Consequently, there is no competition between them. Nevada makes no sales in California or Arizona. In Nevada its sales to direct industrial customers are outside the certificated area served by Southwest and its sales for resale to the other two utilities, namely, California-Pacific and Boulder Natural Gas Company are at points outside Southwest's certificated area. As has been pointed out, Southwest and Nevada do not provide the same type of service. Nevada is a transmission company and has neither the personnel nor the facilities to provide distribution service. It serves only large users at high pressure. The merger will not operate to stifle or reduce present or potential competition with any other company. While the two corporations have been historically separate corporations, there are a number of common stockholders, a majority of the directors are common to both companies, and both of the companies have substantially the same management.

The record shows that the original cost of Southwest's facilities as of August 31, 1961 (including construction work in progress), as it appeared on Applicant's books was $15,322,044 against which a reserve for depreciation had been accumulated in the amount of $2,887,877. Similarly, the book original cost of Nevada's facilities on August 31, 1961, was $7,466,674 and there was an accumulated reserve for depreciation of $1,573,270.

As of August 31, 1961, the capital stock and surplus and long-term debt of Southwest was as follows:

Capital Stock and Surplus:	
Common stock $1 par value issued and outstanding 437,052 shares	$459,784
Cumulative convertible prior preferred stock, $9 par value, $1.20 dividend (voting), issued 96,834	871,506
Capital surplus, restricted against distribution to common stockholders	3,026,781
Earned surplus ($169,087 restricted by bond indenture)	816,442
Cumulative convertible prior preferred stock held in treasury, 15 shares at cost	(323)
	5,174,190
Long-Term Debt:	
First mortgage bonds	5,350,000
Debentures, 6% series due 1978	672,000
6% subordinated sinking fund debentures due 1977	376,000
	6,398,000
Less sinking fund requirements due within 1 year	241,000
	6,157,000

Similarly, capital stock and surplus and long-term debt of Nevada were as follows:

Capital Stock and Surplus:	
Common stock, $1 par value, authorized 1,000,000 shares, issued and outstanding 480,000 shares	$480,000
$1.50 dividend series cumulative preferred stock, $21 par value (redemption and liquidation value $25), authorized 80,000 shares, issued 20,636 shares	433,356
Capital surplus	1,269,799
Earned surplus ($371,530 restricted by bond indenture)	524,585
$1.50 dividend series cumulative preferred stock held in treasury, 830 shares at par	(17,430)
	2,690,310
Long-Term Debt:	
First Mortgage Bonds:	
5% Series due 1973	730,000
5% Series due 1976	2,250,000
5½% subordinated sinking fund debentures due 1976	765,750
	3,745,750
Less sinking fund requirements due within 1 year	250,750
	3,495,000

The acquisition by Southwest of Nevada's properties and resources is described as a statutory merger pursuant to the laws of the State of California. All of the facilities now owned and operated by Nevada will be acquired and then owned and operated by Southwest. Thereafter, the facilities will be used to perform the identical services which they prior thereto will have performed as the property of Nevada. Applicant seeks a continuation in its name of all operative authorizations now outstanding in the name of Nevada and authorization to continue without change all operations, acts, services and sales now being performed or made by Nevada, particularly insofar as the same are subject to the jurisdiction of the Commission under the Natural Gas Act. To this end, Applicant requests that a certificate of public convenience and necessity be issued to it granting the necessary authorizations and, without limitations, substituting Applicant's name in lieu of the name Nevada Natural Gas Pipe Line Company in all operative outstanding certificates of public convenience and necessity and all supplements thereto and amendments thereof heretofore granted to Nevada. Upon approval by the stockholders and the appropriate state and Federal regulatory agencies having jurisdiction in the premises, there will be combined in one corporation all of the property, assets, business rights and interests of Applicant and Nevada and all of such property, assets, business rights and interests of Nevada will become vested in Applicant as the surviving corporation. All of the debts, liabilities and obligations of Nevada will become the debts, liabilities and obligations of Applicant.

Under the terms of the merger agreement the shareholders of Nevada will exchange two shares of the outstanding stock of that company for one share of newly authorized $5 par value convertible preferred voting stock of Southwest. Nevada's $21 par value cumulative preferred will be exchanged share for share for new $21 cumulative preferred voting stock of Southwest. The agree-

ment requires approval by the stockholders of both companies and the stockholders of each class of stock of both corporations have approved the agreement in each instance by a majority of more than 99 percent of all shares voting.

Southwest will, upon the merger becoming effective, have an authorized capital stock consisting of 96,819 shares of $9 par value, $1.20 dividend cumulative convertible prior preferred stock, 19,806 shares of $21 par value, $1.50 dividend cumulative preferred stock, 270,050 shares of $5 par value, $1.00 dividend cumulative convertible preferred stock and 2,000,000 shares of $1 par value common stock.

By order issued November 20, 1961, the Arizona Corporation Commission approved the agreement of merger and authorized Southwest and Nevada to do and perform those things required to be done and performed thereunder. By order dated November 21, 1961, the Public Utilities Commission of the State of California authorized Southwest to enter into and carry out the terms and conditions of the agreement of merger. Although the laws of Nevada do not require formal approval, the testimony is that the Nevada Commission has given informal approval of the proposed merger.

After the merger, the combined capitalization of the two companies will be in the neighborhood of $18,000,000. Normal plant expansion in the present fiscal year will result in total capitalization in excess of $20,000,000. The increased size of the combined company will result in greater financial stability and will enable the company to finance at lower cost. As evidence of this result, the insurance company which holds all of the outstanding mortgage bonds of Nevada and most of the outstanding first mortgage bonds of the Applicant, as well as two-thirds of a series of debentures of the Applicant, has agreed to relax or eliminate certain restrictions in the bond indenture of Nevada. Shortly after the effective date of the merger, the Nevada indenture will be satisfied and discharged and the Nevada bonds outstanding under that indenture will be exchange for new bonds, comparable in interest rates and maturities, issued under the Southwest bond indenture. Certain indenture restrictions will be eliminated upon the merger becoming effective. The evidence indicates that the cost of money to the combined corporation will thus be reduced.

Greater rate and operating flexibility will result from the merger, and it will place the merged company in a more competitive position with respect to other energy sources.

To a growing corporation financing is of paramount importance. Nevada has grown steadily from a system capacity of 20,000 Mcf a day in 1953 to 60,000 in 1961 and again needs increased transmission capacity to meet the market requirements in the Las Vegas area. One of Nevada's largest industrial customers has been partially curtailed every day since the first of December 1961 because Nevada did not have the capacity to serve its firm load. With its present system ceiling of 60,000 Mcf a day, it would not be feasible for Nevada to take on substantial industrial loads. Southwest, too, has grown at a substantial rate and from a management standpoint this growth, about 20 percent a year for the last four years, has presented a serious financing problem.

Combining the two corporations would facilitate the consolidation of management, obviate the necessity to make allocations of management and other functional costs such as rental of office space and the operation and maintenance functions applicable to both companies.

Greater rate and operating flexibility would result from the merger and it would place the merged company in a more competitive position with other energy sources, thus giving the consolidated company a better opportunity to increase its load factor.

The merger will have no effect upon any of Nevada's agreements for the purchase or sale of natural gas except that Southwest will succeed to the rights and obligations of Nevada thereunder. A few of such agreements provide for assignment only with the consent of the other party or parties thereto, but since Southwest will be a successor to Nevada rather than its assignee, such provisions are not expected to be operative.

Since Southwest seeks continuance in its name of all authorizations now outstanding in the name of Nevada and authorization to continue without change all of Nevada's operations, acts, sales and services, Southwest will timely submit, in accordance with the requirements of Section 154.65 of the Commission's Regulations under the Natural Gas Act, a duly executed "certificate of adoption" in the form prescribed by Section 250.4 of such Regulations, of all operative and effective rate filings of Nevada as heretofore filed with the Commission.

The merger will have no effect on any of Southwest's agreements for the purchase or sale of natural gas or upon any of its rate schedules or tariffs on file with the respective commissions having jurisdiction over Applicant.

Since the merger contemplates savings in financing and operational costs, it is not beyond the bounds of reason that Southwest's customers will enjoy lower rates than if the two companies continued to be operated separately.

As has been pointed out, the Commission in its order of January 12, 1962, found it necessary and appropriate in the public interest to take into account, in considering whether to approve the acquisition of the facilities of Nevada by Southwest, the policies and provisions of the anti-trust laws. Staff counsel in this proceeding accordingly directed specific attention to that issue. The question is of peculiar pertinence because of the recent decision of the United States Court of Appeals for the District of Columbia in *People of the State of California* v. *Federal Power Commission* (decided March 30, 1961), 296 F. 2d 348. There the Court held that the Commission in considering whether to approve a transaction must give heed to the policies and provisions of the antitrust laws.

As explained in that decision, the policy of the antitrust laws is to foster free competition. Free competition, of course, is a basic postulate of our free enterprise system and thus the policies of the antitrust laws are founded on the public interest. But, the Court said, free competition is not always in all conditions in the public interest. There are times when monopoly, but regulated monopoly or a measure of controlled monopoly instead, is in the public interest. Thus, in the field of public utilities, monopoly or partial monopoly under public regulation is deemed in the public interest. In such an instance, the principal requirement of the utility is service, and service, the Court recognizes is not a necessary result of competition.[1]

Frequently, regulatory agencies must determine whether one, two or more companies should operate at a given place under given circumstances. Further, the Court had this to say:

> When the Power Commission considers the policies and provisions of the antitrust laws in respect to the transactions of utilities under its jurisdiction, it is not required to—and indeed should not—begin with a general premise

---

[1] *Cf.* The language of Justice Brandeis in his dissenting opinion in *New State Ice Company* v. *Liebmann*, 52 S.C. 371, where he said:

> The introduction in the United States of the certificate of public convenience and necessity marked the growing conviction that under certain circumstances free competition might be harmful to the community and that, when it was so, absolute freedom to enter the business of one's choice should be denied.

> that competition is always and under all circumstances in the public interest. * * * The Commission must recognize the policies of the antitrust laws, but it must also recognize its own responsibilities under its own laws.

The foregoing language is construed to mean that the objective and indeed the criteria for the determination of the public interest is, with respect to monopoly, substantially the same under the antitrust laws as under the certificate provisions of the Natural Gas Act. The antitrust laws and the regulatory laws deal with different subject matters.

In that proceeding the Commission found that the public interest would be served in several respects by the merger proposed therein. The combined system would be considerably strengthened by the increase in available gas supplies; development of sources and markets would be stimulated; the merged company would be in a stronger financial position; existing gas supplies could be more effectively used to meet emergencies in periods of peak demand; and, finally, cost saving would be realized that would ultimately be reflected in lower rates. Thus, the Commission weighed the elimination of an apparent potential competitor against the factors which would tend to be beneficial to the consumers and the public.

In the instant case, the evidence shows that there is not now and has never been competition between the two companies; that the combined system would be considerably srengthened financially and thus be enabled to more readily secure financing for obviously needed expansion in the public interest. Opportunities for improvements in load factor would increase. Cost savings would be realized which, under regulation by this Commission, should ultimately be reflected in lower rates to consumers.

We are not here concerned with questions of conspiracy, legal or illegal, the legality or illegality of motives or corporate relationships created for purposes of the advancement of illegal objectives. The basic and controlling question here is the immediate and/or ultimate impact of the proposed transaction upon consumers whose interests are subject to the protection of this Commission and the interests of the public generally.

Nevada is, and heretofore has been, a natural gas company subject to the jurisdiction of this Commission and consequently all of its rates and charges made, demanded or received for or in connection with the transportation or sale of natural gas subject to the jurisdiction of this Commission, and all rules and regulations affecting or pertaining to such rates or charges are subject to the regulation of this Commission. Although Southwest has not been, upon the consummation of the proposed merger, it will be engaged in the transportation of natural gas in interstate commerce and in the sale of such gas in interstate commerce for resale and its rates, charges, classifications and services will be subject to such regulation. The Natural Gas Act places upon this Commission the duty and responsibility to see that all such rates, charges and classifications are just and reasonable and not unduly discriminatory or preferential. There is no evidence in this record that either Nevada or Southwest will have placed themselves in a position less exposed or vulnerable to such regulation. Furthermore, it is clear from the evidence that the contractual provisions underlying the merger are such that there will be no inflation in Southwest's accounts, and, therefore, no basis on which the possibility of higher rates to consumers in the future might be predicated.

The granting of this certificate gives to Southwest, as the consolidated corporation, the right which has heretofore existed in Nevada, namely, the right to transport natural gas from previously existing points of receipt to preexisting points of delivery. Presently Nevada, and after the consolidation, Southwest

will be the only person or corporation having such rights. The existence of such rights do not preclude the granting of identical or broader rights to some other person or corporation should the future public convenience or necessity so require.

Upon review of the evidence of record herein and with specific attention to the question whether the proposed merger "would result in a potential abuse of economic power or the substantial lessening of competition," Staff counsel expressed, in his brief, the opinion that it would be in the public interest to issue the certificate authorizing Southwest to acquire the facilities of Nevada as hereinabove set out.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner further finds and concludes that:

(1) Applicant, Southwest Gas Corporation (Southwest) is a California corporation engaged in the local distribution of natural gas in the States of Arizona, California and Nevada.

(2) Nevada Natural Gas Pipe Line Co. (Nevada) is a Nevada corporation with its principal place of business in Las Vegas, Nevada, and is a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities of Nevada hereinbefore described are proposed to be acquired and operated by Southwest, by the merger of Nevada into Southwest pursuant to the Agreement of Merger set forth in the application and described in the evidence herein, and in accordance with the General Corporation Law of the State of California.

(4) The acquired facilities are proposed to be used, as they are presently being used, for the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission; and the acquisition, and operation of these facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sales of natural gas made from the facilities of Nevada to be acquired by Southwest by the proposed merger, as more fully described in the application and the evidence herein, will be made in interstate commerce subject to the jurisdiction of the Commission and such sales are subject to the jurisdiction of the Commission and to the requirements of all of the provisions of the Natural Gas Act.

(6) Southwest is able and willing properly to do the acts and perform the services proposed in connection with its acquisition of such facilities of Nevada and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission hereunder.

(7) The acquisition and continued operation of the facilities proposed to be acquired by the merger of Nevada into Southwest, and the sales of natural gas by Southwest, subject to the jurisdiction of the Commission, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter provided.

(8) Public convenience and necessity require that the general terms and conditions set forth in paragraphs (a), (b) ,(d), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20) should attach to the certificate hereinafter issued to Southwest and to the exercise of the rights granted thereunder, and that the time within which the facilities authorized by this order shall be acquired and in actual operation should be fixed at sixty days from the date on which this order shall become effective.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) A Certificate of Public Convenience and Necessity is hereby issued, subject to all pertinent provisions of the Natural Gas Act and the Commission's Regulations thereunder, including to the extent applicable paragraphs (a), (b), (d), and (e) of Section 157.20 of such Regulations, authorizing Southwest to acquire, by merger, and to operate all of the facilities of Nevada, subject to the jurisdiction of the Commission, which are described in the application of Southwest in these proceedings.

(B) All permits and Certificates of Public Convenience and Necessity heretofore issued to Nevada by the Commission are hereby rescinded as of the effective date of the merger herein authorized; and identical Certificates of Public Convenience and Necessity to those so rescinded, with any amendments or modifications thereof made by the Commission, are hereby issued to Southwest, subject to the pertinent provisions of the Natural Gas Act and the Commission's Regulations thereunder, to be just as effective as if Southwest had originally been issued said certificates; and Southwest is hereby vested with all rights, and charged with all obligations and responsibilities, of Nevada under said rescinded certificates.

(C) The certificates issued in Paragraphs (A) and (B) above shall be void and without force or effect unless accepted in writing within thirty days from the date on which this order becomes effective, and in accordance with the provisions of paragraph (a) of Section 157.20 of the Commission's Regulations under the Natural Gas Act.

(D) The acquisition of Nevada's facilities by Southwest, as authorized in Paragraph (A) hereof, shall be accomplished by Southwest by merging Nevada into it pursuant to the General Corporation Law of the State of California by the taking and completing of the legal steps described in Southwest's application and the evidence herein, within sixty days of the issuance of this Order.

(E) Within thirty days from the date on which this Order becomes effective Southwest shall reissue, in its own name and without other change, all FPC Gas Tariffs of Southwest now on file with the Commission, but excluding agreements between Southwest and Nevada.

EDWARD B. MARSH,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

CONTINENTAL OIL COMPANY, DOCKET NO. G–11024; THE ATLANTIC REFINING COMPANY, DOCKET NO. G–11034; CITIES SERVICE PRODUCTION COMPANY, DOCKET NOS. G–11046, G–15330; TIDEWATER OIL COMPANY, DOCKET NO. G–11049

ORDER DENYING REHEARING AND CLARIFYING OPINION

(Issued March 22, 1962)

Continental Oil Company, The Atlantic Refining Company, Cities Service Production Company, and Tidewater Oil Company, jointly known as CATCO, and The Public Service Commission of the State of New York have filed applications

for rehearing on February 21, 1962, of our Opinion No. 351 and Order of January 22, 1962, 27 FPC 96, issuing permanent certificates of public convenience and necessity for the sale of natural gas from the Cameron Area in the Gulf of Mexico to Tennessee Gas Transmission Company conditioned on a base price of 18.5 cents per Mcf. To a large extent we think that our opinion adequately discusses the points raised by the applicants but the following discussion may make our position clearer.

CATCO objects to our determining the "in lineness" of the proposed price as of the year 1956 when it made its contract with Tennessee. CATCO would have us determine the price line on the basis of the record on remand as of the date of our opinion, January 22, 1962.[1] We agree with CATCO that our function under Section 7(e) of the Act is to determine whether the proposed sale is required by the *present* or *future* public convenience and necessity and that we should not ignore events that have occurred since the first proceeding, but because of the remand our certificate issued January 22, 1962, will replace the one issued in June 24, 1957 and will apply from that day forward. In our opinion, if the price was out of line at the time it was first established in the contract, it is not consistent with the present or future public convenience and necessity, nor with the public convenience and necessity from the time deliveries commenced in 1958.

We found that a price is not in line if it is the highest price or in the highest group of prices. CATCO contends that this constitutes a downward drive of prices. We do not agree. CATCO's reasoning must be that the next price we would approve must necessarily be lower than the 18.5 cent price determined by us here.[2] There is no reason for such an assumption. In any case the prices for the offshore Louisiana area are now subject to our Statement of General Policy issued September 28, 1960, 24 FPC 818, and the Fourth Amendment to it issued October 31, 1961. In the latter we determined that the offshore price should be 19.5 cents per Mcf assuming no taxes. On May 10, 1961, we instituted an area proceeding for the Southern Louisiana area (AR61–2) in which the offshore price could be determined on the basis of a record and hearing.

CATCO's attempts to show that its proposed price is in line rests on evidence relating to periods extending after 1956. The same exhibit cited by CATCO shows that in the period July 1, 1954 to June 30, 1956, all but five of 68 contracts contained base prices of 18.5 cents or below and included 88 percent of the gas. It was not until 1957 and 1958 that the situation changed substantially.

PSC agrees that a price is not in line as of a given time if it is the highest price or in the highest group of prices. It points out, however, that there were no sales between the 18.5 cent price and the highest pre-CATCO price of 20 cents. Of course, we did not intend to establish a rigid formula. In one case there might be one high price we would consider out of line; in another case there might be a high group. In the present case if we examine the two years before the CATCO contract we find there are 5 contracts at 20 cents. Then there is a gap and there are 3 at 18.5 cents, 4 at 18.25 cents, 2 at 18 cents, 17 at 17 cents, 3 at 16.4 cents, 25 at 16 cents, and a few still lower. This, in connection with the other evidence cited in our opinion, indicates that 18.5 cents is in line. It is

---

[1] It suggests that a determination would be necessary for intermediate years assuming that a refund were permissible.

[2] CATCO points out that the proposed 21.4-cent price includes 3 mills per Mcf representing the original 3 mill Louisiana Severance Tax. If this tax should be applicable (See Opinion No. 351, p. 5), the tax-free CATCO price, as of the time of the contract would be, in effect, 21.1 cents in the Zone 3 area. This price is still plainly out-of-line under our analysis.

not the highest price but it is close to other lower prices. In another case the pattern of prices may be different, and it is difficult to apply any rigid rule. This is another instance where we believe that the establishment of area rates will prove of great assistance in determining the price required by the public convenience and necessity.

PSC queries as to the meaning of our provision that Tennessee continued to pay a tax reimbursement of 1.5 cents per Mcf for gas produced in Zone 3 pending judicial determination of Federal jurisdiction over the offshore area. It asks whether we mean that the 1.5 cent tax reimbursement is an in-line tax reimbursement of an in-line total initial price or whether it represents the escalated tax reimbursement provision which would be authorized under the Commission's non-certificate practices. If the former, PSC says we are in error because at the time of the contract the total Louisiana taxes were less than 1.5 cents and an "in-line" tax provision for this period would have been one cent per Mcf. If the latter, PSC will offer no objection as the matter is *de minimis*, but will challenge the treatment in another case. We did not intend the 1.5 cent tax reimbursement as an in-line provision as of the time of the contract, but because Louisiana taxes, if applicable, were increased on December 1, 1958, we are of the opinion that the partial tax reimbursement of the tax increases provided in the contract were in the public interest and required by the public convenience and necessity.

Coming to the cost of service, CATCO objects to our finding that the cost of service presentation is limited and falls short of that usually found requisite in a rate case. The cost of service presentation here has been valuable to us and, we do not say that it was inappropriate for the purposes of the proceeding. Nevertheless it is not a complete cost of service and the results must be considered indicative only and not decisive either as showing confiscation or showing that CATCO will make an excessive return. As noted in our opinion the production costs are solely on the basis of one portion of the Cameron area. The Continental exploration costs were used on the company-wide basis although the exploration costs of each company varied by as much as six cents on CATCO's basis of computation.[3] PSC submits that our cost of service computation is generous and overstates the cost. While we agree with PSC that it does not show the necessity for an initial price in excess of 17 cents per Mcf, neither does it show that the price should be as low as 17 cents per Mcf. We think the controversy on this issue shows the necessity for area determined prices that will avoid the need for the presentation of full cost of service evidence in producer proceedings with all the disadvantages set forth in our *Phillips* case.[4]

On allocation of production costs CATCO objects to our use of the gross revenues method even for the purposes of this proceeding, and contends that we should have used the straight Btu method.[5] We do not find that the Btu method, which apportions costs according to the chemical energy in the respective products, is suitable here. The condensate naturally separates from the gas and assumes a different physical form when brought to the surface and the high pressure is reduced. Its use is different and its value per Btu is very different from

---

[3] CATCO used a 14-percent rate of return and the Btu method of allocation showing exploration costs as follows: Continental 16.03 cents, Atlantic 14.07 cents, Cities 9.94 cents, and Tidewater 11.02 cents.

[4] 24 FPC 537, affirmed *State of Wisconsin* v. *F.P.C.*, 303 F. 2d 380, CADC No. 16175, decided November 30, 1961. *Cert.* granted May 14, 1962, 369 U.S. 870.

[5] CATCO cites our *Glasell* case, 25 FPC 1071, Docket Nos. G–9278, *et al.*, June 1, 1961, for this proposition, but this proceeding was remanded on February 8, 1962, by the reviewing Court at the request of the Commission.

the gas. The costs to produce these products, as well as to explore for them, were incurred not soley to obtain energy, but with a view to the economic relationships between them as set forth in our *Phillips* case with respect to the allocation of exploration costs. This situation is different from one where a gas stream is brought to a gasoline plant and in an operation designed for that purpose a separation is there made between two products. The cost of the gas stream at the gasoline plant is thus more directly apportionable to the energy content of the products.

We recognize that there are disadvantages in using the revenues method, which we followed, but the relative cost method used in *Phillips* for production costs was not applicable (there being no wells producing liquids alone in the Cameron area). There would have been some logic in using the Btu method modified by the *Phillips* case economic factor of 4. However, if we had done this, less cost would have been allocated to gas than under the gross revenues method.

With respect to income taxes we agree that actual taxes should be allowed but they have not been shown here. It would give a distorted picture to compute theoretical taxes on the production from any given leases in any given year. In certain years a lease will provide deductions in excess of revenues and in other years it will receive revenue in excess of deductions. In determining company tax liability on its total oil and gas production activities the results of operations under all leases must be considered. In our *Phillips* case cited by CATCO in support of using actual taxes, we based our computations on the company's oil and gas producing business. We found $45,000 of "actual" taxes on the basis of our computation out of a total cost of *Phillips'* oil and gas business of $183,569,305 (24 FPC at p. 581).

On rate of return we did not repudiate the *Bluefield* case [6] as contended by CATCO. The rate of return earned by other companies is properly considered, but is not sufficient in itself, for *Bluefield* recognizes that a utility has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises (262 U.S. at pp. 692–693). In *Tennessee Gas Transmission Co.* v. *F.P.C.* 293 F. 2d 761 (CA5), [Fifth Circuit reversed insofar as it set aside interim order 371 U.S. 145 (1962)] an argument with respect to the return earned by other pipelines was made, but the Court pointed out that there was no basis for the assumption that Tennessee was entitled to the same return on book equity which they have historically enjoyed. We considered the rate of return evidence in this record and did not find it inconsistent with using an 11 percent rate of return in our limited cost-of-service computation.

On the question of reserves we did not make a definite finding: [7] the record did not permit us to do so, but whether we took CATCO's estimate of reserves or the examiner's finding, there is nothing to show that the 18.5 cent initial price is in error.

CATCO argues that we have no authority to order refunds of the difference between the 18.5 cent rate determined in our opinion and order and the 21.4 cent rate actually charged. With respect to the period up to November 17, 1959, when the original certificate was vacated the gist of CATCO's argument is that our certificate granted in June of 1957 allowing the 21.4

[6] *Bluefield Waterworks Improvements Co.* v. *P.S.C.*, 262 U.S. 679.

[7] CATCO argues that we were in error in stating that it "adopted" Tennessee's estimate of reserves in the original hearing. However, it was Tennessee's estimate of recoverable reserves of 1,673,929 Mmcf at 14.73 psia that was developed at the first hearing and recited in the brief of Atlantic and Cities Service, adopted by the brief for Continental and Tidewater.

cent rate was voidable, not void, and that the rate schedule[8] filed pursuant to our June 1957 order was the legal rate which the applicants were required to charge, citing *Montana-Dakota Utilities Co.* v. *Northwestern Public Service Co.*, 341 U.S. 246, 251.

In our opinion the original certificate was nullified *ab initio* insofar as it was found defective for lack of an appropriate price condition. The same holds true of the rate schedule filed under that certificate. Section 19(b) of the Natural Gas Act provides that the Court shall have authority to "affirm, modify or set aside" an order in whole or in part. Set aside means to annul, cancel, make void.[9] Pursuant to section 19 the Court of Appeals "vacated" our original order[10] and its action was affirmed by the Supreme Court.[11] The situation differs in *Atlantic Coast Line R. Co.* v. *Florida*, 295 U.S. 301, 311 cited by CATCO. There the Interstate Commerce Commission had increased a rate found to be discriminatorily low, and the carrier thereafter charged the increased rate. Because of a failure to make proper findings the order was adjudged void; a new order was entered, similarly increasing the rate, and this was affirmed. The shippers sought restitution of the increase in charges made while the void increase was on file. The Court held that "void" in this context meant "voidable", and that equity would not countenance restitution. Unlike the situation in the *Atlantic Coast Line* case we are not merely curing a defect of form in the first order and re-establishing the same rate; we have found that the first order arrived at the wrong initial price and that a lower rate is required by the public convenience and necessity.

As observed in the *Atlantic Coast Line* case the refund question must be examined in light of the equities. The equities are in favor of a refund here because the 21.4 cent price was charged by CATCO upon the authority of a certificate whose final validity had not been adjudicated, and which was eventually found to be inconsistent with the public convenience and necessity. We are not awarding reparations, in the sense of investigating an effective rate, finding it unlawfully high and ordering a refund; we are reissuing a certificate of public convenience and necessity in place of the certificate issued in June 1957, but with a price condition which in our opinion is consistent with the mandate of the Supreme Court.

CATCO argues that we failed to consider substantial evidence of record. Contrary to CATCO's contentions we did consider the risks of offshore drilling, and the need to encourage exploration for and the development of gas reserves. In estimating the cost of service we used an eleven percent rate of return which is much higher than could be allowed any pipeline company and includes amounts designed to make producing attractive. The in-line price, which we are allowing, is higher than our estimated cost of service so that it included an even larger amount for the encouragement of gas production. The citation of *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817 (CA9) for the proposition that pre-CATCO prices are "irrelevant for comparative purposes in other cases" does not seem in point, for here we are determining a price that is required by the public convenience and necessity for CATCO itself.

---

[8] The rate schedule filing made May 26, 1958, included the contract itself executed August 17, 1956, plus certain amendatory agreements.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed herein on February 21, 1962, by CATCO and PSC set forth no new facts or principles of law which were not fully considered by the Commission when it issued its opinion and order of January 22, 1962, or which having now been considered warrant any change in or modification of such opinion and order except as expressed above.

The Commission orders:

The applications for rehearing of the Commission's Opinion No. 351 and order issued January 22, 1962, filed by CATCO and PSC are hereby denied, but the application of PSC to the extent that it asks clarification of our opinion and order is hereby granted as set forth in the text of this order.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–16235; PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G–16237; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–16904

ORDER ON APPEAL AFFIRMING RULINGS OF PRESIDING EXAMINER

(Issued March 22, 1962)

El Paso Natural Gas Company on February 27, 1962, filed an appeal to the Commission from two rulings of the presiding examiner in the above-entitled proceedings.

After the applicants had completed presentation of their cases in chief and had rested, Transwestern Pipeline Company, an intervener, requested that it be allowed 30 days in which to complete the preparation of evidence on the cost of delivering through its existing pipeline larger volumes of gas for use in the southern California market. Counsel for Transwestern stated that certain engineering studies, reserve studies and accounting studies which were needed in that connection had not been completed; that he believed that Transwestern would be able to show that its incremental costs of gas are substantially less than Rock Springs' costs and that a substantial saving to the California consumer will result from full utilization of Transwestern's facilities; and that 30 days was not an unreasonably long period of time. (Tr. 14,592–14,595)

Counsel for El Paso objected to Transwestern's request on the ground that the evidence that Transwestern proposed to present is outside the scope of the issues as delineated by the Commission and requested the examiner to forbid Transwestern to present any of that evidence. El Paso objected also to the allowance of 30 days as requested by Transwestern in which to prepare evidence. (Tr. 14,615–14,619).

The examiner overruled El Paso's objections on both points stating that he considered the position taken by El Paso's counsel with respect to the proposed evidence as being decidedly premature, that there had been no question put to a witness or an exhibit tendered in evidence for the examiner to rule upon, and that then and then alone is the proper time to determine the materiality and relevancy of the evidence which Transwestern will offer (Tr. 14,669). The

examiner ruled also that 30 days was a reasonable period for the presentation of rebuttal evidence by Transwestern and by the City and County of Denver:

> * * * upon the understanding which they have made clear in open hearing that they will do the best they can to transmit to counsel for the applicants and other interveners such portions of their exhibits and evidence as they have ready prior to that time. (Tr. 14,642)

Further citations to the relevant pages of the transcript of proceedings are given in El Paso's appeal and need not be repeated in this order.

Upon careful consideration of the points advanced and arguments made by El Paso in its appeal and by other parties who have filed in support of or in opposition to the appeal, we find that the examiner's rulings from which the appeal was taken were proper and should be affirmed. The matter of using existing pipelines, whether by means of exchange arrangements or otherwise, in connection with bringing additional volumes of natural gas to the southern California market, in the event that we decide that the public convenience and necessity require such additional gas supplies, is definitely an issue in these proceedings and should be fully explored. Affirmative evidence thereon should be presented by the applicants if such evidence is not offered by other parties. Such evidence should include, among other things and without limitation, the location, ownership, age, and physical characteristics of such pipelines and appurtenant facilities; existing and potential delivery capacity and use; additional facilities required to increase delivery capacity to the economic optimum and cost thereof; costs of operation and of gas at delivery points. We find also that the period of time which the examiner allowed for the preparation of evidence by Transwestern and by the City and County of Denver was reasonable and proper.

The Commission orders:

The presiding examiner's rulings hereinbefore referred to are affirmed.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ORDER ESTABLISHING NATIONAL POWER SURVEY ADVISORY COMMITTEES AND PRESCRIBING PROCEDURES

(Issued March 22, 1962)*

The Federal Power Commission is directed by Section 202(a) of the Federal Power Act (16 U.S.C. 792–825r) to promote and encourage voluntary interconnection and coordination of the nation's electric power facilities in the interest of economy and conservation, and is authorized by Section 311 of the Act to conduct broad investigations covering all aspects of the entire power industry. In order to accomplish these objectives more effectively and in accordance with Executive Order No. 11007 of February 26, 1962 (27 FR 1875), relating to the Formation and Use of Advisory Committees, we have concluded that it is the public interest that National Power Survey Advisory Committees be, and they hereby are established.

1. *Purpose.* The Committees shall advise and make recommendations to the Commission in planning and carrying out the Commission's proposed national power survey.

2. *Selection of Committee Members.* All Committee members and alternates shall be selected by the Chairman of the Commission.

---

*Commission determination issued April 7, 1964, continued Committee for additional two years.

3. *Conduct of Meetings.* The Chairman of the Commission, or in his absence, the Vice Chairman of the Commission, or any other full-time employee of the Commission designated by the Chairman of the Commission, shall act as Chairman of Committee meetings and shall be responsible for opening and conducting meetings and for adjourning meetings when, in his judgment, adjournment is in the public interest.

4. *Minutes.* The Chairman of the Commission having made a finding that maintenance of a verbatim transcript would be impracticable and not in the public interest, there shall be kept by the Secretary of each Committee, in lieu thereof, a record of persons present, a description of matters discussed and conclusions reached, and copies of all reports received, issued, or approved by the Committees.

5. *Secretary of the Committee.* The Chairman of the Commission shall appoint a Secretary of each Committee from among the members of the Commission staff who shall be responsible for preparing summary minutes of all Committee meetings, preparing agenda, notifying members of the meetings, and maintaining all records related to organization, membership and operations of the Committees. The Secretary shall be present during all meetings and shall certify the accuracy of all minutes.

6. *Location and Time of Meetings.* Meetings will convene at the call of the Chairman of the Commission at the Office of the Federal Power Commission, located at 441 G St., NW., Washington 25, D.C., unless otherwise directed. Ordinarily, these meetings will be held during the regular working hours of the Federal Power Commission.

7. *Advice and Recommendations Offered by the Committee.* The advice and recommendations of the members of the Committees may be presented to the Commission at Committee meetings either orally or in written form. The advice of all Committees shall be limited to matters relating solely to the planning and carrying out of the national power survey and ultimate decisions based on the Committees' advice or recommendations are reserved to the Federal Power Commission.

8. *Duration of the Committee.* All Committees shall terminate not later than two years subsequent to their date of establishment, unless the Commission determines in writing, not more than 60 days prior to the expiration of such two-year period, that continued existence of a Committee is in the public interest. A like determination by the Commission shall be required not more than 60 days prior to the end of each subsequent two-year period to continue the existence of each Committee thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

VIRGINIA ELECTRIC & POWER COMPANY, PROJECT NO. 2009

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued March 22, 1962)

Application was filed on January 30, 1962, by Virginia Electric and Power Company, licensee for major Project No. 2009, for Commission approval of a revised Exhibit K for the Roanoke Rapids development showing certain minor changes in project works within the project boundaries.

The revisions in Exhibit K reflect ties constructed between two transmission lines extending from the Roanoke Rapids Power Station to the licensee's Carolina Substation; the construction of a new short 13.2 kv line from an area feeder outside the project boundary to the power station to provide an emergency source of power for station service in the event the power station is not operating; the relocation of the tailrace barrier from the downstream end of the tailrace to the head of the tailrace; and the removal of the log boom from the reservoir. The relocation of the barrier and the removal of the log boom were previously approved by our order of June 20, 1960.

The Commission finds:

Revised Exhibit K (First Amended) Sheet 1 (FPC No. 2009–25) conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K (FPC No. 2009–10), now part of the license and which has been superseded, should be eliminated from the license for the project—all as hereinafter provided.

The Commission orders:

The revised Exhibit K referred to in the above finding is approved as part of the license for Project No. 2009, and the exhibit referred to in the same finding as being superseded is eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–16235; PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G–16237; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–16904.

ORDER REVERSING RULING OF PRESIDING EXAMINER

(Issued March 23, 1962)

On February 9, 1962, the presiding examiner in the above-styled proceedings overruled objections of counsel for the applicants to a question propounded on cross-examination by counsel for the joint interveners Tennessee California Gas Company and California Gas Transmission Company (Tenn-Cal) to a witness for El Paso Natural Gas Company (El Paso).

The specific question propounded is as follows:

> Q. In other words, as a security arrangement, the financial interests financing that line asked El Paso to escrow or trustee the funds they are paying on behalf of West Coast?

After extensive argument, on two occasions, with respect to the propriety of the question, the examiner later certified this matter on appeal.

The offer made by the cross-examiner in support of his question indicates that its purpose was to elicit further information to show that the project proposed in these proceedings contravened the policy of the antitrust laws to the detriment of the ultimate consumer.

We have examined closely the arguments of counsel and the record to which they have referred during the course of their arguments. We believe that the matter called for by the particular question does not add substantially to the material already in the record and to the offer of direct proof made by Counsel

for Tenn-Cal. On the ground that the question is remote and cumulative, the ruling of the presiding examiner should be reversed.

In determining whether a new project should be authorized, we fully recognize our responsibility to consider the impact of the construction thereof upon present and future rates and whether the ultimate consumer will be adversely affected thereby. We must also consider how proposed sources of present or future supplies and the relationships between all parties concerned may affect those rates. Such matters must be viewed, also, in connection with the policy of the antitrust laws.

In connection with the narrow question presented on appeal, however, we feel that there is already sufficient evidence of record to show El Paso's interest in Westcoast Transmission, Ltd., which is one of the limbs to El Paso's potential source of gas from Canada.

We feel it necessary to state further that we do not consider the ruling of sufficient import to have required an appeal and that, if an appeal were allowed, the presentation of briefs would have been a more expeditious and orderly procedure than the additional argument had on the question for our benefit.

The Commission orders:

The appeal of El Paso Natural Gas Company from the ruling of the presiding examiner overruling the objection of counsel for that Company made at the hearing in these proceedings on February 9, 1962, be allowed and the ruling of the presiding examiner be and is hereby reversed.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

ORDER PERMITTING INTERVENTION AND DENYING PETITION FOR DECLARATORY ORDER AND MOTION FOR CONTINUANCE

(Issued March 23, 1962)

On February 28, 1962, in the above-captioned proceedings, Hassie Hunt Trust; H. L. Hunt; Hunt Oil Company; William Herbert Hunt Trust Estate; Lamar Hunt Trust Estate; George W. Graham, Inc.; Placid Oil Company; Caroline Hunt Sands; Caroline Hunt Trust Estate; Nelson Bunker Hunt; and Lamar Hunt (Petitioners) filed a joint protest, petition for declaratory order and motion for continuance of hearing.

On February 16, 1962, the Public Service Commission of the State of New York (PSC) filed a notice of intervention in Docket Nos. CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345, CI61–1346 and CI61–1736 in these proceedings.

Petitioners have petitioned the Court of Appeals for the Fifth Circuit for review of certain orders heretofore issued by the Commission in each of the above-captioned proceedings, except in Docket No. CI61–1736. The joint protest and motion for continuance are based upon the contention that, because the certificate applications in these dockets will have been certified to the Court by March 28, 1962, as part of the record on review, the Court will have exclusive jurisdiction over the applications as of that date pursuant to Section 19(b) of the Natural Gas Act (Act), and the Commission will consequently lack statutory authority to take any further action with respect to the applications until completion of court review.

This argument is based upon an erroneous construction of Section 19(b) of the Act. The Petitioners rely on the following pertinent portion which provides that:

> . . . the Commission shall file with the court the record upon which the order complained of was entered, as provided in section 2112 of title 28, United States Code. Upon the filing of such petition such court shall have jurisdiction, which upon the filing of the record with it shall be exclusive, to affirm, modify, or set aside such order in whole or in part . . .

This language is clear and unambiguous; it vests the court with exclusive jurisdiction to affirm, modify or set aside the order complained of in the petition for review. There is no mention of jurisdiction over the certificate application or any portion of the proceeding. Section 19(b) refers only to the exclusive jurisdiction of the court to act upon the order which is before it for review and, provided the Commission does not attempt to modify or set aside that order, it in no way interferes with or limits our jurisdiction to go forward with other aspects of the case. Petitioners set forth no logical basis for extending that jurisdiction to the certificate application or any further proceeding thereon which does not involve a contemplated modification of such order. The mere fact that the certificate application is certified to the court, incidental to review, can in no way extend or enlarge the exclusive jurisdiction conferred upon the court by Section 19(b).

Petitioners do not allege that the further hearing now scheduled to commence in the above-captioned proceedings on March 28, 1962, was initiated to alter, modify, or set aside the orders which are before the Court for review, and such is not the case. Those orders were not dispositive of the cases; they are interlocutory and procedural. The scheduled hearing is a continuation of the proceedings as a result of the reversal by the Court of Appeals of the District of Columbia Circuit of our order denying the intervention of PSC.

Petitioners' request for a declaratory order alleges that the Commission has failed to spell out with any exactitude the type of evidence which a producer must adduce in order to support his proposed initial price. The Commission's policy, as reflected in both the Statement of General Policy, No. 61–1, issued September 28, 1960, as amended, and in recent decisions, establishes that the producer applicant, if he is seeking an initial price higher than the "in line" or area price level, has the burden of proving that the higher price is required by the public convenience and necessity. The particular economic facts and circumstances that might prompt a producer to seek a certain initial price are innumerable, varied and within the province of his own knowledge. Because of the myr-

lad factual situations which could confront us, it is most important that the applicant be permitted the greatest possible latitude in determining what evidence is essential to meet his burden of proof. For this reason, we will not predetermine what evidence is necessary in order to prove an initial price but will decide each case on its own merits.

The Commission finds:

(1) The Petitioners have not presented sufficient reason to support their motion for continuance or warrant the issuance of a declaratory order.

(2) It is desirable to allow the Public Service Commission of the State of New York to intervene in these proceedings in order that it may establish the facts and the law from which the nature and validity of its alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) The Petitioners' motion for continuance and petition for declaratory order are denied.

(B) The Public Service Commission of the State of New York is permitted to intervene in Docket Nos. CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345, CI61–1346 and CI61–1736, subject to the rules and regulations of the Commission. *Provided, however,* That the participation of the intervener shall be limited to matters affecting such rights and interests as may be established; and *Provided, further,* That the admission of the intervener be not construed as recognition by the Commission that it may be aggrieved by any order or orders entered in these proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP62–148

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 26, 1962)

On December 12, 1961, Cities Service Gas Company (Applicant) filed in Docket No. CP62–148 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the calendar year 1962 at a total cost not to exceed $3,000,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The subject facilities will be financed from cash on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 20, 1962, respecting the matters involved in and the issues presented by the application in this proceeding. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the

hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas from producers thereof during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed purusant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the costs of the facilities so construed, and (f) the names of the independent producers involved. together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed thereunder should be limited to $3,000,000, with no single project to exceed a cost of $500,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Cities Service Gas Company to construct during the calendar year 1962 the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Cities Service Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed hereunder are limited to $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. G–11797 AND G–12580

FINDINGS AND ORDER FURTHER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 26, 1962)

On September 14, 1961, El Paso Natural Gas Company (Petitioner) filed in Docket Nos. G–11797 and G–12580 a petition to further amend the certificate orders in said dockets to reflect minor changes in the construction and operation of certain of the field and main line compressor facilities authorized therein.

Among the facilities authorized in Docket No. G–11797 was the addition of one 810 horsepower compressor unit at Vealmoor Compressor Station in Howard County, Texas, and two 1,800 horsepower compressor units at Plains Compressor Station in Yoakum County, Texas. At Vealmoor, Petitioner has installed an additional 800 horsepower unit rather than the unit authorized, because the unit installed was re-rated by the manufacturer from 810 to 800 horsepower. Because it was found to be more economical, a single 3,500 horsepower unit was installed at Plains in lieu of the two authorized 1,800 horsepower units.

Also Authorized in Docket No. G–11797 was the addition of 2,400 compressor horsepower at the Williams Compressor Station in Coconino County, Arizona, which Petitioner proposed to obtain by turbocharging certain existing compressor units. During the initial construction period, turbocharging materials for those units were not available. However, turbocharging materials for other existing units at the Williams Compressor Station were available, obtained, and installed to produce an additional 2,000 compressor horsepower, rather than the 2,400 horsepower authorized. Subsequently, additional turbocharging materials became available and were installed to produce the remaining 400 horsepower. The latter addition was accomplished concurrently with the installation of 6,400 horsepower at the Williams Compressor Station authorized in Docket No. G–12580. Although costs attributable to only 2,000 horsepower were reported in Docket No. G–11797, Petitioner will report the cost of the additional 400 horse-

power as a part of its cost report to be filed in Docket No. G–12580. As a result of the foregoing, Petitioner has installed at the Williams Compressor Station 400 horsepower less than authorized in Docket No. G–11797 and 400 horsepower more than authorized in Docket No. G–12580.

The minor reduction in compressor horsepower at the Vealmoor and Williams Compressor Stations will not impair Petitioner's ability to perform the services certificated for those installations in Docket No. G–11797. The construction phasing for the turbocharging at the Williams Compressor Station has not altered the cumulative horsepower authorized for installation at that location in Docket Nos. G–11797 and G–12580.

The Commission finds:

It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act to further amend the orders issued in Docket Nos. G–11797 and G–12580 to reflect changes in the construction of certain compressor facilities authorized therein, as hereinbefore described and as more fully described in the petition herein.

The Commission orders:

(A) The Commission's orders issued on March 26, 1958, in Docket No. G–11797, 19 FPC 393, and on November 27, 1959, in Docket No. G–12580, 22 FPC 900, as amended, be and the same are hereby further amended to reflect changes in the construction of certain compressor facilities authorized therein, as hereinbefore described and as more fully described in the petition herein.

(B) In all other respects said orders shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP61–30

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 26, 1962)

On November 20, 1961, Natural Gas Pipeline Company of America, 26 FPC 146, (Natural) filed a motion to amend the Commission's order of July 11, 1961, in Docket No. CP61–31, issuing a certificate of public convenience and necessity authorizing Movant to construct and operate facilities to increase the daily design sales capacity of its pipeline by 105,000 Mcf (on a billing basis of 1,000 Btu per cubic foot of gas).

The requested amendment would authorize the sale and delivery by Natural of an additional daily contract quantity of 5,400 Mcf of natural gas to Iowa Electric Light and Power Company (Iowa Electric) and an additional daily contract quantity of 19,000 Mcf of natural gas to Northern Indiana Public Service Company (Northern Indiana). These volumes would be in lieu of those authorized, i.e., zero volumes to Iowa Electric and 15,000 Mcf to Northern Indiana. The additional volumes of gas are to be made available, in part, from the expanded system capacity authorized in the above-entitled docket; and, in minor part (270 Mcf), from facilities authorized in Docket No. CP61–185. Both Iowa Electric and Northern Indiana are existing customers of Natural.

Due notice of the filing of the subject motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on February 27, 1962 (27 FR 1862). No protest or petition to intervene has been filed in this proceeding on the motion.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued on July 11, 1961, in Docket No. CP61–30, should be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued July 11, 1961, in Docket No. CP61–30 is hereby amended so as to permit Movant, Natural Gas Pipeline Company of America, to sell and deliver additional contract quantities of natural gas to Iowa Electric Light and Power Company in the amount of 5,400 Mcf per day and to Northern Indiana Public Service Company a total of 19,000 Mcf per day. These volumes are in lieu of, and supersede, those volumes originally authorized in said order. Service agreements containing these new volumes are to be given an effective date of December 1, 1961.

(B) In all other respects, the order issued July 11, 1961, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP61–186; SKELLY OIL COMPANY, DOCKET NO. CI61–601

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RELATED FPC GAS RATE SCHEDULES FOR FILING

(Issued March 26, 1962)

On January 6, 1961, as supplemented on October 20, 1961, Northern Natural Gas Company (Northern) filed in Docket No. CP61–186 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a 7,000 horsepower compressor station and a 10-inch pipeline tie-over to connect its existing 10-inch field line with its existing 16-inch transmission line, all in Lea County, New Mexico, and all as more fully set forth in the application, as supplemented.

On October 17, 1960, as supplemented on September 15, and October 18, 1961, Skelly Oil Company (Skelly) filed in Docket No. CI61–601 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of residue gas to Northern from Skelly's Eunice No. 1 and No. 2 Plants in Lea County, New Mexico, all as more fully set forth in the application, as supplemented.

Skelly and Northern have entered into an agreement wherein Skelly has agreed to sell and Northern has agreed to buy additional volumes of residue gas from Skelly's aforementioned natural gasoline extraction plants. Northern is not obligated to purchase in excess of 40,000 Mcf of gas per day above and beyond 6,000 Mcf per day presently dedicated.

Additional facilities are necessary for Northern to receive the additional gas into its transmission system. Northern proposes to use the additional gas to

supplement its total gas supplies for general distribution in its market area and does not propose to enlarge its system salable capacity nor make any additional sales. The proposed facilities are estimated to cost $2,206,880, and will be financed by Northern from funds on hand and cash generated through operations. Northern estimates that 104,881 Mcf of gas will be available to it under the contract.

Skelly has filed the gas sales contract, as amended, concurrently with the application and supplements thereto herein.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 15, 1962, respecting the matters involved in and the issues presented by the applications herein. No protests to the granting of the applications or petitions to intervene have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) Applicant, Skelly Oil Company, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities to be constructed by Northern, as hereinbefore described and as more fully described in the application, as supplemented, in Docket No. CP61–186, are proposed to be used in the sale and transportation of natural gas in interestate commerce, subject to the jurisdiction of the Commission, as integral parts of Northern's existing pipeline system and the construction and operation thereof by Northern are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sale of natural gas by Skelly to Northern, as hereinbefore described and as more fully described in the application, as supplemented, in Docket No. CI61–601, will be made for resale in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Skelly is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Northern and Skelly, respectively, are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed by Northern in Docket No. CP61–186 and the sale of natural gas proposed by Skelly in Docket No. CI61–601 are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter in Docket No. CP61–186 and the rights granted thereunder be conditioned upon Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record

and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Northern Natural Gas Company to construct and operate the facilities hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP61–186, for the transportation and sale of natural gas in interstate commerce as therein set forth, upon the terms and conditions of this order.

(B) The certificate issued by Paragraph (A) above and the rights granted thereunder are conditioned upon Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The time within which the facilities authorized in paragraph (A) above shall be completed and placed in actual operation is hereby fixed at six months from the date on which this order issues.

(D) A certificate of public convenience and necessity be and the same is hereby issued authorizing the sale by Skelly to Northern of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as hereinbefore described and as more fully described in the application, as supplemented, in Docket No. CI61–601.

(E) The grant of the certificate issued in paragraph (D) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificate.

(F) The related rate schedules listed below are accepted for filing to be effective on the date indicated. Such acceptance for filing shall not be construed as constituting approval by this Commission of any service, rate, charge, classification, nor any rule, regulation, or practice affecting such service or rate; nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate; and such acceptance is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending, or hereafter instituted by or against the Applicants involved. Further, in the event that any document comprising the listed rate schedule was executed on or after April 3, 1961, and contains provisions, either therein or by adoption of the terms and provisions of other agreements, for a change in rate other than those permitted by Section 154.93 of the Commission's Regulations under the Natural Gas Act, such rate

change provisions shall be inoperative and of no effect at law and any tendered rate change under such provisions will be rejected.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. G–14562; CONTINENTAL OIL COMPANY, DOCKET NO. G–13680; MAGNOLIA PETROLEUM COMPANY (SOCONY MOBIL OIL COMPANY, INC.), DOCKET NO. G–13827; NEWMONT OIL COMPANY, DOCKET NO. G–13948

ORDER REOPENING PROCEEDING AND SETTING DATE OF HEARING, PERMITTING FILING OF AMENDED APPLICATIONS AND DENYING REQUESTS FOR TEMPORARY AUTHORIZATION, FOR SEVERANCE AND FOR EXTENSION OF TIME FOR FILING EXCEPTIONS

(Issued March 26, 1962)

On January 8, 1962, the Presiding Examiner, after having heard the matters presented in the above-docketed applications, as amended, and briefs having been filed, issued his Initial Decision therein dismissing all of the applications. Tennessee Gas Transmission Company (Tennessee), in Docket No. G–14562, had sought authority to construct and operate facilities extending into the Gulf of Mexico off the coast of Louisiana so as to transport to its main transmission system natural gas to be produced by Tennessee in specified acreage in Vermilion and Cameron Parishes, Louisiana. Tennessee proposed to acquire this specified acreage under a so-called leasehold acquisition agreement from the remaining applicants herein.

On February 1, 1962, Tennessee filed a fourth supplement to its amended application in Docket No. G–14562 along with a motion to reopen the instant proceeding. Tennessee now seeks authority to construct and operate the same facilities heretofore requested but denied by the Examiner. However, instead of acquiring the aforesaid leaseholds and producing the gas, Tennessee now proposes to purchase the gas to be produced from said acreage, on a per Mcf basis from the producer-applicants herein.[1] The proposed initial price is 21.4¢ per Mcf at 15.025 psia with a 2¢ per Mcf periodic escalation every four years.

On February 2, 1962, Continental Oil Company (Continental) and Newmont Oil Company (Newmont) each filed an amendment to their respective docketed applications herein seeking authorization of the above sale to Tennessee. Both applicants, on the same date, also filed requests for the issuance of temporary authorization for the sale now proposed, stating that they would be willing to accept temporary authorization conditioned at a price level not below 19.5¢ per Mcf at 15.025 psia, provided that such condition applied only until a determination of a rate for the South Louisiana area is made in the proceeding in Docket

[1] Continental Oil Company, Socony Mobil Oil Company, Inc., and Newmont Oil Company (MCN).

Nos. AR61–2, *et al.*, or until a hearing is had on the now amended proposal and a decision rendered thereon. Conjunctively, a joint and several petition was filed by Continental and Newmont to reopen the instant proceeding along with a motion to sever their respective docketed applications herein and consolidate them with the South Louisiana area rate proceeding in Docket Nos. AR61–2, *et al.*

Similarly, Socony Mobil Oil Company, Inc. (Socony), filed on February 2, 1962, a petition to reopen the instant proceeding along with a motion to sever its docketed application in this proceeding and consolidate it with Docket Nos. AR61–2, *et al.*, *supra*. On February 8, 1962, Socony also filed an amendment to its docketed application herein along with a request for temporary authorization. Socony seeks the same authorization and relief as that now being sought by Continental and Newmont.

Answers in opposition to one or more of the aforesaid pleadings were filed by United Gas Improvement, Long Island Lighting Company and Public Service Commission of the State of New York, all interveners herein. All of these answers put the initial price, proposed in the amended filings, in issue.

We also note that exceptions were filed by the Pennsylvania Public Utilities Commission and the staff of this Commission to that part of the Examiner's Initial Decision wherein the Examiner found:

> * * * The evidence in this proceeding adduced by Tennessee, and taken as evidence adduced by Tennessee on its behalf and on behalf of the MCN companies, is sufficient to prove that a per-Mcf sale of the Blocks 46 and 64 gas involved in the contract of August 26, 1960, at an initial price of 19.5 cents per Mcf at 15.025 psia is in accordance with the public interest and is required by the public convenience and necessity.[2]

In this regard, requests for the extension of time in which to file exceptions to the Examiner's Decision were filed on February 28, 1962, by the interveners, Consolidated Natural Gas System Companies,[3] Public Service Electric and Gas Company and the Columbia Companies.[4]

The Commission finds:

(1) The matters now presented in this proceeding are interrelated and should be heard on a consolidated basis.

(2) Sufficient cause has not been shown why Docket Nos. G–13680, G–13827, and G–13948 should be consolidated with Docket Nos. AR61–2, *et al.*

(3) Good and sufficient reasons have not been shown why temporary authorization should be granted to Continental, Socony, and Newmont.

(4) The manner now proposed for the acquisition of the MCN gas is materially different from the manner previously proposed and disposed of by the Examiner in his Initial Decision of January 8, 1962, in these dockets. In view of our acceptance of these amended filings, the matters disposed of by the Examiner are no longer before us.

The Commission orders:

(A) The motions for severance filed by Continental, Socony, and Newmont are hereby denied.

---

[2] Initial Decision, Finding (5).

[3] The East Ohio Gas Company, Hope Natural Gas Company, Lake Shore Pipe Line Company, New York State Natural Gas Corporation, and The Peoples Natural Gas Company.

[4] United Fuel Gas Company, The Manufacturers Light and Heat Company, and The Ohio Fuel Gas Company.

(B) The motions for consolidation of Docket Nos. G–13680, G–13827, and G–13948 with Docket Nos. AR61–2, *et al.*, are hereby denied.

(C) The requests for temporary authorization filed by Continental, Socony, and Newmont in their respective docketed applications are hereby denied.

(D) The requests for an extension of time in which to file exceptions are hereby denied.

(E) The proceeding in Docket Nos. G–14562, G–13680, G–13827, and G–13948 is reopened and remanded to the Presiding Examiner for further hearing.

(F) A hearing be held in this reopened proceeding commencing on May 14, 1962, at 10:00 a.m. (e.d.s.t.), in a hearing room of the Federal Power Commission, 441 G St., NW., Washington, D.C. All parties heretofore permitted to intervene in these docketed applications are deemed interveners in the reopened proceeding. Further protests or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) on or before April 16, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP61–194: NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP61–198; TOWN OF LIBERTY, MISSISSIPPI, DOCKET NO. CP61–208; THE WIND GAP DIVISION OF BANGOR GAS COMPANY, DOCKET NO. CP61–222; THE HUGHESVILLE DIVISION OF JERSEY SHORE GAS & HEATING COMPANY, DOCKET NO. CP61–223; NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP61–237; TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP61–238; NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP61–238; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP61–238

ORDER DENYING WITHDRAWAL OF PLEADINGS

(Issued March 26, 1962)

These proceedings were initiated on January 23, 1961, with the filing by Transcontinental Gas Pipe-Line Corporation (Transco) at Docket No. CP61–194 and New York State Natural Gas Corporation (New York Natural) at Docket No. CP61–198 of separate applications for certificates of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act. By notice dated July 19, 1961, those two applications were consolidated with five other Section 7 matters and the consolidated proceeding was set down for hearing to commence on September 25, 1961.

In conformance with the notice of July 19, 1961, three pipeline companies, namely, Tennessee Gas Transmission Company (Tennessee), Southern Natural Gas Company (Southern), and Atlantic Seaboard Corporation (Seaboard) and 18 distribution companies filed petitions, and were permitted, to intervene. Notices of intervention were filed by two state commissions. The names of some 50 attorneys appear of record and it may be concluded that including counsel, witnesses, technicians and others, well over 100 persons have been required to devote some or all of their time and attention to this proceeding.

Except for Tennessee, all of the interveners favored the granting of the authorizations sought or, at least, did not oppose such requested authorizations.

Tennessee intervened in Docket Nos. CP61-194, CP61-198, CP61-237 and CP61-238, alleging an interest based on "competition." Tennessee further alleged that the storage proposals here involved are but another step towards ultimately excluding Tennessee from participation in the growth of the Philadelphia, New Jersey, and New York City market areas presently served concurrently by the two pipeline applicants and by Tennessee; that "Consolidated", (Consolidated Natural Gas System, the parent company of New York Natural) "has more than ample storage capacity to satisfy its storage needs for the present and indefinite future;" that "New York Natural has excess storage capacity in its presently developed storage pools which is more than ample to cover the proposed service;" and that "it appears that Consolidated and New York Natural have agreed * * * to purchase * * * ACQ gas from Texas Eastern and Transco with provisions to buy * * * more, while at the same time cutting back on lower priced gas from Tennessee" to the "financial injury" of Tennessee.

Tennessee did not present a direct case but participated quite extensively in the cross-examination of all but one of New York Natural's witnesses. The hearing was concluded on November 2, 1961.

A motion by Transco to omit the intermediate decision procedure was opposed by Tennessee and denied by the Commission.

Thereafter, briefs were filed by New York Natural, Transco, Tennessee, a number of the distributor applicants and Staff counsel. Tennessee filed a 95-page brief strenuously opposing the issuance of the certificates sought by New York Natural at Docket Nos. CP61-198, CP61-237, and CP61-238 and those sought by Transco at Docket Nos. CP61-194 and CP61-238. In that brief Tennesse referred to Transco in the following language:

> Obviously, Transco by its own admission is using the device of now requesting facilities for which it has no need. Of course, these excess facilities will be reflected as part of Tranco's rate base cost. Present customers will thus pay for them without any concomitant use, all contrary to the public interest. The next step in the device will be to seek authority to use such excess facilities to provide some further service with the supporting claim that no facilities are needed to render that service.
>
> Effective regulation must condemn any such practice, particularly when such a device places one pipeline in a position to render service in the New York-New Jersey area without the necessity of asking for further certificate authority to build additional facilities and a competitor to render like service must obtain that authority and build the required facilities. Such a device falls at least within the periphery of unfair competition.

On February 15, 1962, Tennessee filed with the Commission a document as follows:

NOTICE OF WITHDRAWAL

> Tennessee Gas Transmission Company (Tennessee), pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure, hereby withdraws from further participation in the above-captioned proceedings. In addition, Tennessee hereby requests permission to withdraw all pleadings it has heretofore filed in the above-captioned proceedings.

Section 1.11(d) of the Commission's Rules of Practice and Procedure provides that a notice of withdrawal shall set forth the reasons therefor and requires the express permission of the Commission to withdraw any pleading in any proceeding in which a hearing has been commenced.

The Presiding Examiner issued his decision in these proceedings on March 2, 1962. In Footnote No. 1 on Page 5 of his decision, the Examiner takes cognizance of Tennessee's filing and states that his decision was in the final stages of

preparation at the time of this filing and that Tennessee's position, as reflected in its 98-page brief, and elsewhere, had been carefully analyzed. The Examiner states that his decision disposes of the issues presented as of the time of the hearing and that Tennessee's withdrawal does not alter the results so reached.

Contrary to the requirement of Section 1.11(d) of the Commission's Rules, Tennessee's notice of withdrawal does not set forth therein any reason therefor. Before, during and after the hearings, Tennessee has consistently opposed the grant of the instant applications. Tennessee has made serious charges in these proceedings in an attempt to show that the grant of the applications is not in the public interest. The record has been made, and as evidenced by the presiding examiner's decision, Tennessee's charges were given serious consideration. When delivery is thus imminent it is too late to abort.

After its persistent efforts extending over such a prolonged period of time, it is difficult to understand how the public interest can now be served by permitting Tennessee to withdraw. That the conditions which up to February 15, 1962, Tennessee claimed to exist could have disappeared so quickly, if they previously existed, seems doubtful. We believe that this case is ripe for decision and must be decided on the basis of the record made.

The Commission orders:

Tennessee's request to withdraw all pleadings it has heretofore filed in these proceedings be and the same hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. G–19040, G–19041, RP61–23 AND RP62–6

ORDER DENYING MOTION FOR ORDER FIXING HEARING AND PRESCRIBING PROCEDURE

(Issued March 27, 1962)

On February 27, 1962, Northern Natural Gas Company (Northern) the respondent in these consolidated proceedings,[1] filed a motion requesting the Commission to fix a date certain for a hearing to be held for the limited purpose of requiring Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., Upper Lake Docks Coal Bureau, Inc., and The Chesapeake and Ohio Railway Company (Coal Interveners) to support by substantial evidence, prior to their further participation in any conferences or hearings in these proceedings, the allegations of possible aggrievement and economic injury set forth in the petition to intervene filed by the Coal Interveners in these proceedings. Numerous answers in support of Nothern's motion were filed by customers of Northern.

On March 9, 1962, the Coal Intervenors filed their answer in opposition to Northern's motion in which they aver that "this is but another in a series of attempts by Movant to force the Coal Intervenors to present evidence prematurely on an issue the Presiding Examiner and the Commission have held was raised by Movant and as to which Movant has the burden both as to proceeding

[1] These proceedings now involve only the issue of rate design as it applies to the relative levels of the commodity charges and demand charges of the rates provided for in the settlement agreement approved by order of the Commission issued December 21, 1961, 26 FPC 901.

and proof. See 23 FPC 580; 23 FPC 708; 22 FPC 164 at 177." [2] We agree with the Coal Interveners that the present motion filed by Northern is designed to achieve substantially the same result as its motion filed herein on July 21, 1961, and which we denied by order issued August 21, 1961.

In the order issued herein on December 21, 1961, aforementioned, we provided for further hearing on the issue of rate design. On February 23, 1962, a notice was issued reconvening the hearing for said purpose on March 27, 1962. At said hearing Northern or its customers may rest, or may desire to present further evidence on the issue of rate design.[3] In any event the Natural Gas Act (Act) places the burden of supporting the proposed design of rates upon Northern. Thereafter, the submission of evidence to support any contention that the proposed design of rates would cause them aggrievement and economic injury may be made by the Coal Interveners. To grant Northern's motion would be contrary to the requirements of the Act and would disrupt the orderly procedure of the hearing.

The Commission finds:

Due and timely administration of the Commission's functions under the Natural Gas Act require that the motion filed by Northern herein on February 27, 1962, be denied.

The Commission orders:

The motion filed herein by Northern on February 27, 1962 be, and the same is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP62-123

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1962)

On November 16, 1961, Cities Service Gas Company (Applicant) filed in Docket No. CP62-123 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain minor "budget-type" facilities during the calendar year 1962, including branch lines and meter and regulator equipment, to make miscellaneous temporary and permanent direct sales of natural gas from Applicant's existing pipeline system, all as more fully set forth in the application.

The maximum total cost of the facilities for which authorization is sought is $97,500, with no individual project to exceed a cost of $15,000. The cost of said facilities will be paid out of treasury cash.

Applicant estimates that it will have approximately 15 requests for temporary sales in 1962 by road construction contractors and other operators of temporary plant locations, with each request involving an estimated average sale of 35,000 Mcf of gas annually and an average cost to Applicant of approximately $2,500 per installation required for such sale.

Also, Applicant anticipates aproximately 30 requests for direct sales to consumers on a permanent basis, each request involving an average sales volume of

---

[2] Footnote omitted.

[3] It is not here intended to preclude the parties from conferring on possible settlement of the issue involved.

approximately 81,000 Mcf of gas annually and an average cost of approximately $2,000 per instalaltion.

The estimated total volume of gas involved under this application for a maximum of 45 customers is 2,955,000 Mcf of gas, all fully interruptible, with minor exceptions, which volumes will not appreciably affect Applicant's gas reserves or service to existing customers.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 20, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction during the calendar year 1962 and the operation of the facilities and delivery of natural gas as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The authorization granted hereinafter should be limited to construction during the calendar year 1962, and the total expenditures for facilities authorized to be constructed should be limited to a maximum of $97,500, with no single project to exceed a cost of $15,000. Further, this authorization should limit sales to not more than 15 direct industrial customers on a temporary basis, and not more than 30 new direct industrial customers on a permanent basis, with the total volume of natural gas authorized not to exceed 2,955,000 Mcf per year.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit on or before March 1, 1963, a statement under oath showing (a) complete information as to the actual construction, (b) the cost of each installation, (c) name and location of each customer, (d) actual facilities installed for each customer, (e) expected date of termination of service to temporary customers, (f) expected annual revenues, and (g) expected annual deliveries to each customer.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Cities Service Gas Company to construct and operate natural gas facilities and to sell natural gas as hereinbefore described, and as more fully described in the application in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities authorized to be constructed are hereby limited to a maximum of $97,500, with no single project to exceed a cost of $15,000. Further, sales of natural gas under this authorization are hereby limited to not more than 15 direct industrial customers on a temporary basis, and not more than 30 new direct industrial customers on a permanent basis, with the total volume of natural gas involved not to exceed 2,955,000 Mcf per year.

(D) Applicant shall submit on or before March 1, 1963, a statement under oath showing (a) complete information as to actual construction, (b) cost of each installation, (c) name and location of each customer, (d) actual facilities installed for each customer, (e) expected date of termination of service to temporary customers, (f) expected annual revenues, and (g) expected annual deliveries to each customer.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7024

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTAGE BONDS

(Issued March 28, 1962)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of California, Oregon, Washington, Wyoming, Montana and Idaho, with its principal business office at Portland, Oregon, filed an application on February 19, 1962, as supplemented on February 27 and March 8 and 13, 1962, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of $35,000,000 principal amount of First Mortgage Bonds, due 1992, to be sold at competitive bidding.

Applicant proposes to issue the Bonds under its Indenture of Mortgage and Deed of Trust, dated as of July 1, 1947, to Guaranty Trust Company of New York (now Morgan Guaranty Trust Company of New York) and Oliver R. Brooks (Wesley L. Baker, successor) as trustees, as heretofore supplemented and as to be further supplemented by a proposed Thirteenth Supplemental Indenture to be dated as of April 1, 1962.

On or about March 29, 1962, Applicant proposes to invite sealed, written bids for the purchase of the Bonds, by newspaper publication and by distribution of a Form of Bid, together with a statement of the terms and conditions relating thereto and a recital of the terms of purchase which will constitute the purchase

agreement herein. All bids, whether from a single bidder or from a group of bidders, must be submitted on the Form of Bid provided by the Applicant and each counterpart must be signed by the bidder, or by the representative in the case of a group of bidders. Each bid must be for the purchase of all the Bonds and must specify: the coupon rate, which shall be a multiple of ⅛th of 1 percent; the price exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be not less than 98½% nor more than 102¾% of the principal amount thereof; and, that Applicant shall be paid the amount of the accrued interest on the Bonds from April 1, 1962, to the date of payment therefor and delivery thereof. Each bid must be accompanied by a certified or official bank check or checks in the aggregate amount of $1,050,000, payable in New York Clearing House funds.

Unless postponed all bids for the proposed issuance of Bonds must be presented to Applicant before 11:00 a.m., New York Time, on April 11, 1962, at Room 2033, Two Rector Street, New York 6, New York. Unless Applicant rejects all bids, which it reserves the right to do, or excludes a bid or bids for reasons specified in the statement of the terms and conditions, it will accept the bid which will provide it with the lowest annual cost of money.

Applicant will utilize the proceeds of approximately $35,000,000 to be obtained from the proposed issuance of Bonds, together with proceeds of approximately $19,900,000 to be obtained from the proposed issuance of additional Common Stock (Docket No. E–7025), to repay an estimated $42,000,000, principal amount of Promissory Notes, which Applicant has already issued or will have issued under the authority granted by this Commission in Docket No. E–7011,[1] and toward the cost of its current construction program, which is expected to require the expenditure of approximately $44,000,000 for 1962 and $56,000,000 for 1963.

Applicant's estimated construction expenditures for 1962 and 1963 include $250,000 for completion of the Iron Gate Hydroelectric project in 1962, and $3,000,000 in 1962 and $15,000,000 in 1963 for installation of a 150,000 kw unit at the Dave Johnston Steam Plant at Glenrock, Wyoming. Applicant allocates $5,500,000 to the Salt Caves Hydroelectric project—subject to obtaining required regulatory authority permits. Other items, for 1962 and 1963, respectively, are: electric transmission facilities, $14,265,000 and $6,600,000; other facilities, $5,031,000 and $4,500,000; electric distribution facilities, $15,383,000 and $17,000,000; additions to steam heating, water and telephone utility systems, $1,827,000 and $1,540,000; and, other plant facilities, surveys and investigations, $1,845,000 and $5,160,000.

Written notice of the application has been given to the Public Utilities Commission of California, the Idaho Public Utilities Commission, the Public Service Commission of Montana, the Public Utility Commissioner of Oregon, the Washington Utilities and Transportation Commission, and the Public Service Commis-

---

[1] By order issued October 6, 1961, in Docket No. E–7011, Applicant was authorized to issue up to $45,000,000, principal amount of Promissory Notes, under a Credit Agreement of August 15, 1961, between Applicant and various banks. The notes were to be dated as of the dates of the borrowings; were to mature eleven months after dates or on March 31, 1963, whichever should be earlier; and, were to bear interest at the New York prime rate. The notes were to be issued for the following purposes: to discharge notes aggregating $10,000,000 issued by The California Oregon Power Company and assumed by Applicant in the merger of California Oregon into Applicant; to discharge notes aggregating $18,000,000 issued by Applicant to obtain construction funds; and, to provide additional funds required for Applicant's construction program. The application for the issuance of the notes stated that Applicant's construction program had an estimated cost of $30,034,000 in the last six months of 1961 and an estimated cost of $12,000,000 in the first three months of 1962.

sion of Wyoming, and to the Governor of each of those States. Notice of the application has also been given by publication in the Federal Register on March 8, 1962 (27 FR 2259), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before March 21, 1962 with the Federal Power Commission, Washington 25, D.C. No protest or petition or request to be heard in opposition to the granting of the application has been received.

On March 13, 1962, the Public Utilities Commission of California; on March 6, 1962, the Idaho Public Utilities Commission; on March 7, 1962, the Public Service Commission of Montana; on March 16, 1962, the Public Utility Commissioner of Oregon; on March 16, 1962, the Washington Utilities and Transportation Commission; and, on March 8, 1962, the Public Service Commission of Wyoming approved the proposed issuance of $35,000,000 principal amount of bonds, in the manner and for the purposes set forth above.

The Commission finds:

(1) Applicant, a Maine corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is transmitted between the States of Oregon and Washington, from the State of Oregon to the State of California, and between the States of Montana and Wyoming, and is consumed outside the States in which it is generated. These facilities are in addition to and do not include facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant is, therefore, a public utility within the meaning of that term as used in Section 204 of the Federal Power Act.

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the

Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 60 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Commissioner Morgan *dissents* on the grounds that the period of public notice was unreasonably short, that the notice of application was deficient and that the construction of one of the facilities to be financed from the proceeds of the securities authorized herein—the Oregon-California inter-tie as proposed by Applicant—has not been shown to be compatible with the public interest and should not be authorized pending policy decisions relative to such an inter-tie scheduled by the current session of the Congress. A Commission opinion and Commissioner Morgan's dissent will be issued later.[2]

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E–7025.

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued March 28, 1962)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of California, Oregon, Washington, Wyoming, Montana and Idaho, with its principal business office at Portland, Oregon, filed an application on February 19, 1962, as supplemented on February 27 and March 8 and 13, 1962, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of up to 696,695 shares of Common Stock, par value $3.25 per share.

Applicant proposes to offer up to 696,695 additional shares of Common Stock to its Common Stockholders of record at the close of business on March 26, 1962, for subscription on the basis of one share of additional Common Stock for each twenty shares of outstanding Common Stock held on such record date, with a supplementary subscription privilege if the number of shares held on the record date is not evenly divisible by twenty or is less than twenty. Rights to subscribe for the additional Common Stock will be evidenced by transferable subscription warrants. The subscription price per share will be determined by Applicant's Board of Directors shortly before the proposed offering date, and will be fixed in relation to, and at an appropriate discount from the then market price of Applicant's presently issued and outstanding Common Stock. The subscription offer will expire at 3:30 p.m., New York Time, on May 1, 1962. In addition, Applicant proposes to sell to underwriters any shares of additional

---

[2] Commission opinion, No. 354, printed on p. 623; Commissioner Morgan's dissent appears at p. 631.

Common Stock for which Applicant's Common Stockholders do not subscribe, at the same price at which shares of additional Common Stock will be offered under the subscription offer, and to fix by competitive bidding the compensation of the underwriters for their commitments to purchase the unsubscribed Stock.

On or about March 29, 1962, Applicant proposes to invite sealed, written bids for the purchase of the unsubscribed Stock by newspaper publication and by distribution of a form of bid and a form of purchase agreement, together with a statement of terms and conditions relating thereto. All bids, whether from a single bidder or a group of bidders, must be on the form of bid furnished by Applicant and must be for the purchase of all of the unsubscribed Stock. Each bid must specify, among other things, (1) the price per share to be paid to Applicant for the unsubscribed Stock, which price shall be the same as the subscription price to Applicant's Common Stockholders; and, (2) the aggregate amount to be paid by Applicant to the bidder or bidders as compensation for their commitments and obligations in connection with the purchase by them of the unsubscribed Stock.

Unless postponed, all bids for the purchase of the unsubscribed Stock must be submitted to Applicant at Room 2033, Two Rector Street, New York 6, New York, before 11:00 a.m., New York Time, on April 5, 1962. Each bid must be accompanied by a certified or official bank check or checks in the aggregate amount of $250,000, payable in New York Clearing House funds. Each of the bidders must agree that in case any shares of unsubscribed Stock are acquired and sold prior to the expiration of thirty days following the day upon which the subscription period expires for a price in excess of the purchase price plus $1.00 per share, the bidder will pay to the Applicant, in addition to the purchase price, a sum equal to 50% of such excess. Unless Applicant rejects all bids, which it reserves the right to do, or excludes a bid or bids for reasons specified in the statement of terms and conditions relating to bids, Applicant will accept the bid which provides for the lowest aggregate amount of compensation to be paid by Applicant to the bidder or group of bidders.

Applicant will utilize the proceeds of approximately $19,900,000 to be obtained from the proposed issuance of additional Common Stock, together with proceeds of approximately $35,000,000, to be obtained from the proposed issuance of First Mortgage Bonds (Docket No. E–7024), to repay an estimated $42,000,000, principal amount of Promissory Notes, which Applicant has already issued or will have issued under the authority granted by this Commission in Docket No. E–7011,[1] and toward the cost of its current construction program, which is expected to require the expenditure of approximately $44,000,000 for 1962 and $56,000,000 for 1963.

Applicant's estimated construction expenditures for 1962 and 1963 include $250,000 for completion of the Iron Gate Hydroelectric Project in 1962, and

[1] By order issued October 6, 1961, in Docket No. E–7011, Applicant was authorized to issue up to $45,000,000, principal amount of Promissory Notes, under a Credit Agreement of August 15, 1961 between Applicant and various banks. The notes were to be dated as of the dates of the borrowings; were to mature eleven months after dates or on March 31, 1963, whichever should be earlier; and, were to bear interest at the New York prime rate. The notes were to be issued for the following purposes: to discharge notes aggregating $10,000,000 issued by The California Oregon Power Company and assumed by Applicant in the merger of California Oregon into applicant; to discharge notes aggregating $18,000,000 issued by Applicant to obtain construction funds; and, to provide additional funds required for Applicant's construction program. The application for the issuance of the notes stated that Applicant's construction program had an estimated cost of $30,034,000 in the last six months of 1961 and an estimated cost of $12,000,000 in the first three months of 1962.

$3,000,000 in 1962 and $15,000,000 in 1963 for installation of a 150,000 KW unit at the Dave Johnston Steam Plant at Glenrock, Wyoming. Applicant allocates $5,500,000 to the Salt Caves Hydroelectric Project—subject to obtaining required regulatory authority permits. Other items, for 1962 and 1963, respectively, are: electric transmission facilities, $14,265,000 and $6,600,000; other facilities, $5,031,000 and $4,500,000; electric distribution facilities, $15,383,000 and $17,000,000; additions to steam heating, water and telephone utility systems, $1,827,000 and $1,540,000; and, other plant facilities, surveys and investigations, $1,845,000 and $5,160,000.

Written notice of the application has been given to the Public Utilities Commission of California, the Idaho Public Utilities Commission, the Public Service Commission of Montana, the Public Utility Commissioner of Oregon, the Washington Utilities and Transportation Commission, and the Public Service Commission of Wyoming, and to the Governor of each of those States. Notice of the application has also been given by publication in the Federal Register on March 8, 1962 (27 FR 2259), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before March 21, 1962 with the Federal Power Commission, Washington 25, D.C. No protest or petition or request to be heard in opposition to the granting of the application has been received.

On March 13, 1962, the Public Utilities Commission of California; on March 7, 1962, the Idaho Public Utilities Commission; on March 6, 1962, the Public Service Commission of Montana; on March 16, 1962, the Public Utility Commissioner of Oregon; on March 16, 1962, the Washington Utilities and Transportation Commission; and on March 9, 1962, the Public Service Commission of Wyoming approved the proposed issuance and sale of Common Stock by Applicant in the manner and for the purposes described above.

The Commission finds:

(1) Applicant, a Maine corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is transmitted between the States of Oregon and Washington, from the State of Oregon to the State of California, and between the States of Montana and Wyoming, and is consumed outside of the States in which it is generated. These facilities are in addition to and do not include facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant is, therefore, a public utility within the meaning of that term as used in Section 204 of the Federal Power Act.

(2) The proposed issuance of Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of Common Stock is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Common Stock, upon the terms and conditions and for the purposes specified in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Common Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of the Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegram as contemplated by Section 34.9 of the Regulations;

(ii) The Commission, by further order, shall have approved the subscription price per share to be received by Applicant for the Common Stock and the compensation to be paid to underwriters under the proposed arrangement as described above.

(C) This authorization shall expire unless the transactions hereby authorized are consummated within 60 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of costs, or any other matter whatsoever which is now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Commissioner Morgan *dissents* on the grounds that the period of public notice was unreasonably short, that the notice of application was deficient and that the construction of one of the facilities to be financed from the proceeds of the securities authorized herein—the Oregon-California inter-tie as proposed by Applicant—has not been shown to be compatible with the public interest and should not be authorized pending policy decisions relative to such an inter-tie scheduled by the current session of the Congress. A Commission opinion and Commissioner Morgan's dissent will be issued later.[2]

PACIFIC POWER & LIGHT COMPANY, DOCKET NOS. E-7024 AND E-7025

OPINION ON AUTHORIZING ISSUANCE OF SECURITIES

(Issued April 17, 1962)*

Syllabus

1. Commission *finds* issuance of securities herein compatible with the public interest and emphasizes its lack of jurisdiction over construction of facilities by private electric companies. P. 625.
2. Finding the plain purpose of Sec. 204 is to prevent issuance of securities which might impair a company's financial integrity or ability to perform its public

* Designated Commission Opinion No. *354*.

[2] Commission's opinion No. 354 printed next below. Commissioner Morgan's dissent appears at p. 631. Further dissent by Commissioner Morgan *infra* p. 1388.

utility responsibilities, Commission states that in testing a security issue by statutory standards it must be satisfied that object is lawful and within corporate purposes. P. 626, 628.

3. Commission puts aside consideration of political controversy concerning disposition of Bonneville surplus, noting it is not for this Commission to exercise role of Congress as arbiter of such matters since Congress has yet to delegate that authority. P. 628.
4. Discussing contention that construction of line at 500 kv represents a "gamble," Commission observes that any anticipation of future growth is a gamble, and failure to anticipate such growth may be a worse gamble. P. 628.
5. Company decision to prepare line for possible future availability of Bonneville power found an exercise of business and managerial judgment for which Commission should not substitute its own. P. 629.
6. Considering the facts currently before it, Commission finds it would be a serious abuse of power to require a hearing and thus delay this security issue. P. 629.
7. Notice found adequate, not unreasonably short, and in no wise inconsistent with regular practice in these matters. P. 630.
8. Approval of securities is not tantamount to approval of Klamath Falls line, or any other facility, and implies no opinion or conclusion on question whether, how or by whom Bonneville power should be transmitted to California. P. 630.
9. Commission *authorizes* issuance of securities under Section 204 of the Federal Power Act. P. 623; 630.

Commissioner Morgan *dissenting.*
Commissioner Woodward *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

By the Commission.

The central question in this case is whether, under Section 204 of the Federal Power Act,[1] approval of the security issues proposed by Pacific Power and Light Company should have been withheld because one of the many facilities to be financed thereby, the northern half of a transmission line running a distance of approximately 110 miles from Klamath Falls, Oregon, to Round Mountain, California, is to be designed and constructed so that it can be operated at 500 kv when and if 500 kv terminal facilities are provided, although it is to be operated initially at only 230 kv. There is no question that the line is fully justified as a 230 kv line.[2] The narrow issue, therefore, is whether, in exercising our jurisdic-

[1] The pertinent language of that Section, contained in Subsection (a) thereof, is as follows:

> No public utility shall issue any security, or assume any obligation or liability as guarantor, indorser, surety, or otherwise in respect of any security of another person, unless and until, and then only to the extent that, upon application by the public utility, the Commission by order authorizes such issue or assumption of liability. The Commission shall make such order only if it finds that such issue or assumption (a) is for some lawful object, within the corporate purposes of the applicant and compatible with the public interest, which is necessary or appropriate for or consistent with the proper performance by the applicant of service as a public utility and which will not impair its ability to perform that service, and (b) is reasonably necessary or appropriate for such purposes. * * *

[2] "All state and federal authorities are agreed that a 230 kv line is justified and would be useful in the proposed location" (dissenting opinion).

tion over security issues, we should make an independent assessment of the wisdom of the decision of management to invest now the additional amounts required to construct the facility in such a way as to enable it to be operated at a higher voltage in the future.

On February 19, 1962, Pacific Power and Light Company (Applicant) filed applications for authorization to issue $35,000,000 principal amount of first mortgage bonds and up to 696,695 shares of common stock, par value of $3.25 per share.[3] Applicant will use the proceeds of approximately $19,900,000[4] to be obtained from the issuance of the common stock, together with the proceeds of the bonds, to repay $42,000,000 in promissory notes and will apply the balance toward the cost of its present construction program, which is expected to require the expenditure of approximately $44,000,000 for 1962 and $56,000,000 for 1963. Applicant is a successful enterprise, with over $189,000,000 of capital stock and surplus in a total capitalization of $584,499,000, as of December 31, 1961.

Applicant's 1962–1963 construction program is composed of a multiplicity of items, including hydroelectric projects, a new generating unit in a steam plant, electric distribution facilities, additions to steam heating and water and telephone utility systems, and ten transmission lines. Of the total program for 1962–1963, amounting to $100,000,000, $5,000,000 will be used for the Klamath Falls-Round Mountain line.[5] A substantially smaller amount, estimated at $1,500,000, is attributable to the extra cost involved in building the line in such a way that its capacity can subsequently be enlarged by conversion to 500 kv. The line in question will interconnect with the system of Pacific Gas & Electric Company, which will build the southern portion. The record indicates that the new intertie will provide for the exchange of energy between the two systems and will be available for use by the Bonneville Power Administration or other utility companies in the Pacific Northwest. A letter-agreement between Pacific Power and Light and Pacific Gas & Electric, dated January 5, 1962, and filed with the Commission as a rate schedule for each company, provides for the building of a 500 kv intertie to be operated at 230 kv until such time as both parties agree that 500 kv operation is economically justified, and for the sale and exchange of electric services.[6]

Our staff made a careful examination of the applications and the attached exhibits and filed a detailed report with the Commission recommending that they be approved.[7] There were no petitions to intervene in these proceedings, and no timely objections to the applications were received from any source. The security issues had the prior approval of the state utilities commissions of California, Oregon, Washington, Wyoming, Montana and Idaho. The matter was considered at length by this Commission at its meeting of March 23, 1962. On the basis of the applications and the staff's recommendations, and in light of the policy of the Commission to encourage public utilities under its jurisdiction to anticipate future loads and to establish and strengthen inter-regional

---

[3] The applications were supplemented on February 27, March 8, and March 13, 1962.

[4] This was the estimate at the time of our approval of the initial order for the additional shares of common stock. By reason of a decline in the market price of the Applicant's outstanding common stock, the additional shares of common stock produced net proceeds of about $18,000,000.

[5] In using this term, we refer to the northern half of the line, *i.e.*, the portion which Applicant will build.

[6] The filing was completed on February 23, 1962. By letters of March 30, 1962, we allowed the rate schedules to go into effect as of the following day. We note that the January 5 letter-agreement is attached as Exhibit F to the dissenting opinion.

[7] We reject the suggestion in the dissenting opinion that the Commission was importuned to make undue haste in its disposition of the applications.

transmission interconnections, a majority of the members were satisfied that the statutory standards had been met and that the purposes for which the securities were being issued were compatible with the public interest. However, in order to give further consideration to Commissioner Morgan's differing view, it was decided to postpone final action until the next meeting. At the Commission meeting of March 28, 1962, the applications were once again the subject of extended discussion. All members adhered to their earlier views and on March 28, 1962 we issued orders authorizing the proposed security issues.

It should be emphasized that the surveillance exercised by the Commission under Section 204 is far more limited in scope than that we would exercise if, for example, we were issuing certificates of public convenience and necessity for the construction of facilities. Congress has *not* given the Commission certificate jurisdiction in this area. Indeed, a provision which would have granted us such authority was deleted from H.R. 5423, one of the bills which culminated in the Federal Power Act. In explaining this deletion, the relevant committee report pointed out that:

> While it may ultimately be found desirable to adopt a provision of this kind, the Committee is of the opinion that for the present there is no imminent danger of excessive extensions that would prove disadvantageous to consumers.[8]

The specific provisions of Section 204 make it a particularly unsuitable vehicle for comprehensive licensing-type regulation such as that exercised by this Commission under Section 7 of the Natural Gas Act. Under its provisions, for example, had Applicant elected to finance the construction of its transmission facility out of surplus or from the proceeds of a short-term loan, it could have built the line without so much as notifying the Commission. Again, subsection (f) of Section 204 specifically exempts those companies "organized and operating in a State under the laws of which its security issues are regulated by a State commission." By virtue of this provision, this Commission would have had no jurisdiction over the present security issues if Applicant had happened to be incorporated not in Maine but in one of the states in which it operates and in which security issues of domestic utilities are subject to scrutiny by the state commission. Thus, any securities issued by the company building the southern half of the Kalmath Falls-Round Mountain line would not come before this Commission. Furthermore, under Section 318, a security issue which is subject to the regulation of the Securities and Exchange Commission under the Public Utility Holding Act is withdrawn from the jurisdiction of this Commission. Under Section 204(e) our authority is further restricted, for it does not extend to notes of less than a year's maturity aggregating less than 5% of the company's outstanding securities. If Congress had intended Section 204 to do service as a grant of certificating authority, it would hardly have confined the exercise of that authority to the relatively few companies which are not exempted from that Section.

The plain purpose of Section 204 is to prevent the issuance of securities which might impair the company's financial integrity or its ability to perform its public utility responsibilities. The Senate Committee report on the bill which included the present Section 204 stressed that "control over capitalization of operating utilities is plainly an essential means of safeguarding the public against unsound financial practices which make impossible the proper and most economic performance of public utility functions."[9] The concern with "financial

[8] Senate Report No. 621, Senate Committee on Interstate Commerce, 74th Cong., 1st Sess. (1935), p. 20.

[9] See Senate Report No. 621, Senate Committee on Interstate Commerce, 74th Cong., 1st Sess. (1935), p. 50.

practices" is further indicated by the fact that the criteria for approval of security issues in Section 204(a) are copied almost verbatim from Section 20a of the Interstate Commerce Act,[10] a measure which was enacted as part of the Transportation Act of 1920 in an effort to put an end to abuses which had threatened many railroads with bankruptcy. For several years prior to 1920, the Interstate Commerce Commission, in response to resolutions passed by the Senate and requests by the House of Representatives, had conducted numerous investigations in the financial dealings of certain carriers. The theme of its diagnosis of the railroad problem was that "a most prolific source of financial disaster and complication to railroads in the past has been the desire and ability of railroad managers to engage in enterprises outside the legitimate operation of their railroads, especially by the acquisition of other railroads and their securities." [11] It was to cure this evil that the Commission recommended that "every interstate railroad should be prohibited from expending money or incurring liability or acquiring property not in the operation of its railroad or in the legitimate improvement, extension or development of that railroad" and that no securities be issued by an interstate railroad except for those purposes and without the approval of the Federal Government.[12]

The leading historian of the Interstate Commerce Commission summed up the purposes of Section 20a as follows: [13]

> While this extension of the Commission's authority was designed, indirectly, to protect the investing public against the dissipation of railroad resources through faulty or dishonest financing, its dominant purpose was to maintain a sound structure for the rehabilitation and support of railroad credit, and for the consequent development of the transportation system. It aimed to render impossible the recurrence of the various financial scandals, with their destruction of confidence in railroad investment, which had become notorious, and to prevent the subordination of the carrier's stake as transportation agencies to the financial advantage of alien interests.

It is apparent that, in modelling Section 204 upon Section 20a of the Interstate Commerce Act, Congress must have had similar objectives.[14]

[14] The two state decisions cited in the dissent are inapposite. In the Massachusetts case, 62 PUR NS 238; 64 N.E. 2d 640, the State Commission held that the issuance of preferred stock in exchange for common stock was for the sole purpose of furthering the financial interests of persons in 98% control of the company and that, in its judgment, this was not a "reasonably necessary" purpose in the furtherance of the company's public utility business. In the Virginia case, the State Commission held, at 86 PUR NS 136, that, under the different language, coverage, and legislative history of its Act, a Commission order authorizing the issuance of securities is equivalent to a certificate of public convenience. The State Commission then applied a different test then that set forth for an order under Section 204(a), which is not equivalent to a certificate of public convenience and necessity, as pointed out above and as the dissenting opinion concedes.

The dissent also cites *Pacific Power and Light Co. v. Federal Power Commission*, 111 F. 2d 1014 (9th Cir., 1940) as support for a broad reading of the statutory phrase "compatible with the public interest." The holding in that case, however, was that the phrase "consistent with the public interest," which appears in Section 203 and which the court equates with the concept of compatibility, "does not connote a public benefit to be derived or suggest the idea of a promotion of the public interest." The court notes that "it is beyond our immediate purpose to enquire into the precise nature of the interests to be safeguarded by the Commission in passing upon these applications;" yet that is precisely the question at issue here.

In testing a security issue by the statutory standard, the Commission must satisfy itself, of course, that the object is lawful and within the corporate purposes. Beyond that, we must inquire whether the contemplated investment would impair the company's ability to perform its normal functions as a public utility. The Commission might look to whether the investment is so improvident, frivolous, or speculative, that it threatens to squander the corporate substance without reasonable hope of return. By no stretch of reasoning can the construction of the Klamath Falls-Round Mountain line be fitted into one of these categories.

The dissenting view that the Commission should have withheld its approval appears to rest upon two grounds: (a) that the line is politically controversial, particularly in that it could be used to take Bonneville power away from the Northwest if public authorities were to authorize the sale; and (b) that the construction of a line at a voltage of 500 kv represents a "gamble" that Congress will eventually decide to make the Bonneville surplus available for transmission by a privately owned intertie of which this line will be a segment. We not only can but must, put aside the consideration that there may be controversy concerning the disposition of Bonneville's surplus. Whether a publicly owned interconnection should be constructed, whether such interconnection would meet the growing demand for power in the region and thus remove any economic justification for Applicant's proposed expansion of the intertie, and whether Bonneville power should be made available to Applicant for transmission to California, are not for us to decide. It is not for this Commission to exercise the role of Congress as arbiter of these competing claims. That responsibility Congress has yet to delegate.

The remaining question, then, is whether, from an economic standpoint, the extra investment required to make the facilities capable of carrying a voltage in excess of initial requirements—an investment incontrovertibly within the lawful corporate purposes of the Applicant—represents a totally improvident business decision. Any anticipation of future growth is a gamble, and failure to anticipate such growth may be a worse gamble. The electric industry, above all, is one in which making provision for future expansion is customary and prudent. We have no reason to think the "gamble" in this case, that is, the balancing of the carrying charges on the additional investment against the additional costs or losses which will be incurred in the future if the capacity of the facility cannot be expanded when and if needed, is unusual or atypical. Even if the future usefulness of the added investment is contingent upon moving Bonneville power, we cannot say that this is not a contingency Applicant is entitled, and perhaps compelled, to consider. To conclude otherwise is to arrogate to ourselves the right to determine how and by whom Bonneville power should be transmitted.

The movement of Bonneville power, moreover, is not the sole justification for making provision now for a later expansion of capacity. The enormous and continuing growth of the power industry makes it of doubtful wisdom to attempt to restrain electric utilities from taking measures to anticipate future need for greater capacity. This Commission estimated only last January that the demand for electric energy in 1980 will be 3.75 times the requirements in 1960, reflecting a continuation of the industry's recent trend of doubling almost every ten years. The supply of energy needed to meet the demand in the Pacific Northwest and Pacific Southwest areas will come from a variety of sources. In view of the industry-wide tendency toward the use of higher voltages, there is no occasion for surprise that the company has prepared its line, having a life expectancy of upwards of 50 years, for the growing demands of the future. We repeat, however, that even were we to assume with the dissent that the project would be

underutilized if Bonneville power were not obtainable, that fact alone would not justify the Commission in withholding its approval of this security issue. So long as there is a significant possibility that Congress will ultimately decide to make some Bonneville power available for transmission over the Applicant's line—and such possibility manifestly exists—this Commission is in no position to deny that the decision to prepare the line for that eventuality was an exercise of business judgment for which we should not attempt to substitute our own.

The dissenting opinion urges that the Commission should have scheduled a hearing. We declined to do so because we did not see how a hearing would illuminate any material issue. The political questions now confronting Congress would not properly be before us. The nature of the Klamath Falls-Round Mountain line was known, as were the contingencies affecting its future use. No amount of testimony would enable us to predict that future use with accuracy or warrant us in exercising jurisdiction over security issues in such a way as to "second-guess" what is essentially a managerial decision.

It should also be observed that procedures for considering security issues must be expeditious if, in view of changing marketing conditions, utilities are to be able to raise the money needed to carry out their responsibilities. In the present case, no objections were raised to the purposed issue. No person, public or private, sought timely intervention.[15] It would be a serious abuse of power for this Commission to require a hearing and thus delay a $55,000,000 security issue, merely because a small fraction of the proceeds are to be devoted to the construction of facilities which, at extra cost, are susceptible of improvement to enlarge their capacity for a future use which may not materialize. It would be an even more serious abuse of power were we to hold up this security issue merely because questions relative to the disposition of Bonneville's power are politically controversial.

Although we believe that the above considerations are dispositive of this case, we wish to point out that the construction of a high capacity interconnection between the two regions is in harmony with the results of studies of electrical interconnections made by our staff, the Bonneville Power Administration and the Department of the Interior. Such studies were made by our staff in 1950[16] and 1953[17] and show that an interconnection between the electric utility systems in California and the Pacific Northwest would be economically feasible and desirable. In 1960 the Bonneville Power Administration submitted to the Senate Committee on Interior and Insular Affairs a study[18] of possible interconnections between the Pacific Northwest and California. The Bonneville study noted that a proposed intertie between Applicant's predecessor and Pacific Gas and Electric similar to the one here involved would be less costly than an interconnection, then considered, between the federal systems. In commenting on this report in a letter of April 6, 1960, to the Senate Committee, the Chairman of this Com-

[15] The dissent observes that on March 27, 1962, the Commission received a telegram from the Chairman of the State of Washington Utilities and Transportation Commission requesting that we qualify any approval granted so as to prevent the transmission of federally generated power until Congress has acted. The thrust of the telegram goes to political and policy considerations with respect to the use of the line which this Commission cannot consider in a security case. No question was raised as to the economics of the facility or the soundness of the Applicant's financing program. The telegram, moreover, was superseded and withdrawn by a later letter.

[16] Study of an Interconnection between the Electric Systems in the Pacific Northwest and California, Federal Power Commission, February, 1950, pp. 26–27.

[17] Report on Feasibility of California—Oregon 230 kv Interconnection, Federal Power Commission, March 1953, pp. 66–67, 69–72.

[18] Study of High Voltage Electrical Interconnection between the Pacific Northwest and California, Bonneville Power Administration, February 1960, p. 62.

mission stated that the findings of the Bonneville Power Administration indicate that a high voltage interconnection between the Pacific Northwest and California would be desirable and economically feasible regardless of whether the regional facilities were constructed and financed by the Federal Government or private interests. As recently as December 15, 1961, a special task force of the Department of the Interior submitted a report [19] recommending that immediate steps be taken to interconnect the electric generating plants of the Pacific Northwest and Pacific Southwest by lines having a voltage of either 750 kv d-c or 500 kv a-c. Later, in a press release of January 17, 1962 (Appendix C to the dissenting opinion) the Bonneville Power Administrator stated that the plans of Applicant and Pacific Gas & Electric "for a 110-mile 500-kv California intertie are consistent with engineering recommendations of our [Bonneville] Task Force report on a Pacific Northwest-Pacific Southwest intertie."

The dissenting opinion raises a question as to the adequacy of our notice and the length of the notice period. The notice procedure in these cases was in nowise inconsistent with the Commission's regular practice in these matters. In each of the present proceedings, a notice was prepared, describing the securities, setting forth the amounts involved, and stating that the proceeds of the proposed issues would be applied to the payment of outstanding notes and the promotion of the Applicant's construction program. These notices were in the form which has been customary in this agency for twenty-seven years. They did not, to be sure, describe the items in the program as set forth in the voluminous applications. The notices recited, however, that any person desiring to be heard or make protest should do so on or before March 21, 1962, and that the applications were on file and available for public inspection. The notices were dated and sent on March 1, 1962, along with copies of the applications, to the State Commissions of Oregon, Wyoming, Washington, California, Montana and Idaho. The notices were also sent to the Governors and Senators of each of those states and were published in the Federal Register on March 8, 1962, 27 FR 2259. The covering letters to the State Commissions invited the attention of the Commissions to our Plan of Cooperative Procedure, asked whether the Commissions desired to engage in such procedure, and, if not, whether they had any comments or suggestions. The letters to the Governors also asked for comments or suggestions.

A notice in the Federal Register could not, as a practical matter, reproduce the full applications and exhibits thereto. As observed above, the notice advised that all of the documents were available for public inspection. In our view, therefore, the notice was adequate.

Nor was the notice period unreasonably short. All persons were on notice as of March 8, 1962. Certainly, thirteen days, *i.e.*, until March 21, 1962, was an adequate period within which to file a protest or to declare a desire to be heard.

Since the security-issue jurisdiction of this Commission does not embrace a certificating authority, it follows that the approval of the issuance of the securities is not tantamount to an approval of the Klamath Falls-Round Mountain line, or any other facility. Our action in this case implies no opinion or conclusion on the questions whether, how or by whom Bonneville power should be transmitted to California.

Commissioner Morgan *dissents*. Commissioner Woodward *did not participate* in these proceedings.

---

[19] Pacific Northwest-Pacific Southwest Extra-High Voltage Common Carrier Interconnection, Special Task Force of U.S. Department of Interior 5–6 (December 15, 1961).

MORGAN, Commissioner, *dissenting:*

"To be, not merely to seem" must be the objective of every regulatory agency deserving of public confidence and respect. A Commission content with mere seeming, as in this case, substitutes ceremony and ritual for that perceptive, vigilant guardianship of the public interest expected of the great regulatory commissions of the United States.

In this order, which seemingly is concerned only with a routine security issue, the staff and majority of the Commission seem to have dealt alertly with all those technical details possibly entailing later difficulty or unnecessary public expense. The "findings" of the majority seem to indicate that thorough investigations were made at both State and Federal levels. Thus the unknowing reader of this order would never suspect the truth: that there has been no meaningful investigation of all the proposed construction to be financed by this security issue by any agency at any level. Who, reading this order, would imagine that no member of the Commission and no member of the staff is presently able to attest from his own knowledge whether any of the projects are in fact "compatible with the public interest" as the law plainly requires and as the order blandly recites?

What private citizen or public official, after reading the order—or, for that matter, after reading the preliminary public Notice of Application[1] circulated among the various Commissions and Governors of the States in which Pacific Power & Light Company operates—would dream that one of the projects proposed to be financed by this issue of securities is an inadequate, highly controversial, and financially questionable substitute for the extra-high-voltage intertie between the Bonneville Power Administration and the Central Valley project in California recently proposed by the Department of the Interior and scheduled for consideration by the current session of Congress?

Does a public notice which fails to notify the public concerning a fact of that magnitude actually offer "opportunity for hearing" under the Federal Power Act? I hold that it does not.

While applicant had publicly discussed its proposed line in a general way by means of press announcement as long ago as last January, neither the general public nor public officials in the affected States regarded the proposal as a device for exporting BPA surplus to California or understood that the proposed construction was involved in the finance issue here under discussion. Thus the Commission's Notice of Application, addressed to Governors and Utility Commissions in the affected States, seemed—but only seemed—to notify them of an "opportunity for hearing" on an important issue. That notice states:

> Any person desiring to be heard or to make any protests with reference to said application should on or before the 21st day of March 1962, file with the Federal Power Commission, Washington 25, D.C., petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). The application is on file and available for public inspection.

The difference (and the importance of the difference) between the Commission's Notice of Application and a genuine public notice is amply illustrated by the following telegram, dispatched and received while the order was still under consideration as the direct result of my telephone call on March 26, 1962, in-

[1] Appendix A attached hereto.

forming the Chairman of the State of Washington Utilities and Transportation Commission exactly what was contained in the pending application. The telegram, addressed to all Commissioners, was received at 8:40 a.m., March 27, 1962.

> Re your Dockets E–7024 and E–7025 it is requested that FPC give full consideration to position of Pacific Northwest area that no means be provided for the transmission of Federally generated electricity outside present service area Bonneville Power Administration unless and until proper Congressional safeguards be first provided this area. As early as April 1959 in hearings before the Senate Irrigation and Reclamation Subcommittee stated opposition to any California tie-line until such adequate safeguards existed. We therefore respectfully request that in acting on foregoing dockets FPC qualify any approval granted so as to limit any expenditures for interconnection to capacity not in excess of power resources of applicant exclusive of Federally generated power until Congress can fully consider required safeguards.

Does all this throw a new light on the majority's recital, contained in the order, that, on various dates immediately following distribution of the Notice of Application to the Utility Commissions of the States in which PP&L operates, each of those States approved the security issue with no reservations as to the use of the funds raised? It clearly seems so to me—particularly in the case of those States, Oregon and Washington, whose Commissioners testified before the Senate against any intertie proposal such as is now before us.

This seemingly routine financial matter, decided without a hearing and upon the basis of applicant's representations and assertions alone, actually is deeply involved in a controversy which has been raging with increasing intensity for nearly 15 years. It is the most important matter affecting the people of Washington, Oregon, and California to come before the Commission during the incumbency of any of its present members. In its ultimate implications this issue is perhaps as important to the States of the Pacific Northwest as any development since construction of the first Federal main-stream dam across the Columbia more than 25 years ago.

In the light of these facts, I am persuaded that the "period of public notice given in this matter" was unreasonably short, and that the Notice of Application published and circulated by this Commission was gravely deficient in that it conveyed not the slightest inkling of the serious issues actually involved. Further, I am persuaded that the Commission has not, in actual fact, found that all of the proposed construction is "compatible with the public interest" as required by law, for the reasons that:

(a) the applicant has not shown that there is or will be enough non-Federal power to load the intertie in question here; and

(b) the availability of surplus Federal power—which might make the line economical—depends upon a policy decision that must be made by the Congress.

These being the facts, and they are the facts, it was not only premature but impossible for the staff and the majority to "find" that all aspects of the proposal are "compatible with the public interest." I suggest there has been no such finding, that no record exists to support such a finding and that, to those who know and understand the relevant circumstances, the alleged "finding" does not possess even the semblance of reality.

Although no adequate record has been made in this proceeding, there is a voluminous public record, most of it contained in Committee prints and hearings of

the United States Senate,[2] concerning various proposals for marketing seasonally-surplus Columbia River power in California by means of physical interconnection to be built either by privately-owned companies or by the Federal government. Discussion of such an intertie goes back at least as far as 1948.

During the intervening years, every consideration of such an intertie has involved complex problems posed by extension of the marketing area of BPA and by the likelihood of conflicts between the Pacific Northwest and the Pacific Southwest over the possible use of the "preference clause" to export power from the Pacific Northwest which is *not* surplus to that area, but is, in fact, badly needed there.

As a consequence of these long-continued discussions, all Senators and Governors, as well as all Public Utility Commissioners of the Pacific Northwest States, and, in addition, both Senators and the Governor of California, are on record in opposition to any physical interconnection involving the sale of Bonneville power to California-Oregon Power Company (now a part of Pacific Power & Light Company) or to Pacific Gas and Electric Company, or to any other public or private agency in California, unless and until protective legislation is adopted by the Congress effectively quieting all controversy with respect to such exports of power to California.

On July 21, 1960, the Senate Committee on Interior and Insular Affairs adopted a resolution[3] setting forth the foregoing facts and requesting the Secretary of the Interior to:

(a) "* * * continue to suspend negotiations looking to the sale and transfer of surplus power or energy from the Pacific Northwest to California," pending completion of surveys and preparation of protective legislation, and

(b) "* * * submit to the Committee for consideration at the next session of Congress a draft of proposed legislation designed to guarantee consumers in the Pacific Northwest States first call on power generated by Federal agencies in that region, as requested by the Governors of the Pacific Coast States."

Let us dispense with theoretical discussions of the doctrine of separation of powers and the question whether a single Committee of the Senate has authority to control the policies of an agency such as BPA through Committee resolution: the pragmatic fact is that such a resolution, coming from that particular Committee and backed by every Governor and Senator from the states involved (as well as at least two of the Utility Commissions of the states), is a resolution which the Interior Department regards as binding upon it. In compliance, it has suspended negotiations concerning the sale of BPA power in California and

(e) Senate Committee on Interior and Insular Affairs, Resolution adopted July 21, 1960.

[3] Appendix B attached hereto.

the suspension is in effect now. This means that BPA power is not now available for export to California by the applicant in this case, or by any other private or public agency, and will not be available until the Congress has settled the important issues of public policy involved.

In the midst of this situation, and clearly for the political purpose of influencing that policy decision of the Congress, applicant has asked approval from this Commission for financing (and in an associated proceeding has asked approval for rate filings covering certain interchanges of power), involving a most singular construction project to be built jointly with Pacific Gas and Electric Company. This is to be a transmission line, approximately 110 miles long, from Klamath Falls, Oregon, to Round Mountain, California. It seems probable, though because of the absence of any hearing or record or meaningful investigation it is not certain, that the southern (PG&E) end of the line will not initially be connected to the PG&E Company Pit. No. 3 hydro project, thus hopefully avoiding the Commission's preliminary licensing authority, but will be thus connected after construction is completed. The line is planned to include pylons of extra carrying capacity, and 500 kv conductors and insulators. However, it will not initially, if ever, include 500 kv terminal facilities and will be placed in operation at 230 kv. The projected line is situated in such fashion as to constitute an almost mile-for-mile parallel and duplicate of a segment of the EHV line proposed by the Interior Department and now under consideration by the Congress.

This similarity of location and engineering design was highlighted in a news release by the Administrator of BPA on January 17, 1962[4] in response to inquiries of reporters. The Administrator, in guarded language, noted that applicant's proposed line was "consistent" with *engineering* recommendations of the Interior Department for its own proposed line, that the proposal "could provide an important link" in a full-length intertie, and that applicant had "expressed willingness to lease capacity in the intertie to Bonneville and other northwest utilities."

The Administrator pointedly did not endorse applicant's proposal, nor did he comment on the terms of lease offered to BPA by applicant. Instead he volunteered this significant comment:

> In view of our region's concern for protecting its power supply, BPA will make no commitment to export surplus Bonneville power outside the region until Congress has acted upon regional preference legislation. Announcement of the companies' plans makes it imperative that our entire region get behind the enactment of such legislation.

It is important that we take note of the significant differences between the two proposed lines. The Federal line is to be nearly 900 miles long, instead of 110; it is to have all the necessary terminal facilities for EHV operation between the Columbia River and the major California market areas; and it is to operate at extra high voltage from its inception.

The circumstances allow it to be said with complete fairness and accuracy that the main characteristics of applicant's proposed line, viewed in the light of the impending policy decisions in the Congress, are political. Its location was chosen for political effect. Its design and intended use have clear political overtones. The timing of its application before this Commission and the urgency with which immediate construction is advocated, reflect and reveal the forces of the political arena rather than the sober, deliberate business judgment with which utility executives ordinarily approach such an investment.

---

[4] Appendix C attached hereto.

Because of the absence of an investigation, hearing, or adequate record in this proceeding, it is impossible, as I have already pointed out, to "find" that an isolated segment of line such as this, located in sparsely populated country with no heavy industry, connected at both ends to several hundred miles of lower-voltage conductors, and lacking any high-voltage terminals of its own, is "compatible with the public interest." The anomalies in its design and intended use are enough to give anyone immediate pause for reflection.

It is equally, and for the same reasons, impossible to reject the line out of hand as being uneconomic, imprudent or otherwise incompatible with the public interest. There simply is no record on which to base either approval or rejection. I therefore have not advocated rejection of the project in the present proceeding and I do not advocate rejection now.

On the other hand, it is comparatively easy to point out facts, probabilities and possibilities concerning this proposed line which at the very minimum require the most detailed investigation and sober consideration before giving it approval.

What I have advocated, and what I believe is clearly required by Section 204 (a), (b), and (c) of the Federal Power Act, is careful investigation and genuine opportunity for a hearing to determine whether the line is "compatible with the public interest" as alleged by the order. Failing this, we confront the public not merely with negligent failure of the Commission to secure the necessary information, but with the Commission's pointed and obdurate refusal to ask the necessary questions.

Let us consider the fragmentary facts available to us. All State and Federal authorities are agreed that a 230 kv line is justified and would be useful in the proposed location. The line as proposed would initially and for an undetermined period carry 230 kv but would be built (except for terminal facilities and connecting lines) to 500 kv capacity. The amount of over-building and over-investment has not been identified, but that it is a substantial amount cannot be denied. Clearly this over-building represents a complex gamble by PP&L and PG&E that (a) the building of a Federal or other publicly-owned intertie can and will be prevented; that (b) eventually the projected line will become a segment in a privately-owned Pacific Northwest-Pacific Southwest intertie; carrying (c) the Bonneville surplus load, in addition to company-generated surplus and other purchases. In any gamble involving three essential and interdependent elements such as those, the hazard factor increases geometrically.

If this three-ply gamble is successful, presumably the excess capacity of the segment under discussion here would at some future date become fully utilized and therefore economically justified. It follows that, whatever the eventual outcome, for an indeterminate period (during operation at 230 kv) the opposite would be true—the facilities could not be used to full capacity and would not be economically justified.

It also follows that if the gamble is unsuccessful, i.e., if a tie-line or system of tie-lines is built under Federal or other public ownership, it is probable if not certain that the excess capacity of the projected line will remain permanently, or for a very long period, unused and therefore permanently or semi-permanently unjustified from an economic viewpoint.[5]

---

[5] Lest the foregoing reasoning be dismissed as theoretical, Appendices D and E are attached and should be studied carefully. Both are articles from *Electrical World*, a leading trade journal of the electric utility industry. Appendix D, published before the order was issued, illustrates how little was known of the purposes behind the application in this case, even within the industry itself. Appendix E, published after the order was issued and *received by me after this dissent was written* confirms the purposes and the strategy *and the gamble by applicant* already outlined in this dissent.

Here we enter an area in which the responsibilities of the Federal Power Commission are to me very clear and of major importance. Let me say at the outset that building excess capacity, in reasonable amounts for a future market that has been carefully assessed, is not only proper but commonplace in the utility industry, and on many occasions has had the support of this Commission, after proper investigation. But here we are not dealing with a solid and assured source of supply, and hence we cannot measure—in any case we have not measured—the market, its size, its rate of growth, or the degree to which it can predictably carry the costs of the proposed construction so as to rended it economically feasible. We have not done all these things, I repeat, because we are not dealing with, and applicant has not shown, and very probably cannot show, an assured source of power sufficient to load this proposed line.

It is persuasively clear from the applicant's filed rate documents and correspondence, as well as from the wording of contracts between applicant and PG&E,[6] that the proposed intertie is hopefully based on the seasonal Bonneville surplus (though applicant has access to smaller surplus supplies through other channels), and it may be presumed therefore that the Bonneville surplus is necessary in order to load and justify the proposed construction. Further, it is clear that the future contract which the applicant and its associate company hope some day to conclude with the Bonneville Power Administration is substantially the same as, if not identical with, the contract under negotiation between PG&E and BPA in 1959, prior to adoption of the Senate Interior Committee resolution in 1960 which effectively halted negotiations for such a contract. To say, therefore, that the source of power to load this line is nebulous and speculative is to put the matter very charitably indeed.

Brought together, all of the foregoing elements add up to a proposal which I do not believe can any longer be described as a "calculated business risk," in the words of Mr. Robert H. Gerdes, executive vice president of Pacific Gas & Electric Company, testifying in 1959.[7]

Mr. Gerdes so described PG&E's proposal to spend several million dollars on a tie-line in 1959, after admitting that under his proposed contract with BPA: "I will stipulate right now that the power can be curtailed at any time."[8]

If the proposal was a "calculated business risk" under those conditions in 1959, what does immediate construction of a tie-line look like now, with BPA under effective prohibition against even discussing a contract for export of power to California? Senators Kuchel and Jackson called the proposed construction a gamble in 1959, though Mr. Gerdes did not agree.[8] I believe it is indisputably a gamble now; a straight-out heads-or-tails political gamble depending entirely upon policy decisions still to be reached by the Congress. Yet the Commission was orally urged by the staff to approve the security issue in this proceeding at once because PP&L had construction crews in the field and wished to start construction of this line immediately in order to avoid penalties.

And Staff said, "Let there be haste;" and there was haste. The paraphrase may be slightly irreverent but it is entirely on point.[9]

---

[6] Appendix F attached hereto.

[7] Hearings before the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs, United States Senate, Eighty-Sixth Congress, First Session, on the Bonneville (Pacific Northwest)-California Intertie, April 8 and 9, 1959, page 165.

[8] Ibid., page 161.

[9] Judge Henry J. Friendly, of the United States Second Circuit, on February 13, 1962, in an Oliver Wendell Holmes lecture before the Harvard Law School adverted to the same subject in the following words: "In these large agencies a considerable amount of delegation is inevitable; definition of standards is required if the agency members are to be masters of the staff rather than the slaves of anonymous Neros, each fiddling his own tune."

Is there a possible basis in the public interest for allowing the construction of major excess capacity by a public utility to the extent proposed and under the conditions prevailing in this case? In justice to the rate-payers who will eventually defray the costs of construction under rates having the force of law, I cannot conceive of such a basis.

The argument has been made (and rejected by every regulatory commission worthy of the name) that regulatory authority is powerless to interfere with an adventure such as this because it lies within the inviolable prerogatives of management. It would be a waste of time and paper to cite all the cases which have held that, while there are some areas of management discretion which should not be invaded unless required by the public interest, every improper or improvident decision of management which threatens unduly to burden the rate-payer or otherwise to damage the public interest is subject to review and reversal. If it were otherwise, no regulatory law would ever have been enacted or could ever have been enforced.

Virtually every manager, and certainly very manager of a public utility in this country, who handles and spends other people's money is rightly subject to public scrutiny and control undr law, including the Federal Power Act, and I will not lengthen this dissent by laboring the point.

Another favorite thicket of the utility lawyer defending practices such as those under discussion here is the argument that no interference with an enterprise such as this one is proper because the impact of the actions complained of is not sufficient to bankrupt the company even if the worst consequences were to ensue, and the effect upon the individual rate-payer, while not exactly a happy one, would not be disastrous.

This begs the question and raises a smokescreen of sophistry into the bargain. There is a principle involved here, and a supremely important one. How can we condone practices on a limited scale which, if indulged on a larger scale, would unquestionably threaten the solvency of an entire utility system? Where's is the line of demarcation beyond which "tolerable" practices become intolerably dangerous?

Here too the respected regulatory agencies have refused to be led down the primrose path. There are industries, particularly in the extractive mineral field, wherein gambling is such an essential and customary part of their business practices that the courts have, without prejudice, likened them to a poker game. The electric utility industry has never been considered one of these. It should not become one under the aegis of the Federal Power Commission.

Section 204(a) provides that public utilities may not issue securities unless the Commission finds, among other things, that the purpose for which the proceeds will be spent is "compatible with the public interest." This provision has never been interpreted by the courts. Nevertheless some light as to the responsibility and burden which it imposes on the Commission and utility, respectively, can be gleaned from the court's interpretation of the similar but less stringent requirements of Section 203. The latter section prohibits electric utility mergers unless the Commission finds them to be "in the public interest." In *Pacific Power and Light Co., et al.* v. *Federal Power Commission*, 111 F. 2d 1014 at 1016, the court explained that the purpose of this provision is to insure

> against public disadvantages through a requirement of a showing that mergers . . . will not result in detriment to consumers or investors or to other legitimate national interests.

For this reason, it continued,

> the Commission properly *requires applicants to make a full disclosure of all material facts. The burden is on them* of showing affirmatively that the ac-

> quisition or merger is consistent with the public interest. The Commission must necessarily take an over-all view and in many cases it will . . . be called upon to weigh considerations pro and con. (Emphasis supplied.)

In the light of that pronouncement, I am unable to agree that the applicant here has made, or has been required to make, the showing clearly called for by the Act prior to granting the authorization requested. Section 204, as will be seen, is prohibitory in character; it permits authorization of securities "only if" the Commission has obtained information on which it can make the detailed findings that are conditions precedent to its action thereunder. In pertinent part, Section 204(a) of the Federal Power Act (16 USCA 824c) provides that:

> No public utility shall issue any security, . . . unless and until, and then only to the extent that, . . . the Commission by order authorizes such issue . . . The Commission shall make such order only if it finds that such issue . . . (a) is for some lawful object, within the corporate purposes of the applicant and compatible with the public interest, which is necessary or appropriate for or consistent with the proper performance by the applicant of service as a public utility and which will not impair its ability to perform that service, and (b) is reasonably necessary or appropriate for such purposes . . .

To determine these matters, the Act then at 204(b) says that the Commission may hold a hearing, and "may grant any application . . . in whole or in part, and with such modifications and upon such terms . . . as it may find it necessary or appropriate"—depending, that is, upon the extent to which it finds that the purpose of the issue has or has not been shown to meet the established standards. Any doubt as to the decisiveness and finality of the Commission's authority in this area is removed by Section 204(c). It states that "no public utility shall . . . apply any security or any proceeds thereof to any purpose not specified in the Commission's order . . . or otherwise in contravention of such order." In any event, if the Commission after investigation and hearing finds any matter inconclusive, premature or unsettled, it may retain continuing jurisdiction for the purpose of modifying its original order in the light of subsequent developments (Section 204(b).

The only reasonable construction of Section 204(a), as I read it, is that the language of clause (a) requires this Commission to obtain affirmative proof that the pupose for which the securities will be issued is not only lawful and within the corporate powers of the applicant, but that such purpose is also "compatible with the public interest" and appropriate to the proper performance of public utility service. It further appears that clause (b) requires the applicant to show, and the Commission to find, that the particular means proposed is either "reasonably necessary or appropriate." Faced with this latter choice, the majority "found" the proposed facilities to be neither "reasonably necessary" nor simply "appropriate," but "reasonably appropriate."

If this Commission properly is to exercise the responsibilities entrusted to it by the Congress under Section 204, it must examine into the purposes for which electric utility companies wish to issue securities. There is no other conclusion we can come to. And in determining the scope and extent of the efforts it must exert in discharging that responsibility, it is of little help to say that the Commission's investigation under Section 204 must be narrowly confined because the Commission does not have the power to issue or deny certificates of convenience and necessity for electric company construction. As that power was denied to this Commission in 1935 (see Senate Report No. 621, on S. 2796 in the 74th Congress, at p. 20), we obviously cannot disapprove or deny proposed construction on that ground. But that is no reason for suspending or confining

our inquiry, for the fact remains that this Commission can disapprove proposed utility construction under its power to approve or disapprove the purposes and projects for which utility securities to finance that construction will be issued.

Indeed, this has been done by state regulatory commissions armed with only security approval powers whenever, after an investigation and hearing, those commissions were satisfied that the purpose for which securities were to be issued was not "reasonably necessary" to carry out the stated purposes of the electric utility concerned.

Old Dominion Electric Cooperative, 86 PUR NS 129, is a case particularly in point—where a regulatory commission armed only with the power of approval or disapproval over security issues used that authority to prevent construction of generating and transmission facilities which the commission found not "reasonably necessary" for carrying out the company's utility responsibilities. The matter is discussed there in full.

Counsel for Old Dominion argue—

the Virginia Commission began—

> that the only question for the Commission to decide is whether or not $16,000,000 is needed to acquire the structures described in the application, . . . Under that interpretation of the statute the only issue before the Commission would be whether the amount of $16,000,000 is reasonably necessary. Since that amount obviously is necessary, it would lighten our labors if that were the correct interpretation of the statute.
>
> In our opinion that is not what the statute means. The . . . purposes of the law as well as its language show that the words "reasonably necessary" mean not merely that the amount of money sought through the issuance of securities must be necessary to acquire the proposed structures, but also that the proposed structures themselves must be reasonably necessary for the accomplishment of some purpose having to do with the obligations of the utility to the public and its ability to carry out those obligations with the greatest possible efficiency. * * * If the utility, by deciding to build a $16,000,000 plant automatically had the right to borrow $16,000,000, there would be no function for the State Corporation Commission to perform except solemnly to record the fact that $16,000,000 would be reasonably necessary to build a $16,000,000 plant. The general assembly, in passing the statute, could not, in our opinion, have intended that result, because it would appear to be very much better to have no statute at all than to have one that produced only that result. * * * Evidence that the general assembly meant for the Commission to consider the public interest and not merely the question of whether the amount of money sought was necessary to acquire the proposed plant is found in the following provisions of § 56–61:
>
> "The Commission may by its order grant permission for any such issuance or assumption in the amount or on the terms applied for, or in less amount, or on different terms, or not at all, and may include in its order such terms and conditions fairly relating to the matter of such issuance or assumption as it may deem reasonable or necessary."
>
> The quoted language gives the Commission authority it could not usefully exercise if its only function were to pass on the amount of money needed to acquire the plant and not on whether the plant itself was reasonably necessary to perform the public duties of the public utility.

The Supreme Court of Massachusetts interpreted the words "reasonably necessary," as used in a statute dealing with the issuance of securities by public utilities, in the same manner. Speaking in *Lowell Gas Light Company* v. *Depart-*

ment of Public Utilities, 62 PUR NS 238, at 243; 64 NE 2d 640, that Court said that:

> since the words "reasonably necessary" are not employed solely with reference to the amount of a proposed issue but refer also to the necessity of the issue itself, it follows inevitably that the Department must inquire whether the declared purpose of the proposed issue is in fact in the circumstances a reasonably necessary purpose. And having in mind that the function of the Department is the protection of public interests, we think that "reasonably necessary" means reasonably necessary for the accomplishment of some purpose having to do with the obligations of the company to the public and its ability to carry out those obligations with the greatest possible efficiency.

In this case, perhaps for the reasons spelled out in the Virginia and Massachusetts cases cited, the Commission avoided finding that the proposed construction was "reasonably necessary;" choosing to find instead that it was "reasonably appropriate."

I disagree. There are grave doubts, as I have shown, whether the proposed construction is or can be made "compatible with the public interest" in the existing circumstances. Until it passes that first and essential test *on the basis of findings of fact*, it is not helpful to talk about the proposed construction as being "reasonably appropriate." Such talk is, in fact, fuzzy, premature, and represents a conflict in terms.

The doubts concerning the projected construction are serious. They are genuine. They relate to the public interest which the applicant is required by law to serve and we are required by law to protect.

This order should be reconsidered by the Commission for the purpose of determining whether the projected construction is, in fact and in law, compatible with the public interest. If any portion of it is found wanting in this respect, restrictions should be placed upon the use of funds raised by this security issue for advancement of the specific project or projects involved, until such time as full campatibility with the public interest can be, and has been, factually demonstrated.

I repeat that, the extent we fail to do this, we confront the rate-paying public—and its elected and appointed representatives at both State and Federal levels—not merely with our failure to insist upon the necessary informaton but with our specific and repeated refusal to ask the necessary questions.

Whether such behavior is caused by legal obfuscation, confusion or timidity I am unable to say, but I heartly disagree with and dissent from it.

Appendix A

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7024

NOTICE OF APPLICATION

(March 1, 1962)

Take notice that on February 19, 1962, an application was filed with the Federal Power Commission pursuant to Section 204 of the Federal Power Act by Pacific Power & Light Company ("Applicant"), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Wyoming, Washington, California, Montana and Idaho, with its principal business office at Portland, Oregon, seeking an order authorizing the issuance of $35,000,000, in principal amount of First Mortgage Bonds, Series due 1992. Applicant proposes to issue the aforesaid Bonds under its presently existing

Mortgage and Deed of Trust, dated July 1, 1947, to Guaranty Trust Company of New York (now Morgan Guaranty Trust Company of New York) and Oliver R. Brooks (Wesley L. Baker, successor), as Trustees, as heretofore supplemented by twelve supplemental indentures and as to be further supplemented by a Thirteenth Supplemental Indenture to be dated as of April 1, 1962. The Bonds, to be dated April 1, 1962, will be sold at competitive bidding and will bear interest at the rate per annum to be fixed by competitive bidding. Applicant states that the net proceeds of the issuance and sale of the Bonds and of not to exceed 696,695 additional shares of its Common Stock of the par value of $3.25 per share (proposed to be sold separately—Docket No. E–7025) will be applied to the payment of notes then outstanding (not expected to exceed $42,000,000 in principal amount) under a Credit Agreement dated as of August 15, 1961 and to the carrying forward of Applicant's construction program—estimated at $44,000,000 for 1962 and $56,000,000 for 1963.

Any person desiring to be heard or to make any protests with reference to said application should on or before the 21st day of March 1962, file with the Federal Power Commission, Washington 25, D.C., petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). The application is on file and available for public inspection.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E–7025

NOTICE OF APPLICATION

(March 1, 1962)

Take notice that on February 19, 1962, an application was filed with the Federal Power Commission pursuant to Section 204 of the Federal Power Act by Pacific Power & Light Company ("Applicant"), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Wyoming, Washington, California, Montana and Idaho, with its principal business office at Portland, Oregon, seeking an order authorizing the issuance of not to exceed 696,695 shares of its Common Stock with a par value of $3.25 per share Applicant proposes to offer the aforesaid Common Stock initially on a pro rata basis to holders of record of Applicant's presently outstanding Common Stock on the rights offering record date, in the ratio of one share of additional Common Stock for each twenty shares then held. The price of the additional shares will be determined by Applicant's Board of Directors shortly before the proposed offering date, at an appropriate discount. Each common stockholder of record will receive a transferable subscription warrant expressed in terms of rights which will have a life of not less than twenty days. Where the number of rights evidence by a warrant is not evenly divisible by 20 or is less than 20, then the holder will be entitled to subscribe for one full share with the number of rights which exceeds a multiple of 20 or is less than 20. Applicant will not accept subscriptions for fractional shares. Any shares of the additional Common Stock not subscribed for by warrant holders pursuant to the aforesaid subscription offer will be sold by Applicant to underwriters at the same price at which the shares are to be sold to Applicant's stockholders. The underwriters' compensation for commitments to purchase any unsubscribed shares is to be fixed by competitive bidding. Applicant states that the net proceeds of the additional shares of Common Stock and of $35,000,000 in principal amount of First Mortgage Bonds, Series due 1992 (proposed to be sold separately—Docket No. E–7024) will be applied to the payment of notes then outstanding (not

expected to exceed $42,000,000 in principal amount) under a Credit Agreement dated as of August 15, 1961 and to the carrying forward of Applicant's construction program—estimated at $44,000,000 for 1962 and $56,000,000 for 1963.

Any person desiring to be heard or to make any protests with reference to said application should on or before the 21st day of March 1962, file with the Federal Power Commission, Washington 25, D.C., petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). The application is on file and available for public inspection.

APPENDIX B

(The following resolution was adopted by the Senate Committee on Interior and Insular Affairs on July 21, 1960:)

PACIFIC NORTHWEST (BONNEVILLE)-CALIFORNIA INTERTIE

Whereas the Committee on Interior and Insular Affairs by resolution on May 19, 1959, requested the Secretary of the Interior to suspend all negotiations for the interconnection and the sale of surplus power from the Bonneville or Columbia River Basin system to California until a study and analysis of the feasibility and desirability of a high voltage interconnection for the disposal of surplus secondary energy between the Federal power systems of the Pacific Northwest and California; and

Whereas a report on the analysis requested was submitted to the committee under date of February 17, 1960; and the committee held public hearings May 5, 1960, and June 15, 1960, on the subject; and

Whereas the Governor of California, in cooperation with the Governors of Oregon and Washington, has requested further time for a study and analysis of a high voltage interconnection pending the completion of the report of consultants retained by the Governor of California in cooperation with the Governors of Oregon and Washington, and in consideration of legislation that would effectively protect the interests of the United States and the power consumers of the Pacific coast areas; and

Whereas the quantities of surplus energy which may be interchanged between the Pacific Northwest and California range from 4 billion kilowatt-hours in a dry year to 25 billion kilowatt-hours in a wet year; and

Whereas the committee has heard testimony asserting very substantial benefits accruing from the construction of a high-voltage interconnection between the Pacific Northwest and California and indicating that further studies are required to make a full disclosure of the potentialities of the proposed intertie; and

Whereas the committee finds that the public interest in the interconnection and transfer of power or energy within the Pacific coast areas may require legislation to insure protection of the Federal power and multiple-purpose projects in the systems; and

Whereas a completion of the independent study and analysis of the proposals is essential before any commitment is made on behalf of the United States with respect to the transfer of power or energy from one area to the other of the Pacific Coast States; Therefore be it

Resolved, That the Committee on Interior and Insular Affairs requests the Secretary of the Interior to continue to suspend negotiations looking to the sale and transfer of surplus power or energy from the Pacific Northwest to California, pending the completion of the survey and analysis by the consultants retained by the Governors of the Pacific Coast States; the submission of their

report to the committee; and the consideration of legislation that will protect the interests of the United States and the power consumers concerned; be it further

Resolved, That the committee requests the Secretary to submit to the committee for consideration at the next session of the Congress a draft of proposed legislation designed to guarantee to consumers in the Pacific Northwest States first call on power generated by Federal agencies in that region, as requested by the Governors of the Pacific Coast States; be it further.

Resolved, That the Secretary advise the committee of his action with respect to compliance with the request in this resolution.

Approved by the Committee on Interior and Insular Affairs on June 21, 1960.

JAMES E. MURRAY,
Chairman.

APPENDIX C

COMMENT BY BONNEVILLE POWER ADMINISTRATOR CHARLES F. LUCE ON THE PROPOSED NEW INTERCONNECTION BETWEEN PACIFIC POWER & LIGHT COMPANY AND PACIFIC GAS AND ELECTRIC COMPANY

The plans of Pacific Power and Light Company and Pacific Gas and Electric Company for a 110-mile 500-kv California intertie are consistent with engineering recommendations of our Task Force report on a Pacific Northwest-Pacific Southwest intertie.

The companies' proposal could provide an important link in a full length extra high-voltage common carrier intertie between the generating plants of the Northwest and California. Pacific Power has expressed willingness to lease capacity in the intertie to Bonneville and other northwest utilities.

In view of our region's concern for protecting its power supply, BPA will make no commitment to export surplus Bonneville power outside the region until Congress has acted upon regional preference legislation. Announcement of the companies' plans makes it imperative that our entire region get behind the enactment of such legislation.

APPENDIX D

A 110-mile line built for 500-kv operation will be the third transmission intertie between Pacific Gas & Electric Co. and Pacific Power and Light Co. Each company will build half the line, which will run from Klamath Falls, Oreg., to Round Mountain in Shasta County, Calif. Cost is estimated at $10 million.

Construction will begin as soon as possible, and completion is expected by the fall of 1963. Initial operation will be at 230 kv, and conversion to 500 kv will be made when joint studies of load and operating requirements indicate the increase to EHV should be made.

The line closely parallels a line proposed by PG&E in 1960, which was not built after Senator Murray's (D–Mont.) Interior and Insular Affairs Committee indicated that the Committee felt it would conflict with larger proposals also being studied at the time. That proposal, however, was contingent on sale of surplus power by Bonneville Power Administration to PG&E, while no such agreement is included in the present line.

Capacity of the new line was not disclosed, but the capacity of the 230-kv line proposed in 1960 was 200 Mw. At present there are two interconnections between PG&E and PP&L—the 110-kv Cottonwood line and the 69-kv Stillwater

line, which run from separate PG&E switching stations in Shasta County to PP&L's transmission system in Siskiyou County, Oreg.

In announcing the line PG&E's president Norman R. Sutherland said, "We have had interconnections for many years with the utility company to the north of us, as well as with the companies bordering our service territory to the East and to the South. Such interconnections have been augmented and expanded as needed. This new line will assure transmission capability for the additional power that will become available as we and the other companies expand our capacities in the years ahead."

A paragraph in the contract between the two companies reads: "We shall continue to study jointly the economic feasibility, in the light of developing circumstances, of converting the line to operation at not less than 500 kv and also of extending it in a northerly and southerly direction to provide an EHV intertie between the Pacific Northwest and California. It is understood that we will convert the line to operation at not less than 500 kv and extend it in both directions at such time as we jointly determine that such actions are economically justified."

Charles F. Luce, Bonneville Power Administrator and chairman of the special task force that proposed an EHV tie linking California and the Northwest (EW, Dec. 25, 1961, p. 34), called the PG&E–PP&L proposal "consistent with engineering recommendations of our task force report."

Luce also noted, "The companies' proposal could provide an important link in a full-length EHV common carrier intertie between the generating plants of the Northwest and California. Pacific Power and Light has expressed willingness to lease capacity in the intertie to BPA and other Pacific Northwest utilities."

Luce's statement emphasized that BPA would "make no commitment to export surplus power outside the region until Congress has acted upon regional preference legislation." He said that the announcement "makes it imperative that our entire region get behind the enactment of such legislation."

(From *Electrical World*, January 29, 1962, pp. 55–56.)

Appendix E

FOUR CALIFORNIA UTILITIES MAKE EHV TIE OFFER

Principal state investor-owned companies make proposal to transport Northwest power into Southern California

California's four principal investor-owned utilities have offered to construct an extra-high-voltage transmission line to carry Northwest power to southern California.

The offer is in effect a competing proposal to the Interior Department's task force proposal for a 750-kv, dc line between Bonneville Power Administration and California (EW, Dec. 25, 1961, p. 34).

The joint proposal by the four utilities—Pacific Gas & Electric Co., Southern California Edison Co., California Electric Power Co., and San Diego Gas & Electric Co.—was made contingent upon Northwest power being available and on terms that will make construction of the line economically feasible. These four utilities recently formed the California Power Pool (EW, Dec. 25, 1961, p. 34).

The offer, referred to in PG&E's just-issued 1961 annual report, was believed to have been made during a meeting with BPA chief Charles Luce and other officials several weeks ago.

To be constructed in stages

The report goes on to say: "This line will be constructed in stages as needed and existing transmission capacity of the California companies will be used to the maximum extent to avoid uneconomic duplication of facilities. In view of the transmission lines now existing and to be constructed by the California companies, there is no need whatever for the federal government to spend vast sums of taxpayer's money to construct the transmission facilities recommended by the (Interior) task force. The lines to be built by the California companies will be at no cost to taxpayers and, furthermore, will be productive of substantial tax revenue."

The proposed line (of not less than 500 kv) would extend south from PG&E's Round Mountain Substation in the Shasta area. North from Round Mountain will be the previously announced $11 million, 103-mile, 500-kv intertie with PP&L's 230-kv system at Klamath Falls, Oreg. (EW, Jan. 29, p. 55).

No mention is made in the PG&E report of a further extension north from Klamath Falls to The Dalles or some other point in the BPA system. Presumably, some sort of extension would have to be built if the California Pool offer is accepted.

Meanwhile, the California Pool operation is moving ahead. The first step occurred last December with the closing of an existing 220-kv tie between PG&E's Midway Substation and SoCalEd's Magunden Substation, both near Bakersfield. The 250-Mw tie, which will be used for emergencies, has been open for some years. Previously, PG&E used it to buy surplus power from SoCalEd when that company was taking power from Hoover Dam.

The four pool members are presently working on details of further interconnections and other arrangements to permit full operation of the pool.

Finally, details have been released on the 500-kv Round Mountain-Klamath Falls line. Some 600 latticed steel guyed H-frame structures will be used to carry the ACSR cable. Maximum design voltage will be 550 kv. The line will be completed in the fall of 1963 and will be operated first at 230 kv.

(From *Electrical World*, April 2, 1962, p. 26.)

APPENDIX F

PACIFIC GAS AND ELECTRIC CO.,
245 Market St., San Francisco 6, Calif.
January 5, 1962.

N. R. Sutherland, president.
PACIFIC POWER & LIGHT CO.,
Public Service Bldg.,
Portland 4, Oreg.

GENTLEMEN: This letter states our agreement to augment our existing electric interconnection facilities by the construction of a new large capacity transmission line to provide for the sale and exchange of energy between our companies and for the parallel operation of our systems, and to provide facilities and arrangements that make possible the sale and exchange of energy between other electric systems in the Pacific Northwest and PG&E, either directly or indirectly through PP&L.

We agree to continue to maintain our respective portions of our existing interconnecting transmission lines. These lines, which connect our electric systems at two points, both located at Delta in Shasta County, are the "Cottonwood Line", a 110-kv electric transmission line running from PG&E's Cottonwood Substation via Delta to PP&L's COPCO No. 2 Power House in Siskiyou County,

and the "Stillwater Line", a 60-kv electric transmission line running from PG&E's Stillwater Substation "B" via Delta to PP&L's COPCO No. 2 Power House in Siskyou County.

In addition, we agree to construct, operate and maintain a new transmission line running from Klamath Falls to Round Mountain, with the point of interconnection on or in the immediate vicinity of the township boundary line between Townships 42 N and 43 N in Range 1 E, MDB&M. PP&L will construct, own, and operate the northern section of the line, with terminal facilities at Klamath Falls, and PG&E will construct, own, and operate the southern section, with terminal facilities at Round Mountain and also, if it wishes, at Pit 3. The line shall be capable of operating at not less than 500 kv, and shall be designed and constructed in accordance with specifications acceptable to both parties. However, the line will be operated initially at 230 kv, and accordingly the terminal facilities shall be constructed for initial operation at that voltage. The construction of the line and terminal facilities shall be commenced promptly after the execution of this agreement, and shall be completed as soon as practicable.

We shall continue to study jointly the economic feasibility, in the light of developing circumstances, of converting the line to operation at not less than 500 kv and also of extending it in a northerly and southerly direction to provide an extra high voltage intertie between the Pacific Northwest and California. It is understood that we will convert the line to operation at not less than 500 kv and extend it in both directions at such time as we jointly determine that such actions are economically justified.

After supplying customers off of the Cottonwood and Stillwater Lines, the primary use of the three interconnecting lines shall be for firm service, exchange service (including emergency service) and sales of surplus energy between PP&L and PG&E. It is contemplated that PP&L may have transmission capacity in its system that will not be required for purposes deemed necessary by PP&L. PP&L intends to make such excess transmission capacity, along with any excess capacity in the three interconnecting lines after serving their primary use, available for service between Bonneville Power Administration and utility companies in the Pacific Northwest and PG&E. In such case PP&L will make a reasonable charge for transmitting the energy of any other company or agency over its system, the exact amount of the charge to be as agreed upon between PP&L and the owner of the energy.

PG&E and PP&L will plan and operate their systems so that the flow of reactive power will not adversely affect the system of the other, and they shall operate, or provide for others to operate, adequate tie line and frequency control equipment so as to minimize the power swings over the lines and to contribute a proportionate share of the total interconnected system frequency regulation. In addition, an operating committee consisting of an equal number of representatives from each company shall meet from time to time to agree upon methods of operation and related matters in order to achieve the purposes of this agreement, and such matters shall include, but not be limited to, reactive power, voltage regulation, tie line control settings, clock corrections, deviations from energy delivery schedules, emergency operations, estimates of deliveries during meter outages, and scheduling arrangements.

From time to time PP&L may desire to purchase energy from PG&E. PG&E agrees to sell PP&L energy provided that PG&E has surplus energy and the parties have mutually agreed as to the price to be paid, the period to be covered and the time of day deliveries are to be made.

The power sale agreement dated July 14, 1952, as heretofore amended and supplemented, between PG&E and The California Oregon Power Company and to which PP&L is the successor, is hereby in its entirely cancelled effective February 1, 1962. Appropriate notice shall be given to the Federal Power Commission immediately upon the execution hereof and the necessary schedules filed with the Commission in accordance with the terms of this agreement.

Service will commence under this agreement and in accordance with the attached rate schedules on February 1, 1962, and the agreement will remain in effect until February 1, 1972, and from year to year thereafter, terminable on one year's written notice given by either one of us at any time after January 31, 1971.

If this letter and the attached schedules correctly state our agreement, please sign and return one of the enclosed copies hereof.

Yours very truly,

PACIFIC GAS AND ELECTRIC COMPANY

By ----------

We agree:

PACIFIC POWER & LIGHT COMPANY,

By D. R. MCCLUNG.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. G-10000

ORDER FIXING HEARING ON PETITION TO MODIFY ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 28, 1962)

On February 16, 1962, Transcontinental Pipe Line Corporation (Transco) filed a petition, as amended February 19, 1962, requesting that the Commission modify its order and Opinion No. 302, issued March 1, 1957, in the above-entitled proceeding, so as to effect a reallocation of gas for a temporary period and to permit Transco to render certain services during such temporary period, all as hereinafter described.

By Opinion No. 302 the Commission authorized Transco, *inter alia*, to undertake new service to North Carolina Natural Gas Corporation (North Carolina Natural)[1] pursuant to a firm allocation granted therein of 39,780 Mcf per day. North Carolina Natural proposed to use this allocation to serve the natural gas requirements of Tidewater Natural Gas Company (Tidewater) and of other customers within the State of North Carolina. Service by Transco to North Carolina Natural commenced on April 14, 1959. The petition seeks to effect a reallocation of gas for a period of three years so as to permit Transco to render firm service during such temporary period directly to Tidewater.

Tidewater, one of North Carolina Natural's major customers owns and operates five gas distribution systems or divisions located in Fayetteville, Kinston, New Bern, Washington and Wilmington, North Carolina, respectively. The petition alleges that slower than expected market developments have resulted in a poor

[1] North Carolina Natural, a customer of Transco, is engaged in the sale of gas throughout the State of North Carolina. North Carolina Natural is not subject to the Commission's jurisdiction.

earnings position of Tidewater. It appears that Tidewater is still in the developmental stage in changing its operations from manufactured gas to natural gas.

The relief sought by Tidewater, which Transco proposes herein to provide, will require that for a three-year period beginning April 1, 1962, portions of the present allocation of North Carolina Natural be transferred by the Commission to and divided among the five Divisions of Tidewater, and be billed under Transco's Rate Schedule OG–2. The allocations to be transferred, in total volumes of 8,590 Mcf for the period April 1, 1962, to January 1, 1963, and 10,323 Mcf for the period January 1, 1963, to April 1, 1965, are based upon Tidewater's estimates of its requirements from Transco by Divisions for the three-year period, as follows:

Tidewater division	Apr. 1, 1962 to Jan. 1, 1963	Jan. 1, 1963 to Apr. 1, 1965
Fayetteville	2,690	3,400
Kinston	1,050	1,200
New Bern	1,050	1,200
Washington	625	700
Wilmington	3,175	3,823
Total	8,590	10,323

During the time these temporary reallocations are effective, North Carolina Natural will surrender equivalent volumes under its CD–2 service agreement with Transco. The Transco-North Carolina Natural CD–2 service agreement will, consequently, provide for the following maximum daily quantities during the periods shown:

Period	Maximum daily quantity		Reduction
	Present agreement	Proposed agreement	
To November 1, 1962	28,000	19,410	(8,590)
November 1, 1962 to January 1, 1963	36,500	27,910	(8,590)
January 1, 1963 to November 1, 1963	36,500	26,177	(10,323)
November 1, 1963 to April 1, 1965	39,780	29,457	(10,323)
April 1, 1965 and thereafter	39,780	39,780	0

Tidewater will purchase its base load requirements from Transco. If Tidewater requires more natural gas on any day than its allocation from Transco would provide, it will look to North Carolina Natural for such additional volumes.

North Carolina Natural has agreed to release gas to Tidewater and thereby to forego sales to Tidewater represented by such released volumes, *provided* Transco is agreeable to selling to North Carolina Natural for the three-year period involved, at a rate equal to the Commodity Charge under Transco's Rate Schedule CD–2, a daily volume of gas equal to the difference between the total quantity allocated to Tidewater hereunder and any lesser total quantity purchased and received by Tidewater.

All volumes of gas purchased by Tidewater from Transco will be delivered by Transco and received for the account of Tidewater at Transco's existing point of delivery to North Carolina Natural, from which point such purchased gas will be transported and delivered to the respective Divisions by North Carolina Natural.

The Commission finds:

It is necessary in the public interest that the issues raised by the petition of Transco be explored on a formal record and that appropriate findings be made by a Presiding Examiner of the Commission.

The Commission orders:

A hearing on the issues raised by the petition of Transco to modify the Commission's order in Opinion No. 302 be convened on April 16, 1962, before a Presiding Examiner of the Federal Power Commission at 441 G St. NW., Washington 25, D.C., at 10:00 a.m., e.s.t.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNION TEXAS NATURAL GAS CORPORATION (OPERATOR) ET AL., DOCKET NO. RI62-258; UNION TEXAS NATURAL GAS CORPORATION, RI62-259

ORDER DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued March 28, 1962)

On February 16, 1962, Union Texas Natural Gas Corporation (Union) filed a motion wherein it requested that the Commission terminate the above-docketed proceedings and permit the suspended increased rates involved therein to become effective immediately without obligation to refund. The subject increase in rates, from 11 cents to 12 cents per Mcf at 14.65 psia, pertain to Union's jurisdictional sales of natural gas to Arkansas Louisiana Gas Company (Arkansas Louisiana) from the Chickasha Field, Grady County, Oklahoma.

In support of its motion, Union states (1) that, prior to its filing the proposed increased rates on November 24, 1961, four other independent producers' substantially similar sales to Arkansas Louisiana were permitted to become effective without suspension; (2) that since the issuance of the Second Amendment to the Policy Statement No. 61-1, the Commission has reaffirmed its policy of permitting adjustments in price based upon the elimination of favored-nation and other similar type clauses with respect to sales outside of Texas District Nos. 2, 3, 4 and 6, citing: *Bert Fields, et al.*, 25 FPC 983; and (3) that the suspension of its increased rates for sales of gas to Arkansas Louisiana in the same area is purportedly discriminatory and inconsistant with the Commission's Statement of General Policy No. 61-1, as amended.

As cited above, the Commission had permitted proposed increased rates to become effective without obligation to refund at the level requested by Union in the Oklahoma "Other Area." However, we do not consider that prior decisions concerned with an increased rate in the same producing area precludes our analysis of all pertinent factors pertaining to the instant proceedings and the continued re-examination of pertinent policies affecting the public interest, particularly since the increased rates involved are in excess of the area price levels as announced in the Statement of General Policy No. 61-1, as amended. Cf. *F.C.C.* v. *Pottsville Broadcasting Co.* 309 U.S. 134, 145; *Panhandle Eastern Pipe Line Co.* v. *FPC*, 236 2d 289.

The Commission finds:

Accordingly, we conclude in this instance that Union's motion to terminate the proceedings in Docket Nos. RI62-258 and RI62-259 should be denied.

The Commission orders:

Union's motion filed in these proceedings on February 16, 1962, is hereby denied.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP62-25

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 29, 1962)

On January 15, 1962, an amended application, which was further amended on January 18, 1962 and on March 7, 1962, was filed by New York State Natural Gas Corporation (New York Natural) superseding its original application filed July 28, 1961, as amended and supplemented October 19, 1961, requesting authorization to construct and operate a 12-inch diameter pipeline extending approximately 23.2 miles from a terminus of its pipeline system near Auburn in Cayuga County, New York, to its existing regulator at the Phelps Connection in Ontario County, New York, and a measuring station near Phelps, in order to meet increased requirements in the western portion of the Auburn-Geneva market area served by New York State Electric and Gas Corporation (New York Electric), all as more fully set forth in the application, as amended and supplemented.

Further, Applicant has an isolated connection at Phelps with the system of Tennessee Gas Transmission Company (Tennessee) for emergency service directly to New York Electric. Upon completion of the proposed 12-inch extension (called the "Phelps" Line) Applicant's main pipeline system will be interconnected with the pipeline system of Tennessee at the Phelps Connection, thus providing a valuable connection in case of emergency on applicant's main pipeline system.

Based on annual volumes estimated to be delivered through the proposed line, Applicant shows the following incremental return on its proposed investment:

	1962	1963	1964
Estimated volumes (Mcf)	2,115,000	2,292,000	2,553,000
Total revenues (at 53.15 cents per Mcf)	$1,124,123	$1,218,198	$1,356,920
Total expenses including cost of gas at 41.3 cents per Mcf	1,032,851	1,116,841	1,240,692
Net income	$91,272	$101,357	$116,228
Return, percent	8.8	9.8	11.2

The estimated cost of such facilities is $1,038,447, to be financed from funds on hand. Applicant states that it will not include the proposed investment in its rate base for any period prior to November, 1964. Applicant also states, at page 2 of its amendment and supplement of March 7, 1962, that,

> New York Natural will not, in any proceeding fixing rates for any period, include or claim in its cost of service applicable to its existing Rate Zones 1 and 2, any costs for the Phelps line covered by this application. New York Natural believes that, in any proper allocation of costs to its existing

Rate Zones, no Phelps line costs should be assigned to its existing Rate Zones 1 and 2, for among other reasons, the said line is to be located and operated within its Rate Zone 3.

On March 8, 1962, in reliance on the above quotation, the North Penn Gas Company (North Penn), a customer of New York Natural in Rate Zones 1 and 2, filed a notice of withdrawal of its petition to intervene, filed on January 5, 1962[1] and amended on February 2, 1962.[2] We do not at this time pass judgment on the proper allocation method to be employed in a subsequent rate proceeding. The Commission therefore is not bound by the statement of New York Natural, above quoted.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 22, 1962, respecting the matters involved in and the issues presented by the application, herein, as supplemented and amended. No protest to the granting of the application has been received. All customers of Applicant have notified the Secretary by letter or telegram that they do not object to the omission of the intermediate decision procedure nor to the Commission rendering a decision pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure. New York Electric intervened in favor of the Applicant. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York Corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 27, 1942, in Docket No. G-312 (3 FPC 844).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented and amended, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The time within which the construction of the facilities hereinafter authorized should be completed and said facilites placed in actual operation should be fixed at 8 months from the date on which this order issues.

---

[1] Answer in opposition filed by Applicant on January 22, 1962. By letter of the Secretary dated January 16, 1962, Applicant was granted an extension to and including January 22, 1962, within which to answer the petition of North Penn.

[2] Answer in opposition filed by Applicant on February 19, 1962. By letter of the Secretary dated February 13, 1962, Applicant was granted an extension to and including February 19, 1962, within which to answer the amended petition of North Penn.

(7) The statement of Applicant that all costs attributable to the facilities hereinbefore described should be allocated to its existing Rate Zone 3 is not a matter appropriate for determination at this time.

(8) The certificate issued hereinafter should be conditioned upon Applicants not including the proposed investment in its rate based prior to November 1964.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant of Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, New York State Natural Gas Corporation, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application, as supplemented and amended, in this proceeding, upon the terms and conditions of this order.

(B) Applicant shall not include any of the proposed investment in its rate base prior to November 1964.

(C) Nothing herein should be construed as approval of Applicants statement that all costs attributable to the facilities hereinbefore described should be allocated to its existing Rate Zone 3.

(D) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(E) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 8 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CITIES SERVICE GAS COMPANY, *ET AL.*, DOCKET NO. CP61–263, *ET AL.*; ARKANSAS LOUISIANA GAS COMPANY, *ET AL.*, DOCKET NO. CP62–40, *ET AL.*; OKLAHOMA NATURAL GAS GATHERING CORPORATION, *ET AL.*, DOCKET NO. CI61–1408, *ET AL.*[1]

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RELATED FPC GAS RATE FILING[1]

(Issued March 30, 1962)

On April 10, 1961, Cities Service Gas Company (Cities Service) filed in Docket No. CP61–263 an application pursuant to Section 7(c) of the Natural Gas Act (Act) for a certificate of public convenience and necessity authorizing the construction and operation of approximately 23 miles of 16-inch pipeline from a point on Cities Service's existing Oklahoma City 20-inch main transmission pipeline in Noble County, Oklahoma, westerly to a point in Garfield County, Oklahoma, where it will connect with the existing 12-inch pipeline of Oklahoma Natural Gas Gathering Corporation (Gathering) from whom Cities Service pro-

[1] Additional applicants omitted in printing.

poses to purchase and take delivery of not to exceed 40,000 Mcf of natural gas per day, all as more fully set forth in the aforesaid application in Docket No. CP61–263.

Cities Service's estimated cost for the proposed project is $850,000, which will be financed from treasury cash.

On March 28, 1961, Oklahoma Natural Gas Gathering Corporation filed in Docket No. CI61–1408 an application pursuant to Section 7(c) of the Act for a certificate of public convenience and necessity authorizing the aforementioned sale to Cities Service of natural gas which Gathering proposes to purchase in the Ringwood Field, Major County, Oklahoma, as hereinafter described and as more fully described in Gathering's application in said Docket No. CI61–1408. The subject sale will be made pursuant to a gas sales contract between Gathering and Cities Service dated March 23, 1961, as amended by letter filed January 16, 1962, at an initial price of 17.5 cents per Mcf at 14.65 psia, the volume limited to a maximum of 40,000 Mcf per day.

Gathering proposes to purchase natural gas jointly with Warren Petroleum Corporation (Warren) from certain producers thereof in the Ringwood Field as set forth in the twenty-seven producer applications enumerated hereinafter, pursuant to individual contracts, at 11.0 cents per Mcf at 14.65 psia. Warren will take liquid products only from the subject gas and will have no title to the residue gas after processing at a gasoline plant in the Ringwood Field. Gathering will gather the gas, transport it to the processing plant where Warren will extract the liquids, then Gathering will deliver it to Cities Service in Garfield County as aforesaid.

The applications under which producers in the Ringwood Field seek authorization to sell natural gas to Gathering and Warren pursuant to gas sales contracts filed concurrently as initial rate schedules for the respective proposed services, are designated as follows: CP62–40, CI61–1545, CI61–1553, CI61–1557, CI61–1561, CI61–1569, CI61–1587, CI61–1590, CI61–1599, CI61–1639, CI61–1654, CI61–1655, CI61–1664, CI61–1667, CI61–1678, CI61–1693, CI61–1711, CI61–1712 CI61–1738, CI61–1746, CI61–1747, CI61–1785, CI61–1792, CI61–1813, CI62–569, CI62–570 and CI62–938.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 22, 1962, respecting the matters involved in and the issues presented by the applications herein. No petitions to intervene or protests to the granting of the respective applications have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(3) Each Applicant in the remaining dockets enumerated in the caption of this order is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission, or will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption,

subject to the jurisdiction of the Commission, and will, therefore, be a "natural-gas company" within the meaning of said Act upon commencement of the service under the respective authorizations granted hereinafter.

(4) The facilities to be constructed by Cities Service, as hereinbefore described and as more fully described in the application in Docket No. CP61–263, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Cities Service are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The construction and operation of the facilities proposed by Cities Service in Docket No. CP61–263 are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate hereinafter issued to Cities Service and the rights granted thereunder be conditioned upon Cities Service's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) The sales of natural gas by the respective Applicants as described in the respective applications, other than Docket No. CP61–263, enumerated in the caption of this order, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by the respective Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(8) The sales of natural gas by the aforesaid Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(9) The respective Applicants in this consolidated proceeding are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(10) The respective related rate schedules and supplements thereto should be accepted as hereinafter ordered and conditioned.

(11) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate the facilities hereinbefore described, as more fully described in the application in Docket No. CP61–263, upon the terms and conditions of this order.

(B) Certificates of public convenience and necessity be and the same are hereby issued, upon the terms and conditions of this order, authorizing the sales by the respective Applicants, other than Cities Service Gas Company, in this consolidated proceeding, of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore

described and as more fully described in the respective applications, amendments, supplements and exhibits aforesaid in this proceeding.

(C) The certificate issued to Cities Service Gas Company by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Cities Service's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The time within which the facilities authorized in paragraph (A) above shall be completed and said facilities placed in actual operation is hereby fixed at six months from the date on which this order issues.

(E) The certificates issued to the respective Applicants by paragraph (B) above are not transferable and shall be effective only so long as said Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of the certificates issued by paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customers involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon the termination of said contracts as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(G) The authorization granted to Oklahoma Natural Gas Gathering Corporation in Docket No. CI61–1408 by paragraph (B) above is hereby conditioned upon the use of a total initial price of 17.5 cents per Mcf at 14.65 psia, as agreed to by Gathering.

(H) Oklahoma Natural Gas Gathering Corporation is hereby directed to make all future filings pursuant to the Commission's regulations governing pipeline company filings.

(I) The authorization granted to Tidewater Oil Company in Docket No. CI61–1599 by paragraph (B) above is hereby conditioned upon the filing by Tidewater of an acceptable related rate schedule for the proposed service as heretofore requested.

(J) The related rate schedules listed below are accepted for filing to be effective on the date of initial delivery, excepting the filing of Arkansas Louisiana Gas Company related to Docket No. CP62–40 which shall become effective upon the date of issuance of this order. Such acceptance for filing shall not be construed as constituting approval by this Commission of any service, rate, charge, classification, nor any rule, regulation or practice affecting such service or rate; nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate; and such acceptance is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicants involved. Further, in the event that any

document comprising the listed rate schedules was executed on or after April 3, 1961, and contains provisions, either therein or by adoption of the terms and provisions of other agreements, for a change in rate other than those permitted by Section 154.93 of the Commission's Regulations under the Natural Gas Act, such rate change provisions shall be inoperative and of no effect at law and any tendered rate change under such provisions will be rejected.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–13780

ORDER GRANTING MOTION FOR STAY

(Issued March 30, 1962)

On February 9, 1962, 27 FPC 347, this Commission issued its order in this proceeding reducing the initial price, issuing a permanent certificate of public convenience and necessity, and directing refunds. On March 2, 1962, Socony Mobil Oil Company, Inc. filed a motion for stay of such provisions of said order as pertain to price and to refunds until 60 days after final action by the Commission upon Socony's application for rehearing, and until after final disposition of any petition for judicial review of the final order of the Commission herein. On the same day Socony filed its application for rehearing.

We have considered Socony's motion for stay, and find, as we did in our order of March 12, 1962, in *Continental Oil Co.*, Docket Nos. G–11024, *et al.* (*Catco*), that the motion for stay should be granted in part. We do not believe that the public interest will be adversely affected by granting a stay for a period of 60 days after our final action upon Socony's application for rehearing.

The Commission finds:

Good cause exists for granting Socony's motion for stay of ordering paragraphs (A), (C), and (D) of the order issued February 9, 1962, herein, for a period of 60 days following the Commission's final action upon the application for rehearing filed herein.

The Commission orders:

The conditions and requirements set forth in ordering paragraphs (A), (C), and (D) of the order issued February 9, 1962, to and as a part of the permanent certificate of public convenience and necessity issued thereby, and the compliance of Socony, are hereby stayed until 60 days after final action by the Commission upon the application for rehearing filed in these proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CALIFORNIA ELECTRIC POWER COMPANY, PROJECT NOS. 344, 1388, 1389, 1390, AND 1394

ORDER DETERMINING AND DIRECTING ESTABLISHMENT AND MAINTENANCE OF AMORTIZATION RESERVES

(Issued April 2, 1962)

This is an amortization reserve proceeding pursuant to Section 10(d) of the Federal Power Act[1] involving five hydroelectric projects owned and operated by California Electric Power Company; specifically, licensed Project Nos. 344, 1388, 1389, 1390, and 1394. It was initiated by the staff through a comprehensive field examination of the books, records and other data of the Licensee, California Electric Power Company.

Staff proposes that the Commission, pursuant to Section 10(d) of the Act and Articles 17, 20, 22, 20, and 25 of the respective licenses for Project Nos. 344, 1388, 1389, 1390, and 1394, determine: the amount of Licensee's "surplus earnings" from project No. 344 for the period from January 16, 1944 through December 31, 1958, to be credited to Account 264, Amortization Reserve—Federal,[2] to be zero dollars, and the amounts of Licensee's "surplus earnings" from Project Nos. 1388, 1389, 1390, and 1394, for the period from December 1, 1956, through December 31, 1958, to be credited to Account 264 to be $303.52, $389.51, $43.83, and $763.10, respectively.

Article 17 of the license for Project No. 344 provides as follows:

> After the first twenty years of operation of said project under this license, out of surplus earned thereafter, if any, accumulated in excess of a specified reasonable rate of return upon the actual, legitimate investment in said project, all as defined in and determined by the provisions of Regulation 17 of said rules and regulations of the Commission, the licensee shall establish and maintain amortization reserves which reserves shall, in the discretion of the Commission, be held until the termination of the license or be applied from time to time in reduction of the net investment. Such specified rate of return shall, subject to the proviso of Paragraph A, Section 3 of said regulation, be one and one-half (1½) times the weighted average annual interest rate payable on the par value of the bona fide interest-bearing debt actually outstanding, in whole or in part, on account of project property at the beginning of the period of amortization and of each calendar year thereafter; such weighted average annual interest rate being determined as provided in Paragraphs B and C of Section 3 of said Regulation 17: *Provided*, That, if at the beginning of the period of amortization or of any calendar year thereafter, the outstanding interest-bearing debt on account of the

[1] Section 10(d) provides "[t]hat after the first twenty years of operation, out of surplus earned thereafter, if any, accumulated in excess of a specified reasonable rate of return upon the net investment of a licensee in any project or projects under license, the Licensee shall establish and maintain amortization reserves, which reserves shall, in the discretion of the Commission, be held until the termination of the license or be applied from time to time in reduction of the net investment. Such specified rate of return and the proportion of such surplus earnings to be paid into and held in such reserves shall be set forth in the license."

[2] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961.

project under license, together with any other works or property operated in connection therewith, is less than 25 percent of the actual legitimate investment in said project, then and in such event for the calendar year next following the specified rate of return shall be two (2) times the legal rate of interest in the State of California.

Subject to the provisions of Section 6 of said regulation, the following proportions of such surplus earnings shall be paid into and held in such amortization reserves: Of all surplus earnings up to and including 2 percent upon the actual, legitimate investment, 30 percent thereof shall be so paid; of all surplus earnings in excess of 2 percent and not in excess of 4 percent upon such investment, 50 percent thereof shall be so paid; of all surplus earnings in excess of 4 percent and not in excess of 6 percent, 70 percent thereof shall be so paid; and of all surplus earnings in excess of 6 percent, 90 percent thereof shall be so paid; Provided, That if at the end of any calendar year of the amortization period the commission shall find that the accumulated earnings of said project during the period of operation, including the first twenty (20) years thereof, have not yielded a fair return upon the actual, legitimate investment in said project, the proportion of such surplus earnings for such calendar year and for succeeding calendar years to be paid into such amortization reserves shall be ten (10) percent thereof until such time as the accumulated earnings of said project represent, in the judgment of the Commission, a fair return upon such investment for such period of operation.

Articles 20, 22, 20, and 25 of the respective licenses for Project Nos. 1388, 1389, 1390, and 1394 provide as follows:

> After the first 20 years of operation of the project, six percent per annum is the specified * * * rate of return on the net investment in the project under license for determining surplus earnings, in accordance with the provisions of Section 10(d) of the Act, for the establishment and maintenance of amortization reserves to be held until the termination of the license, or, in the discretion of the Commission, to be applied from time to time in reduction of the net investment in * * * project, and one-half of all surplus earnings in excess of six percent per annum received in any calendar year shall be paid into * * * such amortization reserves.

Licensee's Project No. 344 was placed in commercial operation on January 16, 1924, and therefore entered the amortization reserve period at the beginning of its twenty-first year of operation, January 16, 1944. Commercial operation of Project Nos. 1388, 1389, 1390, and 1394, which were already constructed, commenced under license on December 1, 1936, making the initial dates of the respective amortization reserve periods for those projects December 1, 1956. The license for Project No. 344 was issued originally pursuant to Section 4(d) of the Federal Water Power Act on April 27, 1923, for a period of 50 years to the San Gorgonia Power Company (name later changed to San Gorgonio Power Company), and subsequently acquired by the present Licensee. The licenses for Project Nos. 1388, 1389, 1390, and 1394 were issued pursuant to Section 4(e) of the Federal Power Act, and each became effective for a period of 50 years commencing December 1, 1936.

The five projects are located within the State of California and are physically operated by the Licensee as an integral part of an interconnected system that includes an additional hydroelectric generating plant not under Commission license, steam production plants and a network of transmission and distribution systems. In addition, the Licensee receives certain of its electric energy requirements by purchase from other sources or through power pool or interchange

arrangements with other companies. The electric energy generated by the projects is intermingled and distributed in Licensee's system with energy from its other sources of supply. Licensee operates in southeastern California and southwestern Nevada and Arizona.

Consistent with Licensee's method of physical operation of the above projects, its accounts, books and records do not show any particular earnings specifically associated therewith or derived therefrom. The same is true of Licensee's other generating or purchased power resources. In these circumstances, staff proposes that the Commission determine Licensee's respective "surplus earnings" from Project Nos. 344, 1388, 1389, 1390, and 1394 as follows:

(1) Impute to the project during the respective fiscal periods concerned herein the particular earned rate of return which Licensee derived from its electric department utility operations as a whole during that period when computed in accordance with applicable precedents of this Commission;

(2) In the given fiscal period, determine the dollar excess, if any, of the project earnings, computed by applying the particular imputed earned rate of return to the average project net investment during the same period, over the project specified return, computed by applying the specified rate of return for the same period to (a) the project net investment as of the beginning of the same period for Project No. 344, and (b) the project net investment averaged for the beginning and end of the same period for Project Nos. 1388, 1389, 1390, and 1394; such excess to be considered Licensee's "surplus earnings" during the particular period.

The following tabulation shows the "surplus earnings" of the five projects during the amortization reserve periods covered by the staff's examination, computed in this manner, and the portions of such earnings to be credited to the respective amortization reserves for the various projects:

Project No. 344

Period	Earnings in excess of specified return and accumulated deficit		
	Surplus earnings	Accumulated deficit [1]	Credits to account 264
1/16/44 to 12/31/44	($46,623.88)	($46,623.88)	
1945	(47,107.12)	(93,731.00)

12/1/56 to 12/31/56	$1,526.20		$763.10
1957	(11,701.18)	($11,701.18)	
1958	10,955.17	(746.01)	
Total	.780.19	(746.01)	763.10

[1] The large deficiency of earnings below the specified rate of return for project No. 344 is due to the fact that, during the period from January 16, 1944, the beginning of the project amortization reserve period, to November 1, 1949, the date of transfer to California Electric Power Company, the then licensee, San Gorgonio Electric Corporation, had (1) a net operating loss each year, and (2) a high specified rate of return. San Gorgonio had no outstanding interest-bearing debt on account of the project during this period. Therefore, in accordance with the proviso of Article 17 of the license, the specified rate of return was two times the legal rate of interest (7 percent) in California, or 14 percent. After the transfer of the license to California Electric Power Company on November 1, 1949, the project property became subject to the new licensee's bond mortgage indenture; and, accordingly, the new licensee's interest-bearing debt was outstanding on account of the project, and the specified rate of return was one and one-half times the weighted average annual interest rate.

In developing Licensee's yearly actual earned rate of return, the staff derived rate base for the Company's entire electric department operations for any given year is based upon average of beginning and end-of-year balances of electric plant in service (original cost), less related book depreciation reserves, contributions in aid of construction, customer advances for construction, and advance deposits for temporary installations for electric service, plus an allowance for working capital; the last being computed on the basis of a cash allowance equal to one-eighth of cash operating expenses (exclusive of purchased power expense and certain other items) for the particular year concerned, plus average balances of materials and supplies and prepayments, less average available advance collections of Federal income taxes exclusive of accruals attributable to Federal taxes deferred.

The Project No. 344 and other properties of San Gorgonio Electric Corporation were acquired by California Electric Power Company as of November 1, 1949, at a price less than depreciated original cost by $139,636.50. By order issued December 4, 1950, in Docket No. E–6222 (9 FPC 1287), the Commission authorized the recording of the credit amount of $139,636.50 in Account 100.5 (now 114), Electric Plant Acquisition Adjustments, and the disposition thereof by monthly credits of $581.82 to Account 505 (now 406), Amortization of Electric Plant Acquisition Adjustments, and offsetting charges to Account 252 (now 115), Reserve for Amortization of Electric Plant Acquisition Adjustments. The staff has excluded the credit balance in Account 100.5 and the debit balance in Account 252

from the rate base, but has included the monthly amortization credits to Account 505 in the computation of net electric operating income.

Staff treatment of Licensee's Federal income taxes reflects a normalization of the amount of income taxes deferred by Licensee pursuant to Sections 168 and 167 of the Internal Revenue Code of 1954, for the years for which such deferrals were recorded, in determining Licensee's net electric department operating income. Deferred State corporate franchise taxes, which are based upon the company's income for the preceding year, were treated in the same manner as deferred Federal income taxes.

Upon the conclusion of the staff examination, conferences were held between the staff and representatives of the Licensee at which agreement, subject to Commission approval, was reached as to the respective amounts of the "surplus earnings" of the five projects, as well as the portions of such earnings to be credited to Licensee's Account 264, as indicated above.

Licensee, by letter dated December 7, 1960, confirmed its agreement in the above matter and concurs that the Commission determine the amounts of "surplus earnings" to be credited to Account 264, as set forth above.

While the treatment herein of deferrals of income taxes conforms to our Uniform System of Accounts and certain prior Commission precedents and is accepted for the purposes of this determination of excess earnings, we do not necessarily endorse such treatment in principle and reserve the right to reexamine such treatment. We approve the instant determination for past periods inasmuch as any change in Commission policy would not be made retrospectively.

The Commission finds:

(1) The Federal Power Act [Section 10(d)] and Article 17 of the license for Project No. 344 require that Licensee establish and maintain amortization reserves with respect to that project wherein:

> Subject to the provisions of Section 6 of said regulation, the following proportions of such surplus earnings shall be paid into and held in such amortization reserves: Of all surplus earnings up to and including 2 percent upon the actual, legitimate investment, 30 percent thereof shall be so paid; of all surplus earnings in excess of 2 percent and not in excess of 4 percent upon such investment, 50 percent thereof shall be so paid; of all surplus earnings in excess of 4 percent and not in excess of 6 percent, 70 percent thereof shall be so paid; and of all surplus earnings in excess of 6 percent, 90 percent thereof shall be so paid: *Provided*, That if at the end of any calendar year of the amortization period the Commission shall find that the accumulated earnings of said project during the period of operation, including the first twenty (20) years thereof, have not yielded a fair return upon the actual, legitimate investment in said project, the proportion of such surplus earnings for such calendar year and for succeeding calendar years to be paid into such amortization reserves shall be ten (10) percent thereof until such time as the accumulated earnings of said project represent, in the judgment of the Commission, a fair return upon such investment for such period of operation.

(2) The Federal Power Act (Section 10(d)) and Articles 20, 22, 20 and 25 of the licenses for Project Nos. 1388, 1389, 1390, and 1394, respectively, require that Licensee establish and maintain amortization reserves with respect to those projects wherein:

> After the first 20 years of operation of the project, six percent per annum is the specified * * * rate of return on the net investment in the project under license for determining surplus earnings, in accordance with the provisions of Section 10(d) of the Act, for the establishment and mainte-

nance of amortization reserves to be held until the termination of the license, or, in the discretion of the Commission, to be applied from time to time in reduction of the net investment in * * * project, and one-half of all surplus earnings in excess of six percent per annum received in any calendar year shall be paid into * * * such amortization reserves.

(3) The first 20 years of operation of Project No. 344 under license ended as of January 15, 1944; and the first 20 years of operation of Project Nos. 1388, 1389, 1390, and 1394 under license ended as of November 30, 1956.

(4) The computation of Licensee's respective "surplus earnings" from Project Nos. 344, 1388, 1389, 1390, and 1394, subsequent to those dates and the portions thereof to be credited to Account 264, in the manner as proposed by the staff, all as described above, is reasonable and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned.

(5) For the period from January 16, 1944, through December 31, 1958, Licensee's surplus earnings for Project No. 344, and for the period from December 1, 1956, through December 31, 1958, Licensee's surplus earnings for Project Nos. 1388, 1389, 1390, and 1394, on an annual basis, are as set forth in tabular form in the recitals above, as well as the portions thereof required to be set aside for the projects in Account 264, Amortization Reserve-Federal.

(6) As of December 31, 1958, the credit balances required to be maintained by Licensee in Account 264, Amortization Reserve-Federal, for the five projects are as follows: Project No. 344—zero dollars; Project No. 1388—$303.52; Project No. 1389—$389.51; Project No. 1390—$43.83; and Project No. 1394—$763.10.

(6) Licensee's concurrence in the staff recommendations herein obviates the necessity for any public hearings in this matter prior to Commission action in accordance with those recommendations, as hereinafter provided.

The Commission orders:

(A) Licensee shall credit to Account 264, Amortization Reserve—Federal, by a charge to Account 216, Unappropriated Earned Surplus, the amount of zero dollars for Project No. 344 for the period from January 16, 1944 through December 31, 1958; and the amounts of $303.52, $389.51, $43.83, and $763.10 for the period from December 1, 1956 through December 31, 1958, for Project Nos. 1388, 1389, 1390, and 1394, respectively; all as shown in the tabulations hereinbefore set forth.

(B) Licensee shall, within 90 days from the issuance of this order, file three certified copies of its journal entries recording the above credits.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

GEORGIA POWER COMPANY, PROJECT NO. 2303

ORDER DENYING APPLICATION FOR PRELIMINARY PERMIT

(Issued April 2, 1962)

Application was filed on October 27, 1961, by Georgia Power Company (Applicant), of Atlanta, Georgia for a preliminary permit for thirty-six (36) months under sub-section 4(f) and Section 5 of the Federal Power Act (the Act), in order that the Applicant may secure and maintain priority for a license under the Act while studying the feasibility of developing the Flint River between river miles 230 and 270 for hydroelectric generating purposes and preparing an application for license.

By letter of January 19, 1962, the Office of the Chief of Engineers, Department of the Army, has advised that its studies and preparation of a comprehensive plan for developing the water resources involved are essentially complete. The aforesaid studies of the Corps of Engineers are made pursuant to Section 7 of the River and Harbor Act of July 24, 1946, and a June 1, 1948, resolution by the Committee on Public Works, United States Senate. The letter of January 19, 1962, from the Corps also states that: "Since a comprehensive plan for developing the water resources will be available in the near future, the Commission may wish to defer granting the permit."

On March 9, 1962, the Corps issued a notice of a report of the District and Division Engineers for the development of the Flint River. The report contains plans for three developments for the reach of the Flint River in which the applicant proposed to study the feasibility of development for hydroelectric generating purposes. The notice of the Corps describes these three developments, as follows:

Spewrell Bluff Dam. At river mile 263.4 above the mouth of the Flint, about 9 miles west of Thomaston. A dam with a maximum height of about 180 feet would form a reservoir of 16,800 acres at normal full-pool-elevation 700 above mean sea level. Between elevations 700 and 709 approximately 230,000 acre-feet of storage would be reserved for flood control. Between elevations 700 and 670 there would be 322,000 acre-feet stored for regulation of the flow for hydroelectric power production at the site and downstream. A 100,000 kilowatt hydroelectric power plant would be provided. The estimated Federal first cost of the project is $63,200,000.

Lazer Creek Dam. At mile 255.7 about 8 miles southwest of Thomaston. A dam with a maximum height of about 142 feet would form a reservoir of about 9,000 acres at normal full-pool-elevation 543 and would back water to Spewrell Bluff Dam. Between elevations 543 and 547 a storage of 45,000 acre-feet would be for flood control. A power plant of about 87,000 kilowatts would be provided. The estimated Federal first cost of the project is $40,400,000.

Lower Auchumpkee Creek Dam. At mile 233.4 about 18 miles southeast of Thomaston. A dam with a maximum height of about 130 feet would form a reservoir of about 15,600 acres at normal full-pool-elevation 417 and would back water to the Lazer Creek Dam. Between elevations 417 and 425 a storage of 145,000 acre-feet would be for flood control. A power plant of about 81,000 kilowatts would be provided. The estimated Federal first cost of the project is $48,300,000.

The purpose of a preliminary permit is to grant the permittee priority for filing an application for a license, but this priority is not available merely for the asking. It is granted in a situation where the feasibility of a project in a particular stretch of a river has not as yet been demonstrated. It gives the permittee a priority over other non-Federal parties in order to encourage the investigations of projects which otherwise might never be investigated or built. In the instant case, the engineering and economic studies for developing the reach of the Flint River for which the Applicant seeks a permit have just been completed by the District and Division Engineers who recommend that these three projects be constructed by the United States as the first phase of the comprehensive plan described in the report. The studies which a preliminary permit are designed to encourage have thus already been made at public expense and should therefore be available on an equal basis to any party which may wish to develop these water resources in the event Federal development is not authorized. Applicant like all other potential developers

has access to these studies and may of course file an application for a license without a prior preliminary permit. We conclude Applicant has not demonstrated a justification for a proposed preliminary permit.

Moreover, the comprehensive report discussed above is now under review by the Board of Engineers for Rivers and Harbors. It is anticipated that the Chief of Engineers will soon submit a report to this Commission for its review and comments, particularly with respect to the power features of the proposed plan of development. In its present form the report contemplates Federal development of these water resources.

Section 7(b) of the Federal Power Act declares:

> Whenever, in the judgment of the Commission, the development of any water resources for public purposes should be undertaken by the United States itself, the Commission shall not approve any application for any project affecting such development, but shall cause to be made such examinations, surveys, reports, plans, and estimates of the cost of the proposed development as it may find necessary, and shall submit its findings to Congress with such recommendations as it may find appropriate concerning such development.

We have not formed any judgment at this stage concerning the desirability of Federal development. No record has been made on this question and, as indicated above, the Chief of Engineers' report is not yet available to us. However, in light of the policy declared in Section 7(b) it does not seem appropriate to grant the preliminary permit sought by the Applicant when we shall soon have occasion to consider the question of Federal development. Should we conclude after reviewing the report of the Corps of Engineers that Federal construction is the appropriate way to develop the Flint River, it would then be plainly inconsistent with the policy of Section 7(b) to grant a permit; and it seems equally unwise to grant such a permit at the threshold of consideration of the question of Federal development, especially in view of the caution of the construction agency against granting a permit at this time.

In response to notice of the application, several communications have been received in support of the application and several have been received in opposition.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Federal Power Act, that the application for preliminary permit be denied.

The Commission orders:

The application for a preliminary permit for Project No. 2303, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UTAH POWER & LIGHT COMPANY, PROJECT NO. 675

ORDER ACCEPTING SURRENDER OF LICENSE (MAJOR)

(Issued April 2, 1962)

Application was filed August 28, 1956, by Utah Power & Light Company, licensee for major Project No. 675, for surrender of its license for the project pursuant to Section 6 of the Federal Power Act.

The project, known as the Battle Creek project, was located on Battle Creek and Blue Cliffs Creek and affected lands of the United States within the Uinta National Forest in Utah County, Utah.

According to the application, the existing 24-inch wood stave pipe line is 45 years old and needs to be replaced, but replacement is prohibitive under present operating and economic conditions due to labor, material and extensive energy costs, and energy can be supplied more economically from other points in the licensee's interconnected system. Therefore, the licensee concludes it is not justified in operating and maintaining the Battle Creek plant at which in 1955 the cost of energy was 14.120 mills per kilowatt-hour.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Uinta National Forest, has reported, by letter dated December 6, 1961, that all water power generating facilities have been removed and that the national forest lands involved have been restored to a condition satisfactory to the Service, and there is no objection to surrender of the license for the project.

The licensee has returned its copy of the license instrument and annual charges under the license for the project have been paid through December 31, 1960.

The Commission finds:

(1) Public notice of the filing of the application has been given and no protests thereon have been received.

(2) Acceptance of surrender of the license for the project is appropriate as hereinafter provided.

The Commission orders:

Surrender of the license for major Project No. 675 is accepted, effective as of December 31, 1961, subject to the payment of annual charges under the license for the project through said date in the amount of $184.20 within 30 days of rendition of a bill therefor by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

REJECTION OF SALES CONTRACTS CONTAINING INDEFINITE ESCALATION CLAUSES AND OF APPLICATIONS RELYING UPON SUCH CONTRACTS FOR GAS SUPPLY, DOCKET NO. R–203

ORDER 242

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued April 4, 1962)

Subsequent to the issuance on February 8, 1962, of Order No. 242, 27 FPC 339, which prescribed certain amendments to the Commission's Regulations under the Natural Gas Act, applications for rehearing, as noted below, were timely filed. All such applications requested us to reconsider our action and vacate or revoke that order.

The points urged in the applications are substantially the same as those heretofore presented to the Commission in the written submittals made pursuant to the notice of proposed rulemaking issued herein on October 10, 1961 (26 F.R. 9732). They were fully considered by the Commission prior to the issuance of the order. Furthermore, the points are, in large part, the same as those urged in Docket No. R–153 both prior and subsequent to the issuance of our Orders Nos. 232 and 232–A. Accordingly, there is no occasion for further elaboration of our views.

The Commission finds:

No new facts or principles of law have been assigned in the several applications for rehearing which either were not fully considered by the Commission

prior to the issuance of Order No. 242, or, having now been considered, warrant further hearing, modification or revocation of such order or the regulations promulgated thereby.

The Commission orders:

(A) The application for rehearing filed herein by Hunt Oil Company (and others therein named) on March 5, 1962, is hereby denied.

(B) The application for rehearing filed by Pan American Petroleum Corporation of March 7, 1962, is hereby denied.

(C) The application for rehearing and reconsideration filed herein by Humble Oil & Refining Company on March 8, 1962, is hereby denied.

(D) The application for rehearing filed herein by Shell Oil Company on March 8, 1962, is hereby denied.

(E) The petition for rehearing filed herein by The Superior Oil Company on March 8, 1962, is hereby denied.

(F) The application for rehearing filed herein by The Atlantic Refining Company on March 9, 1962, is hereby denied.

(G) The application for rehearing filed herein by Sun Oil Company on March 9, 1962, is hereby denied.

(H) The application for rehearing and reconsideration filed herein by Continental Oil Company on March 12, 1962, is hereby denied.

(I) The application for rehearing and reconsideration filed herein by Phillips Petroleum Company on March 12, 1962, is hereby denied.

Commissioner Woodward *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7025

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued April 5, 1962)

(ii) By order issued March 28, 1962, 27 FPC 620, in the above-entitled matter, the Commission authorized Pacific Power & Light Company (Applicant) to issue and sell up to 696,695 shares of its Common Stock, par value $3.25 per share, through an underwritten subscription offering, subject, among others, to the provisions set forth in paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Common Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of the Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegram as contemplated by Section 34.9 of the Regulations;

(ii) The Commission, by further order, shall have approved the subscription price per share to be received by Applicant for the Common Stock and the compensation to be paid to underwriters under the proposed arrangement as described above.

Applicant, on April 5, 1962, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, in which it states that it has fixed $27.00 per share as the subscription price to be received by Applicant for 676,497 shares of Common Stock and that it proposes to accept, as representing the

lowest aggregate amount of compensation to be paid by the Applicant to the underwriters, the bid of Kidder, Peabody & Co. to purchase all of the unsubscribed shares of the proposed issuance of Common Stock at the subscription price for an aggregate compensation of $236,097.45.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued March 28, 1962, in the above docket, and the subscription price to be received by the Applicant for the Common Stock and the compensation to be paid to the underwriters under the bid referred to above are reasonable.

(2) The proposed issuance of Common Stock, as hereinafter authorized will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The subscription price to be received by the Applicant for the Common Stock and the compensation to be paid to the underwriters under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Common Stock referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized subject only to the provisions of Paragraphs (A), (C), (D), and (E) of the Commission's order issued March 28, 1962, in the above docket.

Commissioner Morgan *dissenting* stated: My objections to this issue, as expressed in my dissent to the order, have not been answered or satisfied and I therefore do not concur in this order under the prevailing conditions.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. G-11980

ORDER DENYING REHEARING AND FURTHER ORAL ARGUMENT

(Issued April 5, 1962)

On February 6, 1962, we issued an opinion (No. 352) and accompanying order determining principles and methods of allocation of costs to zones and related issues in the proceeding in Docket No. G-11980.

Applications for rehearing have been filed by the Columbia Companies [1] and by the New England interveners.[2] In addition to rehearing, the New England interveners in their application and the Columbia Companies by separate document request clarification of specified portions of the Commission Opinion. Columbia has also requested further oral argument. Brooklyn Union Gas Company, Public Service Electric and Gas Company, Consolidated Edison Company of New York, Inc., and Tennessee Gas Transmission Company have filed opposition to the request for further oral argument. The Pennsylvania Public Utility Commission

[1] Manufacturers Light and Heat Company, The Ohio Fuel Gas Company and United Fuel Gas Company.

[2] A complete list of the New England companies is set forth in their petition, p. 1, footnote No. 1.

filed statements joining the Columbia Companies in both their application and petition for rehearing and in their motion for further oral argument.

In the application for rehearing Columbia states *inter alia* that the Commission erred in: (1) the method of assigning costs to Storage Service (SS–5) and Peaking Services (PS–G); (2) adopting the historical revenue patterns;[3] and (3) adopting the Mcf-mile over the zone-by-zone method of allocation.

In support of the allegation that the Commission erred in the assignment of costs to SS–5 and PS–G services, Columbia argues that the Commission is precluded from crediting revenues to these services because of prior orders in Docket Nos. G–11107 and G–11980, and argument by the Commission's Solicitor before the court. It is apparent from the Commission's and the Solicitor's prior statements, read in context, that these statements do not commit the Commission to a particular method of determining costs for these services. Rather, they properly leave the question of the determination of these costs until such time as all the facts and interrelationships can be considered. In Opinion No. 352, upon consideration of all the facts, equities and benefits, we allocated costs to these classes of service which would recover all of the incremental costs of these services and a substantial amount of system costs which would otherwise be borne by regular service. The method employed is both fair and reasonable in the light of the record before us.

Columbia alleges additionally that the Commission erred in its finding of incremental costs applicable to the PS–G service. This assertion appears to rest upon a misinterpretation of the concept of incremental costs. Thus, Columbia seems to imply that incremental cost would include fixed charges. Incremental costs, as we have used them, include only the out-of-pocket costs (compression, purchased gas, etc.). We adhere to this view.

Columbia also contends that the Commission erred in finding that no additional facilities were required to render storage service and peak service. This contention is without merit. While it is a fact that facilities were constructed which ultimately render these services, such facilities were not constructed for the purpose of rendering PS–G service, nor were additional facilities necessary to render the SS–5 service authorized. (Docket Nos. G–10804 and G–11107, 19 FPC 558 and 21 FPC 70.) These services have been authorized to make the best use of existing facilities.

In its petition Columbia reiterates its position opposing the Mcf-mile and favoring the zone-by-zone method of allocation. We have fully considered Columbia's argument made during hearing, in its briefs, exceptions and in two oral arguments. Its position is abundantly clear and does not alter our conclusion.

However, Columbia points out a correction that should be made to the more recent volumetric data of the various zones used in our Opinion. The data used did not include the volumes delivered to the Gabe extraction plant in the Central zone. For this reason the volumes for the Central zone are understated by 7,665,000 Mcf annually. This correction, however, does not affect our conclusion:

> * * * In view of this indicated growth of the *New England* load, an adjustment for load density in that zone does not appear to be necessary. [Emphasis added.]

Both Columbia and New England request clarification of our language with respect to the future application of the historical revenue pattern. So that there

[3] In its concurrent motion for clarification of specified portions of Opinion No. 352, Columbia contends that the portion of that Opinion prescribing the manner of application of the historical revenue is ambiguous and open to conflicting interpretations. That contention is dealt with below.

will be no misunderstanding, we intend that the G–5259 rates be applied to the volumes of gas sold in the respective periods involved in the G–11980, G–17166, and G–19983 proceedings to determine the historical revenue pattern. Also, it is contemplated that the transition from the historical revenue pattern to straight Mcf–mile costs will take place after the period covered by the G–19983 proceeding. We contemplate that in any future case there will be no adjustment to reflect the historical revenue pattern, but do not foreclose the possibility that special circumstances in the future may require some adjustment.

In addition, the New England interveners argue that the Commission erred in: (1) segregating the lateral facilities in the New England zone, or that, even if segregation were proper, the Commission did so on an improper basis; and (2) determining demand responsibility on the basis of the three-day sustained peak rather than on the basis of average billing demands. Our reconsideration of their arguments indicates no error in our findings or conclusions.

Grant of Columbia's request for additional oral argument would be unwarranted. This case has been fully briefed and two oral arguments have been held.

The Commission finds:

(1) The afore-mentioned applications for Rehearing filed herein, set forth no new facts or principles of law which either were not fully considered by the Commission when it adopted its opinion and order issued February 6, 1962, in Docket No. G–11980, or which having now been considered warrant any change or modification of said order.

(2) Columbia's request for further oral argument should be denied.

The Commission orders:

(A) The afore-mentioned petitions for Rehearing of the Commission's opinion and order in Docket No. G–11980 issued February 6, 1962, are hereby denied.

(B) Columbia's request for further oral argument is hereby denied.

Commissioner Woodward *not participating*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

UNION OIL COMPANY OF CALIFORNIA, DOCKET NO. G–13997[1]

ORDER DENYING MOTION TO SEVER AND TERMINATE PROCEEDING

(Issued April 5, 1962)

Union Oil Company of California (Union Oil) has heretofore tendered for filing a proposed increased rate which was suspended and subsequently placed in effect subject to refund. The proposed increased rate, designated Supplement No. 5 to Union Oil's FPC Gas Rate Schedule No. 10, provides for an increase from 10.135¢ per Mcf to 11.1485¢ per Mcf, at 14.55 psia, for the sale of natural gas to El Paso Natural Gas Company, in the Dollarhide Field, Andrews County, Texas (Railroad District No. 8).

On January 31, 1962, Union Oil filed a motion to sever this proceeding from the proceedings in Docket No. AR61–1, *et al.*, and to terminate the proceeding in Docket No. G–13997. In support of its motion, Union Oil cites four proceed-

[1] Consolidated with the proceedings in Docket No. AR61–1, *et al.*, by order issued December 23, 1960, 24 FPC 1121.

ings, involving similar increases, which have been terminated.[2] Also cited is a presiding examiner's decision,[3] and the *Reef Fields* case.[4]

The cases cited by Union Oil are inapplicable to this proceeding, and do not support its position. The four cases listed in footnote 2 were terminated before the issuance of the Commission's Statement of General Policy No. 61–1, September 28, 1960, 24 FPC 818, which established area price levels for producer rates. The *Hunt* case, *supra*, presently pending before the Commission, was decided by the presiding examiner on a cost of service basis after a formal hearing in accordance with the *Phillips* case;[5] and the *Reef Fields* case is inapposite in view of the policy of the Commission as announced in the *Phillips* case and the Statement of General Policy No. 61–1.

Union Oil's increased rate exceeds the 11.0¢ per Mcf level for increased rates in Texas Railroad Commission District No. 8. The proceeding in Docket No. G–13997 has been consolidated with the Permian Basin area rate proceeding, Docket No. AR61–1, *et al.*, in which just and reasonable rates for that area will be determined. Accordingly, we conclude that Union Oil's motion to terminate should be denied.

The Commission finds:

(1) For the reasons hereinabove stated, Union Oil's motion to sever the proceeding in Docket No. G–13997 from the proceedings in Docket No. AR61–1 should be denied.

(2) For the reasons hereinabove stated, Union Oil's motion to terminate the proceeding in Docket No. G–13997 should be denied.

The Commission orders:

(A) Union Oil's motion to sever the proceeding in Docket No. G–13997 from the proceedings in Docket No. AR61–1, *et al.*, is hereby denied.

(B) Union Oil's motion to terminate the proceeding in Docket No. G–13997 is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC GAS TRANSMISSION COMPANY, DOCKET NO. CP62–59

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 6, 1962)

On September 11, 1961, as supplemented on September 28, 1961, and October 20, 1961, Pacific Gas Transmission Company (Applicant) filed an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation, as necessary, of taps and metering facilities at unspecified points along Applicant's 36-inch transmission line in Idaho, Washington and Oregon, in order to deliver to El Paso Natural Gas Company (El Paso), at such points, part of the gas

[2] The Pure Oil Company, Docket No. G–14049, order issued December 16, 1959; Getty Oil Company, Docket No. G–14033, order issued December 23, 1959; Cities Service Petroleum Company, Docket No. G–14885, order issued January 26, 1960; F. G. Blackwood, *et al.*, Docket No. G–14265, order issued June 30, 1960.

[3] Hunt Oil Company, Docket No. G–9065, *et al.*, decision issued October 2, 1961, 28 FPC 626.

[4] *Reef Fields Gasoline Corporation (Operator), et al.*, Docket No. G–14030, 19 FPC 351.

[5] *Phillips Petroleum Company*, Docket No. G–1148, *et al.*, Opinion No. 338, September 28, 1960, 24 FPC 537, at page 549.

Applicant has previously been authorized to transport for El Paso from Canada. Such facilities would be built only at locations where El Paso is or will be authorized by the Commission to sell gas to distributors for resale.

In its order of August 5, 1960, issued in Docket Nos. G–17350, *et al.*, the Commission authorized Applicant to construct and operate a 36-inch transmission line extending from the Canadian boundary at a point in Idaho to the Oregon-California border southeast of Klamath Falls, Oregon. That order also authorized Applicant to transport for El Paso a portion of the latter's Canadian gas from Canada to points along the 36-inch line in Idaho, Washington and Oregon, and, further, the order states "* * * at least 30,000 Mcf, peak day volumes, will be reserved specifically for applications for new service off the PGT line in Idaho, Washington and Oregon, filed within three years from the date such line is placed in service."

In Docket No. CP60–15 El Paso has pending an application for authority to build facilities to receive gas from Applicant's 36-inch line for sale to two distributors for resale in Klamath Falls and Bend, Oregon. The estimated cost of Applicant's proposed facilities at Klamath and Bend is $14,000 and $12,500, respectively. Applicant states that the estimated cost of similar facilities at any other point on its 36-inch line for delivery of gas to El Paso will not be more than $12,500 for each delivery point.

The cost of each tap will be borne by El Paso in accordance with Applicant's FPC Gas Tariff.

Applicant was granted temporary authorization by letter, dated December 11, 1961, to construct and operate facilities and to deliver natural gas at Klamath Falls and Bend.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 28, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. On February 23, 1962, the Idaho Public Utilities Commission filed a notice of intervention in the subject docket. By letter filed March 5, 1962, the Idaho Commission advised that it had no objection to the granting of the subject application. No other petition to intervene or protest to the granting of the application has been received. No appearances, other than that of staff counsel, were entered at the hearing. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Pacific Gas Transmission Company, a California corporation, having its principal place of business in San Francisco, California, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued August 5, 1960, in Docket Nos. G–17350, *et al.* (24 FPC 134.)

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the facilities as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The authorization hereinafter granted should be limited to construction during a period limited to three years from the commencement of operation of

Applicant's pipeline authorized in Docket Nos. G–17350, *et al.*, and only when El Paso has been authorized by the Commission to sell gas received at such facilities during such three-year period.

(5) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the Commission's Regulations thereunder that Applicant should submit a report, under oath, for each of the 3 twelve-month periods within 2 months after the end of each twelve-month period, giving all pertinent details of the construction of facilities hereinafter authorized, including location of each project, a description of facilities constructed for each project, and the actual final cost of each project.

(7) Expenditures for facilities for each individual project constructed pursuant to the authorization hereinafter granted should be limited to $12,500, with the exception of Applicant's project at Klamath Falls which should be limited to $14,000.

(8) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Pacific Gas Transmission Company to operate the proposed facilities in order to deliver natural gas to El Paso and to construct said proposed facilities during a period limited to three years from the commencement of operation of Applicant's pipeline authorized in Docket Nos. G–17350, *et al.*, and only when El Paso has been authorized by the Commission to sell gas received at such facilities during such three-year period, all as hereinbefore described and as more full described in the application, as supplemented, in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit a report, under oath, for each of the 3 twelve-month periods within 2 months after the end of each twelve-month period, giving all pertinent details of the construction facilities authorized in paragraph (A) above, including location of each project, a description of facilities constructed for each project, and final cost of each project.

(D) Total expenditures for facilities for each individual project constructed pursuant to the authorization granted in paragraph (A) above are hereby limited to $12,500, with the exception of Applicant's project at Klamath Falls which is hereby limited to $14,000.

Commissioner Woodward *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SHELL OIL COMPANY, DOCKET NO. G-13876

ORDER DENYING REHEARING AND GRANTING STAY

(Issued April 6, 1962)

Shell Oil Company filed on March 12, 1962, an application for rehearing of our "Order Requiring Additional Refund" issued February 13, 1962, and also a motion to stay the effectiveness of paragraphs (A) and (B) of said order pending action on shell's application for rehearing and until such time as matters raised in said application have been judicially determined. In support of its motion, Shell stated that such stay is necessary to preserve its rights and to prevent irreparable injury.

In our order accompanying Opinion No. 335, issued February 23, 1960, in *El Paso Natural Gas Company*, G-13862, *et al.*, 23 FPC 369, 380, affirmed *sub nom. Texaco Inc.* v. *FPC*, 290 F. 2d 149 (CA 5), we authorized Shell to sell to El Paso residue gas to be produced in certain fields in the Aneth area in San Juan County, Utah, at the rate of 17.7¢ per Mcf in lieu of the initial price contained in its contract with El Paso which Shell had been collecting, subject to refund, under temporary authorization issued on November 18, 1958. In its application for rehearing, Shell refers to certain provisions in its contract with El Paso and concludes that the 17.7¢ price is exclusive of tax reimbursement and that our order issued February 13, 1962 requiring additional refund is invalid " * * * in that it purports to require, without notice or hearing, a refund in addition to that required in the ordering paragraphs accompanying Opinion No. 335, * * *."

On May 18, 1960 Shell filed Supplement No. 4 to its Rate Schedule No. 178 to reflect an increase in the Utah occupation tax from 1% to 2% effective January 1, 1960, and the filing was accepted by the Commission with the refund conditions attached to the temporary authorization. The filing for tax reimbursement was based on the 20¢ contract price, which was then being collected under temporary authorization. Shell concedes that a part of the tax reimbursement should be refunded to El Paso and says that it stands ready to make such refund in the amount of $514.16, said sum being computed on the difference between the contract price and 17.7¢ per Mcf plus applicable tax reimbursement.

It appears that Shell misconstrues our order issued February 23, 1960, accompanying Opinion No. 335 and our order issued November 18, 1958, granting temporary authorization to sell gas to El Paso. The pertinent portions of those orders were applied in our order issued February 13, 1962 requiring additional refund.

Shell says further in its application for rehearing that on June 1, 1961, it received from El Paso the sum of $4,212.45 for the tax of 1960, that this is the only tax reimbursement that it has ever received under its Rate Schedule No. 178, and that the suggestion on page 2 of the order of which rehearing is sought that additional refund should approximate $7,500 apparently results from a misunderstanding of the nature and operation of the Utah tax. We would not expect Shell's tax refund to El Paso to exceed the amount of tax reimbursement received from El Paso under Shell's Rate Schedule No. 178, but we note that Shell did not offer to refund even that amount.

The action of the Commission in this matter does not preclude Shell from filing a supplement to its Rate Schedule No. 178, under the provisions of the Natural Gas Act and Section 154.94 of the Commission's Regulations, reflecting the increase of 1% in the Utah occupation tax.

The Commission finds further:

(1) The assignments of error and grounds for rehearing stated in Shell's application for rehearing set forth no new facts or principles of law which were not fully considered by the Commission when it issued the order of which rehearing is sought or which, having now been considered, warrant any change in said order.

(2) The enforcement of said order should be stayed until 60 days after the date of this order to allow Shell time to seek a review in court pursuant to Section 19(a) of the Natural Gas Act.

The Commission orders:

(A) Shell's application for rehearing of our "Order Requiring Additional Refund" issued herein on February 13, 1962, is denied.

(B) The enforcement of said order is hereby stayed until 60 days after the date of this order.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–13780

ORDER DENYING REHEARING

(Issued April 6, 1962)

Socony Mobil Oil Company, Inc., has filed an application for rehearing of our order of February 9, 1962, 27 FPC 347, herein. Most of Socony's objections closely parallel those of the CATCO companies in their application for rehearing of our Opinion No. 351 and order of January 22, 1962, in *Continental Oil Co.*, Docket Nos. G–11024 *et al.*, 27 FPC 96. We considered such objections fully in denying rehearing by order of March 22, 1962, in those proceedings, 27 FPC 592. See, also, our order of March 7, 1962, in *Texaco-Seaboard, Inc.*, Docket Nos. G–13169 *et al.*, 27 FPC 482.

Socony makes three additional contentions. It is noteworthy that despite previous opportunities Socony presents these arguments for the first time in the application for rehearing.

Socony objects on constitutional grounds to our refusal to base its initial price on a showing of its costs in the High Island field. Socony does not advocate field-by-field cost studies as an intelligent or appropriate approach to rate regulation under the Natural Gas Act. Socony would presumably oppose such an approach in the case of low cost fields. Socony does seem to claim, however, that our order deprives it of property without due process of law, in violation of the Fifth Amendment, if it reduces a single contract price to a level below "cost" in that field (albeit the price proposed by Socony is also claimed to fall under "costs" and most of the gas sold in the area brings a price no higher than that determined by our order). In our view, no constitutional question is presented until, at the very least, a company undertakes to prove that rates determined by us have resulted in reducing total revenues (from all fields) to an unreasonably low level. See *B. & O. R. Co.* v. *United States*, 345 U.S. 146.

Socony also claims that we should have told it what evidence to adduce in this proceeding, and that we should have recognized both the "unique" nature of High Island gas and its comparability to offshore Louisiana gas. Our order of September 25, 1961, herein, made clear our view that the High Island gas is

produced in Texas Railroad Commission District No. 3 and should be so regarded for purposes of initial price determination. Socony's bare assertion does not persuade us to apply Louisiana criteria to this Texas gas. Nor does the record support Socony's contention. There was testimony in the original hearing in 1958 suggesting that High Island was tied to sales of south Louisiana gas in contract negotiations with the purchaser; but, even if so interpreted, this testimony merely indicates some difficulty in marketing this production. Upon consideration of the evidence adduced, we find no compelling reason to allow Socony a higher price than is appropriate for other Texas production.

Finally, Socony suggests that it should be permitted to abandon the subject sale under Section 7(b) of the Natural Gas Act. Whether the public convenience and necessity would permit abandonment is a question not now before us; no application under Section 7(b) has been filed.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed herein on March 12, 1962, by Socony set forth no new facts or principles of law which were not fully considered by the Commission when it issued its order of February 9, 1962, or which, having now been considered, warrant modification.

The Commission orders:

The application for rehearing of the Commission's order issued February 9, 1962, filed by Socony is hereby denied.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP62-156

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 6, 1962)

On January 4, 1962, as supplemented on January 29, 1962, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP62-156 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the calendar year 1962, at a total cost not to exceed $4,000,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application, as supplemented.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas which will be purchased from producers thereof in various areas generally coextensive with said system.

The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 27, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or notice of intervention has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission

render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit on or before March 1, 1963, a statement under oath, showing by projects: names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual final costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1962, and the total expenditures for facilities authorized to be constructed thereunder should be limited to $4,000,000 with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Texas Eastern Transmission Commission to construct during the calendar year 1962 the proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to Texas Eastern Transmission Corporation.

(B) Applicant shall submit, on or before March 1, 1963, a statement under oath, showing by projects: (a) names of fields connected, (b) estimates of gas

supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the actual final costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed thereunder are hereby limited to $4,000,000, with no single project to exceed a cost of $500,000.

Commissioner Woodward *not participating.*

SENECA GAS COMPANY OF WEST VIRGINIA, INC., DOCKET NO. G–18442; ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP62–67; SENECA GAS COMPANY OF WEST VIRGINIA, INC. vs. NAVGAS, INC., DEFENDANT, DOCKET NO. CP62–115; NAVGAS, INC., DOCKET NO. CP61–251

ORDER PERMITTING INTERVENTION

(Issued April 9, 1962)

On May 15, 1961, Seneca Gas Company of West Virginia, Inc. (Seneca) filed a petition for leave to intervene in Docket No. CP61–251.

Seneca alleges, among other things, that Navgas, Inc. by its application proposes to construct and operate substantially identical natural gas transmission and distribution facilities and to render substantially the same service and sales as those encompassed in and authorized by a certificate of public convenience and necessity issued to Seneca by the Public Service Commission of West Virginia on December 29, 1958, and which are the subject of Seneca's Section 7(a) application in Docket No. G–18442. Seneca asserts that Navgas, Inc.'s proposal is in conflict with the rights and duties conferred upon Seneca by the State of West Virginia. For this reason, Seneca says its economic interest in this proceeding is substantial.

Seneca also challenges the legality of Navgas, Inc.'s Section 7(a) application and refers to allegations contained in a petition to reject the application of Navgas, Inc. retendered[1] by Seneca concurrently with the filing of its petition to intervene.

On February 21, 1962, the United States Department of the Navy, acting through the Chief of the Bureau of Yards and Docks, Department of the Navy, filed a petition for leave to intervene in Dockets Nos. G–18442, CP62–67, and CP62–115, alleging:

1. The Department of the Navy is presently constructing a facility known as the Naval Radio Research Station at Sugar Grove in Pendleton County, West Virginia. In carrying out the vital defense mission of this facility it was determined

[1] Filed originally by Seneca on April 24, 1961, and rejected by the Commission's Secretary on May 5, 1961.

that natural gas would be required for the fuel needs of the Station. Following established contracting procedures, the contract covering the procurement of natural gas service was awarded to Navgas, Inc. ("Navgas"), of Charleston, West Virginia, and the formal contract was entered into as of June 15, 1960. Under the contract the contractor agreed to serve the Government exclusively and to provide for all of its natural gas requirements at the facility. The Government agreed to pay the contractor a connection charge upon the satisfactory completion of a twenty-six (26) mile pipeline which would connect with the transmission line of Atlantic Seaboard Corporation ("Seaboard") at a point in Hardy County, West Virginia. Navgas entered into a contract for the construction and installation of the pipeline and the same has now been completed, has been found satisfactory, and the connection charge has been paid.

2. The schedule of operations at the Station presently indicates that natural gas service will be required by October 1, 1962, and it is essential that no delays be encountered in obtaining the gas on or before that date. Any delays will seriously hamper the Department of the Navy in the performance of its defense mission.

3. Insofar as the application under Section 7(a) of the Natural Gas Act, as amended, filed by Seneca Gas Company of West Virginia, Inc. ("Seneca"), is concerned, a contract for natural gas service has been awarded to Navgas, as aforesaid. In view thereof, the Department of the Navy has no intention to procure natural gas from Seneca and consequently to the extent that Seneca's said application under Section 7(a) of the act refers to gas service to the Department of the Navy, any action taken by the Commission on said application should reflect the fact that Seneca's natural gas requirements, as stated in its application, should be reduced by the estimated volume of the Department of the Navy's procurement.

4. The Department of the Navy has advised Navgas and Seaboard that the Navy is vitally interested in the subject proceeding to the extent that it will fully support the application of Seaboard for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act, as amended.

On March 16, 1962, Navgas, Inc., filed a petition for leave to intervene in each of Dockets Nos. G–18422, CP62–67, and CP62–115 alleging that it has on file Docket No. CP61–251, an application pursuant to Section 7(a) seeking an order requiring Atlantic Seaboard Corporation to supply its natural gas requirements and alleging further that Navgas, Inc., has entered into a firm contract with the Department of the Navy to supply natural gas requirements for the Naval Radio Research Station at Sugar Grove, West Virginia.

The Commission finds:

It is desirable to allow the several petitioners to intervene in the respective proceedings in which they seek to intervene in order that said petitioners may establish the facts and law from which the nature and validity of the alleged rights and interests of each of them may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

Petitioners, Seneca Gas Company, the United States Department of the Navy, and Navgas, Inc., are hereby permitted to become interveners in the respective proceedings in which they seek to intervene, subject to the rules and regulations of the Commission: *Provided, however,* That the participation of such petitioners shall be limited to matters affecting asserted rights and interests specifically set forth in their petitions for leave to intervene: *And provided further,* That

the admission of such petitioners shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in these proceedings.

Commissioner Woodward *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

HOPE NATURAL GAS COMPANY, DOCKET NO. CP62-155; MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP62-159

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 10, 1962)

On December 29, 1961, Hope Natural Gas Company (Hope) filed in Docket No. CP62-155 and on January 5, 1962, Mississippi River Fuel Corporation (Mississippi) filed in Docket No. CP62-159, respectively, applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the sale of natural gas to American Louisiana Gas Company (American Louisiana), all as more fully set forth in the applications.

The proposed sales will be made from the Creole Field, Cameron Parish, Louisiana, at an initial rate of 18 cents per Mcf plus 1.5 cents per Mcf tax reimbursement, pursuant to a contract dated December 11, 1961, executed by and between Hope and Mississippi as sellers and American Louisiana as buyer.

Five leases in the Creole Field have been committed under the contract with American Louisiana. Hope has a 75 percent working interest in the leases and Mississippi has a 25 percent working interest.

Applicants propose to construct and operate field facilities in order to make the proposed sales. The cost is estimated to be $68,931, of which Hope will share 75 percent and Mississippi 25 percent.

Deliveries will be made at American Louisiana's meter station near its existing 16-inch transmission line extending between Cameron and Lowry, Louisiana. The contract provides for a daily take-or-pay-for quantity of 500 Mcf.

Temporary authorizations to make the proposed sales were granted to the respective Applicants by the Commission on February 6, 1962.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 29, 1962, respecting the matters involved in and the issues presented by the applications herein. No protest to the granting of the applications or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Hope Natural Gas Company, a West Virginia corporation having its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 27, 1943, in Docket No. G-290 (3 FPC 994).

(2) Applicant, Mississippi River Fuel Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-291 (4 FPC 535).

(3) The sales of natural gas hereinbefore described, as more fully described in the applications in this proceeding, will be made in interstate commerce, sub-

ject to the jurisdiction of the Commission, and such sales by the Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The sales of natural gas by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued, upon the terms and conditions of this order, authorizing the sales by the Applicants herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore described and as more fully described in the respective applications in this proceeding.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter intituted by or against the Applicants. Further, our action in this proceeding shall not foreclose or prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP62-135

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 10, 1962)

On November 29, 1961, as supplemented on January 15, 1962, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP62-135 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities in Will County, Illinois, to deliver and sell natural gas to Northern Illinois Gas Company (Northern Illinois) for resale and distribution in the Village of Minooka, Illinois, all as more fully set forth in the application, as supplemented.

Applicant seeks authorization to construct and operate a side tap connection on its authorized and existing main transmission pipeline, approximately 150 feet of 3-inch lateral pipeline extending from said tap to the facilities of Northern Illinois, and a meter station located at the terminus of the proposed lateral line, all within Will County, Illinois. Northern Illinois estimates the cost of the proposed facilities to be $11,710, which will be financed from funds on hand.

Northern Illinois has received a 50-year franchise from the Village of Minooka and a certificate of public convenience and necessity from the Illinois Commerce Commission to render the proposed distribution service. The subject service by Applicant to Northern Illinois will be rendered from presently authorized volumes of gas available to Northern Illinois.

The estimated market requirements for the Village of Minooka for the first and third years of service are as follows:

	First year	Third year
	Mcf	*Mcf*
Annual	20,200	27,800
Peak day	198	287

Pursuant to due notice, a public hearing was held in Washington, D. C., on March 27, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The proposed service should be rendered only from presently authorized volumes available to Northern Illinois from Applicant, and no increased volumetric obligation should be placed upon Natural for the proposed service.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Natural Gas Pipeline Company of America to construct and operate the proposed facilities and to sell natural gas to Northern Illinois Gas Company for resale and distribution in the Village of Minooka, Illinois, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The proposed service shall be rendered only from presently authorized volumes available to Northern Illinois from Applicant, and no increased volumetric obligation shall be placed on Applicant for the proposed service.

(D) The facilities hereby authorized shall be constructed and placed in actual operation and the delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Commissioner Woodward *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7024

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued April 11, 1962)

By order issued March 28, 1962, 27 FPC 617, in the above-entitled matter, the Commission authorized Pacific Power & Light Company (Applicant) to issue and sell at competitive bidding $35,000,000, principal amount of First Mortgage Bonds, due 1992, subject, among others, to the provisions set forth in paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant on April 11, 1962, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it,

the bid of Halsey, Stuart & Co., Inc., to purchase the proposed issuance of $35,000,000, principal amount of Bonds, for the price of 100.02% of principal amount, with an interest rate of 4¾%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued March 28, 1962, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D), and (E) of the Commission's order issued March 28, 1962 in the above docket.

Commissioner Morgan *dissenting* stated: My objections to this issue, as expressed in my dissent to the order, have not been answered or satisfied and I therefore do not concur in this issue under the prevailing conditions.

Commissioner Woodward *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PAUL J. FLY (OPERATOR), *ET AL.*, DOCKET NO. G–20207

ORDER ACCEPTING OFFER OF SETTLEMENT TERMINATING PROCEEDING AND PRESCRIBING REFUNDS

(Issued April 12, 1962)

On March 2, 1962, Paul J. Fly, (Operator), *et al.* (Fly), tendered an Offer of Settlement in the above-entitled proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, which offer was agreed to by its purchaser, Trunkline Gas Company (Trunkline).

In its Offer of Settlement, Fly proposes to reduce the 15¢ per Mcf rate suspended in the above entitled proceeding to 14¢ per Mcf and delete the flexible pricing provisions from the contracts. Fly requests that its 14¢ rate be permitted to become effective as of May 7, 1960, and agrees to refund the difference between the settlement rate of 14¢ per Mcf and the 15¢ per Mcf rate collected subject to refund.

In support of the offer, Fly cites the deletion of flexible pricing provisions and states that such provisions were important components of the original contracts. Fly also states that the settlement rates are below the level of prices recently negotiated in the area (Texas Railroad Commission District No. 2) and are in line with the price level announced in the Commission's Statement of General Policy No. 61–1.

The Commission finds:

(1) The proposed settlement of this rate proceeding on the basis described herein, as more fully set forth in the offer of settlement filed by Fly and Trunkline on March 2, 1962, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

(2) Good cause exists for terminating the proceeding in Docket No. G–20207.

The Commission orders:

(A) The Offer of Settlement filed by Fly and Trunkline on March 2, 1962, is hereby approved in accordance with the provisions of this order.

(B) The amendments to Fly's gas purchase contracts tendered concurrently with the Offer of Settlement and executed by Trunkline and Fly are hereby accepted as Supplement No. 5 to Fly's FPC Gas Rate Schedules Nos. 1 and 2 effective as of May 7, 1960.

(C) Within 45 days from the date of issuance of this order, Fly shall refund to Trunkline the difference between the amounts collected from Trunkline and the rate agreed upon in the Offer of Settlement, together with simple interest at the rate of 7 percent per annum from the respective dates of receipt of said excess amounts by Fly to the date of refund. Fly shall bear all costs incidental to the making of such refunds.

(D) Within 60 days from the date of issuance of this order, Fly shall report to the Commission in writing and under oath the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with copies of releases from Trunkline with respect to such refunds.

(E) The proceedings in Docket No. G–20207 is hereby terminated.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings which are presently being heard, or in any other proceedings now pending, or hereinafter instituted by or against Fly.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ALABAMA POWER COMPANY, PROJECT NO. 2165

ORDER APPROVING EXHIBITS AND PRESCRIBING ANNUAL CHARGE

(Issued April 13, 1962)

Alabama Power Company, licensee for major Project No. 2165, pursuant to Article 39 of the license for the project, filed for Commission approval Exhibits J and K on September 16, 1959, and Exhibit F on September 17, 1959, November 25, 1959, and November 10, 1960, showing the location and the project boundary of the John Hollis Bankhead powerhouse site and the project boundary of the Lewis Smith Dam development.

The project is located on the Black Warrior River and on the Sipsey Fork of Black Warrior River, navigable waters of the United States, in Cullman, Walker, Winston, and Tuscaloosa Counties, Alabama, and affects United States Lock and Dam No. 17 and appurtenant lands, and lands of the United States within the William B. Bankhead National Forest.

On the basis of Exhibit K, it has been determined that the project occupies 2679 acres of lands of the United States within the William B. Bankhead National Forest, exclusive of those lands which may be used for transmission-line right-of-way.

The effect of approving the exhibits, among others, will be to fix the annual charge to be paid under the license for the project for recompensing the United States for the use, occupancy, and enjoyment of its lands within the William B. Bankhead National Forest, exclusive of those lands which may be used for transmission-line right-of-way.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the William B. Bankhead National Forest, has informed the Commission that approval of Exhibit K will not interfere or be inconsistent with the purpose for which the William B. Bankhead National Forest was acquired and that adequate protection and utilization of the national forest is assured by the conditions already in effect under the license for the project.

The Commission finds:

(1) The following exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project, it being unnecessary to approve Exhibit F as part of the license for the project:

Exhibit J: (FPC No. 2165–48) John Hollis Bankhead Development—Project Area Map; *Exhibit K:* (FPC No. 2165–49) John Hollis Bankhead Development—Project Area Map; and *Exhibit K:* (FPC No. 2165–50 through –69) Lewis Smith Reservoir—Project Area Map.

(2) The amount of the annual charge to be paid under the license for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands within the William B. Bankhead National Forest, exclusive of those lands which may be used for transmission-line right-of-way, is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The above-described exhibits are approved as part of the license for the project.

(B) Article 42 of the license, as amended, is further amended by changing Paragraph (ii) thereof to read as follows:

(ii) Effective September 1, 1957, for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands within the William B. Bankhead National Forest, exclusive of those lands which may be used for transmission-line right-of-way, $5,358.00; and

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of its issuance.

Commissioner Woodward *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. G–15641; PAN AMERICAN PETROLEUM CORPORATION (OPERATOR), *ET AL.*, DOCKET NOS. G–15650 AND G–15780

ORDER GRANTING EXTENSION OF TIME

(Issued April 13, 1962)

By its order issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, the Commission disposed of more than 400 proceedings, including those

above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to the above-listed dockets, ordering paragraph (A) of the March 5 order directed Pan American Petroleum Corporation (Pan American) to refund tax-reimbursement amounts collected from its direct customer United Fuel Gas Company (United Fuel), an intervener in those dockets. Ordering paragraph (C) of that order directed that within 90 days from the date of issuance thereof, Pan American report to the Commission the details of its refund calculations and submit a copy of a release from United Fuel with respect to the required refunds.

On March 15, 1962, Pan American filed in six dockets, including the three dockets listed above, an application for rehearing of the March 5 order. By an order issued concurrently herewith, the Commission is denying said application for rehearing.

In addition to its application for rehearing, Pan American, on March 15, 1962, filed a motion seeking to stay the effectiveness of ordering paragraphs (A) and (C) of the March 5 order until conclusion of judicial review of that order and of the Commission's prior order of August 30, 1961,[1] or in the alternative, to extend the time for compliance with said ordering paragraphs (A) and (C) until 90 days after conclusion of such judicial review. Pan American has heretofore filed petitions for review of both the August 30, 1961, and March 5, 1962, orders in the United States Court of Appeals for the District of Columbia Circuit.

The Commission is satisfied that the public interest will not be injured by the postponement of refunds pending conclusion of judicial review and that such postponement would obviate a great deal of needless effort in the event the Commission's March 5 order is reversed. Accordingly, we are disposed to grant Pan American's request for an extension of time within which to comply with the March 5 order. However, inasmuch as the 90-day period allowed by ordering paragraph (C) of the March 5 order was solely for the purpose of giving Pan American time to seek judicial review, there is no reason to grant a similar period of grace after that review has been obtained. We believe that the purposes for which this extension is granted will be adequately served if the deadline for compliance is postponed until the 30th day after conclusion of court review in the above dockets. Moreover, it is reasonable that the extension herein granted be conditioned upon the payment by Pan American to United Fuel of interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after the issuance of the order of March 5.

The Commission finds:

(1) There is good cause for extending the time within which Pan American must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after conclusion of judicial review of that order, and of the Commission's prior order of August 30, 1961, in the instant dockets.

(2) It is just and reasonable and in the public interest that Pan American be required to pay United Fuel interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after the issuance of our March 5 order.

The Commission orders:

(A) The time within which Pan American must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962, is extended

[1] The August 30, 1961, order reopened all of the Louisiana gathering tax proceedings and set the stage for final disposition of those proceedings on March 5, 1962.

for a period ending 30 days after conclusion of judicial review of the Commission's orders of August 30, 1961, and March 5, 1962, in the instant dockets.

(B) Pan American shall pay United Fuel interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962, order.

(C) The time within which United Fuel must comply with ordering paragraphs (B) and (D) of the March 5, 1962, order is extended for a period ending 60 days after conclusion of judicial review of the Commission's August 30, 1961, and March 5, 1962, orders in the instant dockets.

(D) In the event that Pan American's pending petitions for review are dismissed on grounds of prematurity and that no additional petitions for review are filed within the time limit prescribed by Section 19(b) of the Natural Gas Act, the preceeding paragraphs (A) through (C) hereof shall be deemed inoperative and of no effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NOS. G–15641, G–16065, AND G–16066; PAN AMERICAN PETROLEUM CORPORATION (OPERATOR), *ET AL.*, DOCKET NOS. G–15650, G–15780, AND G–16067

ORDER DENYING APPLICATION FOR REHEARING

(Issued April 13, 1962)

On March 15, 1962, Pan American Petroleum Corporation (Pan American) filed application in the above dockets for rehearing of the Commission's omnibus order of March 5, 1962 in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.* By that order we disposed of more than 400 proceedings, including those above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. In Docket Nos. G–15641, G–15650, and G–15780, the March 5 order directed Pan American to refund tax-reimbursement amounts collected from its direct customer United Fuel Gas Company (United Fuel), an intervenor in those dockets. In Docket Nos. G–16065, G–16066, and G–16067, the Commission vacated its order of August 30, 1961, by which all proceedings had been reopened, and thereby reinstated its May 29, 1961, order absolving Pan American from the duty to make refunds. With respect to the latter three dockets, Pan American was not aggrieved by the Commission's order and therefore has not standing to seek rehearing.[1]

The principal contentions advanced by Pan American in support of its application are as follows: (a) that under the terms of Section 19 of the Natural Gas Act the Commission lacked jurisdiction to reconsider or disturb the finality of the May 29 order; (b) that Pan American was improperly deprived of the trial-type hearing[2] allegedly required by the Administrative Procedure Act, the Natural Gas Act, and the Commission's regulations; and (c) that the Com-

---

[1] Section 19(a) of the Natural Gas Act.

[2] Specifically, Pan American claimed the right to introduce evidence in its behalf (presumably through oral testimony), object to evidence sought to be introduced against it, cross-examine adverse witnesses, and introduce rebuttal evidence. For convenience we shall refer to this bundle of procedural incidents as a "trial-type hearing," borrowing a term coined by Professor K. C. Davis. See 1 Davis, *Administrative Law Treatise* 410 (1958).

mission's order in Docket Nos. G–15641, G–15650, and G–15780 was neither supported by the record nor based upon adequate findings of fact.

The question of the finality of the May 29 order was discussed at length in the order of March 5, and the application raises no objections not previously considered by the Commission.

We cannot agree that the March 5 order was vitiated by the absence of a trial-type hearing. As we explained in our August 30 order, the issues raised in these proceedings were primary, if not exclusively, issues of law, and did not require the adjudication of any disputed factual questions. The procedure we established in that order gave all parties ample opportunity to be heard. Specifically, each party was invited to file a statement of position and to tender in writing any evidence it might deem pertinent. In addition, it was permitted to file a reply to the statements of position filed by other parties. Had it appeared from these submissions that there was a dispute as to any factual matter which might materially bear upon our decision, the Commission might then have convened an oral evidentiary hearing to resolve that dispute. Since the Commission was not in fact called upon to resolve any conflict of testimony, if indeed any such conflict existed, there was no necessity to deal with the 400 or more pending proceedings through the cumbersome and time-consuming mechanism of a trial-type hearing.

In support of a contrary view, Pan American cites Sections 5 and 7 of the Administrative Procedure Act,[3] Section 4(e) of the Natural Gas Act, and Section 1.20 of the Commission's Rules of Practice and Procedure. However, the cited provisions of the Administrative Procedure Act do not apply except in cases of "adjudication required by statute to be determined on the record after opportunity for an agency hearing * * *." To ascertain whether such an adjudication is required in the instant case one must look to Section 4(e) of the Natural Gas Act. Assuming that Section 4(e) would require a "hearing" in the case of a rate filing based solely upon a tax increase, it says nothing at all about a determination "on the record." The term "hearing" is a flexible and comprehensive term which applies to argument-type as well as trial-type proceedings. We are convinced that under present circumstances the procedure adopted by the Commission satisfied the requirements of Section 4(e) and that since that Section did not dictate a trial-type hearing, the specifications of the Administrative Procedure Act were not called into play. Finally, it is plain that Section 1.20 of our Rules of Practice and Procedure was intended to govern only "hearings for the purpose of taking evidence" [4] and not to preclude an argument-type procedure such as the one herein followed.

It is important to note that Pan American has not suggested what additional evidence, if any, it would have sought to introduce or elicit had it been given a chance to examine or cross-examine witnesses. Moreover, it has not attempted to explain in what respect the procedure we adopted impeded it from bringing all relevant facts to our attention or from challenging the facts alleged or evidence adduced by other parties. After careful study of Pan American's application for rehearing, together with its statement of position and other documents of record filed prior to the March 5 order, the nearest approximation we find to a disputed issue of fact is the question whether Pan American owed United Fuel a contractual duty to protest the Louisiana tax. This question, however, was entirely immaterial, for the Commission's decision to require refunds was not based in any way upon contractual considerations. On the

[3] 5 U.S.C. §§ 1004, 1006.

[4] See Section 1.20(a) of Federal Power Commission Rules of Practice and Procedure.

contrary, we expressedly declared in our March 5 order that "having decided on other grounds to order refunds, we deem it unnecessary to pass upon the *Mobile* question or to construe the tax reimbursement provisions of the subject contracts."

Finally, we see no merit in the contention that the March 5 order was not supported by adequate evidence in the record or by appropriate findings of fact. The facts upon which we relied in reaching our conclusion to order refunds, and the manner in which those facts were evaluated, were fully set forth in the body of the March 5 order. The only respect in which the Commission is specifically alleged by Pan American to have defied the record is in ignoring "evidence which clearly shows the course of conduct upon which United Fuel and Pan American had agreed" and refusing "to give effect to the tax payment sharing arrangement agreed by United Fuel and Pan American."[5] Although, as noted earlier, the terms of the contract between Pan American and United Fuel were irrevelant to the Commission's decision, a word should perhaps be said about the "course of conduct" from which Pan American apparently seeks to infer that United Fuel acquiesced in its failure to pay the tax under protest. There is no basis whatever in the record for inferring such acquiescence. A series of appendices attached to Pan American's October 2, 1961, application for rehearing of our August 30 order discloses the following facts: that by letter of September 11, 1958, United Fuel reminded Pan American of its obligation under the Commission's Order No. 206 to repay tax reimbursement amounts if the Louisiana tax were held invalid, and advised it to pay the tax under protest if it wished to protect its own position; that Pan American subsequently deleted from the back of United Fuel's tax reimbursement check, dated February 4, 1959, a restrictive endorsement providing that repayment would be made if the tax were invalidated; that by letter dated February 11, 1959, to United Fuel, Pan American denied any contractual obligation to refund tax reimbursement amounts; and that by letter of February 13, 1959, United Fuel agreed to redraw its February 4 check without the original restrictive endorsement, upon the understanding that such action would not prejudice the rights of either party. We fail to see how this chain of communications can possibly be construed as an acquiescence by United Fuel in the position urged by Pan American.

The Commission finds:

Pan American's application for rehearing of the Commission's order of March 5, 1962, should be denied.

The Commission orders:

Pan American's application for rehearing of the Commission's order of March 5, 1962, is hereby denied.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62-161

ORDER GRANTING PETITION FOR DECLARATORY ORDER AND PROVIDING FOR HEARING

(Issued April 13, 1962)

On January 8, 1962, United Gas Pipe Line Company (United) filed a Petition for Declaratory Order under Section 16 of the Natural Gas Act and Section

[5] Application for Rehearing, at p. 11.

1.7(c) of the Regulations thereunder, requesting that the Commission determine a question of jurisdiction regarding certain gas sales by United in the Jackson District of eastern Louisiana.

The facts set forth in the petition are briefly as follows: On November 2, 1954, the Commission issued Opinion No. 277,[1] determining, among other things, its jurisdiction over sales by United in the area in question. The Commission found that its jurisdiction as set forth in the Natural Gas Act extended to United's Jackson District, including that part of Louisiana north of Lake Ponchatrain and east of the Mississippi River (the so-called Florida parishes).

On June 8, 1961, the Louisiana Public Service Commission (Louisiana Commission) issued an order directing United to show cause why it should not charge its intrastate New Orleans zone rates for gas sold in the Louisiana parishes and particularly that sold to certain Louisiana towns within the Jackson District.[2] Further, the Louisiana Commission indicated its intention to exercise regulatory jurisdiction over sales by United within the Florida Parishes and to the towns specified unless United could show cause why such order should not be issued. United filed exceptions to the order of June 8, 1961, and hearings were instituted by the Louisiana Commission.

On February 21, 1962, United obtained a temporary restraining order against enforcement of the Louisiana State Public Service Commission's order of June 3, 1961. United's petition states that under the present circumstances, upon conclusion of the matter now before the Louisiana Commission, United might "be faced with conflicting orders of the two regulatory agencies and obviously it could not, at the same time, comply with both." This Commission, in reply to a letter request of the Louisiana Commission that the question of jurisdiction be re-examined, stated that formal proceedings were the appropriate method for disposing of the matter, and could be initiated by a petition for declaratory order or by United's filing a notice of cancellation of the service agreements covering the sales in question. Thereafter, United filed the petition presently under consideration.

The Commission finds:

Good cause exists for granting United's Petition for Declaratory Order and for setting for hearing the question of jurisdiction over the sales of natural gas by United to the aforementioned communities in that part of Louisiana situated within United's Jackson District called the Florida Parishes.

The Commission orders:

(A) Pursuant to the authority contained in the Natural Gas Act, a hearing shall be held May 7, 1962, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington 25, D.C., at 10:00 a.m. EDT, regarding the issues as set forth and specified above, with United introducing at the outset of the hearing such evidence as may be necessary for a decision of the Commission in the matters indicated, and with subsequent opportunity for the presentation of such additional evidence by the parties as may be required at that time.

(B) Petitions to Intervene, and Notices of Intervention may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with Sections 1.8 and 1.37(f) of the Commission's Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)], on or before April 30, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MIDWEST OIL CORPORATION (OPERATOR), *ET AL.*, DOCKET NOS. G–13774, G–16673, G–19760

ORDER AMENDING ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDINGS

(Issued April 16, 1962)

On February 23, 1962, Midwest Oil Corporation (Operator), *et al.* (Midwest Operator), tendered for filing an amendatory agreement executed by Differential Corporation (Differential). The amendatory agreement provides that gas attributable to Differential's non-operating interest, covered by Midwest Operator's FPC Gas Rate Schedule No. 11, be sold at a base rate of 14.0507¢ per Mcf (@ 15.025 psia exclusive of tax reimbursement) pursuant to Midwest Operator's offer of settlement accepted by Commission order issued July 28, 1960, 24 FPC 102. At the time of the said order Differential had not joined in said offer of settlement. The order, therefore, provided that with respect to Differential's interest in the sale the rate applicable to its gas should remain subject to refund in the above entitled proceedings.[1] However, with respect to the gas sold by all parties who did join in the said offer of settlement, the Commission's order of July 28, 1960 provided that upon compliance with certain filing and refund requirements, the proceedings in the above entitled dockets be terminated.

The subject filing, designated as Supplement No. 11 to Midwest Operator's FPC Gas Rate Schedule No. 11, consists of an amendatory agreement dated November 1, 1961, implementing the terms of Midwest Operator's offer of settlement. It is essentially the same as the agreement dated August 3, 1960,[2] executed by Midwest Operator and another signatory non-operator. Midwest Operator also submitted a release from Texas Eastern Transmission Corporation (Texas Eastern), the pipeline buyer, indicating it has received appropriate refunds due from Differential under the terms of Midwest Operator's offer of settlement. Midwest Operator requests withdrawal of Supplement No. 9 to its FPC Gas Rate Schedule No. 11 and also requests that the above entitled proceedings be terminated insofar as they pertain to the interest of Differential. Said Supplement No. 9 provides for the sale of gas at 14.2258¢ per Mcf subject to refund in Docket No. G–19760.

The Commission finds:

All parties in interest having now joined in the said offer of settlement and having fully complied with the refund and filing requirements of the Commission's order issued July 28, 1960, accepting such offer of settlement, it is appropriate and in the public interest to accept for filing the said Supplement No. 11 to Midwest's Operator's FPC Gas Rate Schedule No. 11, and to fully terminate these proceedings.

The Commission orders:

(A) Midwest Operator, having made satisfactory refunds and filings in compliance with the Commission's order issued July 28, 1960, is hereby discharged

---

[1] At the time of Midwest's offer of settlement Differential's gas was being sold at the presently effective rate of 14.2558¢ Mcf pursuant to Supplement No. 9 subject to refund in Docket No. G–19760. Prior increased rates of 13.8456¢ per Mcf and 14.0507¢ per Mcf were subject to refund in Docket Nos. G–13774 and G–16673, respectively.

[2] Supplement No. 10 to Midwest's FPC Gas Rate Schedule No. 11.

from the refund obligations required by the several orders in these proceedings with respect to all parties in interest under its FPC Gas Rate Schedule No. 11.

(B) Supplement No. 11 to Midwest Operator's FPC Gas Rate Schedule No. 11, as tendered for filing on February 23, 1962, is hereby accepted for filing effective as of March 26, 1962, and Supplement No. 9 to Midwest Operator's FPC Gas Rate Schedule No. 11 is deemed to be withdrawn as to all parties in interest.

(C) The above-entitled proceedings are hereby terminated.

WASHINGTON PUBLIC POWER SUPPLY SYSTEM, PROJECT NO. 2257

ORDER DENYING APPLICATION FOR EXTENSION OF PRELIMINARY PERMIT

(Issued April 16, 1962)

Application was filed on February 5, 1962, by Washington Public Power Supply System (WPPSS), of Kennewick, Washington, for a one-year extension of the preliminary permit issued for a period of two years for Project No. 2257, effective as of January 1, 1960.

The application states that if the extension sought is granted, WPPSS would undertake such studies as may be necessary to determine the project's feasibility for purposes of applying for a Commission license.

Under Article 9 of the permit, the permittee was required to submit at the close of each six-month period from the effective date of the permit, to the Commission's Regional Engineer at San Francisco, California, or to such other officer or agent as the Commission may designate, accurate statements of the work accomplished during that period and of the work contemplated under the permit for the ensuing period.

Our records show that three progress reports were filed prior to expiration of the permit on December 31, 1961. In the first such report, dated August 26, 1960, the permittee stated that because of the urgency of preparing material in connection with the public hearing on its application for the proposed Nez Perce Project No. 2273, it was unable to devote any effort to additional consideration of Project No. 2257, and, therefore, the progress during the first six-month period of the permit was insignificant. In the second such report, dated December 21, 1960, the permittee advised that it had retained a consulting engineering firm to proceed with the development of preliminary information on the proposed site and reservoir area to secure detailed topographic information from aerial mapping, when weather conditions on the Olympic Peninsula permit. And, in the third such report, dated July 13, 1961, the permittee advised there was no activity conducted during the six-month period previous thereto relating to the proposed project.

By letter dated February 12, 1962, the permittee advised that all of the investigation of the proposed project by its staff and consulting engineers was limited to office work.

The Commission finds:

In the circumstances recited herein, it would be inappropriate and incompatible with the provisions of the Federal Power Act to grant the application for extension.

The Commission orders:

The aforesaid application is denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITY OF SEWARD, ALASKA, PROJECT NO. 2171

ORDER ACCEPTING SURRENDER OF LICENSE (MAJOR)

(Issued April 17, 1962)

Application was filed December 13, 1960, by City of Seward, Alaska, licensee for proposed Project No. 2171, for surrender of its license for the project pursuant to Section 6 of the Federal Power Act.

The license for the proposed project—which was to have been located on Crescent and Carter Lakes on Kenai Peninsula in the Third Judicial Division, State of Alaska, affect lands of the United States within the Chugach National Forest, and consist of an earth fill dam at the outlet of Crescent Lake, a channel between Crescent and Carter Lakes, a penstock to a powerhouse containing a 3,500-kilowatt unit with provision for two additional units, a 69-kilovolt transmission line to Seward, and other appurtenances—was issued August 2, 1957, effective as of August 1, 1957, to City of Seward, Alaska, for a period of 50 years.

The only part of the previously proposed project constructed by the licensee is the 69-kilovolt transmission line between Seward (mile 7) and Falls Creek (mile 25.5). The licensee by letter dated October 14, 1960, informed the Commission that it had discontinued construction of the transmission line and that it had no plan at that time to commence construction of the project.

The transmission line between Seward and Falls Creek is presently being used as a 7.2/12.5-kilovolt distribution line, supplying rural customers along the Seward-Anchorage highway from Seward to approximately mile 25.5 of the highway at Falls Creek. The power for the line is supplied by the City of Seward's diesel plant exclusively, with no connection with any hydroelectric plant.

By letter dated November 13, 1961, the Forest Service, United States Department of Agriculture, informed the Commission that the national forest lands involved have been restored to a condition satisfactory to the Service and that a special-use permit has been issued by the Forest Service to the City of Seward for a right-of-way for a line across national forest lands from the Forest boundary at mile 5 of the Seward-Anchorage highway to approximately mile 25.5 at Falls Creek.

The licensee's copy of the license instrument has been returned.

The Commission finds:

(1) Public notice has been given of the filing of the application for surrender of the license and no protests thereon have been received.

(2) The line as presently operated is not part of a project within the meaning of Section 3(11) of the Federal Power Act and, therefore, is not within the licensing authority of the Commission.

(3) Acceptance of surrender of the license for the project is not inconsistent with the public interest.

The Commission orders:

Surrender of the license for proposed major Project No. 2171 is accepted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. G-12706 AND G-18841

ORDER FURTHER MODIFYING ORDER CONDITIONALLY APPROVING RATE SETTLEMENT AGREEMENT

(Issued April 17, 1962)

By order issued January 25, 1961, 25 FPC 172, in these proceedings, we approved the rate settlement agreement proposed by Texas Eastern Transmission Corporation (Texas Eastern) and ordered concomitant rate reductions and refunds to all of Texas Eastern's customers, except Ohio Valley Gas Corporation (Ohio Valley). With respect to Ohio Valley, we allowed Texas Eastern's rate increase proposals to remain in effect and ordered a hearing to be held concerning Ohio Valley's opposition to the rates proposed in the settlement agreement for Zone "C."

On February 14, 1962, Texas Eastern and Ohio Valley filed concurrent motions requesting the Commission to modify its order of January 25, 1961, as modified, so as to make said order applicable to Ohio Valley. In support of their motions, Texas Eastern and Ohio Valley state that Ohio Valley has now executed the settlement agreement approved by the Commission and Ohio Valley now wishes to withdraw its objections to said settlement.

The Commission finds:

It is reasonable and proper in the public interest to grant the motions filed by Texas Eastern and Ohio Valley on February 14, 1962, and to modify the said order of January 25, 1961, so as to make the settlement approved therein applicable to Ohio Valley as hereinafter ordered.

The Commission orders:

(A) The motions filed by Texas Eastern and Ohio Valley on February 14, 1962, in these proceedings, are hereby granted, and the order issued January 25, 1961, as modified by order issued February 21, 1961, and as further modified below is made applicable to Ohio Valley.

(B) The order issued herein on January 25, 1961, is hereby further modified so as to reflect the acquiescence of Ohio Valley in the settlement agreement approved by said order and Ohio Valley's withdrawal of its objections thereto. Paragraphs (H) and (I) of the said order are hereby deleted in their entirety, and Paragraph (2) of the findings and Paragraphs (C), (D) and (E) of said order are hereby amended by deleting therefrom the language contained therein, which excluded Ohio Valley from the provisions of those paragraphs.

(C) Texas Eastern shall forthwith make refunds to Ohio Valley in conformity with Paragraphs (D) and (E) of said order of all excess amounts collected to the date of such refunds with interest at the rate of 6 percent per annum. In addition, Texas Eastern shall report such refunds in the same manner prescribed in Paragraph (M) of the order issued January 25, 1961.

(D) In all other respects, the orders issued in these proceedings on January 25, 1961, and February 21, 1961, shall remain in full force and effect.

AREA RATE PROCEEDING, DOCKET NO. AR61–1; CLAUDE E. AIKMAN, *ET AL.*, DOCKET NO. G–18466, *ET AL.*; NORTH CENTRAL OIL CORPORATION (OPERATOR), *ET AL.*, DOCKET NO. CI60–435, *ET AL.*

ORDER DENYING MOTION TO TERMINATE PROCEEDING AND REJECTING WITHDRAWAL OF PROPOSED RATE INCREASE

(Issued April 18, 1962)

On January 19, 1962, Austral Oil Company Incorporated, Agent for Oil Participations Incorporated (Austral) filed a motion requesting its dismissal as a party to these proceedings and a notice of withdrawal of its proposed rate increase in Docket No. G–19540 which was consolidated herein by order of the Commission issued December 23, 1960.

Austral recites that the proposed increased rate under its FPC Gas Rate Schedule No. 5, which was suspended in Docket No. G–19540, represents its only sale of gas in interstate commerce from the Permian Basin area. Additionally, Austral states that because of pressure maintenance operations ordered by the Texas Railroad Commission deliveries of gas to El Paso Natural Gas Company (El Paso) ceased before the increased rate proposed in Docket No. G–19540 became effective and that it would be approximately twenty years before Austral resumes making gas sales from the Permian Basin area under this rate schedule.

By letter of February 16, 1962, the Secretary advised Austral that its requests for dismissal from the area rate proceeding would be deferred pending the filing of an application to abandon the sale to El Paso under its FPC Gas Rate Schedule No. 5.

By letter of March 19, 1962, Austral states that it does not propose to file an application to abandon the sale to El Paso under its FPC Gas Rate Schedule No. 5 and that the Commission should not consider Austral's request for withdrawal of its rate increase in Docket No. G–19540 except in conjunction with its motion for dismissal from these proceedings.

Since Austral has outstanding a certificate of public convenience and necessity for the sale of gas in interstate commerce for resale from the Permian Basin area and a rate schedule for such sale is on file with the Commission the lawfulness of the rate set forth in such rate schedule will be determined in the area proceeding. Accordingly, Austral's request to be dismissed from these consolidated proceedings must be denied and its related notice of withdrawal must be rejected.

The Commission orders:

Austral's motion to be dismissed as respondent in these proceedings is denied and its related notice of withdrawal is rejected.

ARKANSAS-LOUISIANA GAS COMPANY[1], DOCKET NO. G–17567; ILLINOIS POWER COMPANY, DOCKET NO. G–17984; ST. CHARLES GAS CORPORATION, DOCKET NO. G–18405; LACLEDE GAS COMPANY, COMPLAINANT v. MISSISSIPPI RIVER FUEL CORPORATION, DEFENDANT, DOCKET NO. G–17832

OPINION AND ORDER ALLOCATING CAPACITY AND REJECTING PROPOSED SETTLEMENT

(Issued April 18, 1962)*

Syllabus

1. Settlement agreement *rejected* since it is predicated on future contingencies and would, if approved, bind Commission to issue certificates for which application had not been filed, hearings held, or possible objections considered. P. 702.
2. Mississippi's proposed merger with its subsidiary, Transmission, appears in public interest because service and rates should not be affected by such an artificial corporate division; Commission notes that existing arrangement has not proved practical and will be abandoned, making unnecessary the institution of a Section 5(a) proceeding to determine possible discrimination between customers of Mississippi and Transmission. P. 702.
3. In light of present record Commission is of the opinion that it was not in the public interest to establish separate supplier of gas and impose high costs of new pipeline wholly on Laclede and Illinois Power . . . costs of pipeline extensions ordinarily being rolled-in so all customers bear new costs, consistent with Commission allocation principles. P. 703.
4. Holding Mississippi has not performed its obligations to its utility customers, Commission *orders* additional capacity be supplied such customers [from portion of gas now going to industrials], giving first consideration to needs of domestic and commercial users. P. 703.
5. Noting that Mississippi's resale customers' requirements include industrial sales, Commission finds no justification in the record for favoring such sales over Mississippi's direct industrial customers. P. 703.
6. Distinguishing firm and interruptible service, Commission holds that if utility has right to curtail service, customers receive and pay for interruptible service even if right of curtailment is not exercised . . . . Thus service to Mississippi's so-called firm customers is interruptible and must be considered as such when determining possible impairment. P. 705.
7. Mississippi's right to serve its industrials has been substantially retained when consideration is given nonfirm nature of the service, substantial capacity allocated industrials, and availability of gas from Transmission. P. 706.
8. While arrangement by which more expensive pipeline gas is sold to Laclede and Illinois Power is unsatisfactory, this is not a rate case and proper rates of Mississippi and Transmission should be left to later proceeding. P. 707.
9. Taking notice of the needs of four Mississippi customers who were not participants, Commission reserves allocation of gas for such customers for a reasonable time, pending application therefor. P. 707.

---

[1] Formerly MidSouth Gas Company. When reference is made to Arkansas-Louisiana as successor to MidSouth, it will be termed Ark-La (MidSouth); when reference is made to Arkansas-Louisiana as a separate recipient of gas, it will be termed simply Ark-La.

*Designated Commission Opinion No. 355; initial decision appears on p. 713; supplemental decision on p. 748. Modified and rehearing denied by order issued June 15, 1962, 27 FPC 1257. Set aside with respect to reallocation of capacity between Mississippi's industrial customers and public utility customers, 320 F. 2d 711 (1963).

10. Mississippi required to file applications for certificates for authority to continue to serve such direct sales customers as it was not serving on effective date of its "Grandfather" certificate. P. 708.
11. Commission *issues* order allocating capacity on Mississippi's system pursuant to proceedings initiated under Sections 5(a) and 7(a) of the Natural Gas Act. P. 709.

Willard W. Gatchell for Granite City Steel Company, Alton District Manufacturers' Association, American Zinc Company of Illinois, Olin Mathieson Chemical Corporation, and Pittsburgh Plate Glass Company.

Walter W. Gallagher and *George J. Meiburger* for Owens-Illinois Glass Company.

John J. Shanahan for City of St. Louis, Mo.

Norman A. Flaningam and *Christman B. Peper* for St. Charles Gas Corporation.

Ezkiel G. Stoddard, Oscar Cox, and *Phillip P. Brown* for Missouri Rolling Mill Corporation.

John P. Randolph and *Joseph H. Grand* for Missouri Natural Gas Company.

Charles J. Dougherty for Union Electric Company.

Robert W. Perdue for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SWIDLER, *Chairman:*

These proceedings involve applications filed by Ark-La (MidSouth), Illinois Power Company and St. Charles Gas Corporation under Section 7(a) of the Natural Gas Act and a complaint filed by Laclede Gas Company under Section 5(a) of the Act against Mississippi River Fuel Corporation in order to obtain additional supplies of gas. Mississippi has capacity in excess of that presently available to its utility customer. The principal question at issue is whether this capacity or some of it, should be allocated to the utility customers, whereas it is now used to supply Mississippi's direct sale industrial customers. The examiner in both a first decision issued September 13, 1960, and in a second decision issued December 1, 1961, after reopening and further hearing, allocated all of this additional capacity to the utility customers except for 2,000 Mcf for industrial pilot lights. The proceedings are now before the Commission on the exceptions filed by a number of parties[2] to the second decision. There is also before us a settle-

[2] Ark-La (MidSouth), Owens Illinois Glass Company, Mississippi River Fuel, Missouri Natural Gas Co., Missouri Rolling Mill Corporation, joint exceptions by Obear-Nester Glass Company, American Brake Shoe Company and Lewin-Mathes Company, joint exceptions by Granite City Steel Company, Alton District Manufacturer's Association, American Steel Foundries, American Zinc Company of Illinois, Laclede Steel Company, National Lead Company, Olin Mathieson Chemical Corp., Pittsburgh Plate Glass Company, and C. K. Williams & Company, and the staff of this Commission.

ment agreement of Mississippi with six of its resale customers and the Public Service Commission of Missouri providing that Mississippi increase its deliveries to its resale customers upon receiving certain quantities of gas from its subsidiary Mississippi River Transmission Corporation (Transmission), which, in turn, proposes to purchase additional gas from Natural Gas Pipeline Company of America. For the reasons set forth below, we are rejecting the proposed settlement. We are in basic agreement with the examiner's allocation of Mississippi's excess capacity, although we differ in the amount of gas to be allocated to Mississippi's utility customers. We, therefore, find it necessary to consider the factual and legal problems involved and the proper allocation of Mississippi's excess capacity.

Mississippi, which began operations in 1929, has two parallel transmission lines, approximately 431 miles long extending from Perryville, Louisiana, where gas is delivered primarily by United Gas Pipe Line Company. One line terminates in Missouri and the other in Illinois. It also has a transmission line extending from Perryville to the Woodlawn Field in Texas. Mississippi has been serving Ark-La's (MidSouth) predecessors since 1929, but its principal sales take place in the vicinity of St. Louis, Missouri, and East St. Louis and Alton, Illinois.

After issuance of prior certificates, the Commission on September 2, 1952, issued an order authorizing Mississippi to construct and operate facilities designed to increase its capacity to 450,000 Mcf per day, 11 FPC 1219; on August 2, 1957, the Commission granted Mississippi a certificate authorizing an additional increase in capacity of 10,000 Mcf per day, 18 FPC 106. Because of increased system capacity achieved by operating improvements, this last order increased the capacity to 515,000 Mcf, and a further order of October 14, 1958, 20 FPC 517, brought the capacity to 522,000 Mcf per day. In the present proceeding Mississippi admits a daily system capacity of 524,000 Mcf, and the examiner has found a sustained dependable delivery capacity of 534,000 Mcf, of which not less than 447,303 Mcf is deliverable in the St. Louis area. Actually the record shows that the system has been able to deliver even larger quantities for short periods. For instance, the system delivered 555,785 Mcf on the peak day of the 1958–1959 heating season.

Mississippi sells gas for resale to a number of customers including utilities and towns. As set forth in the tariff the stated or firm demands of these resale customers is 468,585 Mcf, of which Laclede Gas Co. takes 330,000 Mcf and Illinois Power Co. 57,202 Mcf. Mississippi also sells gas to a number of direct industrial customers principally in the St. Louis area. It considers part of its industrial sales as "firm" sales, even though the contracts provide for curtailment, and part of these sales as interruptible. The examiner found that in the year 1960 Mississippi earned some $6½ million more than its own allocated cost of service to those industrial sales.

Because it failed to obtain the additional gas to which it believes it is entitled Laclede, Mississippi's largest customer, filed its complaint under section 5(a) seeking a determination of Mississippi's present capacity and relief from certain provisions of Mississippi's tariff. Ark-La (MidSouth), Illinois Power and St. Charles, existing utility customers of Mississippi, also needing additional supplies of gas, applied under section 7(a). Laclede's complaint and the 7(a) applications were consolidated and a hearing was held.

In his first decision, issued September 13, 1960, the examiner ordered Mississippi to increase the stated demands of its present utility customers by certain specified amounts that would, roughly, allocate Mississippi's capacity over the

present stated demands to its utility customers; he required Mississippi to file certain changes in its rate schedules providing for the allocation of excess gas to its general service buyers and for reduced overrun penalties; and he required the filing of applications for certificates for facilities, which, he said, Mississippi had not received authority to construct.

On January 10, 1961, Mississippi filed a petition for an order reopening the proceedings on the ground that the utilities' gas supply situation had changed materially because of Transmission's pipeline to the St. Louis area authorized by the Commission on November 29, 1960, 24 FPC 1020, because of additional capacity of Laclede and because of the satisfaction of the application of Ark-La (MidSouth). On March 27, 1961, the Commission ordered that the proceedings be reopened for taking additional evidence on the needs of the utility customers, on the changes, if any, required in Mississippi's tariff pertaining to the establishment of priorities of service between direct and resale customers, and on the supplies of gas available to Mississippi's various customers. Hearings were held on seven days commencing May 31, 1961, and ending on July 26, 1961. The examiner issued his second decision on December 1, 1961.

Apart from his charges that Mississippi had installed facilities without authorization,[3] the examiner strongly criticized it for failing to increase the supplies of gas available to its utility customers while retaining its profitable service to its industrial customers. He noted that Transmission is now authorized to deliver effective December 1, 1961, 63,750 Mcf per day to Laclede and 11,250 Mcf per day to Illinois Power, but Transmission's price is 46.3 cents per Mcf on the basis of a 75 percent load factor in contrast to Mississippi's own price of 31.7 cents per Mcf at a 60 percent load factor. He did not consider Transmission's sale a satisfactory solution to the gas supply problem particularly because of the higher costs, and pointed out that the evidence showed that Mississippi had refused to supply additional gas on the basis of rolled-in costs and had offered the "new subsidiary or nothing."

The examiner did not agree with Mississippi's contentions with respect to Laclede's Lange storage field. Mississippi had argued that the St. Peter formation in the field was not being used to the maximum extent possible and that the Roubidoux formation will be able to supply greater volumes of gas on a peak day. The examiner thought that Laclede's most recent first hand evidence was more persuasive than Mississippi's.

The examiner's solution to the gas supply question, as in his previous decision, was to allocate Mississippi's capacity available above the stated demands of its existing utility customers. From the daily capacity of Mississippi's system of 534,000 Mcf as found by him, he subtracted the present stated demands of the utility customers of 468,795 Mcf[4] and an additional 2,000 Mcf for industrial pilot light service leaving a balance of 63,205 Mcf which he allocated to the utility customers generally in proportion to their stated demands as set forth in the table at page 704 of this opinion. As in his first decision, he generally increased the stated demands of the corporate utility customers. For instance, he gave an additional 45,500 Mcf to Laclede raising its stated demand to 375,500 Mcf per day and 7,989 Mcf to Illinois Power raising its stated demand to 65,191 Mcf per day. As for the towns south of the St. Louis area,[5] he left their stated demands unchanged. Because Union Electric Company, Dupo, PUC Crossett and Ashley County were not parties, he reserved their volumes for six months pending the filing of applications by them.

[3] This matter was the subject of the Commission's order of February 8, 1962, 27 FPC 330, and need not be further discussed here.

[4] Including 640 Mcf for City of Red Bud, Docket No. G–16504, 25 FPC 987.

[5] Chester, Hazen, Altheimer, Augusta, Des Arc, Red Bud.

In connection with his allocation the examiner pointed out that Transmission is merely Mississippi's agent, that Transmission has a present capacity of 140,000 Mcf per day, of which Laclede and Illinois Power have contracted to purchase 75,000 Mcf, that its capacity could be increased to 200,000 Mcf per day, and that Transmission's gas supplies can be made available to all of Mississippi's customers if they are willing to pay the price. We may note that Transmission's pipeline is an 18-inch diameter line which connects with the system of Trunkline Gas Co. in Clay County, north of Johnsonville, Illinois, and extends approximately 94 miles westerly to the west bank of the Mississippi River in north St. Louis County. In so doing it makes deliveries both to Illinois Power and Laclede. As the examiner points out, we authorized an interconnection between Transmission and the main line of Natural Gas Pipeline Company of America in Clinton County, Illinois[6] and an interconnection between Mississippi and Transmission in Madison County, Illinois.[7] In the latter order we recited:

> The purpose of the authorization is to permit Fuel and Transmission to make deliveries of natural gas to each other when such deliveries can assist in their respective system operations and can be made without curtailment or interruption of service to the markets of the party making such deliveries. Under the exchange agreement, the party receiving deliveries thereunder is obligated to return a like quantity of gas to the other party. The exchange of gas will provide added flexibility of operation and continuity of service for both Fuel and Transmission.

As in his prior decision the examiner required Mississippi to file modifications of its rate schedules. One is to provide that any buyer whose gas requirements have not been met by Mississippi will remain a general service buyer under the F–1 Rate Schedule even if it obtains gas elsewhere. Another change is to be a revision of Mississippi's F–1 Rate Schedule to provide for the apportionment of excess gas equitably among the remaining F–1 buyers. A third amendment would reduce the penalty on overrun gas which had formerly extended to $10 per Mcf. The new penalty would be limited to $5 per Mcf for takes in excess of 3 percent of the stated demand.

The examiner's decision was followed by the exceptions which are listed in footnote 2 and which will be discussed below.

The settlement agreement was filed on March 27, 1962, by Mississippi under covering letter of the same date.[8] In addition to Mississippi it was signed by Laclede, Illinois Power, St. Charles Gas Corp., Ark-La (MidSouth), Union Electric Company, Missouri Natural Gas Company and the Public Service Commission of Missouri but not by any other customers of Mississippi. The crux of the settlement is the purchase by Mississippi of additional volumes of gas from Transmission and resale of the gas to its customers. This would be done in two steps—35,000 Mcf per day effective December 1, 1962, and an additional 30,000 Mcf per day effective December 1, 1963. As a result of these proposed purchases Mississippi would increase the stated demands of many of its resale customers in two steps on the same dates. In the agreement Mississippi reserved 70,000 Mcf of gas per day for sales to its direct industrial customers. Deliveries to

---

[6] *Natural Gas Pipeline Company of America*, 26 FPC 543, Docket No. CP61–339, September 26, 1961.

[7] *Mississippi River Fuel Corporation*, 26 FPC 545, Docket No. CP61–341, September 26, 1961.

[8] This followed a similar settlement proposal filed March 6, 1962, by Mississippi and a conference held on March 26, 1962, at the Federal Power Commission but without participation by the Commission's staff except to call the meeting to order and state the staff's position.

these customers would not be curtailed below this amount except when necessary to serve the stated demands of the utility customers and to meet extraordinary conditions affecting the operations of the utility customers or Mississippi. Excess gas from Transmission would be made available by Mississippi to its utility customers.

The proposed agreement specifically makes the increased stated demands given Mississippi's utility customers contingent upon the sale of gas from Natural to Transmission including the requisite certificate authorization, acceptance of the certificate, installation of the facilities and actual availability of the gas. Thus the agreement is predicated on future contingencies and would, if approved, bind us to issue certificates of public convenience and necessity for which applications have not been filed, much less hearings held or possible objections considered. This would, of course, be contrary to Section 7(c) of the Natural Gas Act providing for reasonable notice and hearing in certificate cases.

In the covering letter to the proposed settlement agreement, Mississippi stated that its board of directors had voted to recommend to its stockholders a proposal that it merge with Transmission. It stated further that with the consummation of the merger, there would necessarily be a simplification of certain of its proposed rate schedules and it would make appropriate rate filings in that regard. Such a merger appears to be in the public interest because service and rates should not be affected by such an artificial corporate division. We are happy to see that the existing arrangement, which has not been proved to be practical, will be abandoned. This will make it unnecessary for the Commission to institute a proceeding under Section 5(a) to determine whether there is any discrimination between the customers of Mississippi and the customers of Transmission.

Turning to the present record the principal issue then before us is whether Mississippi's capacity, in excess of the stated demands of its utility customers should be allocated to these customers. Under the Natural Gas Act the questions are whether under Section 5(a) of the Act "any rate, charge, or classification" or any "rule, regulation, practice or contract" of Mississippi is "unjust, unreasonable, unduly discriminatory, or preferential" and whether under section 7(a) it is "necessary or desirable in the public interest" to direct Mississippi to sell additional natural gas to the utility customers. In addition, under section 16, we have "power to perform any and all acts, and to prescribe, issue, make, amend, and rescind such orders, rules and regulations as [we] may find necessary or appropriate to carry out the provisions of [the] Act."

The needs of some of Mississippi's utility customers for additional supplies of gas are shown as follows: [*]

Company	Peak day requirements, 1961–62	Supply (Mcf)		Balance needed
		Present stated demand from Mississippi	Estimate from other sources	
	Mcf			*Mcf*
Laclede	690,000	330,000	[1] 315,000	45,000
Illinois Power	111,000	57,202	[2] 53,798	0
Ark-La (MidSouth)	31,000	26,140	0	4,860
St. Charles	4,840	2,360	852	1,628
Missouri Natural	33,700	24,000	0	9,700

[1] Laclede receives 63,750 Mcf from Transmission.
[2] Illinois Power receives 11,250 Mcf from Transmission.

[*] Volumes are at 14.9 psia 60° F.

The record shows that Mississippi has not met the demands of its utility customers, and they have waiting lists of consumers desiring service. Laclede, whose contract with Mississippi is in terms for its full requirements, has not been granted an increase in its stated demand by Mississippi since 1955.

Meanwhile, Mississippi has been serving and has continued to serve its direct industrial customers. In the thirteen heating seasons from 1948–49 to 1960–61 the peak days of the so-called firm industrial customers have not varied greatly. The least demand was 58,710 Mcf in the last year and the greatest was 71,717 Mcf in the year 1959–60. Effective April 1, 1960, Mississippi's contractual obligations to its direct industrial customers were increased from a total of some 82,000 Mcf per day to over 98,000 Mcf per day.

While Mississippi continued to serve its industrial customers, the record shows that it would not extend additional service to its utility customers except through Transmission at the high costs of a new pipeline. As noted above, the Commission authorized the Transmission project,[10] but in the light of the present record we are of the opinion that it was not in the public interest to establish this separate supplier of gas and to impose the high costs of the new pipeline wholly on Laclede and Illinois Power. Ordinarily, the costs of pipeline extensions are "rolled-in" so that all customers bear the new costs consistent with the principles of cost allocation employed by the Commission. However, this proceeding is not a rate case[11] and we are in no position to consider the combined costs of Mississippi and Transmission.

On the basis of the record and within the scope of the proceeding we agree with the examiner that a remedy is required. Mississippi has retained and extended its service to its industrials including those served under contracts which it claims are firm but which are, in effect, interruptible while its utility customers have been greatly restricted except for service through Transmission. Mississippi, in effect, has not performed its utility obligation to its utility customers including the domestic and commercial consumers served by them. As said in *People ex rel. New York Gas Company* v. *McCall*, 245 U.S. 345, "Corporations which devote their property to a public use may not pick and choose, serving only the portions of the territory covered by their franchises which it is presently profitable for them to serve. . . ." We are properly concerned with the end use of this gas. *F.P.C.* v. *Transcontinental Gas Corp.*, 265 U.S. 1. In our opinion, under the circumstances here presented, its "practice or contract" is "unduly discriminatory or preferential" under section 5(a); it is "necessary or desirable in the public interest" under section 7(a) that Mississippi supply additional capacity to its utility customers. In this regard, Mississippi must give first consideration to the requirements of its utility customers to meet the needs of domestic and commercial users of natural gas. See *Panhandle Eastern Pipe Line Co.*, 6 FPC 196 (1947); 7 FPC 984 (1948); 9 FPC 1330 (1950); 10 FPC 328 (1951). Compare *Panhandle Eastern Pipe Line Co.* v. *FPC*, 232 F. 2d 467. (C.A. 3). In the method of allocation we adopt we do so.

The examiner's allocation of 63,205 Mcf, however, fails to take into account an important element: the requirements of the resale customers include industrial sales. There is no justification in the record for favoring the industrial customers of the utilities over Mississippi's direct industrial customers. The staff advocates an allocation of Mississippi's capacity that would appear to avoid this difficulty (see Exhibit 101).

---

[10] *Trunkline Gas Co., et al.*, 24 FPC 1020 (November 29, 1960).

[11] Laclede's complaint was brought under section 5(a), but cost and rate levels are outside the scope of this proceeding.

The staff's method, we think properly, takes into account the industrial requirements of the utility customers. The staff witness used as his basis the data obtained by circulating a questionnaire to Mississippi's customers, direct and resale. He divided the peak day requirements of each resale customer into requirements for firm industrial sales and requirements for other sales. He then proceeded to allocate Mississippi's capacity first to the resale customers for non-industrial use and then allocated the remaining capacity to industrial users served both directly by Mississippi and upon resale by Mississippi's customers. To do this he determined the non-industrial requirements to be supplied by Mississippi by subtracting from total non-industrial requirements the requirements to be supplied by other sources of supply.[12] He determined the industrial requirements direct and resale to be supplied by Mississippi by deducting the non-industrial requirements from present system capacity and allocating the remaining capacity to Mississippi's resale customers and to Mississippi's direct sale customers in proportion to their industrial requirements. He added each customer's non-industrial requirements to its portion of the firm industrial allocation to obtain a theoretical stated demand which he adjusted so as to give the resale customers at least their existing stated demands. His results were as follows compared with the examiner's conclusions, the present stated demands, and the capacity of the system (at 14.9 psia):

	System capacity	Present stated demand	Examiner's allocations	Staff allocations

[1] Effective November 1, 1963.
[2] Reserved pending application.
[3] Staff concedes an increase to the present stated demand of 57,202 Mcf.
[4] Effective November 1, 1962.
[5] Staff concedes an increase to the present stated demand of 1,068.

[12] Peak shaving, underground storage, and purchases from Transmission.

The staff's method is reasonable and we shall adopt it here in slightly modified form as shown in Appendix A to this opinion. With respect to the area south of the Crossett Compressor station, there is more than enough capacity available. We shall, therefore, adopt the examiner's allocation of 2,750 Mcf to Public Util. (Crossett) and 624 Mcf to Ashley County based upon the questionnaire. However, we agree with him that the gas allocated to these two customers and to Dupo and Union should be held in reserve six months pending their application under section 7(a).

Mississippi has made vigorous objections to the examiner's allocation, and indeed has opposed any allocation of the capacity devoted to industrial loads. Mississippi argues that the examiner's decision will impair its ability to serve its industrial customers and compel it to enlarge its facilities in violation of Secton 7(a) of the Act, that it is the service rendered, not merely a contract obligation, that is to be unimpaired, and that in any case the contracts show that the service rendered is firm service, not interruptible as found by the examiner, whose decision would cause destruction of all industrial sales.

Section 7(a) provides that "the Commission shall have no authority to compel the enlargement of transportation facilities" or "to compel such natural-gas company to establish physical connection or sell natural gas when to do so would impair its ability to render adequate service to its customers." The only difference between firm service and interruptible service is the utilities' contractual right to curtail delivery of gas. If the utility has the right to curtail service then the customers receive and pay for interruptible *service* even if the right of curtailment is not exercised. The issue thus turns not on actual deliveries but on the type of service which Mississippi is obligated to render to its existing industrial customers. The language quoted by Mississippi as typical of its so-called "firm contracts" with its industrials provides in part that, "It is expressly understood and agreed that Seller does not guarantee to Purchaser a constant supply of gas, and the delivery of gas to Purchaser will be curtailed from time to time and on occasion may be completely interrupted." Our previous decisions cited by Mississippi [13] describing its direct industrial sales as "firm" obviously refer to earlier language that was different. In our opinion sales covered by such contracts are interruptible,[14] although ranking above sales covered by other contracts containing language quoted by Mississippi to the effect that "Seller shall have the right to interrupt and discontinue the delivery of gas hereunder at any time and from time to time by giving two (2) hours prior notice * * *." The service to Mississippi's direct sale industrial customers, including the so-called firm customers, is thus interruptible and must be considered as such when determining whether it has been impaired.

Apart from the distinction between firm and interruptible service the allocation which we adopt herein will not result in such a reduction in service to Mississippi's industrial customers that service can be said to be impaired. In the first place there appears to be substantially greater capacity available in Mississippi's system above the 534,000 Mcf sustained capacity found by the examiner and used herein. As already noted the system delivered 555,785 Mcf on the peak day of the 1958–59 season. Further, some light is cast on the needs of the industrials by the emergency service rules effective for the period November 1, 1950,

[13] *Mississippi River Fuel Corp.*, 5 FPC 206, 209 (1946), and 6 FPC 280, 286–287 (1947).

[14] However, in the rate schedule changes we prescribe below we classify them as "firm industrial" to distinguish them from the sales that are more readily interruptible as indicated in the quote that follows in the text.

to February 2, 1952, issued under the authority of the Commission's opinion and order No. 198–A, 9 FPC 219. Under these rules Mississippi's industrials would be curtailed to 24,855 Mcf per day where the system capacity is 350,000 Mcf per day. In our opinion No. 198, July 27, 1950, 9 FPC 198, the nominal daily delivery capacity of the system was stated to be only 266,000 Mcf and the system peak day in 1949 only 300,000 Mcf. Yet these emergency rules were accepted and did not prevent peak deliveries to the industrials from reaching 65,756 Mcf on November 9, 1950.

Finally, if Mississippi wishes to continue service to its industrial customers at a higher level of sales, it may be able to obtain more gas from Transmission, its subsidiary, with which it plans to merge. While Transmission is authorized by us to deliver 75,000 Mcf per day to Illinois Power and Laclede, the record shows that its total capacity is 140,000 Mcf per day, and by further compression facilities this could be raised to 200,000 Mcf per day. Transmission could deliver gas to Mississippi's industrial customers through Mississippi's facilities or by delivering additional gas to Laclede which could decrease its takes from Mississippi by an equivalent amount. These transactions would require delivery of additional gas to Transmission, but the record indicates that Trunkline would be willing to increase its deliveries, and Natural Gas Pipeline of America would also like to supply gas to Transmission. Of course, this would require, as already indicated in connection with the settlement agreement, that certificate authority be obtained from this Commission and that all parties, including Trunkline and Natural, could make the necessary showing.

In our opinion, the allocation we are prescribing in the light of the indication in the record that the capacity of Mississippi's system for short periods is greater than that found by the examiner and the fact that we are allocating some 25,000 Mcf of gas per day to the industrial customers as firm industrial service, will avoid placing an undue burden on Mississippi or force it to enlarge its facilities. Whatever rights Mississippi has under its "grandfather" certificate,[15] its right to serve its industrial customers has been substantially retained when consideration is given to the non-firm nature of the service, the substantial capacity we are allocating to the industrials and the availability of gas from Transmission.

Mississippi also argues that its utility customers do not need an additional gas supply. It says that Laclede and Illinois Power can obtain additional gas from Transmission—at higher cost, of course. There is no reason to discuss Mississippi's arguments with respect to Illinois Power since we are not increasing its stated demand. As for Laclede, we see no reason why we should relegate it to the more expensive gas particularly when it has taken some already. Furthermore, Mississippi says, Laclede has underestimated possible withdrawals from its Lange storage field. On this point we think that Laclede's evidence, based upon the first hand knowledge of its facilities, is more persuasive, and furthermore, Laclede would prefer to use storage capacity rather than capacity purchased from Mississippi at a low load factor and therefore higher cost. With respect to Ark-La (MidSouth) Mississippi points to the fact that its stated demand was increased by 3,350 Mcf effective October 3, 1960, and that it is able to meet all demands by the use of penalty gas at lesser cost than if its stated demand were increased. Mississippi argues that the requirements of St. Charles would be met except for its large industrial load and that Missouri Natural would use the additional gas to serve an interruptible load. In our opinion, penalty gas is no sub-

[15] Issued March 1, 1944, 4 FPC 535.

stitute for a stated demand as its availability is questionable. The industrial and other requirements of St. Charles and Missouri Natural were taken into account in the staff allocation we are adopting here and priority was given to the non-industrial loads of Mississippi's customers. Furthermore, interruptible service would not be rendered by Missouri Natural on a peak day. We are thus treating all the industrial consumers, including those of Mississippi itself, on an equal basis.

The staff's proposed allocation was criticized by some of Mississippi's utility customers. Laclede objects to the staff taking into account that the current needs of Laclede and Illinois Power have been satisfied in part by Transmission. Since the needs of these companies have been met to this extent, it was perfectly proper for the staff to take this fact into account. As already indicated we are not satisfied with the arrangement by which the more expensive pipeline gas is sold to Laclede and Illinois Power, but this is not a rate case and the proper disposition of the rates of Mississippi and Transmission should be left to a later proceeding. Contrary to the contentions of Illinois Power, it was entirely proper in this proceeding to give priority to each resale customer's non-industrial load and to take into account Mississippi's industrial load, for this load should not be treated as inferior to the industrial loads of the resale customers. Ark-La (MidSouth) objects to the examiner reserving a quantity of gas for four of Mississippi's utility customers which did not participate in the proceeding. Our proceedings are designed to further the public interest. Although Union, Dupo, PUC Crossett and Ashley County were not participants, the record shows that they are Mississippi's customers and are in need of gas. Therefore, it is proper that gas be reserved for these customers for a reasonable time pending their application.

Turning to the matter of rate schedule changes, we note that Mississippi objects to the examiner's requirements. Among other changes he required that Mississippi file a rate schedule change providing that any buyer where requirements have not been met by it will remain a general service buyer under the F–1 Rate Schedule even though the buyer obtains gas elsewhere. Mississippi contends that the Commission would have to approve any such tariff change, including the reduction of a stated demand. We, therefore, agree with Mississippi's contention that the examiner's rate schedule change is not necessary.

Mississippi objects to the examiner's rate schedule change providing that excess gas on the system be sold to the F–1 buyers. Mississippi says that this would make it impossible to stay above the 72 percent load factor requirement in Mississippi's contract with United Gas Pipeline Company. We think it more equitable to adopt the staff's rate schedule changes providing that excess gas be made available on the basis of 50 percent to the resale buyers and 50 percent to Mississippi's direct industrial customers.

Mississippi further objects to the examiner's softening the overrun penalty which formerly ran up to $10 per Mcf for overruns in excess of 1,000 Mcf or 1 percent. Mississippi had already removed the 1,000 Mcf limitation and had permitted the taking of 2 percent of the stated demand in any billing month or for a total of 5 days by paying an additional 15 cents per Mcf. Mississippi had further offered to exclude from the computation those days when the excess was less than 1 percent. We think that in this case a $10 per Mcf penalty is too high. On the other hand, we think that the examiner's preservation of the 1,000 Mcf volume tolerance is unduly preferential to Mississippi's small customers. We shall, therefore, adopt the scale of penalties recommended by the staff providing for

the following payments in addition to the commodity charge: (1) 5.88 cents per Mcf for the first 2 percent or 100 Mcf whichever is greater, (2) $2 per Mcf for volumes in excess of 2 percent but not over 3 percent, (3) $5 per Mcf for volumes in excess of 3 percent or 100 Mcf, whichever is greater.

Mississippi contends that the examiner has been biased and that decisions tainted with bias are invalid. We have seen nothing that would lead us to believe that the examiner was biased or that the examiner's recital of the facts or his decision reflected bias. Since the present opinion and order adopts a substantially different approach, the question of bias is irrelevant, and it will not be necessary to discuss it further.

The Commission finds:

(1) Mississippi, having its principal place of business at St. Louis, Missouri, owns and operates a natural gas transmission pipeline system located in the States of Texas, Louisiana, Arkansas, Missouri, and Illinois, and by such operations Mississippi is engaged in the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a natural-gas company within the meaning of the Act as found by the Commission in its order of March 1, 1944, Docket No. G–291, 4 FPC 535.

(2) Laclede, Illinois Power, Ark-La and formerly MidSouth, St. Charles, Union, Missouri Natural, PUC Crossett, Dupo and Ashley County are each a person engaged in the local distribution of natural gas to the public and each purchases natural gas from Mississippi for resale for ultimate public consumption under the terms and provisions of Mississippi's FPC Gas Tariff, Original Volume No. 1.

(3) The settlement proposal filed by Mississippi on March 27, 1962, is not in the public interest when considered in the light of the record in this proceeding.

(4) The sustained dependable delivery capacity of Mississippi's system for future stated demand purposes is not less than 534,000 Mcf, of which not less than 447,303 Mcf is deliverable in the St. Louis area.

(5) Increasing the stated demands of each of Mississippi's utility customers, to the extent and in the manner provided in paragraphs (A) and (B) below, will not place an undue burden upon Mississippi and will not impair its ability to render adequate service to its customers.

(6) It is necessary and desirable in the public interest that Mississippi make the changes in or additions to its FPC Gas Tariff Original Volume No. 1 set forth in the attached Appendix B.

(7) It is necessary and desirable in the public interest that Mississippi be required to file applications for certificates of public convenience and necessity for authority to continue to serve such direct sales customers as it was not serving on the effective date of its "Grandfather" certificate.

(8) It is appropriate for the Commission to require that Mississippi file new or superseding service agreements containing the contract demands stated in paragraph (B) below.

The Commission orders:

(A) The settlement proposal filed by Mississippi on March 27, 1962, is hereby rejected.

(B) The stated demands of the following customers of Mississippi shall be as follows with the reservation noted below:

	Mcf
Laclede	338,347
Illinois Power	57,202
Union Electric	13,757
St. Charles	3,210
Dupo	775
Missouri Natural	33,521
Ark-La (MidSouth)	31,000
Ark-La	9,500
Chester	1,501
Hazen	558
Altheimer	350
Augusta	915
Des Arc	415
Fort Smith Gas Corp.	2,700
Red Bud	641
Direct Industrials	24,608
PUC Crossett	2,750
National Gas Improvement Dist. (Ashley County)	624

The increases granted Union (3,757 Mcf), Dupo (100 Mcf), PUC Crossett (750 Mcf) and Ashley County (250 Mcf) shall take effect only upon approval of applications filed by these customers within six months of the date this opinion and order becomes effective. Upon failure of any one or all of these customers to make timely application pursuant to Section 7(a) of the Act within said six-month period, or failure to support such application, such quantities shall be distributed pro-rata to the utility customers and to the industrial group in the manner utilized herein, by substituting in columns 10 and 11 of Appendix A hereof the supported stated demands. Hearings concerning the 7(a) applications of the four customers above shall omit the issue of gas supply, since this issue has been determined herein.

(C) Within 30 days Mississippi shall file the tariff changes set forth in Appendix B hereto.

(D) Mississippi shall file an application or applications for certificates of public convenience and necessity for authority to continue to serve such direct sales customers as it was not serving on the effective date of its "Grandfather" certificate.

(E) "Mississippi shall file new or superseding service agreements containing the contract demands stated in paragraph (B) above."

(F) Exceptions not granted herein are hereby denied.

APPENDIX A

Allocation of present system capacity of Mississippi River Fuel Corporation among its utility and direct industrial customers (volumes in Mcf of 14.9 psia 60° F.)

APPENDIX B

Tariff Changes

RESTATEMENT OF GENERAL TERMS AND CONDITIONS NO. 7—PRIORITY OF SERVICES

7. *Priority of service:*

7.1 *Firm Service.* Firm Service rendered by Seller to its Buyers up to Buyers' Stated Demands shall have priority over all other services rendered by Seller.

7.2 *Firm Industrial Service.* Firm Industrial Service[1] rendered by Seller to its direct industrial customers shall have priority over all interruptible service rendered by Seller.

7.3 *Interruptible Service.* Interruptible Service rendered by Seller to its Buyers and direct industrial customers shall be the first to be curtailed in the event the demands on Seller's system for firm service and firm industrial service shall exceed available deliverable supplies.

7.4 *Rendering of Interruptible Service.* Interruptible Service shall be deemed to be volumes required by Buyers in excess of Stated Demands and by direct industrial customers in excess of an aggregate volume of 25,000 Mcf per day (excluding sales south of Seller's Crossett Compressor Station). Such volumes which Seller's system can deliver on any day in excess of the sum of 25,000 Mcf plus that portion of the total Stated Demands of its Buyers currently being delivered shall be made available on the basis of 50 percent to Buyers and 50 percent to direct industrial customers.

RATE SCHEDULE I–1. INTERRUPTIBLE GAS SERVICE

1. *Availability:*

This rate schedule is available to any purchaser (hereinafter called Buyer) receiving service from Mississippi River Fuel Corporation (hereinafter called Seller) under Rate Schedule F–1.

2. *Applicability and character of service:*

This rate schedule shall apply to all natural gas delivered by Seller to Buyer on an interruptible basis in excess of Buyer's Stated Demand upon request by Buyer pursuant to Section 7.4 of the General Terms and Conditions.

3. *Rate:*

26.88 cents per Mcf.

4. *Minimum bill:*

None.

5. *Heat content adjustment:*

If the average heating value of the gas delivered during any month is more than 1,005 Btu per cubic foot or less than 995 Btu per cubic foot, the rate shall be increased at the rate of 0.78 percent or decreased at the rate of 0.78 percent for each 10 Btu above 1,005 or below 995 Btu per cubic foot.

6. *Measurement base:*

Refer to Section 1 of the General Terms and Conditions.

7. *General terms and conditions:*

The General Terms and Conditions are part of this rate schedule.

---

[1] Definition under General Terms and Conditions No. 15:

Firm Industrial Service: Firm Industrial Service is deemed to be volumes required by Seller's direct industrial customers for pilot lights, space heating and such uses required in specific instances to prevent physical damages in the aggregate volume of 25,000 Mcf per day.

RESTATEMENT OF SECTION 6 OF RATE SCHEDULE F-1

6. *Payment for volumes exceeding stated demand:*

(a) Volumes taken in excess of the Stated Demand shall be presumed to be delivered under Rate Schedule I-1 except when Seller is providing only Firm Service and Firm Industrial Service pursuant to Sections 7.1 and 7.2 of the General Terms and Conditions.

(b) For each day when Seller is not rendering Interruptible Service pursuant to Section 7.3 of the General Terms and Conditions that the volume of gas taken by Buyer exceeds the Stated Demand, Buyer shall pay for such excess in addition to the commodity charge otherwise applicable as follows:

For any part or all of the first 2 percent or 100 Mcf, whichever is greater, 5.88 cents per Mcf.

Volumes in excess of 2 percent but not over 3 percent, $2 per Mcf (for buyers whose stated demand is over 5,000 Mcf).

Volumes in excess of 3 percent or 100 Mcf; whichever is greater, $5 per Mcf.

(c) The payment for volumes of gas taken in excess of the Stated Demand on days when Seller is not rendering Interruptible Service pursuant to Section 7.3 of the General Terms and Conditions does not grant Buyer the right to take such excess volumes, nor shall such payment exclude or limit any other remedies available to Seller against the Buyer for failure to limit the quantity of gas taken to its Stated Demand.

DECISION

UPON A COMPLAINT AND APPLICATIONS FOR ORDERS DIRECTING INCREASES IN STATED DEMANDS

(Issued September 13, 1960)

HALL, *Presiding Examiner:* Involved here are three applications filed under Section 7(a) of the Natural Gas Act (Act) and a complaint filed by Laclede Gas Company (Laclede) under Section 5(a) of the Act upon which the Commission instituted an investigation.[1] All are directed against Mississippi River Fuel Corporation (Mississippi), a Delaware corporation with its principal office in St. Louis, Missouri.

Laclede, by far Mississippi's largest customer, is engaged in the retail distribution of gas in the City of St. Louis and St. Louis County, Missouri. It has failed to obtain from Mississippi the additional gas to which it believes it has been entitled, and it is and has been in need of a substantial additional gas supply to meet the unsatisfied and constantly increasing requirements of its service area. Its diligent efforts to obtain additional gas from Mississippi on an acceptable basis have been to no avail because of Mississippi's interest in protecting and promoting its profitable industrial sales. Moreover, Laclede has no assurance that Mississippi will make needed gas supplies available to it on an appropriate basis in the future. In these circumstances the normal development and expansion of Laclede's gas business has been and is severely

[1] The Commission set for hearing a consolidated proceeding involving five 7(a) applications and Laclede's complaint. Two of the 7(a) applications, namely, those filed by Natural Gas Improvement District No. 2 of Ashley County, Arkansas (District), in Docket No. G-17942, and the City of Red Bud, Illinois, in Docket No. G-16504, sought initial service from Mississippi. District's unopposed application was severed and granted (22 FPC 1039). The City of Red Bud's application has been considered in a separate decision issued by the Examiner on July 25, 1960.

impeded and the public interest adversely affected. In short, Laclede is finding its tie to Mississippi to be a tie that binds rather than one that strengthens.

Laclede has had a long standing need for additional quantities of pipeline gas and is a full requirements customer of Mississippi.[2] Because of this and its awareness that the 7(a) applicants herein seek additional supplies of gas from Mississippi's existing capacity and that the Commission in prior proceedings has granted other 7(a) applications for service from Mississippi, Laclede filed its complaint seeking a determination of Mississippi's present sales capacity and the extent to which the limitation imposed by the 330,000 Mcf fixed for Laclede in Mississippi's FPC Gas Tariff may be relaxed. The complaint also seeks relief from certain other provisions of Mississippi's tariff and the practices of Mississippi thereunder, such provisions and practices being alleged to be, under present ciircumstances, unjust and unreasonable, resulting in undue prejudice and disadvantage to Mississippi's utility customers.

The 7(a) applicants, namely, MidSouth Gas Company (MidSouth), Illinois Power Company (Illinois Power), and St. Charles Gas Corporation (St. Charles), are, like Laclede, existing utility customers of Mississippi. They also need additional supplies of natural gas to meet their steadily increasing requirements and believe that Mississippi has existing capacity that can safely be made available for increasing their stated demands.

Mississippi objects to the issuance of an order herein directing it to sell and deliver additional natural gas to its existing utility customers, contendng that such an order would exceed the statutory authority of the Commission primarily because it would impair Mississippi's ability to render adequate service to its interruptible industrial customers.

Mississippi is engaged in the business of purchasing, transporting and selling natural gas to two classes of customers: (1) utility distributing companies and (2) industrial customers. Its tariff applicable to utility customers provides for only one service under one rate schedule (except for one minor standby service not important here). Whenever the utility customers exceed their stated demands (stated demands are equivalent to contract demands) now in effect they pay a substantial penalty. On the other hand, Mississippi sells gas in excess of contract volumes to industrial customers without penalty, thereby preventing the utility customers from sharing in excess gas available from time to time on its system. In addition to according its industrial customers this preference, Mississippi's tariff penalizes the utility customers, in particular Laclede and Illinois Power,[3] in still another way in that it effectively prevents such customers from taking their full stated demands. Laclede, for example, has been unable to come within some 6,000 Mcf of taking its full stated demand (330,000 Mcf) on most days of the heating season because of the existing tariff penalty provisions. Mississippi agrees that the tolerance provision of its tariff works unfairly to deprive at least some of the utilities of their full stated demands. It does not, however, agree with other proposed revisions of and additions to its tariff.

Two related matters are therefore presented for determination. First are the requests for increases in stated demand for existing utility customers. Second is the proposed revisions and additions to Mississippi's tariff to prevent undue prejudice and disadvantage to the utility customers.

---

[2] Laclede's gas supply contract with Mississippi provides that the latter "will proceed with due diligence to install facilities or otherwise provide to meet Laclede's total requirements during the remainder of this agreement."

[3] Laclede and Illinois Power make up 82 percent of Mississippi's utility load.

Procedural Background

Laclede's complaint and the 7(a) applications were consolidated for hearing and determination by notice of April 27, 1959, and order issued May 21, 1959, and an investigation instituted upon the complaint (21 FPC 701).

The hearing on the complaint and 7(a) applications began on June 30, 1959, and, with various recesses, continued through October 14, 1959. The record made covered 18 days and the testimony of numerous witnesses and consisted of 2,277 pages of testimony, 73 exhibits and a large number of items.

The parties to this proceeding are Laclede, Mississippi, the 7(a) applicants, the Commission staff, and the following interveners: Missouri Natural Gas Company and Union Electric Company (public utility customers of Mississippi), the City of St. Louis, Missouri, and industrial cutomers directly served by Mississippi, namely, Granite City Steel Company, American Brake Shoe Company, Owens-Illinois Glass Company, Obear-Nester Glass Company, Olin Mathieson Chemical Corporation, C. K. Williams & Company, American Zinc Company of Illinois, Pittsburgh Plate Glass Company, Lewin Mathes Company, Alton District Manufacturers' Association, and Missouri Rolling Mill Corporation.

Briefs have been filed by counsel for Laclede, Mississippi, the 7(a) applicants, the above-named industrial customers directly served by Mississippi, Missouri Natural Gas Company and the Commission staff.

Mississippi's Customers

Utility Customers

As already stated, Mississippi is engaged in the business of purchasing, transporting and selling natural gas to two classes of customers: (1) public utilities and (2) industrial. The public utilities to which Mississippi sells gas and their stated demands are:

Customers	Stated demands (Mcf)
Arkansas Louisiana Gas Company	12, 900
City of Altheimer	400
City of Augusta	858
City of Chester	641
City of Hazen	456
Fort Smith Gas Corporation	2 700
Illinois Power	56, 323
Laclede	330 000
MidSouth	22 790
Missouri Natural Gas Company	24 000
Public Utilities Company (Crossett, Ark.)	1, 900
St. Charles	2 360
Town of Des Arc	415
Union Electric Company	10, 000
Village of Dupo	675
Natural Gas Improvement District No. 2 of Ashley County, Arkansas	374
Total	466. 792

Mississippi does not have service agreements with eleven of its utility customers, namely, Arkansas Louisiana Gas Company, Cities of Augusta, Chester and Hazen, Illinois Power, Public Utilities Company (Crossett, Arkansas), St. Charles, Town of Des Arc, Union Electric Company, Village of Dupo, and Natural Gas Improvement District No. 2 of Ashley County, Arkansas. The reason

for Mississippi's lack of service agreements with these utility customers is not apparent from the record. However, as they know, service to them is protected by the provisions of Mississippi's tariff, to the extent provided therein, and by the provisions of the Act to which Mississippi is subject. Accordingly, these customers can and have ignored such threats as the following testimony shows the Chief Executive Officer of Mississippi directed to a Vice President of Illinois Power:

> Q. Did you discuss the possibility of obtaining supplies for your supply area "C" from other sources than Mississippi.
>
> A. Yes. I mentioned to Mr. Marbury that we badly needed additional gas in Southern Illinois, and that we might have to look for other sources.
>
> Mr. Marbury then told me that if we were to buy any gas from any other supplier to be brought into the market area then served by his company, he would file abandonment proceedings against us with the Federal Power Commission—and I again use his words—"So fast it would make your head swim."
>
> He drew attention to the fact that our contract with his company had expired and that no matter how little gas we might buy from another supplier, he would immediately seek to abandon service to us.
>
> Q. What did you say in reply to this?
>
> A. I told him I could not let that comment go unanswered, and that so long as his company continued to be our major supplier in that area, his threat of an abandonment of service did not particularly disturb or frighten me, nor would I let any such threat lead me to the decision to buy any of this new gas from the proposed new subsidiary which I didn't think was economically practical.
>
> Q. Now, were any other matters discussed at this meeting, Mr. Davies?
>
> A. Yes, we discussed our 7(a) proceedings against his company to obtain gas for the towns of Millstadt, O'Fallon and Hamel.
>
> Mr. Marbury told me that if we and his other purchasers—that is utility purchasers, continued to nibble away at his existing pipeline capacity through this sort of 7(a) proceedings, it was probably our idea that we could do so at the expense of his direct sale customers.
>
> He stated that he intended to continue these direct sales at their present levels, and that if we were successful in prosecuting these 7(a) cases, he would not decrease his sales to his industrials, but would continue them at their present level, and if this resulted in a drop in the pipeline pressure at our delivery points, that was just too bad.
>
> He reminded me that Illinois Power was out at the end of the line.
>
> Q. What was your response to this?
>
> A. I again told Mr Marbury—to rephrase that—I told Mr. Marbury that I doubted if the Federal Power Commission would tolerate any such action and that this threat didn't particularly disturb me either.
>
> He told me that if there was a pressure drop he would never restore it until the FPC made him do it.

The foregoing testimony reflects a recognition on the part of the Chief Executive Officer of Mississippi that the Commission has the power to compel the restoration of pressure drops, etc. The utility customers may be assured that they will be afforded the full protection of the law. In connection therewith the Commission, if necessary, can invoke the penalty powers embodied in the Act for any willful and knowing violation of the provisions of the Act and orders, regulations, etc., issued thereunder (Sections 21, 22).

Industrial Customers

Although each of Mississippi's contracts with its industrial customers provides for interrupting service to such customers, Mississippi regards some of the industrials as firm customers, they being sometimes referred to in this proceeding as "firm-interruptible" customers.

Mississippi now has about 45 direct sale customers, several of which were not served on the effective date of its Grandfather certificate.[4] Mississippi took on some of the new industrial customers, without Commission authorization, through contract assignments even in instances where service to former customers had been discontinued for substantial periods. In two instances Mississippi initiated service through the installation of facilities (meter station and meter station and lateral to serve Sterling Steel Castings Company and Hill Brick Company) for which it sought no certificate authorization from the Commission.

Staff counsel recommends that Mississippi be required to file proper applications for certificate authorization to serve such direct sale customers as it was not serving at the time it received its Grandfather certificate. This recommendation is adopted by the Examiner. Staff counsel further recommend that Mississippi be required to amend its contracts with its existing so-called "firm-interruptible" industrial customers so as to show the actual permissible maximum daily takes of such customers and file such amendments. The Examiner does not agree with this recommendation for the rights of the parties are fixed by the terms of the previously executed contracts and they should not be permitted at this late date, when the utility customers are seeking increases in their stated demands, to acquire a status superior to that of the utilities.

History of Mississippi's System

Mississippi began operations in 1929. Originally it had a single pipeline extending in a northerly direction from Perryville, Louisiana, through the States of Arkansas and Missouri, and into the State of Illinois. Its present system consists principally of two main trunk transmission lines, approximately 431 miles long, extending from Perryville, Louisiana. Line No. 1 terminates in Missouri and Line No. 2 terminates in Illinois. Its principal sales take place in the vicinity of St. Louis, Missouri, and East St. Louis and Alton, Illinois.

In 1929, when Mississippi was constructing its initial transmission system, MidSouth's predecessor, Arkansas Power & Light Company (Arkansas), entered into a contract with Mississippi to purchase natural gas for distribution in eleven of the eighteen Arkansas cities presently served by MidSouth under its full requirements agreement with Mississippi. The 1929 full requirements contract provided that Mississippi would sell and deliver to Arkansas all of the natural gas requisite for the supply of the domestic consumers in those cities and environs. That contract further provided that Arkansas was to use every reasonable effort to increase sales of natural gas to residential, commercial and industrial customers and detailed the methods to be used by Arkansas in accomplishing this objective.

The first deliveries by Mississippi to MidSouth's predecessor were begun on December 11, 1929, making it the first utility customer of Mississippi. Only two industrial customers had received deliveries from Mississippi prior to that date, one on November 21, 1929, and the other on December 11, 1929.

[4] The Examiner is unable to determine the precise number from the record. Staff counsel refer to ten in their brief. Counsel for Laclede say there are nineteen. The precise number is unimportant for present purposes.

In finding Mississippi to be a natural-gas company in 1940 the Commission disagreed with Mississippi's claim that it was organized and its properties financed and constructed with the view of transporting and selling natural gas primarily for industrial use (2 FPC 170, 173–174). The Commission said:

> It is the contention of respondent [Mississippi] that its company was organized and its properties financed and constructed with the view of transporting and selling natural gas *primarily* for industrial use, and that whatever sales have been made by it to distributing companies for general public consumption have constituted only so-called "nuisance" sales along the route of the pipe line.
>
> The evidence discloses, however, that at the very outset of the financing and construction of the line respondent deviated materially from the alleged purpose of confining its operation to the service of selected industrial customers. In the public circular describing the proposed issue of mortgage securities for the construction of the line, the public is advised that, in addition to concluding contracts for the sale of gas to large industrial customers,
>
> > Arrangements are being consummated with Arkansas Power & Light Company, * * * the Arkansas Natural Gas Company, * * * and the Missouri Natural Gas Company for sale of gas to these companies for distribution in communities along the route of the pipe line in the States of Louisiana, Arkansas, and Missouri.
>
> Respondent, by contracts entered into with the Arkansas Power & Light Company, the Arkansas Natural Gas Company, and Missouri Natural Gas Company, agreed to supply these distributing companies with all their requirements for natural gas for distribution in approximately 30 cities and towns in the State of Arkansas and Missouri.
>
> Moreover, under two of these contracts it obligated itself to construct the requisite branch lines from its main trunk pipe line to points near the city boundaries of the cities in which these distributing companies proposed to sell the gas for domestic, commercial, and other purposes. These contracts provide that preference be given the requirements of domestic consumers over industrial consumers, in the event of shortage of gas; that the distributing companies maintain every possible effort to increase sales of natural gas for house heating, cooking, and all other domestic uses; and domestic consumers are defined as including "private homes, boarding houses, apartment houses, hospitals, [and] charitable institutions."

The designed daily sales capacity of Mississippi's original system was about 100,000 Mcf. By 1942 it had increased to 135,000 Mcf. Mississippi's second line project, i.e., looping program, involving an increase in sales capacity from 135,000 Mcf to 183,000 Mcf was commenced pursuant to certificate authorization granted on August 28, 1946. The Commission's opinion recited in part (5 FPC 206, 209–210):

> The peak day sales of the applicant in 1944 consisted of 43 percent sales to utilities and 57 percent sales to direct industrial customers. In the following year the peak day sales to utilities rose to 60 percent of the total, while the sales to direct industrial customers fell to 40 percent.
>
> On the basis that the facilities, sought in this application, if authorized, will be in operation for the peak day of 1947–48, applicant estimates that of the total daily sales capacity of 181,000 Mcf, 83 percent will go to the utility customers and 17 percent to the industrial customers. *For the peak day of 1950, it appears that unless additional facilities are installed, almost 100 percent of the system sales capacity of 181,000 Mcf will be devoted to utility sales.*

> Applicant estimates that with presently proposed facilities, it will be necessary to curtail its firm industrial sales on system peak day for each of the calendar years 1946 to 1950, inclusive. * * * *Applicant has indicated its intention to add facilities to increase the capacity of its system from time to time as warranted by the increases in demands.* * *

As the Commission recognized, all of Mississippi's system capacity would eventually be devoted to utility sales unless Mississippi increased the capacity of its system from time to time.

Authority to complete the above referred to looping program of Line 2, to be operated at 700 pounds pressure giving a system daily design sales capacity of 266,000 Mcf, was granted by the Commission on December 8, 1947 (6 FPC 280). In connection therewith it was estimated that on the peak day in the years 1947 through 1951 Mississippi would have to curtail deliveries to its direct industrial customers in order to meet the demands of its resale customers.

The system design sales capacity was increased by successive steps from 266,000 Mcf in 1950 to 450,000 Mcf in 1952, exclusive of any gas that might become available from Waterloo storage (9 FPC 219, 9 FPC 1187; 11 FPC 760; 11 FPC 1219). In connection therewith, and because an acute shortage had developed on Mississippi's system, Mississippi was required to file emergency service rules to govern deliveries of natural gas to all of its customers. Such rules became effective as of November 1, 1950, and as subsequently amended were to continue in effect through March 31, 1953, or until such time as Mississippi's aggregate sales capacity would exceed 450,000 Mcf, whichever occurred first. Such rules were terminated as of March 31, 1953.

In 1952 the Commission, in Docket No. G–1281, et al. (11 FPC 1219), and subsequently on June 3, 1953 (12 FPC 151), made the latest allocation it has made of Mississippi's capacity. The then claimed total delivery capacity of Mississippi's system was 450,000 Mcf, of which 415,000 Mcf, or 92 percent, was allocated to utility customers and 35,000 Mcf, or 8 percent, was permitted to be used in connection with Mississippi's industrial sales. In that connection the Commission adopted an agreed-to schedule of stated demands allocating the 92 percent of Mississippi's capacity among its utility customers on the basis of a stipulation that the amounts stated would not affect rights under existing utility contracts.

While Mississippi and the other parties agreed to the allocation of 450,000 Mcf, represented by Mississippi to be the design sales capacity of its system, the record shows that in the summer of 1952 Mississippi, *without certificate authorization*, increased its system sales capacity by some 50,000 Mcf, or to 500,000 Mcf, by "pigging" a portion of one of its two transmission lines, adding some horsepower to raise the pressure on its two lines by 25 psi each, and by the installation of "cross-overs" between its two lines.

Today, Mississippi claims that its design sales capacity is 524,000 Mcf, an increase of 74,000 Mcf over the 450,000 Mcf capacity alleged in 1952 and 1953. Except for (1) 10,000 Mcf additional capacity authorized by order of August 2, 1957, (18 FPC 106) and (2) a claimed 7,000 Mcf additional capacity authorized by order of October 14, 1958, in Docket No. G–15190, or a total of 17,000 Mcf additional capacity, the claimed increase of 74,000 Mcf between the 450,000 Mcf and the alleged 524,000 Mcf design sales capacity as of today *was accomplished without Commission authorization.*

In connection with the above referred to 10,000 Mcf additional capacity authorized on August 2, 1957, Mississippi's utility customers complied with its request that they support the application therefor without requesting an allocation of the 10,000 Mcf, they being of the opinion that Mississippi would proceed with another application to provide an additional 50,000 Mcf capacity. Such an application was never filed.

On May 19, 1958, Laclede's President wrote a letter to Mississippi inquiring as to what it proposed to do concerning the matter of furnishing additional gas to Laclede. On May 28, 1958, Mississippi replied that "It is our intention to bring to St. Louis whatever additional quantities of gas the market requires" and requested Laclede to advise Mississippi as to its requirements. By letter dated June 5, 1958, Laclede advised Mississippi of its willingness to take all or any part of 100,000 Mcf per day at any time prior to the fall of 1960.

Instead of proposing to enlarge its existing facilities for the purpose of increasing its supply of gas to its customers, Mississippi, on October 25, 1958, announced in the daily press that it had organized a new corporation known as Mississippi River Transmission Corporation to bring in an additional supply of gas from a point on Texas Eastern Transmission Corporation's line near Oran, Missouri. Thereafter, on December 5, 1958, a conference was held in Laclede's offices attended by representatives of Mississippi, Laclede and Illinois Power in which the details of the proposed new line were outlined. Laclede then indicated that it would be interested in the program as outlined if it could be set out in greater detail and certain changes in the delivery requirements could be made.

On December 19, 1958, Mississippi advised Laclede as to the details of the proposal which were substantially different from the proposal outlined at the December 5th meeting. At several subsquent conferences the President of Laclede advised Mississippi that its latest proposal was not acceptable to Laclede, and on February 5, 1959, wrote Mississippi formally rejecting the proposition, primarily because of price. That proposal also included a monthly 75 percent take-or-pay provision which Laclede regarded as unjustifiably saddling the utility customers with the major cost of the new line, although the industrial customers would have received much of the benefit.

A Vice President of Illinois Power, in explaining the opposition of his company to Mississippi's proposal, threw Mississippi's interest and attitude in clear focus when he testified as to what took place at the above referred conference held on December 5, 1958:

> A. Illinois Power thought that not only the price but several other provisions of this deal made it very unattractive for Illinois Power Company.
>
> Accordingly we told them * * * that as far as Illinois Power * * * was concerned we were not interested in that proposition.
>
> Q. Did you give them any reasons?
>
> A. Yes, I did.
>
> Q. What were the principal reasons?
>
> A. As I have said, the price was unattractive and would have lifted our average cost of gas quite a bit. In addition to that there were two other factors. By having to buy the gas through a new and separate subsidiary, we could not take advantage of the automatic cost of gas adjustment clause in our field rate schedules to recoup this increased cost.
>
> And we would have to file a separate rate increase application on top of an increase which * * * had just prior thereto been granted to us by the Illinois Commission.
>
> To explain that further: If the gas had been bought by us from Mississippi * * *, it would have represented an increase in price on our existing supply and our automatic cost of gas adjustment clause would have taken care of that.
>
> But a new source of supply was not covered in our automatic cost of gas adjustment clause.
>
> Q. Were there any other considerations that caused you to turn down this proposition?

A. Yes. We found that the 75 percent take-or-pay provision which was a monthly 75 percent take-or-pay provision would have been very burdensome to us. This would have required that we buy a substantial amount of our spring, summer and fall gas under the provisions of this new contract to satisfy this provision.

This would mean that we would substantially reduce our purchases from Mississippi under our existing contract under which we were then buying gas at substantially lower prices. This would have increased the quantities of gas that Mississippi would then have available for sale to its direct sale customers.

It was our feeling that the net effect of this whole proposition would be that we and Laclede would be paying—I might say we, Laclede and other utility customers that might have been involved—would be paying the entire cost of the increased gas supply and that the direct sale customers would be getting many of the benefits of the increased supply at no increase in cost to them.

Q. Did you indicate, nevertheless, * * * that you did continue to have an interest in increased quantities of gas from Mississippi?

A. Yes. * * *

Q. Can you relate any other particulars of this conversation?

A. Yes. I suggested * * * that they consider having this increased capacity owned by Mississippi * * *—or at least sold to us by Mississippi * * *—and that it make the sales to our company under a rolled-in rate.

Q. What was their reaction to this suggestion?

A. * * * Mr. Marbury told me that neither he nor his Board would even consider any such proposition.

He stated that because of their rate and their regulatory situation they had no intention of expanding the existing Mississippi * * * system.

The officials of Laclede present at the meeting also stated that they would prefer the rolled-in supply. And Mr. Marbury on several occasions during the meeting reiterated that his company would give no consideration to supplying gas on this rolled-in rate basis, and that it was—and I use his words—"The new subsidiary or nothing."

The foregoing testimony justifies the conclusion that Mississippi lacks the incentive to provide its utility customers with their needs in a manner compatible with the over-all public interest; that it is doing everything possible to protect and increase its industrial sales, and that this is being done to the detriment of the utility customers and the areas they serve.

History of Mississippi's Supply of Gas to Laclede

Laclede is engaged in the retail distribution of gas in the City of St. Louis and St. Louis County, Missouri, an area undergoing rapid growth. It distributes straight natural gas supplemented by propane and other manufactured gas and and by use of Laclede's underground storage facilities developed at great expense.[5]

Laclede began purchasing natural gas from Mississippi for mixing purposes in 1942, converting to straight natural gas in 1949. As has been typical in such

[5] Laclede's peak day during the 1958–59 heating season occurred on January 4, 1959, when it sold slightly in excess of 473,000 Mcf of gas. Of that amount, it withdrew 96,230 Mcf from storage, manufactured 67,415 Mcf and received 325,000 Mcf from Mississippi. Laclede did not receive its full stated demand of 330,000 Mcf from Mississippi on that day because the tariff penalty provision made it inadvisable for Laclede to attempt to take its full entitlement.

situations, Laclede's need for natural gas sharply increased following that conversion.

During the period from 1950 to 1958 Laclede's house-heating customers increased from 92,532 to 190,158 and its industrial customers increased from 6,971 to 9,242. It presently has 17,500 applications for space heat. Since 1950 Laclede has operated under some form of restriction as to the acceptance of new customers. A large potential has been, and continues to be, deprived of natural gas service. The house-heating saturation in Laclede's service area is only 55 percent.

Laclede estimates that its peak day requirements (0 degrees at year end) from 619,000 Mcf in 1959 to 852,000 Mcf in 1963, and a further increase to 952,000 Mcf in 1966. Much of this estimated increase represents a programmed effort to meet existing unsatisfied demands for gas service which has built up over the past ten years. It must obtain additional pipeline gas if it is to satisfy its public service obligation.

Laclede's most recent contract with Mississippi, executed in 1947, provided for a maximum of 200,000 Mcf per day. In 1950 Mississippi entered into a full requirements contractual obligation with Laclede. When the emergency rules governing Mississippi's deliveries to its various classes of customers went into effect on November 1, 1950, Laclede was assigned a peak day maximum of 268,000 Mcf. This was increased to 300,000 Mcf in 1952 and 330,000 Mcf in 1955. Accordingly, in the last ten years Mississippi has made available to Laclede only 62,000 Mcf of additional natural gas.

Laclede has repeatedly sought substantial additional pipeline gas from Mississippi. On March 25, 1957, it formally requested an additional 100,000 Mcf for the 1958–59 heating season. In February 1957 Mississippi had filed with the Commission an application for a certificate authorizing the construction and operation of facilities to increase Mississippi's pipeline capacity by approximately 50,000 Mcf per day. However, in March 1957 Mississippi withdrew that application and substituted an application for facilities to provide only 10,000 Mcf per day and requested its customers to support the application *without asking for an allocation of the 10,000 Mcf*. The customers complied with this request. The certificate was issued on August 2, 1957 (18 FPC 106). In that connection Laclede's President testified: "We had expected, although I must say it was never guaranteed to us, that upon completion of the project * * * Mississippi would proceed with the original project and that our share of the increase of 50,000 Mcf based on an allocation among utility customers would be about 35,000 per day. Numerous conferences were held during the remainder of 1957 and on into 1958 without result."[6]

It was on May 19, 1958 that Laclede's President wrote the letter hereinabove referred to (pp. 719–720, *supra*) inquiring as to Mississippi's intentions concerning the matter of furnishing additional gas to Laclede, such inquiry, and the conferences that followed, resulting in Mississippi's unacceptable proposal to organize a subsidiary to construct a new separate pipeline system instead of enlarging its

[6] In a letter dated August 19, 1957, addressed to Mississippi, the President of Illinois Power stated that he was "quite unhappy" about what was happening. He explained: "We have recently heard that your corporation has changed its plans concerning the application for an additional 40 million cubic feet a day * * *. I was quite surprised to learn this because Mr. Kramer clearly indicated you were going to proceed with the application for 40 million cubic feet capacity when he requested my help with respect to the 10 million cubic feet, and we have previously advised your corporation in writing that we were prepared to contract for an additional 45 million cubic feet a day regardless of whether or not we find storage."

present system so that both industrial and utility customers would share equitably in the increased cost of the new gas supply and facilities.

Origin of Problems Presented

The issues, to be fully appreciated, must be considered not only against a background of Mississippi's history, method of operation and present position, but also against a background of the effect of the unchecked rise in prices paid producers for natural gas purchased, transported and sold by pipeline companies such as Mississippi.

As has been explained, Mississippi's business has always consisted in part of the transportation and sale of natural gas to public utilities for resale, and in part of transportation and sales to industrials for their use and consumption. While the Commission's jurisdiction extends to (1) the *transportation* and *sale* of natural gas to utilities for resale, and (2) to the *transportation* of gas to industrials, it has no regulatory authority over rates charged by pipelines to industrials. Thus pipelines such as Mississippi have been free to charge industrial customers "what the traffic will bear" rates which have been very lucrative. As the Commission explained in a Mississippi rate decision rendered November 5, 1945 (4 FPC 340, 343, 351) :

> After the early development period when the capacity of the pipeline greatly exceeded the volume of gas sold, Mississippi has enjoyed exceptionally high earnings, and has maintained the payment of large dividends to stockholders.
>
> * * * * * * *
>
> From the beginning, the business of the company has been predominantly the sale of natural gas to industries, but the proportion of the sales to utilities for resale has increased constantly to the point where revenues from sales to utilities for resale constituted 32% of the total in 1943. The company estimates that in the immediate post-war period revenues from sales to utilities will be about 35% of the total. * * * The rates for gas sold directly to industrial customers are not subject to our jurisdiction * * *.

A serious problem particularly for pipelines and distributors has been created and is now endemic in the industry. This problem results largely from the rapidly increasing field prices which producers are permitted to charge and is daily becoming more serious because, among other things, the higher such prices are permitted to go the greater the erosion of profits from industrial sales. Thus the higher field prices are making it progressively more difficult for pipelines to continue making industrial sales at desired profits. This in turn is causing pipelines to seek ways and means of offsetting the increased producer prices, as well as the higher cost of new facilities, to protect industrial sales and their profitability.

An unfortunate corollary of the problem of accelerated producer prices has been the reluctance of pipelines to "roll in" the higher costs of newly purchased gas as part of their total cost of service. In explaining the "rolled-in" rate method in *Battle Creek Gas Co. et al.*, v. *FPC., et al.*, 281 F. 2d 42, the Court pointed out, *inter alia*, that "the cost of the various assets of the system are collected or 'rolled in' to arrive at the cost of the entire system which is then pro-rated among all of the customers" and that—

> The rolled-in rate method is generally disadvantageous * * * to old customers of an expanding pipeline. The cost of new facilities and new gas historically has risen steadily, and a rolled-in rate requires old customers to pay a higher price and bear part of the cost of an expansion from which

> they receive little visible increase in service. But, conversely, use of the rolled-in approach insures that two otherwise similar customers will not pay radically different prices for commingled gas coming from the same pipe, merely because one happens to have been receiving the service longer than the other. Use of the rolled-in method thus serves the interest of equal treatment for customers receiving equal service.

The normal effect of a "roll-in" is to increase the cost of gas available to the pipeline on an overall basis. The next effect is to make it difficult to sell gas for industrial purposes at rates and profits comparable with those in the past. As a result there have been an increasing number of cases where the pipeline seeks to "tilt" the rates so that they can sell a large volume of industrial gas. The effect of the "tilt" is often to place an unfair share of the burden upon the householder or commercial user as compared to the burden of the industrial user. To put it another way, the increased cost of gas at the wellhead results in attempts by pipelines seeking to preserve the industrial business to charge unfair and discriminatory prices to the average user. This problem comes into sharp focus in these proceedings. As already shown (*supra*, pp. 719–721), the pipeline in this case sought, in 1958, to deal with this general problem not by "tilting" its rates but by the creation of a subsidiary to construct and operate a new and separate pipeline system. This Mississippi proposed notwithstanding the feasibility of looping or otherwise increasing the capacity of its present system (as it has done in the past and could do now if it had the necessary incentive). If that procedure, which had to be rejected by its utility customers, had been followed it would have, among other things, circumvented rolled-in rates by keeping the additional and more costly gas supply and facilities from being integrated into Mississippi's over-all cost of service, and would have saddled the utility customers with a disproportionate share of the higher cost gas supply and facilities, thereby promoting Mississippi's industrial sales.[7]

In *Mississippi River Fuel Corp.* v. *F.P.C.*, 252 F. 2d 619, 624, Mississippi opposed the higher single rate there involved because it was injurious to its direct industrial sales. The Court held, however, that the reasons for Mississippi's opposition to the single rate—

> * * * While * * * potent from the standpoint of that company, they do not avail too much from the standpoint of general regulation and the public interest.

Of significance here is the testimony of Mississippi's Chief Executive Officer who makes it clear that, contrary to the intent of the Act, Mississippi's Management proposes to continue to give priority to industrial sales:

> We feel a grave responsibility to the basic large industry that we serve with firm gas and have served for many years. We feel that that was our original business in the main. We have been authorized to engage in it. The people rely on us. The economic well-being of the community to a great extent is dependent upon it. And we intend to fulfill our obligation. And, therefore, we want to reserve for our own customers sufficient gas to let us fulfill our responsibilities to them.

---

[7] Another attempt (in modified form) by a pipeline to avoid rolled-in rates and to saddle a distributing company with the cost of higher priced gas and new facilities was unsuccessfully advanced in the *Trunkline Gas Company* case (21 FPC 704, 711, 739–746), a plan which would have promoted the direct industrial sales program of Panhandle Eastern Pipeline Company. This case was reviewed by the United States Court of Appeals of the District of Columbia Circuit in *Battle Creek Gas Company, et al.* v. *Federal Power Commission, et al.*, 281 F. 2d 42.

After that amount of gas is served, we are willing and anxious to devote all the rest of our capacity to the requirements of our resale customers, both present and future. [Emphasis supplied.]

Mississippi's position, as thus expressed, ignores the fact that Mississippi is contractually bound to deliver only interruptible gas to its industrial customers. That is to say, delivery of interruptible gas to the industrial customers represents Mississippi's full "responsibilities to them." Furthermore, Mississippi's position is wholly out of harmony with the intent of the Act and with the fact that both the Commission and Mississippi have in the past recognized that Mississippi's sales to its industrial customers were not to have priority over sales to utility customers. Contracts executed by Mississippi in 1929 with utility customers gave preference to the requirements of domestic consumers over industrial consumers, in the event of shortage of gas, with the utilities to make every possible effort to increase sales to natural gas. Since that time the Commission has required, and Mississippi has accepted, restrictions on deliveries to its industrial consumers. In authorizing an increase from 135,000 Mcf to 183,000 Mcf in Mississippi's capacity on August 28, 1946, the Commission made it clear that all of Mississippi's capacity would eventually be devoted to utility sales unless Mississippi increased the capacity of its system from time to time as warranted by the increases in demand (*supra*, pp. 718–719). Moreover, Mid-South and certain other resale customers have had full requirements contracts with Mississippi dating back to 1929 and Laclede has had such a contract since 1950.

When the underbrush is cleared from Mississippi's plea in these proceedings, the Examiner finds that what it is really seeking is permission to avoid its responsibilities to utility customers which, for the most part, it voluntarily assumed, in order to more than meet its responsibilities to its industrial customers. And it is requesting that it be allowed to avoid its responsibilities to its utility customers at the same time it is refusing to expand its present system to provide for the requirements of all of its customers on an equitable basis.

Industrial sales, particularly interruptible sales, must be subordinated to utility sales, for the public interest can be protected in no other way. Furthermore, in considering Mississippi's above stated position the fact is not to be overlooked that Mississippi is acutely aware that its higher prosperity depends upon its ability to hold and increase industrial sales. There is, of course, no objection to such sales being made provided they are not made to the detriment of resale customers and the consuming public.

Mississippi's position in this proceeding is to be contrasted with the view expressed in *Pennsylvania Water & Power Co.* v. *Consolidated Gas Electric Light and Power Company of Baltimore*, 184 F. 2d 552, 567:

> One of the most important duties of a public utility, inherent in its franchise to serve the public, is the duty to take the initiative in * * * rendering adequate services, taking into account changing conditions; and the utility is not relieved from this duty because its activities are subject to governmental regulation, for a regulatory commission is not clothed with the responsibility or qualified to manage the utility's business. * * *

Here Mississippi is not only rendering inadequate service to its utility customers but is refusing to expand its existing system to provide their needs even though it knows that the expanded system would provide it with a reasonable rate of return on its investment. The catch is that Mississippi is demanding more than what the Commission regards as a reasonable rate of return for the

services it renders. Obviously in these circumstances the Commission has an obligation, within the limits of its authority, to cause Mississippi to properly perform its contractual obligations to its utility customers.

In its efforts to hold, promote and protect its industrial sales at the expense of its utility customers and the areas they serve, Mississippi is attempting to grab too great a place for its own pocketbook and is in effect dominating to a large extent the advancement and success of its utility customers. It appears that whether Mississippi will continue such domination will depend upon the extent to which the Commission utilizes its regulatory power under the Act, which is the blueprint for the Commission's work and which lays down the basic principles for the positive, constructive side of the Commission's task.

A problem which the circumstances of this case presents is the proper course a distributing company should pursue in overcoming the failure of its pipeline supplier, which favors its industrial sales, to live up to its contract obligation to "proceed with due diligence to install facilities or otherwise provide" the distributor with its total natural gas requirements. The course here being followed by Laclede in an effort to break out of its confinement is summarized by its president in the following testimony:

> Q. Tell me, Mr. Derrick, what is your position with respect to Mississippi's obligation to supply Laclede with its increasing gas needs?
>
> A. We believe that Mississippi * * * has the responsibility to make every reasonable effort to supply our actual gas requirements. But whatever the reason, Mississippi has failed to do so. We believe that in these circumstances we are entitled to seek the assistance of this Commission in increasing our stated demand if any of the gas is available on Mississippi's system and in modifying Mississippi's tariff to the extent that it will make it possible for us to take more gas without subjecting ourselves to the payment of outrageously high penalties.
>
> Q. Now, if Mississippi is not able or is unwilling to meet your requirements, then what do you plan to do?
>
> A. In that event we would feel that we have no alternative but to look elsewhere for part of the gas supply which we simply must have if we are going to continue meeting our public utility obligations to the people of St. Louis.

Laclede, like other gas distributing companies, is obligated to the extent possible to provide service to all those seeking service in its franchise area. This is an obligation that cannot be met merely by continuing to supply existing customers. The increased needs of existing customers as well as the requirements of new customers must be met. Thus, if Laclede and Mississippi's utility customers are to fulfill their public utility obligation they must obtain additional volumes of gas, including volumes of firm pipeline gas.

Solution to Problems Presented

Mississippi's utility customers need and are entitled to two things: (1) Increased stated demands. (2) Modification of Mississippi's FPC Gas Tariff to eliminate undue prejudice and disadvantage to the utility customers. Mississippi and its industrial customers oppose both. Their attack in large part centers upon the fact that Mississippi's present gas supply and facilities are inadequate to fill the demands of its utility and industrial customers, so that any increase in deliveries to the utility customers will diminish the gas supply now being made available to the industrials. Counsel for Mississippi seek to glean support for their position by arguing, *inter alia*, that the quantity limitations in Mississippi's industrial contracts have not been interpreted by either Mississippi

or the industrials as a binding limitation on the right of Mississippi to sell and the industrials to take more than that quantity. But this argument is beside the point. The question here is not what Mississippi and the industrials have regarded as permissible in the past but what the Act, public interest, and Mississippi's contractural obligations require for the future. As the undersigned Examiner stated in *Central Kentucky Natural Gas Co., et al.*, 15 FPC 700, 708–709, 719; aff'd 15 FPC 730; *Cincinnati Gas & Electric Co., et al.*, v. *F.P.C.*, 246 F. 2d 688–

> * * * events and situations are considered in relation to their causes and results. This makes it necessary for the Commission to deal not only with successive changes as they occur, but to utilize experience gained to more effectively deal with regulatory matters not involving change. Thus once it is demonstrated that practices and procedures are inappropriate for any reason, the Commission, having continuous jurisdiction, performs one of its primary functions in permitting or prescribing appropriate readjustments to provide a more stable basis for the continuous progress of the regulated industry. Stated another way, the Commission's orders are a necessary adjunct to carrying out the purposes of the statutes it administers and recognize that what once may have appeared to be an ideal regulatory action can be completely out of step with present and expected future conditions.
>
> * * * * * * *
>
> * * * In this situation, it is much better for the Commission to act in a timely way when a threat to economic stability appears on the horizon than to await the development of difficulties.

The only adequate solution to the problems here presented is for Mississippi to do what it could have already accomplished without perpetuating a worsening gas crisis in its service area, namely, *properly* provide the gas needed by its customers. The utility customers, without any apparent support from the industrials, have diligently sought to bring about this solution which Mississippi steadfastly rejects in the interest of the profitability of its industrial sales. Mississippi, therefore, gives the Commission no choice but to do the best it can in the circumstances of this case by strictly enforcing (1) the intent of Congress as reflected in the Act, and (2) the contractual rights of the parties. None of Mississippi's industrial customers have a contractual right to receive other than interruptible service and some of them are receiving service not authorized by the Commission. On the other hand, some of Mississippi's utility customers, including Laclede, its largest customer, have full requirements contracts and their natural gas requirements exceed that part of Mississippi's capacity not now allocated to them. Accordingly, for the Commission to carry out its regulatory functions in this case, it must allocate Mississippi's entire capacity to the utility customers, which have a superior right thereto, such allocation to be accomplished in two increments and to be accompanied by appropriate changes in Mississippi's FPC Gas Tariff. If before the second increment becomes effective next year Mississippi should desire to carry out its public utility responsibility and benefit the economy and the strength of its service area and the Nation by enlarging its existing system, rather than following the unnecessarily restrictive policy of insisting upon "The new subsidiary or nothing," the Commission can reconsider the action herein making the second increment effective.

Mississippi's largest utility customers take the position that their needs be provided through an expansion of Mississippi's existing transmission system rather than through Mississippi's proposal to create a subsidiary to contruct, own and operate a separate transmission system to promote and protect its industrial

sales. Expansion of Mississippi's system has provided Mississippi's customers with increased supplies of gas in the past. A further expansion can accomplish the needed result in the future. Moreover, expansion of Mississippi's system is the only way of assuring that both the utility and industrial services will be assigned their proportionate share of the cost, under a rolled-in rate method, for gas taken from Mississippi's system. That is to say, an expanded system with a rolled-in rate, rather than a separate system, serves the salutary function of equal treatment for all.

As already pointed out (*supra*, pp. 718–719), the Commission in authorizing Mississippi to increase its system capacity in 1946, stated that "For the peak day of 1950, it appears *that unless additional facilities are installed, almost 100 percent of the system sales capacity of 181,000 Mcf will be devoted to utility sales.*" But as the Commission also observed Mississippi "indicated its intention to add facilities to increase the capacity of its system from time to time as warranted by the increases in demands." That was in 1946 and until recently Mississippi has increased the capacity of its system from time to time, although such increases have not adequately provided for the needs of its customers. Now, however, Mississippi has gone on what is tantamount to a sit-down strike against additional gas supplies unless and until it has its own way of constructing a separate system. But Mississippi cannot go on such a strike and retain capacity not contractually committed to industrials from being allocated to utility customers depending upon Mississippi for their natural gas supply. Nor can Mississippi restrain any action of the Commission permitting other pipelines willing to provide additional service to the area from doing so.[8] The Commission has both the power and the obligation to act in this situation even if Mississippi desires to stand still.

As those familiar with the provisions of the Act know, the Commission has no power to compel a natural gas company such as Mississippi to enlarge its facilities for the purpose of providing additional service. But this does not render the Commission helpless in the circumstances of this case for it may at any time allocate a company's system capacity as the public interest may require provided such allocation does not impair the company's ability to render "adequate service" to its customers. The Examiner's order herein does not impair Mississippi's ability to render "adequate service" to industrial customers within the meaning of the Act, nor does it compel Mississippi to enlarge its existing facilities. Mississippi will be free to enlarge its facilities if it desires to furnish either firm service, or interruptible service in excess of present contract quantities, to its industrial customers, assuming the industrial customers are willing to continue to purchase gas on the terms offered by Mississippi. But if and when Mississippi applies for authority to enlarge its facilities the utility customers may and should intervene and assert their claim to any additional capacity applied for by Mississippi up to the extent of their then requirements.

---

[8] The Commission's general authority to direct a second supplier to service an area already being served by another natural gas company is expressly reserved by Section 7(g) of the Act which provides that:

"Nothing contained in this section shall be construed as a limitation upon the power of the Commission to grant certificates of public convenience and necessity for service of an area already being served by another natural-gas company."

As the Court held in *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 169 F. 2d 881, cert. den., 335 U.S. 854, "nothing in the * * * Act suggests that Congress thought monopoly better than competition or one source of supply better than two, or intended for any reason to give an existing supplier of natural gas for distribution in a particular community the privilege of furnishing an increased supply."

As has been shown (*supra*, pp. 717–721), Mississippi, with and without certificate authority, has increased its system capacity over the years without in each instance providing its resale customers with an opportunity to increase their stated demands, or to share in excess gas available on its system from time to time. The result is that a substantial part of Mississippi's capacity has been and is being used to supply the needs of new industrial customers and increased demands of industrial customers.

The Chief Executive Officer of Mississippi testified that "During the second World War we had about 65 million coincidental peak-day firm industrial gas load attached to our system. And that was the approximate volume in 1942, 1943, right through the War and after the War. That is what it is today." But much of Mississippi's capacity used in making industrial sales has been constructed without Commission authorization. For example, in 1952 the Commission allocated 35,000 Mcf, or only 8 percent, of Mississippi's then claimed capacity of 450,000 Mcf for industrial use, whereas the record shows that in the summer of 1952 Mississippi, without Commission authority or knowledge, increased its system sales capacity by some 50,000 Mcf, or to 500,000 Mcf. Today Mississippi's dependable system sales capacity is at least 534,000 Mcf, with the Commission, so far as the record shows, having authorized only 17,000 Mcf of the 84,000 Mcf difference between 450,000 Mcf and 534,000 Mcf (*supra*, p. 719). The portion (41,792 Mcf) of the 84,000 Mcf difference which has since been allocated to utility customers is hereinafter discussed (*infra*, pp. 732–733).

All changes in capacity are required by good conscience and the law to be disclosed at the time they take place. Discovery of the existence of unauthorized capacity increases and their unauthorized employment by Mississippi should result in the taking of affirmative steps by the Commission to assure that the unauthorized and discriminatory conduct exercised in the past will not be continued or repeated in the future.

Sales Capacity of Mississippi's System

In considering the sales capacity of Mississippi's system it should be pointed out that the section of its pipeline between Perryville station and Crossett station has 15,000 Mcf capacity for the delivery of gas to customers between those stations, which gas if not sold there cannot be moved beyond Crossett. Gas not sold between Crossett station and Neelyville and Poplar Bluff stations cannot be brought into the St. Louis area, and only a part of the gas not sold between those stations and the St. Louis area can be moved into that area. Thus Mississippi's witness Miller, in explaining his conclusion as to the system sales capacity testified that it—

> * * * is based upon a sales pattern in which some gas is sold between Perryville and Crossett, some sold between Crossett and Neelyville, some gas is sold between Neelyville and Bonne Terre and some gas is sold between Bonne Terre and the St. Louis area.
>
> Now there is no difficulty in changing the pattern so that more gas is sold near Perryville than was sold during the 1958–59 heating season, but the change cannot take place in the other direction, since the facilities do not exist to move more gas toward the St. Louis area.

Mention should also be made of the fact that Mississippi's Waterloo Storage Field, which began operation in 1950, has not measured up to expectations and it is not the kind of storage from which large volumes of gas can be taken day

after day.[9] Injections must be and are made as frequently as possible during the winter months. When full the Waterloo storage field contains about 450,000 Mcf.

Contrary to Mississippi's contentions, the Waterloo storage field is not to be ignored in determining the sustained dependable delivery capacity for stated demand purposes. For even though this field is not of the same seasonal character as other storage fields, it is useful and contributes to capacity. Commission witness Pettit, in reaching his conclusion as to the total daily system sales capacity, utilized an average daily withdrawal from Waterloo storage of 1,380 Mcf. According to his studies, the field has a daily delivery capacity of up to 18,000 Mcf.

It may also be observed in passing that Mississippi's witness Ziebold, whose testimony was concerned with the operation of Mississippi's system, testified that the difficulty experienced in system dispatching stems from the fact that Mississippi has no control over the daily takes of its industrial customers. Such customers have consistently overrun contract maximums during periods when utilities were manufacturing gas for peak shaving. The amount of their daily overruns has not been of any particular concern to the industrial customers since Mississippi's contracts with them do not contain either a minimum bill or provision for overrun penalty payment.

By use of Waterloo storage, withdrawal of line content and compressor overloads, Mississippi has been able to deliver for short periods of time larger quantities than what it regards as the design peak capacity (524,000 Mcf) and delivery capacity (531,000 Mcf) of its system. For example, the three consecutive days of highest system sales during the 1958–59 heating season occurred on February 18, 19 and 20, 1959. On the day of highest sales, February 18, sales totaled 555,785 Mcf, of which 19,680 Mcf was taken from Waterloo storage. The second highest day, February 19, had sales of 554,304 Mcf, of which 13,400 Mcf was taken from storage. The types of sales made on the three days are classified by Mississippi as follows:

	Feb. 18 (Mcf)	Feb. 19 (Mcf)	Feb. 20 (Mcf)
Interruptible industrial	39,486	35,049	34,611
Firm industrial [1]	61,086	65,147	61,332
Utility sales	455,213	454,108	452,039
Total	555,785	554,304	547,982

[1] As hereinabove explained (*supra*, p. 716), the so-called "firm" deliveries are in fact interruptible.

In connection with these particular sales it is to be borne in mind that they were made as the season was considered to be nearing its end and when Mississippi's operators thought they could reasonably protect themselves.

Mississippi's consecutive three day peaks in 1957–58 and 1958–59 averaged 544,000 Mcf and 551,000 Mcf, respectively. On four other groups of *three* consecutive days during the 1958–59 season, Mississippi's total sales averaged 541,000 Mcf (1/7/59–1/9/59), 539,000 Mcf (1/15/59–1/17/59), 542,000 Mcf (1/21/59–1/23/59) and 537,000 Mcf (2/10/59–2/12/59). On two periods of *five* consecutive days its sales averaged 542,000 Mcf (2/17/59–2/21/59) and

[9] As Commission witness Pettit explained, even though gas withdrawn from the Waterloo Storage Field, located just south of Mississippi's Columbia station, goes to the St. Louis area "it benefits everybody down the line."

538,000 Mcf (1/4/59–1/8/59). Mississippi's average deliveries on its *seven* consecutive day peak was 539,812 Mcf, with 457,340 Mcf delivered into the St. Louis area.

Counsel for Laclede and St. Charles contend that based upon past actual system performance over short periods of time the sustained delivery capacity of Mississippi's system, insofar as necessary to meet firm demands in the future, is not less than 540,000 Mcf per day. Assuming this 540,000 Mcf capacity the result would be:

	Mcf
Sales capacity	540,000
Deduct south of Crossett	15,000
Balance north of Crossett	525,000
Present stated demands north of Crossett	[1] 467,133
Balance	57,867

[1] Stated demand of 467,133 Mcf includes 640 Mcf for the City of Red Bud, Illinois.

Three witnesses testified with respect to the capacity of Misssissippi's system, two (Ziebold and Miller) being presented by Mississippi and the other (Pettit) by Commission counsel. The result of their testimony is shown by the following figures:

	Sales capacity (Mcf)	Deduct Crossett	Balance north of Crossett	Deduct stated demands	Balance
Ziebold	524,000	15,000	509,000	467,133	41,867
Miller	531,000	15,000	516,000	467,133	48,867
Pettit	534,000	15,000	519,000	467,133	51,867

As to deliveries into the St. Louis area the testimony of the three witnesses shows the following results:

	System (Mcf)	Deliverable into St. Louis area
Pettit	534,000	447,000
Miller	531,000	442,000
Ziebold	524,000	437,000

Mississippi, through the testimony of witness Miller (which was concerned with the capacity of Mississippi's system and the utilization of that capacity), would have any capacity determination based upon the unrealistic assumption that Mississippi's utility customers in the future will take their full stated demands on coincidental peak days and that they will take the full stated demands on every day of the heating season. However, this witness testified that he could recall no "instance where each customer, each utility customer, had his own individual peak simultaneously with the system peak and every individual customer's individual peak occurred on the same day."

Mississippi's system is about 88 percent efficient. Witness Ziebold testified that on his flow diagram, showing 524,000 Mcf per day system sales capacity,

he used the manufacturers rating on all the compressor stations on Line No. 2, although experience has shown that, except in at least one station, actual performance is above rated performance. As this witness testified, there isn't a day when the plant will not operate up to 12 hours at 110 to 115 percent of rated horsepower.

Commission witness Pettit, in making his study, took into consideration compressor overloading, which he explained as "nothing new," and use of line pack, an average net storage withdrawal of 1,380 Mcf,[10] compressor fuel and company use, line losses, the capacity of various sections of the line, manipulation of system operations and every other factor upon which a reliable judgment can be based. He examined considerable data on company operations for the 12-month period ending August 31, 1959 and studied the entire operations of the company during the 1958–59 winter period. After studying this data and inspecting certain compressor stations and other system equipment, as well as analyzing the data and testimony presented through witness Ziebold, particularly four sustained periods of high demand on Mississippi's system aggregating 33 days, namely December 8–15, 1958; January 2–12, 1959; January 30–February 5, 1959; and February 17–23, 1959, and based upon his long experience in pipeline design and operations, he concluded that the system has a daily sales capacity of 534,000 Mcf, of which 447,303 is deliverable into the St. Louis area. As witness Pettit testified, "I took Mr. Ziebold's periods * * * and I came out with an average."[11]

The Commission's witness Pettit looked at actual performance during a recent period as the most appropriate guide. To borrow the words of the Supreme Court in *New York Trust Co.* v. *Eisner*, 256 U.S. 345 and 349, he proceeded upon the valid assumption that "a page of history is worth a volume of logic" and on that page of history properly concluded that the system should be able to reach the same level of performance for future periods. The future, of course, will be aided by controlled takes by the industrials.

On the basis of the record the Examiner concludes that the sustained dependable delivery capacity for future stated demand purposes for Mississippi's utility customers is not less than 534,000 Mcf, of which not less than 447,303 is deliverable in the St. Louis area.

Allocation of System Capacity

The most recent allocation by the Commission concerning the sales capacity of Mississippi's system was in 1952 and 1953 when Mississippi claimed that its system capacity was 450,000 Mcf. At that time the Commission accepted a proposed settlement allocating 415,000 Mcf, or 92 percent, to Mississippi's utility customers, with the remaining 35,000 Mcf, or 8 percent, to be used by Mississippi in connection with its industrial sales. The sustained capacity of Mississippi's system today, however, is at least 534,000 Mcf, an increase of 84,000 Mcf, accomplished by Mississippi without further Commission authorization except for about 17,000 Mcf (*supra*, p. 719). As counsel for Laclede point out, Mississippi

[10] Mississippi made net storage injections during the 90-day period (December, January, and February) of over 60,000 Mcf, or an average daily injection of 670 Mcf. During this period it not only was able to replace the gas withdrawn during the 33 days of greatest demand, but injected 60,000 Mcf in addition. Witness Pettit's inclusion of 1,380 Mcf in his conclusion as to system capacity, as representing an average daily withdrawal from storage, therefore appears reasonable.

[11] Commission witness Pettit did not take the average deliveries during the highest periods, but rather the average of the entire 33 days during the several periods as the sustained capacity of the system.

> * * * has been able to retain a continuing volume of industrial sales in the range of 50,000–60,000 Mcf without at any time subjecting new or increased industrial sales to the test of comparative need *vis a vis* utility requirements. This means that the utilities have had no opportunity to assert their requirements against a substantial part of MRF's capacity. It may be that the new or increased industrial users could have established an overriding need for MRF's excess capacity superior to the long unsatisfied residential and commercial demand on MRF's system, our point is that they were never required to do so.

Counsel for St. Charles points out that if the Commission now allocates the 534,000 Mcf capacity in the same manner that the 450,000 Mcf capacity was allocated in 1952 and 1953, namely, 92 percent to the utility customers and 8 percent for industrial use, the result would be that 491,280 Mcf would be allocated to the utility customers and 42,720 Mcf would be allocated for industrial use. As he further states, however, since 1953 the stated demands allotted to Mississippi's utility customers have been increased by 51,792 Mcf, or from 415,000 Mcf to a total of 466,792 Mcf (*supra*, p. 715). This represents, under the 1952 and 1953 allocation, some 25,488 Mcf less to the utility customers than the 92 percent of the 84,000 Mcf of peak capacity added since 1953. Aside from this, of the 84,000 Mcf additional capacity, some 32,208 Mcf has never been allocated by the Commission, but has been and is being used by Mississippi to make deliveries upon an interruptible basis to its direct industrial customers.

Concerning the point made by counsel for St. Charles, counsel for Mississippi state that—

> * * * St. Charles advances the theory that in the 1953 rate settlement * * * there was an allocation of Mississippi's designed delivery capacity of 8% to the nonjurisdictional sales and 92% to the utility customers. The defect in this argument is that while the percentages are accurate the only allocation made was to assign 415,000 Mcf as a stated demand to the utility customers which assigned each such customer a maximum quantity. There was no allocation of any quantity either maximum or minimum to Mississippi for sales to its direct industrial customers. * * * The fact is therefore that the only allocation of capacity that has been made is that represented by the stated demands * * *. All the capacity in Mississippi's system not taken by the utility customers remains available for use by Mississippi in serving its industrial customers.

But the controlling point which counsel for Mississippi ignore is that gas not heretofore allocated by the Commission to specific customers can still be allocated by the Commission and, in the circumstances of this case, must now be allocated to specific utility customers. Mississippi can no longer be permitted to enjoy the luxury of the use of capacity not allocated to specific customers, for to permit a continuation of such enjoyment would not only nullify the provisions of Section 7(a) of the Act, insofar as Mississippi is concerned, but also the priority of Mississippi's responsibility to its utility customers which, as counsel for Laclede points out—

> * * * is clearly reflected both in its sales contracts and in its Tariff. Thus, its contracts with its industrial customers * * * are cancellable on six months' notice and contain maximum quantities limiting the lawful entitlement of each customer. Additionally, with one exception, MRF's firm industrial contracts expressly recognize in the following language or similar language, the priority to be accorded its utility sales [emphases supplied]:
>
> "Purchaser understands that the demands for natural gas which will be made upon Seller during the winter months by *the public utility distribution*

companies served by Seller may require substantially all of the natural gas which Seller will be able to transport through its pipeline system, and that Seller will give priority to those demands over the natural gas requirements of Seller's industrial customers. It is expressly understood and agreed that Seller does not guarantee to Purchaser a constant supply of gas, and *the delivery of gas to Purchaser will be curtailed from time to time and on occasion may be completely interrupted.* It is further expressly understood and agreed that Seller shall not be liable to Purchaser for any damage to Purchaser's plant, and equipment or any other loss which Purchaser may suffer as a result of any such interruption, curtailment or any failure of gas supply or service."

In contrast, Laclede's contract with MRF * * * is not subject to cancellation or interruption and obligates MRF to meet Laclede's full requirements, not merely its Stated Demand at any given time. Thus, MRF has a duty under this contract: (a) to make available to Laclede every foot of gas its present system can deliver to St. Louis and (b) to make every reasonable effort to expand its facilities and obtain additional gas supplies when and as necessary to meet Laclede's increased and growing requirements.

Similarly, Section 7 of the General Terms and Conditions of MRF's Tariff (Second Revised Sheet No. 14, Item F by reference) provides that, "firm service rendered by Seller to its buyers shall have priority over all other services rendered by Seller."

Hence, MRF's position, and that of its industrial customers frequently expressed in this proceeding, that its industrial sales are somehow entitled to a special preferred status is completely unfounded. * * *

Counsel for St. Charles contends that "Mississippi should be required, from capacity not heretofore allocated, to supply additional gas to St. Charles" requested in its Section 7(a) application herein. This could be done but more is required. What is plainly required is an allocation of the entire capacity of Mississippi's system to the utility customers except for 2,000 Mcf to provide pilot light service for industrial customers.

In connection with the Section 7(a) applications of St. Charles, Illinois Power and MidSouth, it may be pointed out that the Examiner had occasion to state in his decision in *City of Red Bud, Illinois, Docket No. G–16504*, issued July 25, 1960 that "adequate service," as that term is used in Section 7(a) of the Act, in the light of the circumstances and facts in this proceeding—

> * * * connotes the ability of Mississippi to satisfy the requirements of its utility customers every day throughout the year. It further connotes the ability of Mississippi to satisfy the requirements of all existing customers and those authorized by the Commission to be added throughout the year, except, if necessary, during peak periods. Deficiencies which may occur, if any, are to be met by industrial curtailment, which is the usual and normal practice in the industry * * *.
>
> * * * * * * *
>
> Mississippi's attempt to equate "adequate service" as that term is used in Section 7(a) with the demands of its industrial customers rather than to the volumes it is contractually obligated to deliver to them is wholly without merit. The order herein does not take gas away from anyone. It permits the maintenance of adequate service to existing customers, and provides the additional service which has been shown to be necessary and desirable in the public interest. This is an exercise of the Commission's prerogative under the Act to require service, making it impossible for Mississippi to veto the authority granted to the Commission.

As the Chief Executive Officer of Mississippi has recognized, the utility customers have been and will undoubtedly continue "to nibble away at" Mississippi's capacity not now allocated to the utility customers (*supra*, p. 716), which they may properly do under Section 7(a). There is, of course, no necessity for a continued nibbling away at such capacity if it is all allocated at one time so as to provide each of the utility customers their pro rata share. Obviously, what the Commission can do piecemeal it can accomplish in one action.

Accordingly, since the capacity of Mississippi's system is not less than 534,000 Mcf, this capacity less the present stated demands of 466,792 Mcf and 2,000 Mcf for pilot light service and 640 Mcf for the City of Red Bud, Illinois, or a balance of 64,568 Mcf is available for increasing the stated demands of the utility customers. One-half of the 64,568 Mcf, or 32,284 Mcf, is allocated to the present utility customers on a pro rata basis effective upon the date the order herein becomes the final order of the Commission. The remaining 32,284 Mcf is allocated to the utility customers on a pro rata basis effective December 1, 1961. Accordingly, the stated demands of Mississippi's utility customers are increased as follows:

Customer	Present stated demands (Mcf)	New stated demands (Mcf)	12-1-61 stated demands (Mcf)
Arkansas Lousiana Gas Company	12,900	13,792	14,684
City of Altheimer	400	428	455
City of Augusta	858	917	977
City of Chester	641	685	730
City of Hazen	456	488	519
Fort Smith Gas Corporation	2,700	2,887	3,074
Illinois Power	56,323	60,218	64,114
Laclede	330,000	352,823	375,647
MidSouth	22,790	24,366	25,942
Missouri Natural Gas Company	24,000	25,660	27,320
Public Utilities Company (Crossett, Ark.)	1,900	2,031	2,163
St. Charles	2,360	2,523	2,686
Town of Des Arc	415	444	472
Union Electric Company	10,000	10,692	11,383
Village of Dupo	675	722	768
Natural Gas Improvement District No. 2 of Ashley County, Arkansas	374	400	426
Total	466,792	499,076	531,360

Concerning the above referred to increased stated demands it should be observed here that not all of Mississippi's utility customers are parties to this proceeding, but the utility customers which are parties to this proceeding, in fairness to the other utility customers, seek only their pro rata share of whatever additional volume of gas is made available. If this procedure is not followed, the 64,567 Mcf would have to be allocated on a pro rata basis to each of the utility customers which are parties to this proceeding.

The Section 7(a) Applications

A. *Authority of the Commission*

A question has been raised concerning the propriety of the Commission's action denying Mississippi's motions requesting dismissal of the 7(a) applications of its existing customers—MidSouth, St. Charles and Illinois Power—for increased stated demands (21 FPC 814; 22 FPC 1081). In denying Mississippi's motions the Commission said "its review of the contentions, answer and Act shows that the clear language and intent of Section 7(a) gives the Commission jurisdiction

to hear and determine the matters involved." While the Commission's action, which is binding upon the Examiner, eliminates any necessity for consideration of this matter here, a brief discussion may serve to further point up the fact that the denial of the motions was well founded.

While the Commission's authority under Section 7(a) is sufficient to direct Mississippi to increase the stated demands of its existing utility customers, the circumstances of this case are such that the Commission may invoke the total of its statutory power, including its authority to allocate the ascertained dependable capacity of Mississippi's system, to accomplish the purposes which the statute makes mandatory.

The grounds upon which Mississippi's motions to dismiss were based are: (1) That there is no statutory authority for the filing of an application or other pleading by a gas distributing company for the purpose of obtaining an increase in stated demand. (2) That Section 7(a) of the Act is limited to gas distributing companies not already having natural gas service. (3) That the general terms and conditions of Mississippi's FPC Gas Tariff prescribe the method whereby additional quantities of gas may be obtained by a distributor from Mississippi. As to the latter contention it need only be observed that all provisions of the tariff are subject to the plenary power of the Commission under the appropriate provisions of the Act, including Section 7(a).

As shown by the order of the Commission issued February 6, 1959 (21 FPC 190; see note 12, *infra*), directing Mississippi to provide additional service to Illinois Power and St. Charles, and initial service to the City of Chester, Illinois, and prior decisions (19 FPC 143, 148–150; 10 FPC 369, 385–387), the Commission has consistently held that its authority under Section 7(a) to order a pipeline supplier to provide increased deliveries to its utility customers is coextensive with its authority to direct initial services to a new customer. In Wisconsin *Southern Gas Company*, 4 FPC 188, 191, the Commission stated:

> Under section 7(a) we "*may*" by order "direct" a natural gas company to extend its service if such action is found to be "necessary or desirable in the public interest." From an examination of the language of this section, it is apparent, that Congress vested in the Commission broad discretion in dealing with cases involving the exercise of authority to require the extention and connection of facilities *and the rendition of additional service.* [Emphasis supplied.]

One additional citation of authority, *Home Gas Company* v. *F.P.C.*, 231 F. 2d 253, *cert.* den., 352 U.S. 831, will suffice for the purpose of showing the authority of the Commission with reference to 7(a) applications. In the *Home Gas Company* case the Court rejected the contention that the Commission, under Section 7(a) of the Act, was powerless to order Tennessee Gas Transmission Company, in a Section 7(c) proceeding, to provide additional service. In this case the Court sustained the order of the Commission directing Tennessee to supply two distributing companies with a supplementary supply of natural gas in addition to the supply then being furnished by Home Gas Company (also by Algonquin Gas Company as to one of the distributors). The distributors showed, *inter alia*, that a connection with Tennessee's system was necessary for the normal development of their gas businesses then undergoing tremendous growth in demand for natural gas service; that they had no assurance that the additional gas needed by them could or would be made available by their then pipeline suppliers; that there would be an improvement in the adequacy and reliability of service to their customers; that they would realize substantial economies through lower gas cost and retirement of old standby emergency equipment; that they could develop markets that could not otherwise be developed; and their purchase of gas from

Tennessee was the most feasible and economical solution of their gas supply problem. In rejecting Home's contention that the Commission was powerless to order Tennessee to provide additional service under Section 7(a) to the distributors, which were customers of Home, the Court said (231 F. 2d at 257–258):

> * * * Petitioners contend that, assuming the Commission has power under the Act, 15 U.S.C.A. § 717f (a), (e) and (g), to grant a certificate * * * to a second supplier for service to an area already being served, the Commission has no power to require such service by order pursuant to § 717f(a) * * *.
>
> To uphold petitioners' contention would in effect force us to consider the above-noted sections as being mutually exclusive. This we cannot do. Indeed, we find them complementary. No basis exists in the legislative history of the Act, and certainly none in the plain language of the text, for the creation of a third limitation in § 717f(a), as petitioners urge, namely, where the area involved is already being served by a natural gas company. Cf. *Manufacturers Light & Heat Co.* v. *F.P.C.*, * * * 206 F. 2d 404.

Since the Commission, under Section 7(a) of the Act, may require a second supplier to provide supplementary service to a distributor as the public interest may require, it necessarily follows that it may require a supplier to do the same thing with respect to its existing utility customers, provided such action places no undue burden upon the supplier or impairs its ability to render adequate service to its customers. The "adequate service" here referred to is that represented by maximum contract or tariff obligation authorized by the Commission, not excess deliveries, at the pleasure of the supplier, to a particular customer or group of customers.

Moreover, the Commission may at any time allocate to a specific customer or customers any unallocated capacity in a pipeline system. Such allocation authority may not be delegated to or assumed by the management of a pipeline, for the exercise thereof is entrusted solely to the Commission. As held in *Central West Utility Co.* v. *F.P.C.*, 236 F. 2d 287, 288:

> * * * it is the duty of the Commission to determine the present capacity of the Liberty Lateral or its original designed or actual capacity, whichever was greater and allocate the gas to be delivered from the lateral within the maximum capacity thus ascertained. * * *

And it is well known, of course, that, as recognized in *Federal Trade Commission* v. *Bunte*, 321 U.S. 349, 352, "Authority actually granted by Congress * * * can not evaporate through lack of administrative exercise."

B. *The 7(a) Dockets*

The dockets covering the 7(a) applications filed by Illinois Power, MidSouth and St. Charles are:

> *Docket No. G–17984.* Application filed March 5, 1959, by Illinois Power for an additional 12,000 Mcf which, together with the quantities heretofore authorized (57,202 Mcf), would give it 62,202 Mcf stated demand.[13]

---

[13] Illinois Power's service agreement with Mississippi expired in 1951. It has, however, been authorized by the Commission to purchase 55,000 Mcf per day of gas from Mississippi under Mississippi's existing rate schedules. On February 6, 1959, the Commission directed Mississippi to deliver an additional 2,202 Mcf of gas per day to Illinois Power for service in the communities of O'Fallon, Hamel, and Millstadt, Illinois, and to file executed service agreements covering this service (21 FPC 190, 197). In the same order the Commission directed Mississippi to sell and deliver to St. Charles an additional daily volume of 360 Mcf and to provide initial service to the City of Chester, Illinois, *i.e.*, a maximum daily volume of 1,518 Mcf and to file executed service agreements covering such service.

Docket No. G–17567. Application filed January 19, 1959 by MidSouth for an increase in its present daily delivery volume of 22,790 Mcf to 25,790 Mcf by November 1, 1960.

Docket No. G–18405. Application filed April 28, 1959 by St. Charles, with a present stated demand of 2,360, for successive annual increases reaching a total stated demand of 5,651 Mcf by November 1, 1963.

Staff counsel agree that the 7(a) applicants have fully sustained the burden of proof, including the fact that Mississippi has unallocated capacity greatly in excess of what the 7(a) applicants seek. However, in lieu of granting the increases in stated demand the staff recommends that the Commission require Mississippi to make certain tariff changes. Such changes, however, would provide only token relief to the 7(a) applicants.

The record fully substantiates the requests made by Illinois Power, MidSouth and St. Charles for additional supplies of natural gas and, to the extent possible through a pro rata allocation of Mississippi's present unallocated capacity, those requests have been granted. In view of this the Examiner finds it unnecessary to consider the 7(a) applications in detail other than to discuss certain contentions raised with respect to MidSouth's application.

MidSouth is a full requirements customer of Mississippi. Many of the communities served by it have never used anything but natural gas. As staff counsel recognize, MidSouth is "sorely" in need of the additional 3,000 Mcf it seeks "to meet the requirements of *domestic* customers *now* actually attached."

Mississippi is MidSouth's most feasible source of supply. No known storage possibilities exist in MidSouth's service area. Its use of peak shaving equipment on a reasonable basis is complicated by the fact that it serves eighteen communities and purchases gas from Mississippi at seventeen separate delivery points. Studies made by MidSouth of peak shaving devices have shown the cost thereof to be of an exorbitant nature.

In resisting MidSouth's request for additional gas, counsel for Mississippi state in their brief that—

> Due to the location of the several communities constituting MidSouth's system it is apparent that whatever gas MidSouth wants it is in a position to take. The record is clear that the management of that Company will continue as in the past to take on all the residential space heating business it is offered and intends to take overrun gas so long as the cost of gas purchased from Mississippi does not exceed what gas from other sources would cost.

MidSouth, however, is simply fulfilling its public utility responsibility. Its efforts in that direction can provide no comfort to Mississippi in its failure to live up to its obligation to provide MidSouth's full natural gas requirements. No company should want, or be permitted, to stand still when the public interest demands otherwise. The pressure to grow is always a vital force and in business life growth is taken as a matter of course. Unless a business is prepared to take risks and expand it will soon find itself pushed aside as more venturesome competitors take its place. Moreover, a cardinal principle in the industry should be that every utility provided new increments of gas at the lowest possible cost. As the United States Court of Appeals for the Fifth Circuit pointed out in its decision issued August 2, 1960, in *El Paso Natural Gas Company, et al. v. Federal Power Commission*, "It is the obligation of all regulated public utilities to operate with all reasonable economies."

MidSouth now has a stated demand of 22,790 Mcf per day, such volume being assigned to it in 1953. On its 1955–56 peak day it took 21,591 Mcf. Its 1956–57

peak day take was 23,693 Mcf. Its 1957–58 peak day take was 24,383 Mcf. Its 1958–59 peak day take was 26,107 Mcf, or 3,317 Mcf more than its present stated demand. This 3,317 Mcf overrun is 317 Mcf in excess of the 3,000 Mcf increase sought by MidSouth in this proceeding.

Mississippi knows that MidSouth must take overrun gas to meet its requirements. It is also aware of the fact that on every day that MidSouth was taking overrun gas in the 1958–59 heating season and paying a penalty therefor, Mississippi was selling gas in excess of contract volumes to its interruptible customers without penalty.[13] True it is, as counsel for Mississippi say, "that whatever gas MidSouth wants it is in a position to take," but the point is that in the circumstances of this case it should be permitted to take it without penalty. Failure to increase MidSouth's stated demand would simply enable Mississippi to continue to exact what is tantamount to an unjust and unreasonable charge for the service it is contractually obligated to render and can render without in any way impairing service it is obligated to render to other customers.

MidSouth's deliveries to its interruptible customers are fully interruptible, except for one customer which used only 28 Mcf on the 1958–59 peak day. During the 1958–59 heating season MidSouth curtailed deliveries to its interruptible industrial customers on 48 days.

In connection with MidSouth's request for a 3,000 Mcf increase in its stated demand it may be pointed out that Mississippi River Chemical Company (Chemical Company), formerly a division of Mississippi, is located about 35 miles south of the St. Louis area and its contract with Mississippi provides for interruptible deliveries. The plant has standby fuel and can be fully interrupted. But notwithstanding this fact, Chemical Company never received less than 5,726 Mcf on any day during the 1957–58 heating season. For the year 1958 Mississippi's sales to Chemical Company averaged 9,670 Mcf per day. The records show that if deliveries to Chemical Company were interrupted at least part of this gas could not be delivered to the St. Louis area on some days and other days none of it could be delivered into St. Louis.

A witness for Mississippi estimated that under the best operating conditions approximately half of the gas curtailed at the Chemical Company plant might be moved into the St. Louis area but that 100 percent thereof could be delivered to MidSouth. It is thus apparent that counsel for MidSouth correctly conclude that "Separate and apart from Mississippi's ability to render increased service to MidSouth from unallocated system capacity, the evidence of record shows that Mississippi can make additional deliveries to MidSouth of gas which could not be delivered to the St. Louis area on peak days."

Service Rendered by Mississippi to Its Industrial Customers

Although each of Mississippi's contracts with its industrial customers provides for interrupting service to such customers, Mississippi nevertheless regards some of the industrials as firm customers, they being referred to in this

---

[13] As Staff counsel state in their brief, "During the heating season of 1958–1959, St. Charles was forced to pay the penalty for 'substantial' volumes of excess gas * * *, MidSouth had to make penalty payments for ten days on which it exceeded its Stated Demand * * *, and Missouri Natural made penalty payments for six days on which it exceeded its Stated Demand * * *. The significant fact is that on every day on which these utility customers were taking overrun gas, and paying a penalty for the same, Mississippi was selling gas in excess of the contract volumes to its 'firm-interruptible' customers * * *."

proceeding as "firm-interruptible" customers. As explained by a witness for Mississippi:

> Q. Well, now, do you consider all your firm industrial customers to be "firm-interruptible"?
>
> A. When it is necessary to interrupt them, yes. We don't plan it that way. * * * We don't want to curtail them. We oppose the 7(a)s because it creates a situation that leads to that curtailment. If we have to curtail them to meet the utility load we do.

Mississippi not only has "firm-interruptible" and what are said to be "true" interruptible direct sales, but it has in addition "top of the totem pole" interruptible direct sales which are made to customers willing to pay 50 cents per Mcf for gas so that, should any curtailment occur, they will be the last curtailed. A witness for Mississippi testified:

> The WITNESS: The 50 cents is interruptible gas.
>
> PRESIDING EXAMINER: Yes. But it is, as * * * you agreed at the top of the totem pole, so to speak.
>
> The WITNESS: Yes, that is right.

The present provisions of Mississippi's FPC Gas Tariff enable Mississippi to make available to its industrial customers all gas not taken by the utilities. This means that Mississippi has been making available to its industrial customers that part of the 466,792 Mcf not at times being utilized by the utility customers, plus the difference between the present stated demands and the total capacity of the system. The industrial customers, therefore, take their total requirements up to the capacity of Mississippi's system to deliver. That is to say, except as they may, or some of them may, at times be limited in their takes by the capacity of Mississippi's system, the industrial customers take as much or as little gas as they need on any day, this being permitted by the lack of any contract minimum bill or overrun penalty. On the other hand, the utility customers not only pay a minimum bill but a substantial penalty for takes in excess of stated demand. The heavy overrun penalty applicable to utility customers and the failure of the tariff to make provision, as is the case with respect to other suppliers, for the utility customers to share in excess gas available on Mississippi's system, have the practical effect of assuring the industrial customers that there is available for their use at all times substantially all gas on Mississippi's system in excess of stated demands, as well as that part of the stated demands not taken by the utilities from time to time.

On any day that Mississippi is unable to deliver to one of its "firm-interruptible" customers all the gas it could have used on that day—regardless of its maximum contract volume—Mississippi considers that that customer has been "curtailed". As a witness for Mississippi put it, "Curtailment to us means anything that is cut by our request below the volume that they would actually need on the day that the curtailment takes place." He further explained: "Naturally when we start curtailing we curtail the lowest price gas first and work our way up to the highest price, and vice versa when we are putting the gas back on." Operating on this basis Mississippi considers that during the 1958–59 heating season it curtailed some of its "firm-interruptible" customers on five days, yet on those same days it was delivering over the contract maximum volumes to other of such customers and even selling some gas to what it regards as "true" interruptible customers.

The instability of what Mississippi conceives to be requirements is further strikingly illustrated by its continually changing "requirements". As counsel for Laclede point out, Mississippi "has employed an 'allocation' system in apportioning firm industrial gas, which has permitted an industrial customer to

increase its entitlement during peak periods simply by using more gas during off-peak periods, thereby building up its quota or 'credit' in the preceding month * * *."

Mississippi's Objections to Regulation of Its Industrial Sales

Mississippi objects to Commission regulation of its industrial sales on four grounds: (1) That the Commission has no statutory juridiction over direct sales to industries. (2) That there cannot be a violation of the anti-discrimination provisions of Section 4(b) by reason of its industrial sales. (3) That the "Grandfather Clause" contained in the proviso of Section 7(c) of the Act gave it the right to serve the industrial customers it was serving on February 7, 1942, untrammeled by Commission regulation. (4) That the right acquired under the "Grandfather Clause" enables it to serve today, without regulation, a volume of gas equal to that which it sold on February 7, 1942, and such volume may be sold to any industrial customer or customers of its choice along the route of its pipeline.

It is obvious, of course, that if Mississippi's contentions as to the want of authority in the Commission to regulate its industrial service were to be sustained, it would pave the way for it to justify unauthorized construction of facilities to serve some of its industrial customers; the taking on of new industrial customers without authorization; the supply of increased demands to industrials; and continued discrimination against its utility customers.[14]

Contention (1). Concerning the contention that the Commission has no statutory jurisdiction over direct sales to industries, it is true that the Commission's jurisdiction does not extend to rates charged for direct sales made by a pipeline (*Panhandle Eastern Pipe Line Co.* v. *P.S.C. of Indiana*, 332 U.S. 507; *City of Hastings, Nebraska* v. *F.P.C.*, 221 F. 2d 31, *cert.* den. 349 U.S. 920). However, the Commission's jurisdiction does extend to the transportation of gas for the direct sales (*Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 232 F. 2d 467, *cert.* den., 352 U.S. 891). The fundamental distinction which the Act makes between resale and direct sales services does not, therefore, make the direct *service* immune from regulation, the intent of the statute being that each service is to be "regulated in a different manner and for different purposes" (Order issued June 13, 1960, *South Georgia Natural Gas Co., Docket No. G-17568*, 23 FPC 795). There is, of course, no complaint here of discrimination in the rates governing sales to the two classes of customers. Rather, as counsel for Laclede put it, the objection is "to the fact that excess gas *service* is supplied to the direct sale customers but *not to the utilities*, which may have a preferential right to it. Laclede complains, in other words, that MRF uses its *transportation facilities* in a discriminatory manner proscribed by Section 4(b)—not that it *sells* gas to one of two classes of customers at a discriminatory rate proscribed by Section 4(a)."

---

[14] As counsel for Laclede state, "The record herein shows that, over the past ten years, MRF's industrial service has, for reasons which are not entirely clear, largely escaped Commission surveillance. In contrast to other pipelines, Mississippi, through circumstance or design, has been able to avoid normal Commission regulation of the commencement, abandonment, volume and character of its industrial service. The record shows conclusively that MRF has increased its capacity, has taken on new industrial customers and has changed the volumes supplied to individual industrial customers without Commission authorization. As a result, while a part of MRF's jurisdictional service (its utility sales) has been limited by inadequate Stated Demands and severe penalties for overruns, another part (its industrial service) has been entirely free of any service limitations except for the priority accorded utility Stated Demands."

Contention (*2*). To be just and reasonable within the meaning of the Act a tariff applicable to a pipeline's utility customers must satisfy at least two broad principles. First, it must produce fair results between the supplier and its customers. Second, it must not unduly discriminate against any customer or class of customers in favor of any other customer or class of customers. Mississippi's existing tariff does not satisfy the latter principle. That discrimination of the type now permitted by that tariff is prohibited by Section 4(b) of the Act is a question to which the Court addressed itself in *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 232 F. 2d 467, *cert.* den., 352 U.S. 891, and decided adversely to Mississippi's contention, this being shown in the excerpt from that opinion set forth below (pp. 743–744).

Contentions (*3*) *and* (*4*). Mississppi contends that the "Grandfather Clause" contained in the proviso of Section 7(c) of the Act gave it the right to serve the industrial customers it was serving on February 7, 1942, untrammeled by Commission regulation, and that the right so acquired enables it to serve today, without regulation, a volume of gas equal to that which it sold on February 7, 1942, and that such volume may be sold to any industrial customer or customers of its choice along the route of its pipeline.

Mississippi's position with reference to its "grandfather" rights ignores the fact that Congress, in enacting the Act, embarked upon a program of regulation through Commission control of its operations. Mississippi's plea for self-regulation as to all aspects of its industrial business is therefore wholly untenable. Moreover, no public utility may pick and choose customers it finds most profitable without regard to the overall public interest (*United Fuel Gas Co.* v. *Railroad Commission of Kentucky*, 278 U.S. 300, 309; *Manufacturers Light & Heat Co.* v. *F.P.C.*, 206 F. 2d 404, 408).

The law with respect to Mississippi's contentions is so settled as not to merit discussion, but in view of the seriousness with which these contentions are asserted they will be considered. In doing so, however, the fact should be made clear that Mississippi's position incorrectly assumes that its service to existing direct customers is provided under its "grandfather" certificate. The fact is that some of Mississippi's direct sale customers were not served on February 7, 1942, the effective date of its "grandfather'" certificate. A substantial portion of its existing direct service is therefore "nongrandfather" because it is supplied new customers and involves increased deliveries. Merely because Mississippi supplies gas to new customers in its "grandfather'" area or increased volumes to old customers, does not mean that such service comes within the scope of its "grandfather" certificate (*Kansas-Nebraska Natural Gas Co.*, 6 FPC 259, 265–266). As the Commission only recently had occasion to again make clear, changed and increased deliveries make necessary new certificate authority. (See order issued June 13, 1960, *South Georgia Natural Gas Company*, Docket No. G–17568.)

If it were true that the "grandfather" certificate authorized Mississippi to continue wholly unrestricted and unregulated service to its industrial customers, Mississippi would have the same rights regarding its utility "grandfather" sales and service. Clearly this is not the case. As held in *Mississippi River Fuel Corp.* v. *F.P.C.*, 121 F. 2d 159, 163, service contracts, even though entered into prior to the enactment of the statute, are subject to regulation under the Act:

> It is argued that petitioner's contracts were entered into some years before the legislative enactment, and hence, they must be held inviolate against statutory regulation. Having held the statute a constitutional regulation of "an industry * * * subject to control for the public good" (*Nebbia* v. *New York*, *supra*), it logically follows that contracts made by petitioner,

even though prior to its enactment, are also subject to regulation in the public interest. *Union Dry Goods Co.* v. *Georgia Public Service Corp.*, 248 U.S. 372 * * *.

Mississippi's "grandfather" certificate authorized the continued operation of its "facilities, which were in *bona fide* operation on February 7, 1942, * * * for the transportation and sale of natural gas, subject to the jurisdiction of the Commission" (4 FPC 535). Such certificate was, however, issued

> * * * without prejudice to the authority of this Commission * * * with respect to rates, service, accounts, valuation, estimate or determination of cost, or any other matter whatsoever now pending of which may come before this Commission * * * (Paragraph B).

By inserting this provision in the order the Commission made sure its intent, and that of the Act, could not be mistaken. The Commission here clearly recognized that the "grandfather" certificate merely authorized the "continued operation of" facilities, leaving the results of operation, changes in service, addition of facilities, abandonments, etc., to the future regulatory control of the Commission. Indeed the Commission could not have granted broader authority to Mississippi insofar as that certificate was concerned for the provisions of the Act regulate service initiated both before and after February 7, 1942, in identical fashion. "A 'grandfather' certificate obviously is not intended to be unlimited but, rather is subject to future regulation, under the provisions of the * * * Act." *Michigan-Wisconsin Pipeline Co.*, 6 FPC 58, 63, aff'd *Panhandle Eastern Pipeline Co.* v. *F.P.C.*, 169 F. 2d 881; *Kansas-Nebraska Natural Gas Co.*, 6 FPC 259, 265–266.

The Examiner must therefore reject Mississippi's contention that its transportation facilities, insofar as they are used in making any direct sale in the general area of its "grandfather" certificate, are beyond the reach of the Commission's regulatory power. That contention is at variance with the plain requirements of the Act and is at war with Mississippi's prior recognition and acceptance of the Commission's regulatory authority relating to service rendered in its "grandfather" area. For example, Mississippi's emergency service rules, effective November 1, 1950 (9 FPC 219), required Mississippi to restrict deliveries to its "grandfather" industrial customers. Moreover, the 7(a) applications granted by the Commission from time to time since the issuance of the "grandfather" certificate have had the effect of restricting deliveries to Mississippi's direct customers. Then, too, the Commission often sets volumetric limits on the industrial service of pipelines such as Panhandle Eastern Pipeline Company which made substantial direct sales prior to 1942. And as the court held in *Panhandle Eastern Pipe Line Company*, v. *F.P.C.*, 232 F. 2d 467, *cert.* den., 352 U.S. 891; it is within the Commission's power to order Panhandle to make excess gas available to its utility customers to prevent undue discrimination:

> * * * When the Congress gave the Commission control over the transportation of natural gas, it necessarily gave it control over the functioning of a pipeline's facilities. Since these are limited, new services must be subject to the Commission's authority if the latter is to be at all effective. Otherwise the Commission would be unable to enforce the mandate of Section 4(b) of the Act, * * * and a natural gas company, contrary to the there declared principles of the Act, would be able to "(1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service."

If the orders on review had failed to limit the priorities of interruptible service for direct sales to those available for the resale customers, Panhandle, by allowing higher priorities to its direct sale purchasers who constitute only 6% of its total volumes of business, could preempt the entire interruptible capacity and leave the resale group without any of the excess gas at all. The resale buyers, saddled as they are with most of the cost of construction and maintenance of the transportation facility, are entitled to a reasonable amount of the I Schedule gas. This is the intent and accomplishment of the orders.

* * * * * * * * * The Commission by those orders is insisting that the petitioner properly perform its obligation to its existing customers. It is refusing to allow petitioner to avoid its responsibilities in that regard by selling all of its interruptible capacity directly to industry to the detriment of its resale customers and the consuming public. The control exercised is an integral part of the Commission's jurisdiction over the transportation of natural gas.

Tariff Revisions

Evidence offered by Commission counsel shows that Mississippi's system capacity is at least 534,000 Mcf, or 10,000 Mcf per day greater than the 524,000 Mcf claimed by Mississippi, and this excess amount is without giving consideration to curtailing any industrial customers to the amounts set forth in their respective interruptible gas service contracts.

It is the theory of the Commission Staff that, so far as capacity is concerned, only the 10,000 Mcf referred to in the preceding paragraph is available for use by Mississippi's utility customers. However, in their view, no part of the 10,000 Mcf should be used to increase the stated demands of the utility customers. Their position is that the 10,000 Mcf would be utilized completely in the administration of the revised tariff provisions which they propose. The Examiner does not agree with either the theory or position taken by staff counsel.

Mississippi's FPC Gas Tariff permitted authorized overruns of only 1 percent of the stated demands of 1,000 Mcf, whichever is the greater, and even within that narrow limit there is a penalty provision with respect thereto. That is to say, if a utility customer does not overrun its stated demand more than five days in any one month or two days in succession, the penalty is $0.15 per Mcf. Otherwise, the penalty is $2.00 per Mcf. For all gas over the 1 percent (or 1,000 Mcf) limitation, the penalty is $10.00. As counsel for Laclede state, "Although in theory the utilities may be able to take excess gas to meet emergency demands, in actuality they cannot in most instances afford to pay the $10.00 per Mcf penalty rate, which is imposed regardless of the availability of the gas on" Mississippi's system. They further point out that "Because of the size of Laclede's take from its eight delivery points, any overrun would almost inevitably exceed the 1,000 Mcf 'first step' of $2.00 gas and go into the $10.00 penalty gas step in MRF's existing tariff. An overrun of only 5% of Laclede's stated demand would result in a penalty of approximately $157,000.00 a day!

Laclede takes gas from Mississippi at eight metering points. It also makes certain sales directly off Mississippi's line. Since there is a substantial delay in obtaining complete metering readings and since there are unavoidable limitations in metering accuracy, Laclede, should it attempt to take its entire stated demand of 330,000 Mcf, would never have any positive assurance that it would not incur the overrun penalty of $10.00 per Mcf for such gas as it might inadvertently take in excess of its stated demand. As counsel for Laclede state,

"During the 1958–1959 season, for example, Laclede never on any day took its full stated demand, although it manufactured gas or made net withdrawals from storage on 35 days of the season * * *. MRF's existing Tariff, therefore, not only prevents Laclede and the other utilities from sharing in the excess gas available from time to time on its system but it also effectively prevents them from taking the full amount of gas to which they are justly entitled." During the 1958–59 heating season Laclede was able to come within 3,000 Mcf of its stated demand on only three days. It took less than 325,000 Mcf on all but 19 days.

Staff counsel, recognizing the inequitable and discriminatory operation of Mississippi's overrun provision, recommends that Mississippi be directed to file a revision of its Fourth Revised Sheet No. 6, Section 6(a), which would apply the existing overrun takes only to the extent that they exceed 2 percent of the stated demand. Such a penalty revision, which is adopted by the Examiner, would permit Laclede and Illinois Power to come close to taking their stated demand without fear of having to pay the $10.00 penalty for overrun gas. Contrary to the position of Commission counsel, this liberalized tariff provision is no justification for not allocating presently unallocated capacity to Mississippi's utility customers. This is made abundantly clear by counsel for Illinois Power—

> * * * It is the theory of the Commission Staff * * * that this 10,000 Mcf of gas would be utilized completely in the administration of the revised tariff provisions proposed by the Staff. With all due deference, Illinois Power suggests that this would not necessarily be the case. The penalty provisions—although liberalized from those existing at the present time and although desirable in themselves as additions to Mississippi's FPC gas tariff—are not such as will permit a utility, such as Illinois Power, to purchase gas intentionally above its stated demand. The same unreliability of telemetering equipment that now prevents a utility from approaching its existing stated demand will preclude its going above its stated demand intentionally, even under the liberalized penalty provisions proposed by Commission Staff. Thus, the utility companies will attempt to buy 100 percent of their stated demands and, if they inadvertently run over such stated demands, they will not be saddled with a prohibitive penalty if their overrun does not exceed 2 percent of the stated demand. But any overrun greater than 2 percent would be prohibitive and uneconomical for the utility companies to assume—i.e., $2.00 per Mcf for each Mcf in excess of the stated demand up to 3 percent, and $5.00 per Mcf for each Mcf in excess of 3 percent. We submit that even during coincidental peak days the total takes by the utility companies from Mississippi will not call for an invasion of the 10,000 Mcf of excess gas found to exist in Mississippi's system. * * *

Two other revisions in Mississippi's existing tariff are also necessary and desirable in the public interest. The first is a revision to Section 11(b), First Revised Sheet No. 16, as requested by Laclede, to provide that any buyer whose gas requirements have not been met by Mississippi will remain a general service buyer under the F–1 Rate Schedule if it obtains gas from elsewhere. The second is a revision of F–1 Rate Schedule, or the addition of a new Tariff Sheet, to provide for the sale of E or excess gas to Mississippi's utility customers which may be available on Mississippi's system from time to time, such excess gas to be sold the utility customers in proportion to their effective stated demands. As already pointed out, Mississippi's present tariff discriminates against the utility customers in that it permits Mississippi to sell all of its excess capacity to its industrial customers, a practice which is inconsistent with the Act and the requirements of the Commission as to other pipelines.

FINDINGS

(1) Mississippi, having its principal place of business at St. Louis, Missouri, owns and operates a natural gas transmission pipeline system located in the States of Texas, Louisiana, Arkansas, Missouri and Illinois, and by such operations Mississippi is engaged in the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a natural-gas company within the meaning of the Act as found by the Commission in its order of March 1, 1944, Docket No. G–291, 4 FPC 535.

(2) Laclede, Illinois Power, MidSouth, St. Charles, Union Electric Company and Missouri Natural Gas Company, each is a person engaged in the local distribution of natural gas to the public and each purchases natural gas from Mississippi for resale for ultimate public consumption under the terms and provisions of Mississippi's FPC Gas Tariff, Original Volume No. 1.

(3) MidSouth, Illinois Power and St. Charles each have filed an application under Section 7(a) of the Act; Laclede, Union Electric Company and Missouri Natural Gas Company have each filed intervening petitions in said 7(a) applications; and Laclede has filed a complaint upon which the Commission has instituted an investigation. Each of these proceedings is directed against Mississippi and seeks an increase in the stated demand of each which is now in effect in Mississippi's FPC Gas Tariff, Original Volume No. 1, 10th Revised Sheet No. 25, and seeks certain revisions of the terms and provisions of Mississippi's said FPC Gas Tariff, Original Volume No. 1.

(4) Increasing the stated demands of each of Mississippi's utility customers, to the extent and in the manner provided in paragraph (A) below, will not place an undue burden upon Mississippi and will not impair its ability to render adequate service to its customers.

(5) Mississippi shall continue to sell and to deliver natural gas to each of its utility customers, such sale and delivery to be henceforth on the basis of the stated demands set forth in paragraph (A) below.

(6) It is necessary and desirable in the public interest that Mississippi make the following changes in or additions to its FPC Gas Tariff Original Volume No. 1:

(a) A revision of Section 11(b), First Revised Sheet No. 16, to provide that any buyer whose gas requirements have not been met by Mississippi will remain a general service buyer under the F–1 Rate Schedule if it obtains gas elsewhere.

(b) A revision of F–1 Rate Schedule, or the addition of a new Tariff Sheet, to provide for the sale of E or excess gas which may be available on Mississippi's system from time to time, such excess gas to be sold to the F–1 customers in proportion to their then effective stated demands. Excess gas rejected by any F–1 Rate Schedule buyer will be apportioned equitably among the remaining F–1 buyers desiring to purchase such excess.

(c) A revision to Section 6 of Rate Schedule F–1 which will provide that for each day that a buyer exceeds its stated demand by not more than 2 percent or 1,000 Mcf, whichever is greater, the charge for such excess take per Mcf shall be the commodity charge of the rate schedule increased by $\frac{1}{30}$ of the demand charge under the rate schedule; for excess takes above the stated demand by more than 2 percent but not more than 3 percent, or 1,000 Mcf, whichever is greater, a penalty charge of $2.00 per Mcf shall apply in addition to the commodity charge under the rate schedule; and for takes in excess of 3 percent of the stated demand or 1,000 Mcf, whichever is greater, a penalty charge of $5.00 per Mcf of excess shall apply in addition to the commodity charge under the rate schedule.

(7) It is necessary and desirable in the public interest that Mississippi be required to file applications for certificates of public convenience and necessity for authority to continue to serve such direct sales customers as it was not serving on the effective date of its "Grandfather" certificate.

(8) It is necessary and desirable in the public interest that Mississippi be required to file an application for a certificate of public convenience and necessity for authority to continue the operation of all facilities comprising its system for which it has not heretofore made application and received certificate authority to construct and operate.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission:

(A) Mississippi be, and it is hereby directed, to increase the stated demands of its present utility customers as follows, with the stated demands shown under the heading "New Stated Demands" to be effective upon the date this order becomes the final order of the Commission, and those shown under the heading "12-1-61 Stated Demands (Mcf)" to be effective December 1, 1961:

Customer	Present stated demands (Mcf)	New stated demands (Mcf)	12-1-61 stated demands (Mcf)
Arkansas Louisiana Gas Company	12,900	13,792	14,684
City of Altheimer	400	428	455
City of Augusta	858	917	977
City of Chester	641	685	730
City of Hazen	456	488	519
Fort Smith Gas Corporation	2,700	2,887	3,074
Illinois Power	56,323	60,218	64,114
Laclede	330,000	352,823	375,647
MidSouth	22,790	24,366	25,942
Missouri Natural Gas Company	24,000	25,660	27,320
Public Utilities Company (Crossett, Ark.)	1,900	2,031	2,163
St. Charles	2,360	2,523	2,686
Town of Des Arc	415	444	472
Union Electric Company	10,000	10,692	11,383
Village of Dupo	675	722	768
Natural Gas Improvement District No. 2 of Ashley County, Arkansas	374	400	426
Total	466,792	499,076	531,360

(B) Mississippi be, and it is hereby directed, to file, in a form acceptable to the Commission, the changes in or additions to its FPC Gas Tariff Original Volume No. 1 set forth in paragraph (6) above.

(C) Mississippi be, and it is hereby directed, to file an application or applications for certificates of public convenience and necessity for authority to continue to serve such direct sales customers as it was not serving on the effective date of its "Grandfather" certificate.

(D) Mississippi be, and it is hereby directed, to file an application or applications for certificates of public convenience and necessity for authority to continue the operation of all facilities comprising its system for which it has not heretofore made application and received certificate authority to construct and operate.

(E) The filings to be made by Mississippi pursuant to paragraphs (A), (B) and (C) above shall be made within 60 days from the date this order becomes the final act of the Commission.

FRANCIS L. HALL,
Presiding Examiner.

736-330—64——50

SUPPLEMENTAL DECISION

UPON A COMPLAINT AND APPLICATIONS FOR ORDERS DIRECTING INCREASES IN STATED DEMANDS

(Issued December 1, 1961)

HALL, *Presiding Examiner:* This case is before the Examiner for a second time primarily because, after the close of the initial hearing, the two largest utility customers of Mississippi River Fuel Corporation (Mississippi), namely, Laclede Gas Company (Laclede) and Illinois Power Company (Illinois Power), which are here continuing, along with other distributors, their prolonged efforts to obtain additional natural gas from Mississippi, partially relieved the pent-up demand for natural gas in their service areas by contracting to purchase 50,000 Mcf per day from a new pipeline that Mississippi caused to be constructed in the name of a subsidiary, Mississippi River Transmission Corporation (Mississippi Transmission), rather than as an integral part of Mississippi's system.

The Laclede and Illinois Power contracts executed after the close of the initial hearing and providing for the purchase of part of their natural gas needs from Mississippi Transmission (at 48.7 cents per Mcf as contrasted with Mississippi's 31.7 cent rate), were entered into in 1960. These contracts were executed after Mississippi had failed and refused for several years to expand its system, although it was clear that large additional supplies of gas were critically needed by Laclede, Illinois Power and other utility customers. This purposeful avoidance of needed expansion to keep pace with growth was the lever employed by Mississippi to force its utility customers in the St. Louis area, namely, Laclede, Illinois Power and St. Charles Gas Corporation (St. Charles), to pay substantially higher rates to Mississippi Transmission than could have been obtained by Mississippi following its past practice, as well as the ordinarily accepted practice in the industry, of enlarging facilities to meet increasing demands.

This case confronts the Commission with a natural gas company's disregard of its obligations to its utility customers, in an effort to preserve the profitability of its industrial sales, which denial of the relief sought herein by the utility customers would reward. The efforts of Mississippi in this proceeding to become locked in, and to cling to, the past with its unrestrained opportunity for high profits clearly does not harmonize with the Commission's task of facing the future and, with the aid of the Natural Gas Act (Act), to restrain the power of the strong over the weak. Performance of this task in this proceeding will mark a turn in the road for Mississippi.

As counsel for Laclede point out, "Mississippi conceives of the transportation capacity of its pipe line as principally a private matter with only grudging acceptance of the fact that, since the passage of the * * * Act, such transportation capacity has become affected with a public interest." In enacting the statute Congress clearly embarked upon a program of regulation through Commission control of a natural gas company's operations. Therefore, as the Examiner stated in his prior decision, "Mississippi's plea for self-regulation as to all aspects of its industrial business is * * * wholly untenable." In this area of the natural gas business the essential role of the Commission is to assure adequate service to the public at reasonable rates, not regulate the general public into using high cost gas for the sole purpose of protecting Mississippi's higher profits from the sale of industrial gas.

Contrary to the contentions of Mississippi and its industrial customers, this is not a case in which utility customers seek to take gas under Section 7(a) of the Act from direct industrial customers. Rather it is a situation in which

utility customers are asking that the pipeline's overall capacity be allocated in a manner consistent with the intent of the Act and most nearly designed to serve the public interest.

Following the initial hearing the Examiner, after an exhaustive study of the record and the briefs, issued his decision on September 13, 1960, disposing of the issues by granting the relief sought by Mississippi's utility customers to the extent possible to do so. That decision is still pending before the Commission and will be considered along with this Supplemental Decision dealing with the extent, if any, the evidence in the reopened record indicates a need for modification of the Examiner's decision issued September 13, 1960.

Mississippi's utility customers involved in this proceeding are in general agreement with the conclusion of Commission Staff counsel, as set forth in his brief in the reopened phase of this proceeding, "that the evidence introduced at the reopened hearings bore out the opinion the staff had following the issuance of the decision of the Presiding Examiner herein—at which time the staff determined not to file exceptions thereto—namely, that the Examiner's decision should be affirmed by the Commission." On the other hand, the briefs filed by Mississippi and its industrial customer-interveners set forth in large part a restatement of exceptions which they filed to the Examiner's decision.

In cases of this type the Commission must tailor its actions with the objective of realizing a sequence of successive expansions on the part of a pipeline company in which all customers pay their proportionate share of the cost and obtain their proper share of the gas supply made available. In contrast to Mississippi's failure to perform its public utility duty, other pipelines forging ahead in the competitive fuel business, such as Northern Natural Gas Company, for example, annually or periodically enlarge the total of their businesses so that all can enjoy the most flourishing growth possible—a growth so essential to the promotion of area and national interests. They recognize that economic progress is not made by standpatters; that a growing population, expanding economic activity, a rising standard of living, and greater mechanization have supported, and for the foreseeable future will continue to support, a growth in natural gas use; and that a key ingredient in any formula to spur and keep pace with economic growth and to meet commitments is their willingness to expand and move on to new sales opportunities. They also recognize that no one has a vested right to protection against the effect of price changes and that unless they are prepared to take risks and expand that economic growth in their service areas will be stifled and that they will find themselves pushed aside as more venturesome competitors take their place, just as others have been and are now actively investigating the opportunities for marketing natural gas in Mississippi's service area. In short, in the business life of other pipelines, and in business generally, the goal of growth is taken as a matter of course.

Any contrast of the progress and commendable outlook of either pipelines with the condition which Mississippi, for the sake of service-destroying maximum profits from industrial sales, created in its service area, particularly in the St. Louis area, will serve to emphasize the untenableness of Mississippi's position in this proceeding and the injustice it has inflicted upon those in its service area.

The following testimony of a Vice President of Illinois Power at the initial hearing, concerning what took place at a conference held in 1958 between representatives of Illinois Power, Laclede and the Chief Executive Officer of Mississippi, brings Mississippi's attitude in this proceeding into clear focus:

> * * * [The Chief Executive Officer] told me * * * that because of their rate and regulatory situation they had no intention of expanding the existing Mississippi * * * system.

> The officials of Laclede present at the meeting also stated that they would prefer the rolled-in supply. And [the Chief Executive Officer] on several occasions during the meeting reiterated that his company would give no consideration to supplying gas on this rolled-in rate basis,[1] and that it was—and I use his words—"The new subsidiary or nothing."

Mississippi, by standing its ground until 1960—during a time of critically short gas supply in its service area and skyrocketing producer prices—finally forced its hard-pressed utility customers in the St. Louis area to agree to bear the full cost of Mississippi Transmission's expensive gas supply. Mississippi progressed further towards its goal of "The new subsidiary or nothing" when construction and operation of the Mississippi Transmission system was authorized by the Commission on November 20, 1960, as amended on December 10, 1960, and advanced still further when its application, filed January 10, 1961, to reopen the record was granted over the vigorous protests of its utility customers, particularly Laclede and Illinois Power which had already contracted to purchase 50,000 Mcf of Mississippi Transmission's high cost gas. The Commission reopened the record because, in its opinion, "the changed circumstances which have occurred since the Examiner considered this matter and the issues involved should be decided upon as complete a record as possible" (*infra*, p. 768). However, that Commission action had the effect, insofar as Mississippi and its utility customers were concerned, of (1) foreclosing the possibility of immediate relief from Mississippi to its still hard-pressed utility customers—recommended by the Examiner in his decision issued September 13, 1960; (2) continuing the profitability of Mississippi's industrial sales; (3) causing Laclede and Illinois Power to again turn to Mississippi Transmission to increase their combined purchases from the latter from the initial 50,000 Mcf to 75,000 Mcf; (4) causing St. Charles to continue paying penalty payments to Mississippi for overrun gas and to contract for 1,000 Mcf of Mississippi Transmission's high cost gas; and (5) causing the other utility customers, whose locations prohibit them from purchasing gas directly from Mississippi Transmission, to also continue taking penalty gas from Mississippi and restrict service.

Mississippi having set out to attain its goal of "The new subsidiary or nothing," and having succeeded in creating its subsidiary with a separate system capable of providing gas either directly or, indirectly by displacement, to the industrial customers as well as the utility customers of Mississippi, this proceeding has now reached the point at which it is to be determined whether Mississippi's utility customers are to get "nothing" or "something" further from Mississippi. To put it another way, the outcome of this case will determine whether Mississippi is to be left in an "I told you so" position insofar as its utility customers are concerned.

The Examiner, in his decision issued September 13, 1960, determined that Mississippi has 64,568 Mcf of unallocated system capacity that it uses in serving its interruptible industrial loads, such service being provided under contracts with six-month termination clauses and subject to a prior claim to such gas by

---

[1] The "rolled-in" rate method is explained in *Battle Creek Gas Co.* v. *F.P.C., et al.*, 281 F. 2d 42, 46, where Mr. Justice Reed, speaking for the Court, points out that under this method "the cost of the various assets of the system are collected or 'rolled in' to arrive at the cost of the entire system which is then pro-rated among all of the customers"; that "Use of the rolled-in method thus serves the interest of equal treatment for customers receiving equal service"; and that "the Commission has repeatedly stated a general preference for it whenever it may equitably be used."

Mississippi's utility customers. Notwithstanding the interruptible character of the industrial load, Mississippi's peak day service to industrial customers, as pointed out by counsel for Mississippi, "has been within a constant range of about 60,000 to 70,000 Mcf for at least 13 consecutive heating seasons * * *." This industrial service is provided in substantial part through capacity constructed without certificate authority and therefore in violation of the Act (*infra*, p. 760).

The Examiner found as a matter of law that the entire capacity of Mississippi's system must be dedicated on a two-step pro-rata basis (based on then-existing stated demands of all resale customers of Mississippi) to Mississippi's utility customers, except for minor amounts used in pilot lights, and if it is necessary to meet the needs of Mississippi's utility customers, Mississippi must curtail its industrial load. As stated in the pending decision, the

> * * * Examiner's order herein does not impair Mississippi's ability to render "adequate service" to industrial customers within the meaning of the Act, nor does it compel Mississippi to enlarge its existing facilities. Mississippi will be free to enlarge its facilities if it desires to furnish either firm service, or interruptible service in excess of present contract quantities, to its industrial customers, assuming the industrial customers are willing to continue to purchase gas on the terms offered by Mississippi. * * *

Mississippi sells natural gas to two types of customers: (1) utility customers—at the reasonable rate of 31.7 cents per Mcf determined by the Commission, and (2) industrial customers—at the much more profitable negotiated rates ranging from 32 to 50 cents per Mcf, these being rates at which Mississippi sold approximately 40 percent of its total annual capacity in 1960 to its industrial customers.

Although each of Mississippi's contracts with its industrial customers provides for interrupting service to such customers, Mississippi nevertheless contends that some of the industrials are firm customers, they being referred to in this proceeding as "firm-interruptible" customers.[2] As Mississippi's witness explained:

> Q. Well, now, do you consider all your firm industrial customers to be "firm-interruptible"?
>
> A. When it is necessary to interrupt them, yes, We don't plan it that way. * * * We don't want to curtail them. We oppose the 7(a)'s because it creates a situation that leads to that curtailment. If we have to curtail them to meet the utility load we do.

Not only does Mississippi have what it considers to be "firm-interruptible" and "true" interruptible direct sales, but it has in addition still higher priority interruptible direct sales made to customers willing to pay 50 cents per Mcf for gas so

---

[2] The Examiner has pointed out in his decision issued September 13, 1960 that—

> On any day that Mississippi is unable to deliver to one of its "firm-interruptible" customers all the gas it could have used on that day—regardless of its maximum contract volume—Mississippi considers that that customer has been "curtailed." As a witness for Mississippi put it, "Curtailment to us means anything that is cut by our request below the volume that they would actually need on the day that the curtailment takes place." He furher explained: "Naturally when we start curtailing we curtail the lowest price gas first and work our way up to the highest price, and vice versa when we are putting the gas back on." Operating on this basis Mississippi considers that during the 1958–59 heating season it curtailed some of its "firm-interruptible" customers on five days, yet on those same days it was delivering over the contract maximum volumes to other of such customers and even selling some gas to what it regards as "true" interruptible customers.

that, should any curtailment occur, they will be the last curtailed.[3] Mississippi's witness testified:

> The WITNESS: The 50 cents is interruptible gas.
>
> PRESIDING EXAMINER: Yes. But it is, as * * * you agreed, at the top of the totem pole, so to speak.
>
> The WITNESS: Yes, that is right.

Mississippi's direct industrial sales are returning some $6,465,000 a year in excess of Mississippi's own allocated cost of service to those sales—which includes a return on its investment to Mississippi of 6½ percent.[4] A rate witness for Laclede measured the cost to Mississippi's system if Mississippi itself incurred the cost of the additional gas supplies from Mississippi Transmission on behalf of all of its customers. As he testified, if Mississippi itself incurred the cost of the additional 75,000 Mcf per day (which Laclede and Illinois Power have now contracted to purchase from Mississippi Transmission), Mississippi revenues would only be some $700,000 annually less than the combined revenues of Mississippi and Mississippi Transmission. If the volume of Mississippi Transmission gas to be rolled-in were to increase to 100,000 Mcf per day, the loss in Mississippi revenues would amount to some $800,000 annually. An increase in rolled-in volume to 125,000 Mcf per day would represent a total reduction in revenue of some $900,000 annually. In short, a purchase by Mississippi of Mississippi Transmission gas would at worst result in a reduction of Mississippi's $6,465,000 "excess" profit by some $700,000–$900,000 per year.[5]

Mississippi has some 48 industrial customers of which 13 intervened in this proceeding. These industrials recognize that Mississippi has been exacting high rates for its service. As stated by counsel for one industrial-intervener, independent of the evidence "Owens-Illinois is aware of the fact that Mississippi's direct industrial service to Owens-Illinois is more than paying its own way, and that Mississippi is deriving at least a handsome profit on such gas sales." Like other industrial-interveners in this proceeding, this intervener complains that Mississippi's utility customers pay no more than their proportionate share of Mississippi's jurisdictional cost of service as determined by the Commission, whereas Mississippi's direct industrial customers do not have such protection. This complaint of lack of Commission jurisdiction over industrial rates is one that should be addressed to Congress, not to the Commission. Commission jurisdiction

---

[3] Counsel for Mississippi at page 51 of their brief argue that Mississippi's direct sale customer contracts "clearly are not 'interruptible' contracts as the Examiner supposed." They correctly state the fact at page 46 when they point out that the contracts "provide that 'Seller will give priority' to the demands of 'public utility distribution companies', and that deliveries to the direct customer 'will be curtailed from time to time and on occasion may be completely interrupted.'" In law and in fact Mississippi's contracts with its direct industrial customers are truly interruptible contracts.

[4] During the year ended December 31, 1960, Mississippi's revenues from nonjurisdictional sales were $23,640,000, as compared to $17,175,000 which Mississippi has allocated as cost of service for such sales in the same period. The dollars of allocated costs include very substantial amounts paid to United Gas Pipe Line Company subject to refund. To the extent of any such refunds which Mississippi may receive from United, and not pass out to its direct industrial customers, the $6,465,000 per year of earnings in excess of a 6½ percent rate of return is understated. It is also clear that it may also be understated for a number of other reasons mentioned by Laclede's rate witness.

[5] Laclede's witness explained that "It is apparent * * * that any additional sales which Mississippi makes to utility customers on a basis wherein the return is regulated, and any reduction in sales which Mississippi makes directly to industrial customers on a basis wherein the return is not regulated are going to produce some dilution of Mississippi's over-all return and earnings. This does not mean that the additional sales to the utility customers would be made at less than properly allocated costs. It merely means that they would be made with less margin of profit than the present margins of profit on Mississippi River Fuel's system from its direct industrial customers."

over industrial rates could long ago have nullified Mississippi's excess profit motive which has caused such great distress in its service area.

Counsel for Mississippi also assert irrelevently that Laclede, not Mississippi, "is the giant in these proceedings." They point out in this connection that "Mississippi's net investment in gas transmission properties is approximately $80,000,000 compared to Laclede's net investment in utility plant of approximately $120,000,000." However, the size of Laclede's utility plant only emphasizes why Laclede has so desperately sought additional gas from Mississippi to feed its plant and maintain its financial integrity. The absence of adequate supplies of pipeline gas would place Laclede in the position of an automobile owner without sufficient gasoline to propel his automobile. From the public standpoint lack of adequate gas supply from Mississippi adversely affects the thousands of consumers supplied by Laclede's distribution system. Moreover, the only reason that Mississippi's investment in its gas transmission properties is no more than $80,000,000 is because, contrary to the wishes of its utility customers, it has failed to expand its system to meet needs in its service area.

As already stated, Mississippi's opposition to the requests of its utility customers herein for increases in their stated demands (stated demands are equivalent to contract demands), through allocation of the 64,568 Mcf of unallocated capacity hereinabove referred to (*supra*, pp. 750–751), is motivated by its desire to perpetuate the present profitability of its industrial sales. On the other hand, the utility customers seek their share of Mississippi's unallocated capacity along with appropriate changes in Mississipi's FPC tariff which now provides for only one service under one rate schedule to the utility customers (except for one standby service not important here).

At the reopened hearing Mississippi's President testified that Mississippi—

> * * * is not a company that is going to forever stand up and say it will never do anything to benefit anyone if it costs it some money, but I think most of the people who run Mississippi, and I'm speaking of the Board of Directors, do feel that this type of thing results in too severe a penalty and the question comes down, is it our obligation to do that sort of thing.
>
> I mean, how far does that obligation extend?

How far does Mississippi's obligation to its utility customers extend? The answer to this question is to be provided in the disposition of this case. The answer should have been clear to Mississippi for some time in view of the provisions of the Act; its service obligations to its utility customers; its interruptible contracts with its industrial customers; the fact that as far back as 1946 (5 FPC 206, 210) the Commission made it clear that all of Mississippi's system capacity would eventually be devoted to utility sales unless Mississippi increased the capacity of its system from time to time; and the fact that Mississippi's attempt here to avoid further erosion of its earnings from its industrial sales is the same position it took unsuccessfully in *Mississippi River Fuel Corp.* v. *F.P.C.*, 252 F. 2d 619, 624, in opposing the higher single rate there involved because it was injurious to its industrial sales. In that case the court, in rejecting the reasons for Mississippi's opposition, stated:

> Mississippi makes two principal claims of damage to it. It claims that the single rate hurts it more than it hurts other purchasers from United since a larger proportion of its purchases were under the older, lower contract rates whereas the greater part of the others' purchasers were under newer, higher contract rates. Again, the commodity price in the single rate is twice that in the old contract rate, and Mississippi claims

> that, because rates to *interruptible industrial consumers* are pegged largely on the commodity rate, the double rate is particularly injurious to that phase of Mississippi's operations. Sales direct to industry are not regulated by the Commission, but it can influence these rates by its allocation of costs to industrial business as part of its determination of rates over which it has jurisdiction. A low commodity rate would enable Mississippi to meet competition from other fuels without jeopardizing its profits from its jurisdictional sales. These seem to be the principal reasons for Mississippi's opposition to single rate. *While they are potent from the standpoint of that company, they do not avail too much from the standpoint of general regulation and the public interest.* [Emphasis supplied.]

Also pertinent is the statement of the Supreme Court in *Dayton-Goose Creek Railroad Co.* v. *United States*, 263 U.S. 456, 461:

> By investment in a business dedicated to the public service the owner must recognize that, as compared with investment in private business, he cannot expect either high or speculative dividends but that this obligation limits him to only fair or reasonable profit.

In this proceeding, it is the public interest, not Mississippi's private interest, that must prevail. If the public interest does not prevail Mississippi will have succeeded in ridding itself of its service obligations to its utility customers and will be enabled to maintain its present profit margins from industrial sales at the expense of the customers of its utility customers, thereby effecting the destruction, insofar as Mississippi is concerned, of the "primary aim" of the Act which is "to protect consumers against exploitation at the hands of natural gas companies" (*Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U.S. 591, 610).

Counsel for Mississippi assert that the testimony of the President of Mississippi at the reopened hearing "displayed no more or less than a proper interest in his stockholders." The outlook of the Commission and its powers, however, are greater than the interest of Mississippi's stockholders. That outlook is as comprehensive as the total public interest. The idea of Mississippi to maintain the present level of its earnings from its industrial sales is attractive to it, but that idea has to be tested in relation to (1) the interest of all natural gas users in Mississippi's service area; (2) its effect upon utility customers; and (3) the factor of growth as a pattern for expansion in volume and extension of service in Mississippi's service area. When so tested the position of Mississippi is found to be totally lacking in merit.

If a natural gas company in a changing service area is not to go to waste, insofar as providing needed additional service is concerned, and if the public interest is not to be jeopardized, it is necessary from a regulatory standpoint to take such action as will cause the company to perform its duty and to adjust its profits to existing circumstances and regulatory requirements. Reduced profits from the industrial sales here under consideration results from shifting and growing requirements in Mississippi's market, and from higher cost gas supplies and facilities. This, from Mississippi's point of view, may be regrettable. It is nevertheless unavoidable and is one of the prices Mississippi must pay for progress and for being a natural gas company (Cf. *United States* v. *Appalachian Electric Power Co.*, 311 U.S. 377, 427–428).

As already indicated, from 1957 until after the close of the initial hearing both Laclede and Illinois Power opposed Mississippi's plan to provide their

additional natural gas requirements through Mississippi Transmission's system. But Mississippi, by adhering to its unyielding position that it was "The new subsidiary or nothing", finally succeeded in 1960 with a revised subsidiary plan which, while more favorable to Laclede and Illinois Power than Mississippi's original proposal, was not preferred by these distributors and constitutes only a partial and unsatisfactory solution to their gas supply problem.

In causing Mississippi Transmission's system to be constructed and operated as a separate system, Mississippi abandoned its past practice of expanding and extending its own system and rolling in the costs of new gas and additional capacity with other system-wide costs in arriving at rates. Under that practice the costs of expansions were shared proportionately by all of Mississippi's customers. Abandonment of this practice was designed by Mississippi to prevent any further dilution of its highly profitable earnings from its industrial sales.[6] This was accomplished by saddling the utility customers in the St. Louis area with the entire burden of Mississippi Transmission's higher cost gas supply. That is to say, by use of the subsidiary approach, costs of constructing Mississippi Transmission's pipeline and its substantially higher cost gas supply were passed on to Mississippi's utility customers because they are the only customers of Mississippi Transmission. The industrial customers, by continuing to purchase gas directly from Mississippi, would not share in the cost of Mississippi

---

[6] The basic reason for the existence of Mississippi Transmission is as explained by the President of Mississippi at the reopened hearing:

PRESIDING EXAMINER: In short, what you are saying is that Mississippi * * * Transmission * * * was organized for the purpose of protecting the profitability of Mississippi River Fuel's earnings to the extent that it is possible to do so?

The WITNESS: That, I would say was the principal reason, yes.

* * * * * * *

PRESIDING EXAMINER: I believe that Mr. Kramer has testified that the approximate cost of Mississippi * * * Transmission Corporation's 93 mile transmission line to date is $6 million. Now, it is a fact * * * that Mississippi * * * in the past has constructed improvements and additions and expansions to its system that cost in excess of that amount?

The WITNESS: Oh, yes.

* * * * * * *

PRESIDING EXAMINER: Now, the difference in the tariff rate [of Mississippi and Mississippi Transmission] is accounted for by the fact that Mississippi * * * Transmission * * * facilities and natural gas cost are higher than those of Mississippi * * * is that not so?

The WITNESS: Primarily the gas costs. Plus the fact that [Mississippi] Transmission * * * does not have a large volume of industrial sales which contribute very substantially, of course, to lowering the price to utilities under the cost allocation methods.

* * * * * * *

PRESIDING EXAMINER: To your knowledge has Mississippi * * * ever proposed to supply the needs or any part of the needs of its industrial customers through a new and separate subsidiary such as Mississippi * * * Transmission * * *?

The WITNESS: No, not to my knowledge.

* * * * * * *

PRESIDING EXAMINER: Well, if Mississippi * * * had desired to do so it could have constructed the line now owned by its subsidiary * * *?

The WITNESS: Yes.

PRESIDING EXAMINER: Rolled that cost, which is now incurred by the subsidiary, into its costs, sold the gas to the industrials with Mississippi in that process recovering a great deal higher profit from those [industrial] sales than it reaped from the sales to the utilities; now, isn't that so?

The WITNESS: It could have, and does make more profit on its non-regulated business than it does on its regulated business, but if it should do what you just suggested it would make less profit and that would be a continuing thing as the utility load grew. I mean, it is a constant attrition of those earnings.

Transmission's system, nor would Mississippi's earnings from its industrial sales be eroded.

Laclede's urgent need for additional gas at the time of the acceptance of the revised subsidiary plan in 1960 is set forth in the following testimony of its President at the reopened hearing:

> Q. The record in this proceeding contains testimony by you that Laclede was offered an additional supply of gas by a subsidiary of Mississippi and that you turned it down principally because of the price. Why then, since the Examiner's decision in this case, have you accepted additional deliveries of gas from that same subsidiary?
>
> A. We have been taking care of our very limited load growth for over five years from our storage without any addition to our pipeline supply. However, the time had come when storage could not continue to provide for our growth and we were desperately in need of additional pipeline flow. Further, in several respects the proposal which we did accept was much different from the original proposal.
>
> * * * * * * *
>
> PRESIDING EXAMINER: Just how desperate were you for gas? * * *
>
> The WITNESS: In 1955 Laclede got an increase * * * from 300,000 to 330,000. I might point out that I came to Laclede as its president on May 1, 1956, and I saw from almost the very day I went to work that we were in need of pipeline gas to supplement the development of the storage. I started work on it then, and it was five years later to the very day, on May 1, 1961, that we opened the valve and turned in the first additional gas that we had gotten from anywhere and that was this [Mississippi] Transmission gas.
>
> * * * * * * *
>
> I can truthfully say that I have spent probably a third of my working time on that one problem during those five years.
>
> PRESIDING EXAMINER: Was the growth of your company in any way hampered as a result of the lack of pipeline supply of gas?
>
> The WITNESS: Yes, sir.
>
> PRESIDING EXAMINER: Would your company be any larger today in terms of service if you had progressively gotten what you considered to be your need?
>
> The WITNESS: Our company would be larger in terms of the number of heating customers, it would be larger in terms of gross revenues, annual send-out, I hope in net income. We would be larger in every respect if we had an unlimited supply of gas.

In connection with this testimony it should be observed that in contrast to the initial 50,000 Mcf per day Mississippi Transmission contracted to sell to Laclede (42,500 Mcf) and to Illinois Power (7,500 Mcf) beginning in May 1961, Laclede, in 1958, had advised Mississippi that it would purchase an additional 100,000 Mcf at any time prior to the fall of 1960, and Illinois Power, in 1957, had advised Mississippi that it was prepared to purchase an additional 45,000 Mcf "regardless of whether or not we find storage." During the last ten years, Mississippi, Laclede's sole supplier of natural gas up until 1961, has made available to Laclede little more than 60,000 Mcf of additional gas per day.

Mississippi Transmission is now authorized to deliver, effective December 1, 1961, 63,750 Mcf of natural gas per day to Laclede and 11,250 Mcf per day to Illinois Power, which gas Laclede and Illinois Power are obligated to take (or

pay for) on the basis of 75 percent load factor at a price of 46.3 cents per Mcf.[7] This 46.3 cent price is to be contrasted with the substantially lower price of 31.7 cents per Mcf at which Laclede and Illinois Power buy gas from Mississippi at 60 percent load factor.

The Examiner's decision issued September 13, 1960, allocates the 64,568 Mcf of capacity now utilized by Mississippi in serving its industrial load to Mississippi's utility customers on a pro-rata basis, such method resulting in 45,647 Mcf of the total being allocated to Laclede commencing on December 1, 1961. The following testimony of Laclede's President contrasts the price impact of this volume of gas as between Mississippi and Mississippi Transmission:

> Q. If that amount [45,647 Mcf] of additional gas is not made available from Mississippi * * * what will you do?
>
> A. We will have to get an equivalent volume of gas somewhere else. As Mr. Liberman's testimony shows, we need this gas and after that we still need more gas.
>
> Q. Assuming that the 45,647 Mcf had to be purchased from Mississippi * * * Transmission * * * at that company's presently filed tariffs, how much more would you have to pay for the gas than you will if the Examiner's decision is upheld and you are permitted to purchase the same volume of gas at Mississippi River Fuel's presently filed tariffs?
>
> A. At the currently effective tariffs the volume of gas involved, 45,647 Mcf of demand, would cost almost $2,500,000 more per year purchased from Mississippi * * * Transmission * * * rather than from Mississippi * * *. This is about 70 percent more. It is true, however, that Mississippi * * * rates will probably increase June 15, 1961, and the Transmission Corporation will probably decrease in December 1961, when that system begins to transport larger volumes of gas. Taking these two factors into account, the purchase of the 45,647 Mcf volume allocated to Laclede by the Presiding Examiner would cost about $3,800,000 a year purchased from Mississippi * * *, but the same volume would cost $5,800,000 a year if purchased from [Mississippi] Transmission * * *. This is an annual difference of about $2,000,000 and means that gas purchased from Transmission would cost Laclede approximately 55 percent more than it would purchased from Mississippi * * *.

Counsel for Mississippi claim that "Laclede in this case unlawfully sseks relative cheap volumes of gas, heretofore served by Mississippi to longtime industrial markets in St. Louis, so that Laclede profits may be further enhanced and its dividends to stockholders increased." This claim will not bear analysis. While Laclede naturally expects all of its sales to be profitable, regardless of the source of its gas supply, it will be the ultimate consumer, not Laclede, who will be the real beneficiary of the savings involved in the purchase of lower

---

[7] The average cost to Laclede and Illinois Power of purchasing the initial 50,000 Mcf from Mississippi Transmission was 48.7 cents per Mcf as compared with the average cost of 46.3 cents per Mcf for the purchase of 75,000 Mcf as of December 1, 1961. As the President of Mississippi Transmission explained, the lower average cost of 46.3 cents per Mcf for the 75,000 Mcf results from the fact that "when you increase the volumes and as the operating costs do not increase this decreases the average cost of gas to Laclede and Illinois Power." Assuming no change in the cost of purchasing gas from Trunkline, the average cost of 100,000 Mcf per day would be 44.8 cents per Mcf at 75 percent load factor. Making the same assumption, the average cost of 140,000 Mcf would be 43.6 cents per Mcf. This would also be the average cost of 200,000 Mcf because of the added cost to Mississippi Transmission of compression needed to transport 200,000 Mcf.

cost gas from Mississippi.[8] Counsel for Mississippi make this fact clear on the preceding page of their reply brief when they point out that "Laclede on May 12, 1961, filed with the Missouri Commission a revision of its tariffs to increase its rates to recover increased gas costs occasioned by the purchase of gas from [Mississippi] Transmission." Had Laclede obtained the same volume of gas from Mississippi that it purchases from Mississippi Transmission, there would be no necessity for Laclede to recover the higher cost of Mississippi Transmission's gas from ultimate consumers through higher retail rates. Also not to be ignored is the fact that Laclede's efforts to improve its business are directed at fulfilling its public utility responsibility and advancing economic growth; that Laclede's performance of its expected duty can provide no comfort to Mississippi for its failure to live up to its public utility obligations; and that a cardinal principle in the industry should be that every utility provide new increments of gas at the lowest possible cost. As the court said in *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567, 573, "It is the obligation of all regulated public utilities to operate with all reasonable economies."

The evidence makes it apparent that notwithstanding the fact that the public interest demanded otherwise, Mississippi, solely because of its high profit motive, elected to stand still until 1960 when it finally succeeded with respect to the construction of Mississippi Transmission's system in lieu of a further enlargement of its own system. The reason for this standstill must be removed if Mississippi is to be moved to serve the public interest. Failure to remove it might encourage other natural gas companies to also ignore the public interest by becoming too choosey about what service they will render and waiting for something at least as good as present profits to come along. Important to this consideration is the following statement of the Supreme Court in *United Gas Co.* v. *Railroad Commission*, 278 U.S. 300, 309, relating to a request made to a State Commission for higher rates or, in the alternative, withdrawal from service which the company had undertaken:

> The primary duty of a public utility is to serve on reasonable terms all those who desire the service it renders. This duty does not permit it to pick and choose and to serve only those portions of the territory which it finds most profitable, leaving the remainder to get along without the service which it alone is in a position to give. * * *

And in *Pennsylvania Water & Power Co.* v. *Consolidated Gas Electric Light and Power Company of Baltimore*, 184 F. 2d 552, 567, the court said that—

> One of the most important duties of a public utility, inherent in its franchise to serve the public, is the duty to take the initiative in * * * rendering adequate service, taking into account changing conditions; and the utility is not relieved from this duty because its activities are subject to governmental regulation, for a regulatory commission is not clothed with the responsibility or qualified to manage the utility's business. * * *

---

[8] At one point in his testimony at the reopened hearing the President of Mississippi testified:

PRESIDING EXAMINER: * * * The person that really benefits is the ultimate consumer, isn't it? Isn't that the way it works?

The WITNESS: Yes, that is true, and I am not a Simon Legree, understand, but I have never been able to quite get through my head why it is that a customer who has been using oil or propane or whatever he uses to heat his house should be subsidized, so to speak, to too great an extent either by our industrial customers or by Mississippi stockholders. I mean, to me that is a little hard to fathom. * * *

In this testimony the President of Mississippi appears to overlook the fact that Laclede's need for additional pipeline gas does not flow solely from conversions from other fuels to natural gas, but also from increased needs of existing customers and from new housing and other developments.

It would have been far better if Mississippi had concentrated its energies over the past few years on increasing the supply of natural gas through a further enlargement of its system at reasonable rates rather than in devising plans to keep its present wealth from industrial sales and sidetracking the fruitful path of economic growth. Had it set the stage for further expansion by adopting a policy of equal treatment for all, it would have raised the horizons of individual and collective progress. It would have been much easier to have allowed everyone a larger slice out of a bigger cake than to attempt to maintain the division of a smaller cake.

Service Rendered by Mississippi to Its Industrial Customers

The interruptible character of Mississippi's service to its direct industrial customers has been commented upon hereinabove (*supra*, pp. 751–752). However, the following excerpts from the Examiner's decision issued September 13, 1960, will serve to provide a broader understanding of Mississippi's method of operation under its existing inequitable tariff provisions.

> The present provisions of Mississippi's FPC Gas Tariff enable Mississippi to make available to its industrial customers all gas not taken by the utilities. This means that Mississippi has been making available to its industrial customers that part of the 466,792 Mcf not at times being utilized by the utility customers, plus the difference between the present stated demands and the total capacity of the system. The industrial customers, therefore, take their total requirements up to the capacity of Mississippi's system to deliver. That is to say, except as they may, or some of them may, at times be limited in their takes by the capacity of Mississippi's system, the industrial customers take as much or as little gas as they need on any day, this being permitted by the lack of any contract minimum bill or overrun penalty. On the other hand, the utility customers not only pay a minimum bill but a substantial penalty for takes in excess of stated demand. The heavy overrun penalty applicable to utility customers and the failure of the tariff to make provision, as is the case with respect to other suppliers, for the utility customers to share in excess gas available on Mississippi's system, have the practical effect of assuring the industrial customers that there is available for their use at all times substantially all gas on Mississippi's system in excess of stated demands, as well as that part of the stated demands not taken by the utilities from time to time.
>
> * * * * * * *
>
> The instability of what Mississippi conceives to be requirements is further strikingly illustrated by its continually changing "requirements." As counsel for Laclede point out, Mississippi "has employed an 'allocation' system in apportioning firm industrial gas which has permitted an industrial customer to increase its entitlement during peak periods simply by using more gas during off-peak periods, thereby building up its quota or 'credit' in the preceding month * * *."

Mississippi's System Capacity and Unauthorized Construction of Facilities

Mississippi began operating its system in 1929 with a designed daily sales capacity of about 100,000 Mcf. By 1942 that capacity had increased to 135,000 Mcf. Mississippi's second line project, i.e., looping program involving an increase in sales capacity from 135,000 Mcf to 183,000 Mcf, was commenced pursuant to certificate authorization granted on August 28, 1946, with the Commission recognizing in its opinion (5 FPC 206, 210) that all of Mississippi's system capacity

would eventually be devoted to utility sales unless Mississippi continued to increase the capacity of its system from time to time. The Commission stated:

> * * * For the peak day of 1950, it appears that unless additional facilities are installed, almost 100 percent of the system sales capacity of 181,000 Mcf will be devoted to utility sales.
>
> Applicant estimates that with presently proposed facilities it will be necessary to curtail its firm industrial sales on system peak day for each of the calendar years 1946 to 1950, inclusive. * * * Applicant has indicated its intention to add facilities from time to time as warranted by the increases in demands. * * *

Authority to complete the looping program, giving a system daily design sales capacity of 266,000 Mcf, was granted by the Commission on December 8, 1947 (6 FPC 280). In connection therewith it was estimated that on the peak day in the years 1947 through 1951 Mississippi would have to curtail deliveries to its direct industrial customers in order to meet the demands of its resale customers.

The system design sales capacity was increased by successive steps from 266,000 Mcf in 1950 to 450,000 Mcf in 1952, exclusive of any gas that might become available from Waterloo storage (9 FPC 219; 9 FPC 1187; 11 FPC 760, 11 FPC 1219).

In 1952 (11 FPC 1219), and subsequently on June 3, 1953 (12 FPC 151), the Commission made the latest allocation it has made of Mississippi's capacity. The then claimed total delivery capacity of Mississippi's system was 450,000 Mcf, of which 415,000 Mcf, or 92 percent, was allocated to utility customers and 35,000 Mcf, or 8 percent was permitted to be used in connection with Mississippi's industrial sales. In that connection the Commission adopted an agreed-to schedule of stated demands allocating the 92 percent of Mississippi's capacity among its utility customers on the basis of a stipulation that the amounts stated would not affect rights under existing utility contracts.

While Mississippi and the other parties agreed to the allocation of 450,000 Mcf, represented by Mississippi to be the design sales capacity of its system, the record shows that in the summer of 1952 Mississippi, *without certificate authorization*, increased its system sales capacity by some 50,000 Mcf, or to 500,000 Mcf, by "pigging" a portion of one of its two transmission lines, adding some horsepower to raise the pressure on its two lines by 25 psi each, and by the installation of "cross-overs" between its two lines.

Today Mississippi claims that the designed daily sales capacity of its system is 524,000 Mcf, an increase of 74,000 Mcf over the 450,000 Mcf capacity alleged in 1952 and 1953. Except for (1) 10,000 Mcf additional capacity authorized by order issued August 2, 1957 (18 FPC 106), and (2) a claimed 7,000 Mcf additional capacity authorized by order of October 1958, or a total of 17,000 Mcf additional capacity, the claimed increase of 74,000 Mcf between the 450,000 Mcf and the alleged 524,000 Mcf design sales capacity as of today *was accomplished without Commission authorization.*

On the basis of the evidence the Examiner has determined that the sustained dependable delivery capacity of the system is not less than 534,000 Mcf—or 10,000 Mcf in excess of that now claimed by Mississippi, of which not less than 447,303 Mcf is deliverable in the St. Louis area. Mississippi's deliveries to its industrial customers, most of which are in the St. Louis area, has been within a constant range of about 60,000 to 70,000 Mcf for at least 13 consecutive heating seasons.

The facts make it clear that when Mississippi wanted to serve its very profitable industrial customers more gas than contemplated by the Commission's

orders, it disregarded those orders and the law and constructed unauthorized capacity. But when the utility customers desperately needed more gas to serve the general public at reasonable rates determined by the Commission, Mississippi stood still until 1960 when it got its own way with respect to the construction of Mississippi Transmission's system, and concentrated its efforts on fighting off the requests of its utility customers for increases in their stated demands.

Because of Mississippi's unauthorized construction, the Examiner's decision issued September 13, 1960, directs Mississippi "to file an application or applications for certificates of public convenience and necessity for authority to continue the operation of all facilities comprising its system for which it has not heretofore made application and received certificate authority to construct and operate." As the Examiner stated in his prior decision:

> All changes in capacity are required in good conscience and the law to be disclosed at the time they take place. Discovery of the existence of unauthorized capacity increases and their unauthorized employment by Mississippi should result in the taking of affirmative steps by the Commission to assure that the unauthorized and discriminatory conduct exercised in the past will not be continued or repeated in the future.

The importance of timely compliance with the Act and the Commission's rules and orders to the efficient exercise of the Commission's duties cannot be overemphasized. This is especially true with respect to system capacity which is the subject of these proceedings. Moreover, the deliberate acts of Mississippi in increasing the capacity of its system without Commission authorization are attended by no extenuating circumstances whatever. Had Mississippi proceeded on *bona fide* mistake of law, the Examiner would hesitate to recommend application of penalties. But here its offense is aggravated by its attempt to ignore certificates procedures in total disregard of the consequences attaching to its unlawful conduct. To allow such instances of willful failures to pass without the fullest penalties provided by the Act is to invite further inexcusable resistance to the requirements of the statute. Therefore, the Examiner's order directs that a copy of the record herein be transmitted to the Attorney General of the United States with a request that criminal proceedings be instituted, under the provisions of Sections 20 and 21 of the Act, against Mississippi and its officers and directors.

Reasons Why Laclede and Illinois Power Finally Agreed To Purchase Part of Their Additional Natural Gas Requirements From Mississippi Transmission

Laclede and Illinois Power, after the closing of the initial hearing, agreed to purchase natural gas from Mississippi Transmission because of their desperate need for additional pipeline gas and because of the more favorable terms of the proposal they accepted in 1960.

The Vice-President of Illinois Power testified that Illinois Power "generally concluded that the substantial differences in price and take and pay provisions and the potentiality of the St. Jacob storage field justified our signing the contract" with Mississippi Transmission. The President of Laclede testified:

> In the first place, the delivered cost of the gas is less than under the prior proposed arrangement. In the second place, the gas is being delivered to us in a small initial quantity with options in the agreement to increase the quantities at stated intervals, thus making it possible to absorb the gas into our system in a more orderly fashion. In the third place, the Mississippi River Transmission proposal provided for the utilization of the St. Jacob

Storage Field which is currently under development, and although Mississippi Transmission turned down the certificate granted, we still have hopes that the field will ultimately be fully developed under circumstances which will make the overall new project a great deal more attractive to us. In the fourth place, and not by any means the least of the considerations, is the fact that our new delivery point is in the extreme northwest end of our distribution system and very close to our own storage, which was not true of the original proposal; also the delivery pressures are high enough to permit injection of the gas into the St. Peter formation without compression.

All these considerations made it seem to us that this proposal was sufficiently attractive for us to accept it.

I would like to point out, however, that Mr. Liberman testified in detail the amount of gas which we are purchasing from Mississippi Transmission does not solve the problem of gas supply for the St. Louis area.

Negotiations Relating to Mississippi Transmission's Gas Supply and Construction of Its System

At the time Mississippi organized Mississippi Transmission in 1958 it was contemplated that the latter would obtain its gas supply from Texas Eastern Transmission Corporation near Oran, Missouri. However, negotiations carried on in 1960 led to an agreement between Mississippi Transmission and Trunkline Gas Company (Trunkline) dated April 26, 1960, and an agreement among Mississippi Transmission, Laclede and Illinois Power dated April 22, 1960. The Mississippi Transmission-Trunkline agreement provided for Mississippi Transmission's purchase from Trunkline of 50,000 Mcf per day initially, with options to increase the quantity to 75,000 Mcf on December 1, 1962, and 100,000 Mcf on December 1, 1964. The agreement with Laclede and Illinois Power provided for the sale of 85 percent of this gas to Laclede and 15 percent to Illinois Power.

Construction of Mississippi Transmission's 93-mile pipeline commenced on January 3, 1961. Deliveries of gas through the pipeline commenced to Laclede on May 1, 1961, and to Illinois Power on May 10, 1961.

Laclede and Illinois Power each have entered into a 20-year service agreement with Mississippi Transmission, dated March 29, 1961. Laclede's initial contract quantity was 42,500 Mcf per day, and Illinois Power's was 7,500 Mcf per day. The gas is sold to them on a 75 percent annual load factor basis, which is the same basis that Mississippi Transmission purchases the gas from Trunkline.

By an agreement between Trunkline and Mississippi Transmission dated February 24, 1961, Trunkline agreed to accelerate the dates on which increased quantities could be obtained by Mississippi Transmission under the options contained in the prior agreement. Under this agreement, an additional 25,000 Mcf per day is to be made available on December 1, 1961, and a further 25,000 Mcf per day could be made available on December 1, 1962.

On May 11, 1961, the Commission issued temporary authorization to Trunkline and Mississippi Transmission to commence the sale of the first additional 25,000 Mcf per day. Thus, commencing December 1, 1961, the total quantity available from Mississippi Transmission will be 75,000 Mcf per day, of which Laclede's portion is 63,750 Mcf and Illinois Power's is 11,250 Mcf. If the options for the next 25,000 Mcf are exercised, and assuming Trunkline can obtain adequate reserves for additional deliveries and Commission authorization is obtained, 100,000 Mcf per day would be available by December 1, 1962, of which Laclede would have 85,000 Mcf and Illinois Power 15,000 Mcf. Trunkline has expressed a willingness to further increase the available quantity to 150,000 Mcf,

but Laclede and Illinois Power are withholding any indication of their desire to purchase this additional gas until the outcome of the instant proceeding is known.

Mississippi Transmission Represents a Supply of Gas Which Can Be Made Available to All of Mississippi's Customers

Mississippi Transmission was organized by Mississippi and is the agent of the latter. Notwithstanding the attempt to create the appearance of two corporations functioning separately, the Commission must pierce the corporate veil and recognize that those carrying on negotiations in the name of Mississippi Transmission are in fact negotiating with Mississippi. As the Supreme Court of the United States so aptly said in the case of *Electric Bond and Share Co.* v. *Securities and Exchange Commission*, 303 U.S. 419, 440, "It is the substance of what they do, and not the form in which they clothe their transactions, which must afford the test." The Commission must recognize, as did the Supreme Court in *Southern Pacific Terminal Co.* v. *I.C.C.*, 219 U.S. 498, 523–524, that "it is with the system that the law must deal, not with its elements. Such elements may, indeed, be regarded from some standpoint as legal entities; may have, in a sense, separate corporate operation; but they are directed by the same paramount and combining power and made single by it." Under no circumstances can Mississippi relationship to Mississippi Transmission be regarded as a means of insulating Mississippi from its statutory responsibility to its utility customers.

The as-is capacity of Mississippi Transmission's system is in excess of 140,000 Mcf per day, of which Laclede and Illinois Power have contracted to purchase 75,000 Mcf. With compression of about 7,500 horsepower, estimated to cost $2,500,000, the capacity could be increased to 200,000 Mcf per day.

Mississippi Transmission's system crosses over the main line of Natural Gas Pipeline Company of America near Shattuc, Illinois. The Commission, by order issued September 26, 1961, in Docket No. CP61–339, authorized an interconnection between these two pipelines for the purpose of making deliveries of natural gas "to each other when such deliveries are desirable to insure continuity of service to their respective customers during periods of emergency." As the President of Mississippi Transmission testified, when his company got gas "from Natural Gas Pipeline Company of America, which is much closer to the St. Louis area, or if we develop some business in that immediate area, we may have much more delivery capacity than" 200,000 Mcf per day.

By another order, issued September 26, 1961, in Docket No. CP61–341, the Commission authorized an interconnection between the pipelines of Mississippi Transmission and Mississippi for the purpose of permitting them "to make deliveries of natural gas to each other when such deliveries can assist in their respective system operations and can be made without curtailment or interruption of service to the markets of the party making such deliveries. Under the exchange agreement, the party receiving deliveries thereunder is obligated to return a like quantity of gas to the other party. The exchange of gas will provide added flexibility of operation and continuity of service for both" companies. Accordingly, the Mississippi and Mississippi Transmission systems are now integrated with the common element of ownership. As counsel for Laclede state, "The Commission has always considered the combined Panhandle-Trunkline system as a single entity in determining and allocating customer demands. It would be fully justified in so treating the Mississippi-[Mississippi] Transmission system."

As the evidence shows, the gas supplies represented by Mississippi Transmission's capacity can be made available either directly or, by displacement indirectly, to all of Mississippi's customers.

While Mississippi's President testified at the reopened hearing that he has thought about Mississippi seeking to purchase gas from Mississippi Transmission, he has made no effort to do so. But, as is apparent, if Mississippi had the necessary incentive it could at any time, with a minimum of effort, obtain for its customers any volume of gas Mississippi Transmission's system is capable of delivering, because Mississippi would in truth be dealing with itself. It is sitting on both sides of the table.

Counsel for Mississippi's industrial customers object to any disruption of their dependence upon Mississippi for natural gas service. However, there can be no doubt but that Mississippi, after allocation of Mississippi's presently unallocated capacity to the utility customers, will be in a position to satisfy their claimed needs either directly, or through Mississippi Transmission, if it is willing to do so on terms acceptable to the industrial customers. Thus if there is any disruption of service it will be a disruption for which Mississippi, not the Commission, will be responsible. This is made clear, among other things, by the following testimony of the President of Mississippi Transmission:

Q. If the companies, Illinois Power and Laclede, do not exercise the options to take the additional gas, does your company intend to try to find markets for that gas to sell it?

A. We do.

Q. Are you actively seeking markets to sell your gas, additional volumes of gas, quantities of gas?

A. Yes, sir, we are.

Q. You will sell the gas that Laclede and Illinois Power will not take under their options to other distributing companies or other persons, is that true, sir?

A. It is our intention.

* * * * * * *

Q. Have you approached Mississippi * * * to see if you can sell any of that gas to them * * *?

A. It apparently was not necessary for us to approach Mississippi * * *. There have been discussions between some of Mississippi River Fuel's customers and Mississippi * * * itself which I am advised might result in such a sale.

* * * * * * *

Q. Has anybody from Mississippi * * * ever approached you to try to buy gas from you for their system?

A. They have talked about it.

* * * * * * *

Q. You would have no objection, would you, to selling any excess gas you might have to Mississippi * * *?

A. I cannot answer your question as to excess gas. I would say I will be willing to sell gas to Mississippi * * * or Laclede * * * or Missouri Natural or St. Charles * * * or Union * * * or Illinois Power some additional gas. * * *

Q. Well, if Mississippi * * * industrial customers, as it should turn out, should need some gas, you would not have any objection to selling it to them, would you?

A. Not if we can make money doing it.

Therefore, for the industrial customers to escape the consequences they visualize, all they have to do is duplicate the efforts of Laclede, Illinois Power and St. Charles and assume whatever financial obligation Mississippi requires and that the industrial customers will be able to live with.

No witness was presented at the reopened hearing by any of the industrial customer-interveners.[9] In the absence of testimony from responsible officials of the industrials as to the plans they have been or are making to provide for their future fuel needs, their counsel ask the Commission to assume that the industrial customers cannot get gas from Mississippi Transmission or Mississippi, or both, or from some other source, in the event the Examiner's decision becomes the decision of the Commission—an assumption which seems to be completely contradicted by the above quoted testimony of the President of Mississippi Transmission to the effect that his company is willing to sell gas to both Mississippi and the industrials "if it can make money doing it." In any event, counsel are asking far too much without having undertaken the responsibility of showing that their assumption is a fact. To borrow the words of the Supreme Court in *Runkle* v. *Burnham*, 153 U.S. 216, 225–226, "production of weaker evidence, when stronger might have been produced, lays the producer open to the suspicion that the stronger evidence would have been to his prejudice." Clearly, it was incumbent upon counsel for the industrials to establish the validity of the assumption they make. This is particularly true in this case where a private interest cannot be permitted to override the obligation of a natural gas company to the public interest.

In the circumstances of this case, the Examiner is unwilling to assume that the industrial customers have been unresourceful in protecting their own interest for they have always known of the interruptible character of their gas purchase contracts which can be terminated on six months notice. They have for years known that both the Commission and Mississippi have regarded the utility customers as having a prior claim to Mississippi's capacity, and that in recognition of this fact the Commission has on occasions, including two occasions in the initial phase of this consolidated proceeding, increased the stated demands of utility customers and provided initial service to new utility customers out of Mississippi's capacity. Moreover, since September 13, 1960, they have been aware of the fact that the Examiner's decision now pending before the Commission recommends the allocation of the remaining portion of Mississippi's unallocated capacity to the utility customers. And since September 26, 1961, they have known that Mississippi's system will be interconnected not only with Mississippi Transmission's system but also with the system of Natural Gas Pipeline Company of America (*supra*, p. 763). They are also aware that orders have been, and presumably still are, actively investigating the opportunities of serving gas in the St. Louis area.

The Commission reopened the record for the purpose of taking additional evidence on three factors (*infra*, p. 768), one being "evidence concerning the supplies of gas presently available to Mississippi's various customers." On the basis of the evidence presented the Examiner finds that the Mississippi Transmission system represents a supply of gas which can be made available to all of Missis-

[9] At one point in the reopened hearing the Examiner put counsel for the industrials on notice that if they "put in any evidence in this proceeding, I will be very interested in finding out whether or not your clients have approached Mississippi * * *, what its response was, whether they approached Mississippi [Transmission], what its response was, and if neither of those will supply your clients, whether or not you have gone to the distributors that serve the territory to see what they would do. I think this record ought to show that."

sippi's customers if they are willing to pay the price fixed by the Commission—in the case of utility customers, or exacted by Mississippi—in the case of the industrial customers. If the industrial customers need firm gas, and are willing to contract for it, the purchase of a firm supply from Mississippi Transmission would create no more hardship on the industrial customers than on the utility customers, despite the higher cost of Mississippi Transmission gas. As shown by the abridged hearing set for December 7, 1961, to authorize Mississippi Transmission to sell 1,000 Mcf to St. Charles (*infra*, p. 776), it is a very simple matter for Mississippi Transmission to obtain authorization to provide Mississippi's customers with whatever firm gas they desire to purchase.

While counsel for Mississippi contend that Illinois Power could meet its 1963–64 requirements by introducing gas purchased from Natural Gas Pipeline Company of America into Illinois Power's supply area C, the record shows that this is not at present an assured supply but only a possible source that Illinois Power might have to try to firm up in the event its application herein, which has been pending since March 5, 1959, is denied to enable Mississippi to preserve the present profitability of its industrial sales.

Examiner's Decision Issued December 13, 1960

Following the close of the initial hearing on October 14, 1959, the Examiner issued his decision on September 13, 1960, disposing of the consolidated proceeding other than the two 7(a) applications which were granted by separate prior opinions issued by the Examiner on November 13, 1959 (22 FPC 1039), and July 25, 1960. The history of this proceeding up to September 13, 1960, is set forth in the Examiner's decision issued that date.

The issues upon which the Examiner's initial decision was based were:

> Two related issues * * *. First are the requests for increases in stated demand for existing utility customers. Second is the proposed revisions and additions to Mississippi's tariff to prevent undue prejudice and disadvantage to the utility customers.

These are the issues framed by the Section 7(a) applications and the complaint and by the Commission's order dated May 21, 1959 (21 FPC 701), consolidating these proceedings for purpose of initial hearing and instituting an investigation upon the complaint. In disposing of these issues the Examiner was primarily concerned with this question: What *is* Mississippi's system capacity and *how* should it be allocated? This is still the basic controversy underlying this proceeding. It gets to the root of Mississippi's service-destroying high profit motive which prevented the economy of its service area from achieving its potential for progress and severely impeded the normal expansion and development of the distribution systems of utility customers.

In resolving the related issues the Examiner ordered revisions and changes in Mississippi's FPC Gas Tariff, Original Volume No. 1, upon finding certain provisions of that tariff to be unjust, unreasonable, unduly discriminatory and preferential, and found the actual capacity of Mississippi's system to be 534,000 Mcf per day, as determined by the Commission's staff upon investigation ordered by the Commission, of which only 466,792 Mcf was then allocated to Mississippi's utility customers. The difference of 67,208 Mcf (534,000 Mcf—466,792 Mcf), less 2,640 Mcf,[10] or 64,568 Mcf per day, was allocated on a two-step pro rata basis to the utility customers.

[10] Capacity not allocated to the utility customers was 2,000 Mcf for pilot light service for Mississippi's industrial customers and 640 Mcf for the City of Red Bud, Illinois, for initial service.

The decision also directs Mississippi to file applications for certificates of public convenience and necessity for authority to continue (1) the operation of all facilities comprising its system for which it has not heretofore made application to construct and operate, and (2) service to such industrial customers as it was not serving on the effective date of its "Grandfather" certificate.

Commission Authorization of Construction and Operation of Mississippi Transmission's System

Following the close of the hearing on which the Examiner's decision of September 13, 1960, was based, Mississipi, by maintaining its unyielding position, progressed towards its goal of "The new subsidiary or nothing." In a new and separate proceeding which commenced on September 7, 1960, and concluded on October 2, 1960, the Commission authorized Mississippi Transmission to construct, own and operate the system recently placed in operation to deliver additional gas to the St. Louis area from a Johnsonville, Illinois, connection with the initial delivery to be 50,000 Mcf per day, of which 42,500 Mcf was to be delivered to Laclede and 7,500 Mcf to Illinois Power. This authorization was part of the authorization contained in the Commission's Opinion No. 339 issued November 29, 1960, after the issuance, 24 FPC 1020, of the Examiner's decision on September 13, 1960. In Opinion No. 339 the Commission observed that the additional 50,000 Mcf per day initially made available through Mississippi Transmission's system would "help relieve the longstanding and rather acute deficiencies in gas supply in the areas served by Laclede and Illinois Power, particularly in the St. Louis area."

Mississippi's Petition To Reopen the Record

Following the issuance of the Commission's Opinion No. 339 on November 29, 1960, as amended on December 14, 1960, to eliminate the St. Jacob Storage Project (24 FPC 1068), Mississippi, on January 10, 1961, filed its petition requesting the Commission to reopen the record for the purpose of receiving additional evidence, the ground for which being that changes of fact, relating primarily to Laclede, Illinois Power, MidSouth and St. Charles, "have occurred since the conclusion of the hearing which are compelling materiality." According to the petition, the changes of fact had "completely destroyed the 'gas shortage' as a basis for decision herein" and that, consequently the utilities no longer have need for the increase in the stated demands allocated to them by the Examiner * * *."

Mississippi, in support of the allegations made in its petition to reopen the records, offered to adduce evidence showing (1) that Mississippi Transmission's system would substantially increase the natural gas supplies available to Laclede, Illinois Power, and St. Charles; (2) that Laclede and Illinois Power had contracted to purchase 50,000 Mcf initially from Mississippi Transmission with options allowing increases up to 75,000 Mcf on December 1, 1962, and up to 100,000 Mcf on December 1, 1964, subject to certain conditions pertaining to Trunklines' reserves; (3) that Trunkline had expressed its willingness to accelerate the quantity increases called for by the options held by Laclede and Illinois Power; (4) that Mississippi believed that negotiations between St. Charles and Mississippi Transmission would produce a definitive arrangement, indicating that Mississippi Transmission would supply St. Charles with the additional gas it needs; (5) that effective October 3, 1960, Mississippi increased MidSouth's stated demand by 3,350 Mcf, such increase being made possible by the voluntary release of gas by another utility customer of Mississippi; (6) that Mississippi could produce geological evidence supporting the optimistic

view that the additional storage area of the Roubidoux formation in Laclede's Lange Storage Field, now in the process of development, will be capable of peak day deliveries of at least 37,000 Mcf by the 1961–62 heating season and of at least 177,000 Mcf during the 1964–65 heating season; and (7) that the reopening of the record would also permit it to offer evidence of the development of Mississippi's St. Jacob storage field then in an exploratory stage.

Laclede, Illinois Power and MidSouth strongly objected to the reopening of the record. Each emphatically denied that the factors relied upon by Mississippi had or would satisfy their gas needs. St. Charles agreed to the reopening of the record only if the Commission by interim order granted part of the relief requested in its application, which request was denied.

Laclede opposed the granting of Mississippi's petition on the ground that the alleged changes of fact were matters of which the Commission could take official notice and that, in any event, the alleged changes were not material because it is Mississippi's gas sales and capacity and not that of its customers that is on trial. Counsel for Laclede expressed the view that Mississippi's petition represented "but another effort to delay further the long overdue day of reckoning. It * * * is based in large measure upon speculation. It ignores the real issue * * * and is founded on the erroneous premise that 'gas supply,' regardless of price and regardless of law and equity, was the only reason for Laclede's Complaint and was the sole issue in the many days of hearings." "Mississippi continues to make every effort to avoid its responsibility to supply Laclede's requirements and appears willing to do everything possible to perpetuate its irresponsibility." "The most persuasive and relevant evidence concerning other sources of supply for Laclede could have but little bearing on how Mississippi's capacity is to be allocated equitably among its customers through revision of its tariff." "The Examiner recognized the real issues and especially the important bearing on them of the provisions of Mississippi's tariff in which he ordered * * * changes * * *." "Laclede entered into the agreement to purchase Trunkline gas only after some four years of negotiations with Mississippi and following Mississippi's repeated refusal to meet its obligations to Laclede's full requirements contract. The record in the *Trunkline* case is clear that Laclede has always preferred to have its requirements met—as by contract they are supposed to be met—by Mississippi * * *; that this is the basic source of supply upon which it must rely. The agreement to purchase Trunkline gas through Mississippi's affiliate (Mississippi Transmission) was entered into only as a last resort * * *." "The Trunkline gas is small in volume (only 85,000 Mcf per day after both options are exercised). Its price is substantially in excess of that paid by Laclede to Mississippi. While Laclede needs this gas and plans to make as much of it as possible—even on an accelerated basis—this represents but a partial solution to Laclede's overall gas supply problem." "Laclede would not be able to present any evidence other than of a speculative nature on [the Roubidoux storage aspect of Laclede's gas supply picture]; we are sure Mississippi could not."

The Commission's Order Reopening the Record

By its order issued March 27, 1961, the Commission determined that the record should be reopened. As reasons for so doing it stated:

> Considering the arguments for and against reopening we are of the opinion that in the circumstances of this case the public interest will be best served by reopening the proceedings. We believe the changed circumstances which have occurred since the Examiner considered this matter and the issues involved should be decided upon as complete a record as possible.

> It appears that as a result of the certifications granted [Mississippi] Transmission * * * supplies of gas available to Laclede and Illinois Power will be augmented by some 50,000 Mcf per day. There is the further possibility that gas from [Mississippi] Transmission may alleviate St. Charles' dilemma. The development of storage areas also gives rise to the possibility of further amelioration of the St. Louis area's gas supply problems. The Commission is aware that issues other than gas supply are of equal importance in these proceedings, and we are of the opinion that an augmented record containing the additional evidence concerning the matters referred to above may be of such significance as will affect the disposition of these proceedings, and therefore that the public interest demands the introduction of such evidence into the record.
>
> In the present posture of these proceedings the Commission is of the opinion that the record is inadequate to make a fair and reasonable determination of what changes, if any, may be required to be made in Mississippi's tariff to allocate its system capacity among all customers served. In order to make such determination, it appears that it will be necessary to have in the record information concerning the present and estimated future requirements of all customers served by Mississippi, including those customers which presently are not parties to the proceedings. In order to make a fair and reasonable allocation consideration must be given to the comparative needs for gas. The present record is inadequate to weigh comparative needs.

The Examiner construes the above quoted language as providing only for bringing the record down to date so that the issues can be decided on as complete a record as possible—not as indicating an intention on the part of the Commission to provide the industrial customers with rights superior to either their contract rights or the rights of the utility customers. As the Examiner stated in his decision, "the rights of the parties are fixed by the terms of the previously executed contracts and [the industrial customers] should not be permitted at this late date, when the utility customers are seeking increases in their stated demands, to acquire a status superior to that of the utilities."

Additional Evidence Required by Commission's Order and Examiner's Ruling at Reopened Hearing

The Commission's order reopening the record required that additional evidence be taken on three factors:

(a) The relative need of the various utility customers of Mississippi for gas from pipeline capacity available to Mississippi.

(b) The changes, if any, required in Mississippi's tariff pertaining to the establishment of priorities of service between direct and resale customers.

(c) The supplies of gas presently available to Mississippi's various customers.

Because of allegations contained in Laclede's response to Mississippi's petition to reopen the record to the effect that at the time Mississippi's subsidiary was considering whether or not to accept the certificate issued in Opinion No. 339, Mississippi's President attempted to convince Laclede that Mississippi Transmission might not accept the certificate and serve the additional gas unless Laclede withdrew its Section 5(a) complaint in the instant proceeding, the Examiner, at the outset of the reopened hearing called upon—

> * * * Mississippi, Laclede and Illinois Power, and any other parties which have knowledge of the facts and desire to do so, to set forth on this record, through the testimony of a responsible representative of each company, what took place following the close of the record in this proceeding on October 14, 1959, which caused Laclede and Illinois Power to agree to pur-

chase the additional 50,000 Mcf through Mississippi's subsidiary, and what caused the president of Mississippi to attempt to convince Laclede that Mississippi's subsidiary might not accept the certificate and serve the additional gas unless Laclede withdrew its Section 5(a) complaint herein. Such evidence is essential to a forthright determination of the basic controversy underlying these proceedings.

In response to the Examiner's inquiry as to Laclede's allegation as to the efforts of the President of Mississippi to get Laclede to withdraw its Section 5(a) complaint, the President of Mississippi testified that he did not threaten the representatives of Laclede and Illinois Power but—

> * * * simply asked them if they would be willing to withdraw their 5(a) and 7(a) applications their companies had filed in the event Mississippi * * * Transmission * * * decided to refuse to go ahead with its pipeline project in the absence of such a withdrawal.

Laclede's President testified that his recollection of the conversation was that Mississippi's President inquired if—

> * * * we [Laclede and Illinois Power] would be willing to withdraw the 5(a) and 7(a) applications, respectively, * * * as a condition of Mississippi River Transmission accepting the certificate which had been issued. * * * And he said that unless we did, he thought he would have difficulty in getting his Board to let him accept that certificate.
>
> Now * * * about the question of whether he threatened us. I don't consider that a threat, but I do think it was an effort to persuade. And we both turned it down.

Reopened Hearing Procedure

Following a conference held on the record on April 18, 1961, seven days of additional hearings were held commencing May 31 and ending July 26, 1961, at which time evidence was presented with respect to the above mentioned factors set forth in the Commission's order of March 27, 1961. At the conclusion of the reopened hearing the Examiner fixed September 6 for the filing of simultaneous main briefs and September 20 for the filing of simultaneous reply briefs.

Main and reply briefs have been filed by counsel for Mississippi, Laclede, Illinois Power, MidSouth, St. Charles, Missouri Natural Gas Company, Owens-Illinois Glass Company, Obear-Nester Glass Company, American Brake Shoe Company, Lewin-Mathes Company, Missouri Rolling Mill Corporation, Alton District Manufacturers' Association, Granite City Steel Company, American Steel Foundries, American Zinc Company of Illinois, The Dow Metal Products Company, Laclede Steel Company, Olin Mathieson Chemical Corporation, National Lead Company, Pittsburgh Plate Glass Company, and C. K. Williams & Company. Commission staff counsel filed a summary-type main brief but no reply brief.

Applications and Complaint Involved Herein

Two of the applications involved in the initial hearing (filed by Natural Gas Improvement District No. 2 of Ashley County, Arkansas, in Docket No. G–17942 and by the City of Red Bud, Illinois, in Docket No. G–16504), filed under Section 7(a) of the Act, have been severed from the consolidated proceeding and granted by opinions and orders which have become final. Accordingly, there are now involved in this proceeding (1) the three Section 7(a) applications for increased stated demands filed by Illinois Power, MidSouth Gas Company (MidSouth), and St. Charles, and (2) the investigation instituted by the Commission upon the Section 5(a) complaint filed by Laclede.

In addition to the complaint and the 7(a) applications above referred to, there are other utility customers of Mississippi, namely Union Electric Company (Union), Missouri Natural Gas Company (Missouri Natural), the Village of Dupo, Illinois (Dupo), Public Utility Company of Crossett, Arkansas (PUC Crossett), and Natural Gas Improvement District No. 2 of Ashley County, Arkansas (Ashley County), which are seeking comparable relief.

Laclede's Complaint. Laclede's stated demand of 330,000 Mcf has not been increased by Mississippi since 1955. It filed its complaint on February 13, 1959, after extended negotiations with Mississippi for additional gas supplies and following Mississippi's repeated refusal to meet its obligations under Laclede's full requirements contract. The complaint seeks not only a fair and equitable allocation of Mississippi's overall system capacity among Mississippi's utility customers, but also relief from the provisions of Mississippi's tariff and practices of Mississippi thereunder, to which the Examiner has, in his decision issued September 13, 1960, found the utility customers to be entitled.

Laclede's estimated requirements for 1961–62, totaling 690,000 Mcf, give effect to the assumption that it will receive the additional 45,647 Mcf per day which the Examiner's decision of September 13, 1960, allocates to it:

	Mcf	
Peak day requirements		690,000
Peak day supply:		
Mississippi (present 330,000 plus 45,000)	375,000	
Purchase from other pipeline (Mississippi Transmission)	64,000	
Company produced gas	95,000	
	534,000	
Receipts from storage (balance)	156,000	
	690,000	690,000

Counsel for Mississippi attempt to minimize Laclede's need for additional gas by contending that Laclede's Lange storage is capable of delivering volumes of gas in excess of those now estimated by Laclede to be deliverable. Their challenge is based on two grounds:

(a) that the St. Peter formation is not being utilized to the maximum extent possible; and

(b) that the Roubidoux formation in that field will be able to supply greater volumes of gas on a peak day—and sooner—than Laclede has indicated.

Before considering these two grounds, two other factors of importance should be mentioned. First is the fact that the methods utilized in meeting peak deliveries of gas from storage are generally the most economical of all known methods. There is no reason to believe that Laclede would seek to buy additional pipeline gas if it could meet its peak day requirements from its own storage. Laclede is here seeking additional pipeline gas from Mississippi at about 25 percent load factor, and it appears that even under Mississippi's relatively favorable rates, it would be expensive, costing about 47 cents per Mcf. Laclede estimates that if purchased from Mississippi Transmission it would be twice as expensive, after giving effect to its 75 percent load factor minimum take or pay provisions and consequent reduction in volumes purchased from Mississippi. As counsel for Laclede state in their brief, "all argument on the subject becomes rather meaningless when it is recognized that Laclede would be irresponsibly wasteful if it were to buy firm pipeline gas at 25 percent load factor if it could meet its demand with gas from its own storage."

Second, the record shows that Mississippi Transmission is anxious to sell Laclede more gas and it does not appear that any opposition has ever been registered by Mississippi to it doing so. In fact Mississippi is anxious for Laclede to again turn to Mississippi for its additional needs. From this it is reasonable to conclude that Mississippi's contentions here are really not based upon a belief that Laclede does not need and cannot sell the additional gas, but upon what has been evident since 1956, namely, that Mississippi's efforts are directed to preserving the present profitability of its industrial sales at the expense of the general public.

In their attempt to show that Laclede is understating its storage deliverability, counsel for Mississippi rely upon estimates which were made by Laclede prior to the operation of the 1960–61 winter. They seek to have the conclusion drawn from such earlier estimates and the general knowledge of their witness—rather than current performance data—that Laclede's Lange storage is capable of delivering volumes of gas in excess of those now estimated by Laclede to be deliverable, particularly for 1961–62.

Laclede readily admits that its estimates of Lange's deliverability have been revised downward, an action which is understandable because it was caused in the main by the fact that, during the past winter, 1960–61, the pressures in the field declined to the point where a continuation of cold weather would have rendered Laclede unable to meet its commitments to its customers. Laclede's current appraisal of its storage potential, based upon a detailed study made on a day to day basis by a qualified engineer who has lived with the Lange project since its inception, must be given far greater weight than its prior appraisals and the generalized knowledge of underground storage projects and a preliminary study made in 1954 (before storage of gas in the Lange Field)—upon which Mississippi's witness drew his conclusion that Lange can produce greater quantities of gas than Laclede contends is possible.[11] Mississippi's witness testified that he had "never gone into the [Lange] field and done any pressure or physical testing" himself. Staff counsel describes the opinion given by Mississippi's witness as "considered conjecture."

Laclede, in its response to Mississippi's petition to amend the record pointed out that, because Roubidoux—an acquifer storage—is in the early and experimental stages, Laclede would not be able to present any evidence other than of a speculative nature concerning the possibilities and potentialities of Roubidoux, and that it was sure Mississippi could not (*supra*, p. 768). The record bears out Laclede's contention.

As Laclede's President testified (*supra*, p. 757), if the 45,647 Mcf of additional gas which the Examiner has allocated to Laclede from Mississippi's pipeline is not made available from Mississippi, Laclede "will have to get an equivalent volume of gas somewhere else. As Mr. Liberman's testimony shows, we need this gas and after that we still need more gas." After pointing out that the 45,647 Mcf would cost $3,800,000 a year if purchased from Mississippi, the President of Laclede further testified:

> PRESIDING EXAMINER: * * * I want to ask you this question in connection with that amount of money, * * * would you have any part in recommending to your company or recommending your company to incur that amount of money if you could not recover it through the sale of gas?
>
> THE WITNESS: No, sir, I would be derelict and most certainly, when we enter into an agreement over a long period of time, obligating ourselves for

[11] 200,000 Mcf on the peak day in 1961–62 as compared with Laclede's estimate of 156,000 Mcf.

the demand cost as well as the future rate increases which may or may not be forthcoming as a result of action by this Commission, I would have to be very certain that we could market that gas. But there is a market that Mr. Liberman didn't even touch on.

PRESIDING EXAMINER: What market is that?

The WITNESS: We have, for example, * * * hotels and hospitals that operate like that on an interruptible basis which should not be that way. They should have firm services, but we have not even figured on them. They have been getting along reasonably adequately, but they would prefer firm service and I am sure they would pay for it if we could make it available to them, but we are going to take care of these others first.

* * * * * * *

The WITNESS: * * * But apartment houses and hotels, hospitals, many on other fuels at this time, would like to go on firm gas. They won't take interruptible because of the bother and the labor problem, all those things in addition to what Mr. Liberman has shown exists in the market place, in his opinion, add up to my view that we can use all this gas and then some."

As counsel for Laclede point out in their brief, "Laclede's house-heating saturation remains the lowest of any major city in America, being slightly over 60% * * *. Despite only minimal efforts to sell gas—more in the nature of institutional advertising than in the nature of a selling campaign—Laclede has long waiting lists on file of those wanting gas for house-heating purposes * * *. As a matter of fact, Laclede has been operating since 1950 under restrictions against the addition of space heating load. The record clearly demonstrates, therefore, that Laclede and the public require not only the new [Mississippi] Transmission gas but also the additional [Mississippi] gas allocated to it by the Examiner's Decision * * *." As they further point out, "In the face of such clear and truly uncontroverted evidence of genuine need for gas, the dollar oriented attitude of Mississippi seems especially shocking. * * * While storage is important and essential—including the development of additional storage—it is not the sole long-range answer to Laclede's supply problem."

There can be no question but that Laclede needs the gas allocated to it in the Examiner's decision issued September 13, 1960, if it is to have reasonable expansion and if the public, rather than Mississippi's private interest, is to be served.

Illinois Power's Application. Illinois Power's application was filed on March 5, 1959, for an order directing Mississippi to sell and deliver to Illinois Power 12,000 Mcf of natural gas per day in addition to the 57,202 Mcf per day that Mississippi is presently authorized to deliver to Illinois Power during the on-coming heating season (1961–62).

During the reopened hearing Illinois Power amended its application filed March 5, 1959, from an additional 12,000 Mcf per day to an application for 17,548 Mcf per day, to conform to the evidence presented, such evidence demonstrating Illinois Power's requirement for 17,548 Mcf, or an increase in stated demand from 57,202 Mcf per day to 74,450 Mcf per day, beginning with the 1963–64 heating season. The Vice President of Illinois Power testified that he has indicated to other pipelines proposing to come into the area that Illinois Power desires to purchase an additional 10,000 Mcf per day for the 1962–63 season because Illinois Power needs further protection for that winter; that the avail-

able "supplies as shown in Exhibit 97 are very close to our estimated market needs. And while that is our projection of our needs, our commercial and sales organization tells us and feel that they are too conservative, that they will be able to sell more gas, particularly for space heating, in that area, and that our requirements are perhaps understated."

Illinois Power, as hereinabove noted (*supra*, pp. 762–763), originally contracted to purchase 7,500 Mcf per day from Mississippi Transmission, delivery of which began on May 10, 1961. After the reopening of the record Illinois Power contracted for additional gas from Mississippi Transmission, so that commencing December 1, 1961, it will receive from this company a total of 11,250 Mcf per day.

Counsel for Mississippi speculate that Illinois Power "by availing themselves of the option from [Mississippi] Transmission * * * could obtain an additional 3,750 Mcf from that company in that year under existing arrangements * * *. Furthermore, they could undoubtedly get the entire 17,548 Mcf from Transmission by the 1963–64 season, if they chose to arrange for it, in view of Transmission's capacity and other evidence * * *." No good reason is shown why Illinois Power should purchase Mississippi Transmission's higher cost gas, even if the options were firm in all respects, if there is lower cost Mississippi gas available. Nor is there any reason why Illinois Power and the other utility customers should be required to bear the entire additional burden in price, and to pass that burden on to their retail customers.

Counsel for Mississippi suggest another alternative source for meeting Illinois Power's requirements, namely, introduction of gas to be purchased from Natural Gas Pipeline Company of America, which might be made available to Illinois Power through the construction of about two and a half miles of additional pipeline—pipeline construction which would be unnecessary if the desired volume is made available through Mississippi's existing interconnection with Illinois Power's system.

The evidence makes it clear that unless Illinois Power can obtain further commitments from Mississippi, it will attempt to connect Natural Gas Pipeline Company of America's line to Illinois Power's Supply Area C. In carrying out its public utility responsibility, and in making its contribution to the economic growth of its service area, Illinois Power attempts to make its plans sufficiently in advance to take care of the needs of those in its service area whenever it is possible to do so in the public interest. This cannot be said of Mississippi.

The forced use of the alternative methods suggested by Mississippi for meeting Illinois Power's requirements—assuming that in fact they could be firmed up—would be justified only if it could be shown to be in the public interest. Such a showing would be impossible for use of either or both alternatives would be detrimental to the public interest. This is so because the purpose of using the alternative methods would be to preserve the present profitability of Mississippi's industrial sales at the expense of the general public. Mississippi's attempt to preserve the magnitude of its present profits has been greatly destructive of the public welfare and ought not to be continued.

MidSouth's Application. MidSouth's application, filed January 19, 1959, sought an increase of 3,000 Mcf in its stated demand, or from 22,790 Mcf to 25,790 Mcf, by November 1, 1960, for service on peak days to domestic and commercial customers.

After the closing of the initial record and before its reopening, Mississippi increased MidSouth's stated demand by 3,350 Mcf, effective October 3, 1960. This increase was the first increase in MidSouth's stated demand since 1952 and appears to have been accomplished by the voluntary release of gas by

Arkansas Louisiana Gas Company, another utility customer of Mississippi.

One of the "changes of fact" upon which Mississippi relied in its petition to reopen the record was that the need for an increase in MidSouth's stated demand had been satisfied because it had received the 3,350 Mcf of natural gas which had been released by Arkansas Louisiana Gas Company. In opposing Mississippi's petition to reopen the record, MidSouth stated that "Mississippi filed the change in its tariff to reflect this increase in MidSouth's Stated Demand by a letter dated August 30, 1960. And in this letter which gave the reasons for the proposed changes in the Stated Demands of MidSouth and several other customers, no allegation was made by Mississippi that the increase to MidSouth was to be in lieu of, and in complete satisfaction of, the 3,000 Mcf increase that MidSouth is seeking in the instant proceeding. In fact, no reference was made in any way to the instant consolidated complaint—7(a) proceeding. Therefore, Mississippi must have considered the reallocation of the gas released by Ark-La. as being unrelated to MidSouth's 7(a) application."

With but one very minor exception,[12] MidSouth has no firm industrial contracts and, hence, service to its industrial customers is fully interruptible.

MidSouth's present stated demand is 26,140 Mcf. Because the firm requirements of connected customers are now in excess of this stated demand, it is in need of additional gas and finds itself in the position of being forced to overrun its stated demand and pay heavy penalties. During the 1960–61 winter MidSouth's actual total peak day requirement was 28,951 Mcf. On that day (January 24, 1961) MidSouth curtailed deliveries to its interruptible industrial customers by 5,821 Mcf, but nevertheless overran its stated demand of 26,140 Mcf by an amount of 2,811 for which it paid Mississippi $20,110 in penalties. It was also required to take penalty gas on three other days in the past winter to meet the needs of its connected customers.

MidSouth has had extensive studies conducted looking toward the development of underground storage, but no known storage possibilities have been found in the territory served by MidSouth. It purchases gas from Mississippi at 17 separate delivery points, and because of this and as the dilution of natural gas by a propane-air mixture is limited, it becomes very difficult for MidSouth to construct and operate propane-air peak shaving equipment on a reasonable basis.

The evidence offered by MidSouth supports the reasonableness of its estimated peak day requirements through the 1963–64 heating season, namely, a need for 4,860 Mcf for the oncoming heating season, and additional increases of 1,000 Mcf each year for the next two years. It is therefore requesting an increase in its present stated demand of 26,140 Mcf per day to a stated demand of 31,000 Mcf for the 1961–62 heating season, 32,000 Mcf for the 1962–63 heating season and 33,000 Mcf for the 1963–64 heating season.

The Examiner finds no justification for the contention of counsel for Mississippi that the testimony of the President of MidSouth in the reopened record indicates that MidSouth does "not desire to have its stated demand increased."

St. Charles' Application. St. Charles' application filed April 28, 1959, requests an order directing Mississippi to increase St. Charles' stated demand from 2,360 Mcf to 3,686 Mcf by November 1, 1959, to 4,289 Mcf by November 1, 1960, to 4,865 Mcf by November 1, 1961, and to 5,287 Mcf by November 1, 1962, and to 5,651 Mcf by November 1, 1963, or by a total of 3,291 Mcf per day over the five-year period. The application filed by St. Charles, as amended, was based upon

[12] MidSouth has a contract with the Remington Rand Corporation which provides for a maximum delivery of three Mcf per hour but this company does not take firm gas every day and did not take gas on the peak day of January 24, 1961.

St. Charles obtaining all of its supplies from Mississippi, exclusive of approximately 460 Mcf of peak shaving to be produced by St. Charles.

In opposing Mississippi's petition to reopen the record, counsel for St. Charles pointed out that "St. Charles, having a duty to serve its growing market but having received no increase since February 1, 1959, in its Stated Demand allotment of 2,360 Mcf per day, during the current winter season is being required to pay to Mississippi substantial penalties at $2 per Mcf of gas taken in excess of 2.360 Mcf per day. The penalties have been and are being incurred as this is written * * *."

In its application to reopen the record Mississippi stated that it believed that negotiations between St. Charles and Mississippi Transmission would produce a definitive arrangement, indicating that Mississippi Transmission would supply St. Charles with the additional gas it needed. By the time the reopened hearing commenced on April 18, 1961, St. Charles had entered into an agreement to purchase 1,000 Mcf of gas per day from Mississippi Transmission, contingent upon certain conditions including authorizations by the Commission being granted in Trunkline's Docket No. CP62–46 and in Mississippi Transmission's Docket No. CP62–48 which have been consolidated and set for hearing on December 7, 1961, under the Commission's shortened procedure rule.

As the record clearly shows, St. Charles has need for the 1,000 Mcf per day to be obtained from Mississippi Transmission and substantially more—namely, 628 Mcf per day more for the on-coming winter, an additional 772 Mcf per day more by November 1962, and an additional 922 Mcf per day more by November 1963.

In the following excerpt from the reply brief of counsel for St. Charles, with which the Examiner is in complete agreement, counsel for St. Charles correctly and successfully challenge not only the unfounded statement in the brief of counsel for Mississippi to the effect that St. Charles and the other utility customers "have admitted on this record that gas supply is no longer a problem" but also other contentions made by counsel for Mississippi with respect to the request of St. Charles herein and the situation with respect to which St. Charles is faced:

> St. Charles has nowhere "admitted on this record that gas supply is no longer a problem", but, rather, it has consistently requested the additional supplies needed by it and supported its request with clear evidence of its need.
>
> Mississippi's brief in other respects fails to do justice to St. Charles' needs. For example * * * it attempts to summarize the increased volumes of gas requested by St. Charles, but, in so doing, quotes volumes substantially below those requested and substantiated by St. Charles.
>
> By commencing with this understatement of the increases in Stated Demand requested by St. Charles, then by adding in the 1,000 Mcf per day of higher-priced gas for which St. Charles has contracted from Mississippi's subsidiary, Mississippi * * * Transmission * * * and by eliminating certain requirements estimated by St. Charles in its existing market area, Mississippi in its brief concludes that St. Charles' supply problem has been solved and its application should be denied. Conversely, we submit that St. Charles' attempt partially to relieve its immediate shortage by contracting for the higher-priced gas from Mississippi * * * Transmission * * * is the clearest possible indication of the serious nature of its short supply. Additionally, in the time between the 1959 and the 1961 hearings, in a further effort to relieve its short-supply situation, St. Charles nearly doubled its peak-shaving capacity. Accordingly, St. Charles is confident that neither the

Presiding Examiner nor the Commission will reach the conclusion suggested by Mississippi.[2]

Requests of Other Utility Customers Served by Mississippi. Two of Mississippi's utility customers, namely, Union and Missouri Natural, intervened in this proceeding for the purpose of requesting that if it is determined that additional capacity exists on Mississippi's system, they should be allowed to share in the allocation of such additional gas. In submitting the information requested by the Staff's questionnaire, three other customers of Mississippi—Dupo, PUC Crossett and Ashley County—indicated a need for additional quantities of flow gas to meet their peak day requirements. The present stated demands and indicated needs for these five utility customers for the periods shown are:

Customer	Stated demand (Mcf) [1]	1961–62	1962–63	1963–64
Union	10,000	14,385	16,446	16,793
Missouri Natural	24,000	33,700	34,300	34,900
Dupo	675	1,118	1,191	1,267
PUC Crossett	2,000	3,260	3,284	3,313
Ashley County	374	818	848	878

[1] Stated demands shown are those set forth in Mississippi's effective FPC Gas Tariff. Indicated needs for 1961–62, 1962–63, and 1963–64 have been converted to 0° F.

The increases in stated demand sought by Missouri Natural are supported by the testimony of the company's Vice President. However, no witness appeared on behalf of Union, Dupo, PUC Crossett and Ashley County. Accordingly, the only evidence as to the requirements of these four customers is found in their responses to the Staff questionnaire.

Missouri Natural, a full requirements customer of Mississippi, has not received an increase in its stated demand since October 1, 1955. In the past it has been able to provide the service it has provided in its service area only by taking gas at penalty rates from Mississippi.

The Commission's staff recommends that the stated demand of Missouri Natural be increased by 9,700 Mcf per day, or up to the needs shown for the 1961–62 heating season. Counsel for Mississippi take the position that Missouri Natural "should continue, as it has in the past, to purchase overrun gas on the few days in the winter when it needs it to meet its peak requirement * * *." Counsel for Missouri Natural disagree, and properly so, for the following reasons set forth in their reply brief:

> Mississippi * * * intimates that Missouri Natural is better off paying for penalty gas. This is a good idea for Mississippi but is not good for Missouri Natural's customers. Mississippi follows this by saying that if Missouri Natural's stated demand were increased by 9,700 mcf as proposed by the Staff, its demand charge would be increased approximately $228,000.00 annually, as against an eight-day penalty charge for 1960–1961 of $110,700.00. What Mississippi did not say, however, is infinitely more material and important. That is the fact that Missouri Natural is exposed

[2] Contrary to what Mississippi suggests * * *, the primary industrial customer of St. Charles is not a "recently-acquired industrial load." We are advised that this industry, until it moved to the City of St. Charles four years ago, had been supplied by Laclede * * * in St. Louis since 1918.

Additionally, the housing development to which Mississippi objects as not having been certificated * * *, has been certificated in St. Charles' service area and construction commenced.

to penalty gas equal to $862,400,000 based upon a season as severe as the 1939–40 heating season, and $463,800.00 in a season as cold as the 1950–1951 heating season. In an attempt to alleviate its exposure to catastrophic charges for penalty gas, Missouri Natural considered the effect upon its costs of stated demand gas from Mississippi Transmission, but concluded that it would be premature, imprudent, improvident, and against the best interest of its customers to take any gas from Mississippi Transmission. To illustrate, only 2,000 mcf of stated demand gas from Transmission under its existing rates would cost Missouri Natural approximately $200,000.00, or almost as much as the 9,700 mcf increase in stated demand would cost from Mississippi * * *. Moreover, Missouri Natural's exposure to penalty gas would be virtually eliminated with 9,700 mcf increase from Mississippi * * *, whereas with 2,000 mcf or even 4,000 mcf (at a cost of approximately $400,000.00) stated demand from [Mississippi] Transmission, Missouri Natural would continue to be exposed to heavy and onerous penalty gas charges since its total stated demand would continue to be inadequate to meet its peak loads and to expand the service it renders in the public interest."

Insofar as Mississippi's utility customers now seeking gas in this proceeding are concerned, the Examiner's decision issued September 13, 1960, grants increases in stated demand on a pro rata basis, effective December 1, 1961, as follows:

	Present stated demands (Mcf)	Increase granted (Mcf)	Stated demands as of 12-1-61 (Mcf)
Laclede	330,000	45,647	375,647
Illinois Power	56,323	7,791	64,114
MidSouth	22,790	3,152	25,942
St. Charles	2,369	326	2,686
PUC Crossett	1,900	2,031	2,163
Dupo	675	722	768
Missouri Natural	24,000	25,660	27,320
Union	10,000	1,383	11,383
Ashley County	374	52	426

The additional quantities of gas were ordered, subject to review by the Commission, to be made available in two steps, that is one-half on the effective date of the final order of the Commission herein and the other half on December 1, 1961. Use of the pro-rata basis of allocation was caused by the inadequacy of Mississippi's capacity to support an increase in the stated demand of each resale customer to the extent desired by such customers.

Authority of Commission Under Section 7(a)

Section 7(a) of the Act confers jurisdiction upon the Commission to require extensions of service whenever the Commission finds that such action will place no undue burden upon the company. It further provides:

> That the Commission shall have no authority to compel * * * such natural-gas company to * * * sell natural gas when to do so would impair its ability to render adequate service to its customers.

Mississippi and its industrial customers argue that the industrial loads served by Mississippi constitute present service rendered by Mississippi in the same sense that the utilities are present customers of Mississippi, and that it would be unlawful for the Commission to further increase the stated demands of the

utility customers because it would impair Mississippi's ability to render adequate service to its existing industrial customers. While the lack of merit of this contention is shown in the Examiner's decision issued on September 13, 1960, the matter will nevertheless be considered here.

The argument advanced by Mississippi and its industrial customers ignore several facts. First, that the Commission on several occasions has carried out the intent of Section 7(a) of the Act in restricting deliveries to Mississippi's industrial customers not only by increasing the stated demands of existing customers but also by directing Mississippi to provide initial service to new utility customers. Second, that both Mississippi and the Commission have always recognized that, insofar as Mississippi's capacity is concerned, the rights of the utility customers are superior to the industrial customers. Third, that Mississippi's contracts with its industrial customers provide only for interruptible service and are cancellable on six months notice. Fourth, that as the Examiner stated in his opinion issued July 25, 1960, in *City of Red Bud, Illinois, Docket No. G–1650*, in allocating part of Mississippi's capacity to the City of Red Bud over Mississippi's objection—following the initial hearing herein:

> "Adequate service" in the light of the circumstances and facts in this proceeding connotes the ability of Mississippi to satisfy the requirements of its utility customers every day throughout the year. It further connotes the ability of Mississippi to satisfy the requirements of all existing customers and those authorized by the Commission to be added throughout the year, except, if necessary, during peak periods. Deficiencies which may occur, if any, are to be met by industrial curtailment, which is the usual and normal practice in the industry, as explained in [*Manufacturers Light & Heat Co.* v. *F.P.C.*, 206 F. 2d 404] * * *.
>
> * * * * * * *
>
> Mississippi's attempt to equate "adequate service" as that term is used in Section 7(a) with the demands of its industrial customers rather than to the volumes it is contractually obligated to deliver to them is wholly without merit. The order herein does not take gas away from anyone. It permits the maintenance of adequate service to existing customers, and provides the additional service which has been shown to be necessary and desirable in the public interest. This is an exercise of the Commission's prerogative under the Act to require service, making it impossible for Mississippi to veto the authority granted to the Commission.

Fifth, that while Mississippi and its industrial customers are concerned about threatened impairment of service, the fact is that they seek preferential treatment over the utility customers, whose impairment of service has been a grim reality, not just a threat, because Mississippi has continuously and consistently failed to meet their requirements. To offset such impairment of service in part, Laclede and Illinois Power have developed their own manufacturing and storage facilities and have purchased additional high-cost pipeline gas from Mississippi Transmission, and the same is true of St. Charles except that it does not have storage facilities. These steps the industrials have themselves not yet taken. In the face of Mississippi's unwillingness to correct the obviously unsatisfactory supply situation in its service area, it would seem clear that the hazards and disadvantages of impairment, including the higher costs of effecting complementary supplies of gas, should be shared by all, including Mississippi and its industrial customers. Sixth, that the Chief Executive Officer of Mississippi has always been aware of the fact that the existing utility customers could obtain increases in their stated demands by filing Section 7(a) applications. This

is shown, among other things, by the testimony of a Vice President of Illinois Power at the initial hearing:

> Q. Now, were there other matters discussed at this meeting * * *?
>
> A. Yes, we discussed our 7(a) proceedings against [Mississippi] to obtain gas for the towns of Millstadt, O'Fallon and Hamel.
>
> [The Chief Executive Officer] told me that if we and his other purchasers —that is utility purchasers, continued to nibble away at his existing pipeline capacity through this sort of 7(a) proceedings, it was probably our idea that we could do so at the expense of his direct customers.
>
> He stated that he intended to continue these direct sales at their present levels, and that if we were successful in prosecuting these 7(a) cases, he would not decrease his sales to his industrials, but would continue them at their present level, and if this resulted in a drop in the pipeline pressure at our delivery points, that was just too bad.
>
> He reminded me that Illinois Power was out at the end of the line.
>
> Q. What was your response to this?
>
> A. * * * I told [the Chief Executive Officer] that I doubted if the Federal Power Commission would tolerate any such action and that this threat didn't particularly disturb me.
>
> He told me that if there was a pressure drop he would never restore it until the FPC made him do it.

It was in the light of this testimony and the provisions of Section 7(a) and the Commission's allocation authority that the Examiner stated in his prior decision:

> As the Chief Executive Officer of Mississippi has recognized, the utility customers have been and will undoubtedly continue "to nibble away at" Mississippi's capacity not now allocated to the utility customers * * *, which they may properly do under Section 7(a). There is, of course, no necessity for a continued nibbling away at such capacity if it is all allocated at one time so as to provide each of the utility customers their pro rata share. Obviously, what the Commission can do piecemeal it can accomplish in one action.

Comparative Needs

The Commission's order reopening the record (*supra*, pp. 768–769) refers to the initial record as being "inadequate to weigh comparative needs." It therefore desired "information concerning the present and estimated future requirements of all customers served by Mississippi, including those customers which presently are not parties to the proceedings." In paragraph (a) of its order the Commission directed that additional evidence be taken "on the issues of the relative need of the various utility customers of Mississippi for gas from pipeline capacity available to Mississippi."

As the Examiner has already determined (*supra*, pp. 762–765), the pipeline capacity available to Mississippi is represented by the capacity of its existing system plus the capacity of Mississippi Transmission's system to the extent that it has not already been contracted for by Laclede, Illinois Power and St. Charles; that Mississippi Transmission's capacity also is equally available to Mississippi's industrial customers and its utility customers; that for the industrial customers to purchase a firm supply from Mississippi Transmission would create no more hardship on the industrial customers than on the utility customers; and that the general public would be beneficiary of the allocation of Mississippi's lower cost capacity to the utility customers.

As the record shows, the contracts which Mississippi has with its industrials provide for a six-month termination and that delivery of gas is contingent upon

a prior claim to such gas by Mississippi's utility customers. Accordingly, Mississippi has no need for firm gas to serve its industrial customers if their needs are to be determined in accordance with the terms of the contracts. Furthermore, Mississippi has no need even for interruptible gas to serve such customers after any six-month period it selects because the contracts, by their terms, are cancellable on six months notice.

The Commission's staff sent each of Mississippi's resale and direct customers a questionnaire soliciting information regarding the present and future requirements of such customers. Staff's Exhibit No. 99 is the tabulation of responses of the customers of Mississippi, and is divided into two tables, the first showing the responses of the utility customers, and the second showing the responses of the industrial customers. The staff made no substantive analysis of the requirements reported by any of the customers, but merely recorded, in Exhibit No. 99, the figures submitted by the various customers. Moreover, no witness for any industrial customer of Mississippi appeared at the reopened hearing to testify in support of the information submitted in answer to the staff's questionnaire. In this connection it is to be remembered that only 13 of Mississippi's 48 industrial customers even intervened in this proceeding.

Counsel for Mississippi assert that the industrial customers' "need for gas was fully spelled out and corroborated in the prior record." [13] In this connection they ignore that the fact that the Commission considered the initial record "inadequate to weigh comparative needs." In the absence of testimony at the reopened hearing from responsible officials of the industrial customers, and the failure of any party to make a showing as to comparative needs in the light of the Commission's order reopening the record, the present record can only be regarded as still inadequate for determining comparative needs on the basis the Commission had in mind.

Based upon the information received in response to the questionnaires submitted to all of Mississippi's customers, the Commission Staff witness presented an example of allocating Mississippi's capacity now utilized in serving industrial loads. Under his method that capacity, with certain adjustments, was allocated to both industrial (24,993 Mcf) and utility (29,115 Mcf) customers. The 29,115 Mcf allocated to utility customers is to be compared with the 64,586 Mcf allocated to such customers in the Examiner's decision issued September 13, 1960. For reasons now to be stated, the Examiner does not agree with the premise upon which the Staff theory is founded or with the result achieved.

The Staff witness relied exclusively on estimated requirements for the oncoming heating season 1961–62 as a basis for his recommended allocation. His reason was that "the further into the future these estimates are made the more likelihood there is of error occurring as well as the possibility of changed circumstances." This approach is out of harmony with the long-established Commission procedure which utilizes, in both Sections 7(a) and 7(c) proceedings, second and third year requirements in addition to those for the first year. Use of requirements for three years would have produced results comparing favorably with the Examiner's own proration of capacity on the basis of present stated demands.

A major inequity in the selection by the Staff witness of 1961–62 as a basis for allocation is, as pointed out by counsel for Illinois Power, "that he thus

[13] Counsel for Mississippi stated that "If the prior record in this case is inadequate to determine comparative needs, the utilities and the Staff have added nothing to the record * * *." The same can be said of Mississippi and the industrials. Except for four of Missippi's smaller utility customers (*supra*, p. 777), witnesses appeared for Mississippi's utility customers and supported their requests for increases in stated demand.

allocates increased quantities of low cost Mississippi gas to those companies which have made no efforts to alleviate the difficulties caused by Mississippi's failure to expand, while penalizing those companies which have made such efforts. In order to protect their consumers, in view of Mississippi's failure to expand and in view of the protracted nature of these proceedings, Illinois Power and Laclede have spent large sums in developing natural gas storage and have contracted to purchase certain quantities of relatively high priced [Mississippi] Transmission gas. Had they not done so, [the Staff witness] would have allocated more low price Mississippi gas to Illinois Power and Laclede * * *. Such an approach will only tend to defeat the Commission policy of encouraging development of natural gas storage."

Moreover, the Staff's method ignores not only the fact that Mississippi's direct industrial customers are entitled, under their respective contracts with Mississippi, to no more than interruptible service, but also the fact that the evidence shows that the full amounts desired by the industrial customers of Mississippi may be purchased by them from Mississippi Transmission. This fact is made clear not only by the testimony of the President of Mississippi Transmission (*supra*, pp. 764–765) but also the testimony of the President of Mississippi who testified that there is no physical reason why Mississippi could not deliver to the industrial customers the quantities desired by them, for the account of Mississippi Transmission without causing difficulties on Mississippi's system.

The Staff's allocation method also overlooks the necessity for removing the reason for Mississippi's standstill from 1956 to 1960 hereinabove discussed (*supra*, p. 758). Removal of Mississippi's service destroying motive in this proceeding is a simple matter. It can be accomplished simply by allocating to the utility customers the capacity utilized by Mississippi in serving its interruptible industrial loads; prohibiting further unlawful construction of facilities; and by causing appropriate revisions to be made in its inequitable tariff provisions. In the Examiner's view, what is shown to be necessary in this proceeding to protect the public interest must be made possible. The Examiner's disposition of this case eliminates the cause that Mississippi had for creating Mississippi Transmission. If Mississippi elects to continue Mississippi Transmission as a separate corporation it will do so by imposing unnecessary corporate expenses upon the consumers in its service area. As the President of Mississippi testified:

> PRESIDING EXAMINER: As a matter of fact * * *, isn't there every reason to believe that if Mississippi * * * had constructed Mississippi Transmission Company's system the over-all cost of constructing and operating that system would have been less, and what I have in mind is that it's cheaper to operate one company than it is to operate two, isn't it?
>
> The WITNESS: Yes.
>
> PRESIDING EXAMINER: Well, is there any reason why if Mississippi * * * had constructed a line Trunkline * * * would not have been just as willing to sell the gas to Mississippi * * * as it was to sell it to Mississippi * * * Transmission?
>
> The WITNESS: None whatever so far as I know.

As has been explained, Mississippi Transmission was created for the purpose of executing a scheme devised by Mississippi to cause natural gas consumers in Mississippi's service area to pay higher rates than they would have paid had Mississippi caused its system to be further expanded, the intended end result being the preservation of the profitability of Mississippi's earnings from its industrial sales. This scheme is not outside the jurisdiction of the Commission to deal with. Whatever the limits of the Commission's power it may forbid any acts done in furtherance of a scheme that is regarded as contrary to the public interest, whether it can forbid the scheme or not.

Allocation of Mississippi's Capacity to Its Utility Customers

The evidence in this case makes it clear that the utility customers here seeking increases in their stated demand are entitled to and should have allocated to them that portion of Mississippi's capacity now utilized by it in serving interruptible industrial loads, except for 2,000 Mcf for pilot light service.

The utility customers served by Mississippi and their present stated demands are:

Customer	Present stated demands (Mcf)
Arkansas Louisiana Gas Company	9,500
City of Altheimer	350
City of Augusta	915
City of Chester	1,068
City of Hazen	456
City of Red Bud	[1] 640
Fort Smith Gas Corporation	2,700
Illinois Power	57,202
Laclede	330,000
MidSouth	26,140
Missouri Natural	24,000
PUC Crossett	2,000
St. Charles	2,360
Town of Des Arc	415
Union Electric Company	10,000
Dupo	675
Natural Gas Improvement District No. 2 of Ashley County, Arkansas	374
Total	468,795

[1] Paragraph (C) of the Commission's order issued May 18, 1961, in City of Red Bud, Illinois, Docket No. G-16504, 25 FPC 987, directs Mississippi to deliver to the City of Red Bud "a maximum daily volume of 430 Mcf during the first year of operation, such maximum volume to be increased to 640.9 Mcf per day during either the second or third year of operation."

The daily sales capacity of Mississippi's system has been determined to be 534,000 Mcf. Subtracting from this total capacity the present stated demands of the utility customers of 468,795 Mcf, and an additional 2,000 Mcf for pilot light service, leaves a balance of 63,205 Mcf to be allocated to the utility customers seeking increases in their stated demand.

Only 447,303 Mcf of the daily sales capacity of 534,000 Mcf is deliverable in the St. Louis area. The three utility customers in that area now have stated demands aggregating 389,562 Mcf and are seeking stated demand increases aggregating 141,870 Mcf for the next three heating seasons (121,000 Mcf for Laclede; 17,548 Mcf for Illinois Power; and 2,322 Mcf for St. Charles). South of the St. Louis area the utility customers are seeking total stated demand increases of 26,952 Mcf (1,313 Mcf for PUC Crossett; 6,869 Mcf for Midsouth; 10,900 Mcf for Missouri Natural; 6,793 Mcf for Union; 582 Mcf for Dupo; and 504 Mcf for Ashley County). In short, Mississippi's utility customers are seeking an aggregate increase of 168,822 Mcf in their stated demands as compared to the 63,205 Mcf presently available for allocation.

The Examiner, in his intial decision, allocated Mississippi's available capacity on a pro rata basis in acordance with stated demands of all utility customers in effect at the time. With the exception of St. Charles there appeared to be no basic disagreement among Mississippi's utility customers with the proposition that such method of capacity allocation produced equitable results. Since some of the utility customers of Mississippi are not now seeking increases in their stated demand, the 63,205 Mcf available for allocation will be allocated only to those utility customers which have shown or indicated a need for increases in their stated demand. The 63,205 Mcf, if allocated on a pro rata basis (based on

existing stated demands) would increase the stated demands of the utilities here requesting or indicating a need for additional gas as follows:

	Present stated demand (Mcf)	Percent	Increase in stated demand (Mcf)
Laclede	330,000	72.89	46,070
Illinois Power	57,202	12.64	7,989
St. Charles	2,360	.52	329
PUC Crossett	2,000	.44	278
MidSouth	26,140	5.77	3,647
Missouri Natural	24,000	5.30	3,350
Union	10,000	2.21	1,397
Dupo	675	.15	95
Ashley County	374	.08	50
Total	452,751	100.00	63,200

The Examiner will adjust the allowance for Laclede by 570 Mcf so as to increase St. Charles' allowance from 329 Mcf to 899 Mcf. Accordingly, effective upon the date the Examiner's order becomes the final order of the Commission, Laclede's stated demand will be increased from 330,000 Mcf per day to 375,500 Mcf. St. Charles' stated demand will, effective as of the same date, be increased by 628 Mcf, or from 2,360 Mcf to 2,988 Mcf per day, and will be further increased on November 1, 1962, from 2,988 Mcf to 3,259 Mcf. The stated demand of Illinois Power will be increased by 7,989 Mcf, or from 57,202 Mcf to 75,191 Mcf per day, effective November 1, 1963.

The other six utility customers (PUC Crossett, MidSouth, Missouri Natural, Union, Dupo and Ashley County) of Mississippi located south of the St. Louis area would receive a total of 8,817 Mcf on the above stated pro rata basis. However, since MidSouth recently received an increase in its stated demand of 3,350 Mcf per day, it appears equitable to reallocate the 8,817 Mcf on the following basis:

Customer	Increase granted (Mcf)
Union	1,900
Missouri Natural	4,000
Dupo	300
PUC Crossett	750
Ashley County	250
MidSouth	1,617
Total	8,817

As has been pointed out (*supra*, p. 777), the only evidence as to the requirements of Union, Dupo, PUC Crossett and Ashley County is to be found in their responses to the Staff questionnaire. Accordingly, following the precedent set by the Commission in *American Louisiana Pipe Line Co., et al., Docket No. G–2306, et al.*, 15 FPC 23, 34–35; *Michigan Consolidated Gas Co.* v. *Federal Power Commission*, 283 F. 2d 204, 212, the volumes allocated to Union, Dupo, PUC Crosset and Ashley County will be reserved for not more than six months, during which time they may apply pursuant to Section 7(a) of the Act for the increased quantities allocated to them herein. In the event they fail to file an application within this period of time they will forfeit the right to receive the natural gas as authorized and provided herein.

Missouri Natural, having intervened in this proceeding and having supported its request for an increase in its stated demand, will be granted the relief it seeks in this proceeding (*Texas Eastern Transmission Corp., et al., Docket Nos. G–1003, et al.*, 8 FPC 139, 145–147).

Tariff Revisions

In the Examiner's decision issued September 13, 1960, it was shown that three revisions in Mississippi's existing tariff are necessary and desirable in the public interest. First, a revision to Section 11(b), First Revised Sheet No. 16, to provide that any buyer whose gas requirements have not been met by Mississippi will remain a general service buyer under the F–1 Rate Schedule if it obtains gas elsewhere. Second, a revision of the F–1 Rate Schedule, or the addition of a new Tariff Sheet, to provide for the sale of E or excess gas to Mississippi's utility customers which may be available to Mississippi's system from time to time, such excess gas to be sold to the utility customers in proportion to their effective stated demands. As stated in the Examiner's initial decision "Mississippi's present tariff discriminates against the utility customers in that it permits Mississippi to sell all of its excess capacity to its industrial customers, a practice which is inconsistent with the Act and the requirements of the Commission as to other pipelines." Third, a revision to Section 6 of Rate Schedule F–1 to provide a reduction in penalty charges for overruns, and to enable the utility customers, particularly Laclede and Illinois Power, to more nearly take their full stated demands. As the Examiner has pointed out in his prior decision, "Laclede, for example, has been unable to come within some 6,000 Mcf of taking its full stated demand (330,000 Mcf) on most days of the heating season because of the existing tariff penalty provisions. Mississippi agrees that the tolerance provision of its tariff works unfairly to deprive at least some of the utilities of the full stated demands. It does not, however, agree with other proposed revisions and additions to its tariff."

In its order reopening the proceedings herein, the Commission set forth, as one purpose of reopening, taking additional evidence on changes required in Mississippi's tariff pertaining to the establishment of priorities of service between direct and resale customers (*supra*, p. 769).

Concerning the penalty charges for overruns contained in Mississippi's existing tariff, the Examiner in his prior decision stated:

> Mississippi's FPC Gas Tariff permitted authorized overruns of only 1 percent of the stated demands or 1,000 Mcf, whichever is the greater, and even within that narrow limit there is a penalty provision with respect thereto. That is to say, if a utility customer does not overrun its stated demand more than five days in any one month or two days in succession, the penalty is $0.15 per Mcf. Otherwise, the penalty is $2.00 per Mcf. For all gas over the 1 percent (or 1,000 Mcf) limitation, the penalty is $10.00. As counsel for Laclede state, "Although in theory the utilities may be able to take excess gas to meet emergency demands, in actuality they cannot in most instances afford to pay the $10.00 per Mcf penalty rate, which is imposed regardless of the availability of the gas on" Mississippi's system. They further point out the "Because of the size of Laclede's take from its eight delivery points, any overrun would almost inevitably exceed the 1,000 Mcf 'first step' of $2.00 gas and go into the $10.00 penalty gas step in MRF"s existing tariff. An overrun of only 5% of Laclede's stated demand would result in a penalty of approximately $157,000 a day!"

> * * * During the 1958–1959 heating season Laclede was able to come within 3,000 Mcf of its stated demand on only three days. It took less than 325,000 Mcf on all but 19 days.

At the reopened hearing a Commission staff witness recommended a revision on Mississippi's tariff relating to payment for volumes taken in excess of stated demand which differed from that decided by the Examiner in his prior decision.[14]

Counsel for Mississippi state that Mississippi "relaxed the tolerance provisions of its tariff in respect of overruns in a filing made effective March 1, 1960, and is willing to further relax those provisions to the extent set forth in Exhibit 109; however, this is the most that Mississippi believes can properly be required." [15]

Staff counsel also recommended that interruptible service be made available on the basis of 50 percent to utility customers and 50 percent to direct industrial customers of Mississippi. The Examiner's prior decision ordered, subject to Commission review, that Mississippi make any excess gas available on its system from time to time to F–1 customers in proportion to their effective stated demands.

Evidence offered by Mississippi through two witnesses at the reopened hearing was directed at the claimed difficulties in administration and unworkability of the staff's tariff proposals, not at the Examiner's prior decision. Staff counsel, in his brief, appears to make no serious effort to support the tariff revisions proposed by his witness. The Examiner finds that the solutions provided in the Examiner's decision issued September 13, 1960, relating to overrun penalties and the making available overrun gas are the correct ones. These tariff revisions are necessary to avoid undue discrimination against Mississippi's utility customers and undue preference in favor of direct industrial customers. As the Examiner held in his prior decision—

> To be just and reasonable within the meaning of the Act a tariff applicable to a pipeline's utility customers must satisfy at least two broad principles. First, it must produce fair results between the supplier and its customers. Second, it must not unduly discriminate against any customer or class of customers. Mississippi's existing tariff does not satisfy the latter principle. That discrimination of the type now permitted by that tariff is prohibited by Section 4(b) of the Act is a question to which the Court addressed itself in *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 232 F. 2d 467, *cert.* den., 352 U.S. 891, and decided adversely to Mississippi's contention* * *.

---

[14] The revision proposed by the staff witness would provide a penalty of 5.88 cents per Mcf for any excess taken over stated demand up to the first 2 percent or 100 Mcf, whichever is greater; of $2.00 per Mcf for any volume over 2 percent of 100 Mcf, whichever is greater but not over 3 percent or 100 Mcf, whichever is greater; and $5.00 per Mcf for volumes over 3 percent or 100 Mcf, whichever is greater. These penalties would apply only on days on which Mississippi sells no interruptible gas. On days on which Mississippi sells any interruptible industrial gas, any excess over stated demand taken by a resale customer would be deemed interruptible gas, not subject to overrun penalty.

[15] Paragraph 6(b) of Exhibit No. 109, relating to payment for volumes exceeding stated demand, provides:

(b) If the volume of such excess gas taken by Buyer exceeds the Stated Demand by not more than 100 Mcf or 2% of the Stated Demand, whichever is greater, and such excess volume is taken in any billing month for not more than 2 consecutive days or on not more than 5 days, Buyer shall pay for such excess volume of gas at the rate of 15¢ per Mcf in lieu of the rate provided in paragraph (a) above in addition to the commodity charge otherwise applicable. Otherwise, the provisions of paragraph (a) above shall apply as to payment for all volumes taken by Buyer in excess of the Stated Demand. In determining whether such excess volumes have been delivered for not more than 2 consecutive days or not more than 5 days during any billing month, no consideration shall be given to any day on which the volume of excess gas is less than 1% of Buyer's Stated Demand or 50 Mcf, whichever is larger.

In the *Panhandle* case (13 FPC 301) referred to the Commission was faced with a situation somewhat similar to that faced here with reference to Mississippi's position. Panhandle sought to establish priorities of service for some of its direct sale customers. Alleging that its interruptible rate schedules were inequitable and unworkable, Panhandle proposed to cancel them—claiming that they afforded advantages to industrial customers of the utilities not available to Panhandle's own direct industrial customers and that cancellation was necessary to protect the pipeline's firm deliveries and to control interruptible deliveries to certain customers of its utilities. The Commission, in denying the request to cancel, rejected every argument advanced by Panhandle in favor of according preferential treatment either to direct industrial customers as a group or individually. With particular reference to the contention that the industrial customers of Panhandle's resale customers might receive preferential treatment over the pipeline's own firm customers, the Commission said (13 FPC at pp. 307–308):

> Another claim by Panhandle is that the "I" Schedules are inequitable in that discrimination would develop against Panhandle's direct customers in favor of the latter's competitors served by Panhandle's distributors in the event that the "I" schedules are implemented. In our opinion Panhandle's apprehensions are not well founded. Testimony in the record indicates it is more likely that absence of an interruptible rate schedule would result in discrimination against customers of Panhandle's resale customers in favor of Panhandle's direct customers. Accordingly, Panhandle's contentions in this regard are not persuasive. Moreover, it should be pointed out that the interruptible schedules, as modified, broaden Panhandle's opportunities to render service to direct customers.

It is apparent that Mississippi, in opposing revisions in its existing tariff, is doing so primarily to protect its earnings from industrial sales to the detriment of the public interest. In this connection, and as stated in *Alabama Power Co.* v. *F.P.C.*, 128 F. 2d 280, 296, *cert.* den., 317 U.S. 652, with respect to licensees under the Federal Power Act, which has equal applicability here:

> * * * the Commission has many duties to perform, over a long period of time, other than coaxing a reluctant licensee to act as the law requires that it shall act.

The findings and order accompanying the Examiner's decision issued September 16, 1960, are modified and expanded to the extent hereinafter set forth.

FINDINGS

(1) Mississippi, having its principal place of business at St. Louis, Missouri, owns and operates a natural gas transmission pipeline system located in the States of Texas, Louisiana, Arkansas, Missouri and Illinois, and by such operations Mississippi is engaged in the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a natural-gas company within the meaning of the Act as found by the Commission in its order of March 1, 1944, Docket No. G–291, 4 FPC 535.

(2) Laclede, Illinois Power, MidSouth, St. Charles, Union, Missouri Natural, PUC Crossett, Dupo and Ashley County, each is a person engaged in the local distribution of natural gas to the public and each purchases natural gas from Mississippi for resale for ultimate public consumption under the terms and provisions of Mississippi's FPC Gas Tariff, Original Volume No. 1.

(3) MidSouth, Illinois Power and St. Charles each have filed an application under Section 7(a) of the Act; Laclede, Union and Missouri Natural have each

filed intervening petitions in said 7(a) applications; and Laclede has filed a complaint upon which the Commission has instituted an investigation. Each of these proceedings is directed against Mississippi and seeks an increase in the stated demand of each which is now in effect in Mississippi's FPC Gas Tariff, Original Volume No. 1, 10th Revised Sheet No. 25, and seeks certain revisions of the terms and provisions of Mississippi's said FPC Gas Tariff, Original Volume No. 1.

(4) Responses filed by PUC Crossett, Dupo and Ashley County to the Commission staff questionnaire indicate their need for increases in their stated demands for the 1961–62, 1962–63, and 1963–64 heating seasons.

(5) The sustained dependable delivery capacity of Mississippi's system for future stated demand purposes is not less than 534,000 Mcf, of which not less than 447,303 Mcf is deliverable in the St. Louis area.

(6) Increasing the stated demands of each of Mississippi's utility customers, to the extent and in the manner provided in paragraph (A) and (B) below, will not place an undue burden upon Mississippi and will not impair its ability to render adequate service to its customers.

(7) Mississippi shall continue to sell and to deliver natural gas to each of its utility customers, such sale and delivery to be henceforth on the basis of the stated demands set forth in paragraphs (A) and (B) below.

(8) It is necessary and desirable in the public interest that Mississippi make the following changes in or additions to its FPC Gas Tariff Original Volume No. 1:

(a) A revision of Section 11(b), First Revised Sheet No. 16, to provide that any buyer whose gas requirements have not been met by Mississippi will remain a general service buyer under the F–1 Rate Schedule if it obtains gas elsewhere.

(b) A revision of F–1 Rate Schedule, or the addition of a new Tariff Sheet, to provide for the sale of E or excess gas which may be available on Mississippi's system from time to time, such excess gas to be sold to the F–1 customers in proportion to their then effective stated demands. Excess gas rejected by any F–1 Rate Schedule buyer will be apportioned equitably among the remaining F–1 buyers desiring to purchase such excess.

(c) A revision to Section 6 of Rate Schedule F–1 which will provide that for each day that a buyer exceeds its stated demand by not more than 2 percent or 1000 Mcf, whichever is greater, the charge for such excess take per Mcf shall be the commodity charge of the rate schedule increased by 1/30 of the demand charge under the rate schedule; for excess takes above the stated demand by more than 2 percent but not more than 3 percent, or 1000 Mcf, whichever is greater, a penalty charge of $2.00 per Mcf shall apply in addition to the commodity charge under the rate schedule; and for takes in excess of 3 percent of the stated demand or 1000 Mcf, whichever is greater, a penalty charge of $5.00 per Mcf of excess shall apply in addition to the commodity charge under the rate schedule.

(9) It is necessary and desirable in the public interest that Mississippi be required to file applications for certificates of public convenience and necessity for authority to continue to serve such direct sales customers as it was not serving on the effective date of its "Grandfather" certificate.

(10) It is necessary and desirable in the public interest that Mississippi be required to file an application for a certificate of public convenience and necessity for authority to continue the operation of all facilities comprising its system for which it has not heretofore made application and received certificate authority to construct and operate.

(11) Mississippi and its responsible officers and directors have willfully and knowingly failed to comply with the certificate provisions of the Act and the Commission's rules pertaining thereto.

(12) It is appropriate for the Commission to transmit to the Attorney General of the United States a copy of the record in this proceeding, together with a request that criminal proceedings be instituted, under the provisions of Sections 20 and 21 of the Act, against Mississippi and its officers and directors.

(13) It is appropriate for the Commission to require Mississippi to enter into service agreements with Arkansas Louisiana Gas Company, Cities of Augusta, Chester, Hazen and Red Bud, Illinois Power, PUC Crossett, St. Charles, Town of Des Arc, Union, Dupo, and Ashley County.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission:

(A) Mississippi be, and it is hereby directed, to increase the stated demands of Laclede, St. Charles, MidSouth and Missouri Natural, effective upon the date this order becomes the final order of the Commission, as follows:

Customer	Present stated demands (Mcf)	Increase granted (Mcf)	Total stated demands (Mcf)
Laclede	330,000	45,500	375,500
St. Charles	2,360	628	2,988
MidSouth	26,140	1,617	27,757
Missouri Natural	24,000	4,000	28,000

(B) Mississippi be, and it is hereby directed, to further increase the stated demand of St. Charles, effective November 1, 1962, by 271 Mcf, or from 2,988 Mcf to 3,259 Mcf, and to also increase the stated demand of Illinois Power, effective November 1, 1963, by 7,989 Mcf, or from 57,202 Mcf to 65,191 Mcf.

(C) Of Mississippi's existing capacity available for allocation to its utility customers, there is reserved until further order of the Commission, 1,900 Mcf for Union, 300 Mcf for Dupo, 750 Mcf for PUC Crossett, and 250 Mcf for Ashley County, which have indicated in responses to a Commission staff questionnaire that they are in need of increases in their stated demands. Each of these utility customers of Mississippi shall make application within six months—from the date this order becomes the final order of the Commission—for the increased quantities indicated. Upon failure of these utility customers to make application pursuant to Section 7(a) of the Act for these increased quantities within said six-month period, or failure to support such application, such quantities will be distributed pro-rata among the parties hereto up to their demonstrated requirements. Hearings concerning such 7(a) applications shall be limited to the issue of applicant's requirements, all other issues having been determined herein.

(D) Mississippi be, and it is hereby directed, to file, in a form acceptable to the Commission, the changes in or additions to its FPC Gas Tariff Original Volume No. 1 set forth in paragraph (8) above.

(E) Mississippi be, and it is hereby directed to file an application or applications for certificates of public convenience and necessity for authority to continue to serve such direct sales customers as it was not serving on the effective date of its "Grandfather" certificate.

(F) Mississippi be, and it is hereby directed, to file an application or applications for certificates of public convenience and necessity for authority to continue the operation of all facilities comprising its system for which it has not heretofore made application and received certificate authority to construct and operate.

(G) Mississippi be, and it is hereby directed, to enter into service agreements on or before July 1, 1962, with Arkansas Louisiana Gas Company, Cities of Augusta, Chester, Hazen and Red Bud, Illinois Power, PUC Crossett, St. Charles, Town of Des Arc, Union, Dupo, and Ashley County, and to file said service agreements with the Commission.

(H) The record in this consolidated proceeding be referred to the Attorney General of the United States with a request that criminal proceedings be instituted against Mississippi and its officers and directors, under Sections 20 and 21 of the Act, for violation of the certificate provisions of the Act and the Commission's rules pertaining thereto.

(I) The filings to be made by Mississippi pursuant to paragraphs (A), (B), (D), (E) and (F) above shall be made within 60 days from the date this order becomes the final order of the Commission.

FRANCIS L. HALL,
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–12580

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 18, 1962)

On October 11, 1961, El Paso Natural Gas Company (Petitioner) filed a petition to amend the Commission's orders issued March 26, 1958, and November 27, 1959, in Docket No. G–12580, 19 FPC 681 and 22 FPC 900, respectively.

The order of March 26, 1958, issued a certificate of public convenience and necessity to Petitioner authorizing, among other things, a 2,500 horsepower compressor unit to be installed at Petitioner's Goldsmith Compressor Station, Ector County, Texas. After receiving authorization, Petitioner found that it had available in stock a 2,000 horsepower compressor unit which, rather than continuing to stock for an indefinite period of time, it installed in place of the 2,500 horsepower compressor unit. Although the smaller unit will not produce the capacity originally proposed, Petitioner states that it will not impair its ability to perform the service certificated in Docket No. G–12580. Therefore, Petitioner requests that the subject order be amended to authorize the 2,000 horsepower compressor unit in lieu of the 2,500 unit.

The order of November 27, 1959, issued a certificate of public convenience and necessity to Petitioner authorizing, among other facilities, a 16-inch O.D. meter run and appurtenances to be located at Topock, Arizona, where Petitioner had proposed to deliver gas to Southern California Edison Company (Edison). The subject meter run was to be used for separate measurement of the gas to be sold directly to Edison. However, the subject order did not permit Petitioner to deliver gas directly to Edison, but instead required that such gas be sold to Southern California Gas Company and Southern Counties Gas Company of

California. The order of November 27, 1959, did not elminate authorization for the subject 16-inch O.D. meter run, and, accordingly, Petitioner requests amendment of the order so as to eliminate such authorization.

The Commission finds:

It is necessary and appropriate to carry out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's orders issued March 26, 1958, and November 27, 1959, in Docket No. G–12580, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 26, 1958, in Docket No. G–12580, as amended, is hereby further amended so as to authorize Petitioner to install a 2,000 horsepower compressor unit at its Goldsmith Compressor Station, Ector County, Texas, in lieu of the presently authorized 2,500 horsepower compressor unit.

(B) The Commission's order issued November 27, 1959, in Docket No. G–12580, as amended, is hereby further amended so as to eliminate the authorization in said order for a 16-inch O.D. meter run and appurtenances to have been installed near Topock, Arizona.

(C) In all other respects, said orders shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE WASHINGTON WATER POWER COMPANY, PROJECT NOS. 204, 2058, AND 2075

ORDER WAIVING PENALTIES FOR DELINQUENCY IN PAYMENT OF ANNUAL CHARGES

(Issued April 18, 1962)

On February 2, 1962, statements of the annual charges for the calendar year ended December 31, 1961, under the licenses for Project Nos. 204, 2058, and 2075, respectively, were mailed to The Washington Water Power Company, licensee for the projects. The letter of transmittal stated that the charges should be paid within 30 days of rendition of the bills therefor.

In transmitting its check covering the annual charges owing, which was not received until March 9, 1962, the licensee explained that the delay was due to the sudden hospitalization of the executive exercising control over such payments and the fact that our statements were overlooked during his absence.

Our records relating the past payment of annual charges by the licensee for the projects involved show consistent promptness in payment.

The Commission finds:

It will not be inconsistent with the public interest to waive the penalties owing by reason of the licensee's delay in payment of the annual charges.

The Commission orders:

The penalties arising out of the delay of The Washington Water Power Company, licensee for Project Nos. 204, 2058, and 2075, respectively, in the payment of the annual charges under the licenses for the projects for the calendar year ended December 31, 1961, is waived.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP61–24; TIDEWATER OIL COMPANY, DOCKET NO. CI61–125; PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI61–164; SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. CI61–254; HUMBLE OIL & REFINING CO., DOCKET NO. CI61–307; UNION PRODUCING COMPANY, DOCKET NO. CI61–318; J. RAY McDERMOTT & CO., INC., DOCKET NO. ORDER MODIFYING AND ADOPTING DECISION OF PRESIDING EXAMINER AND DENYING INTERVENTION

(Issued April 19, 1962)*

Syllabus

1. Statement of General Policy is not in and of itself controlling in case of initial prices proposed under pre-Policy statement contracts, at least when service has been theretofore initiated. [here deliveries have not started] P. 793.
2. Commission notes Examiner's discussion of appropriate price "line" for area in terms of comparison with other sales and his official notice of other area prices as reflected by past orders, and on basis of these matters specifically *finds* a base price of 17¢ per Mcf, exclusive of tax reimbursements, is in line for proposed northern Louisiana sales. P. 793.
3. Commission *issues* certificates of public convenience and necessity to American-Louisiana and producer applicants, under Section 7 of the Natural Gas Act. P. 793; 799.

Charles V. Shannon, for American Louisiana Pipe Line Company.

Jack D. Jones for Tidewater Oil Company.

John F. Jones, *William H. Emerson*, *Norton Standeven*, and *William J. Grove* for Pan American Petroleum Corporation.

Roy L. Merrill for Socony Mobil Oil Company, Inc.

William J. Merrill and *George H. Lawrence* for Humble Oil & Refining Company.

Wilbert O. Crain, *Saunders Gregg*, *Vernon W. Woods*, and *C. Huffman Lewis* for Union Producing Company.

T. P. Hull, Jr., for J. Ray McDermott & Co., Inc.

Kent H. Brown, *Martin L. Barr*, *Charles J. Cox*, and *Barbara M. Suchow* for Public Service Commission of the State of New York.

James O'Malley, Jr., *Halcyon G. Skinner*, *John A. Lodge*, and *Eugene B. Thomas, Jr.*, *for Consolidated* Edison Company of New York, Inc.

David J. Bardin for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

The Presiding Examiner issued an initial decision in these proceedings on March 12, 1962. The Examiner would grant certificates of public convenience and necessity to the applicants herein, conditioning the independent producers' certificates upon reduction of the proposed initial price. Three parties to these proceedings, the Public Service Commission of the State of New York (PSC), Pan American Petroleum Corporation, and Humble Oil & Refining Corporation, filed exceptions to the decision on April 2, 1962.

PSC says the Examiner erroneously based his decision entirely and exclusively on the Commission's Statement of General Policy No. 61–1 (issued September 28,

* Initial decision appears on p. 793.

1960, 24 FPC 818) even though the initial prices here at issue are based on contracts executed prior to the issuance of our Policy Statement. While we do not fully agree with PSC's characterization of the Examiner's decision, we do agree that the Statement of General Policy is not in and of itself controlling in the case of initial prices proposed under pre-Policy Statement contracts at least when service had been therefore initiated. PSC is correct in citing our previous holdings to that effect.

The Examiner's decision discusses the appropriate price "line" for this area in terms of comparison with other sales. The Examiner properly took official notice of other prices in the area as reflected by this Commission's certificate orders. On the basis of these matters we specifically find that a base price, exclusive of tax reimbursement, not in excess of 17¢ per Mcf is in line for the sales here proposed. See, also, our order of March 21, 1962, in *The Ohio Oil Company*, Docket No. G–15385, *et al.*, 27 FPC 551.

Pan American excepted to some, but not all, of the matters noticed by the Examiner. But Pan American has not sought leave to adduce additional evidence controverting the facts so noticed. Additional lengthy exceptions filed by Pan American (and adopted by Humble) are without merit; they should be and are denied.

While the record does not so show, we take notice that J. Ray McDermott & Co., Inc., is now a "natural-gas company" and modify the Examiner's finding paragraph (1) accordingly.

Consolidated Edison Company of New York, Inc., filed a petition to intervene in these proceedings on March 22, 1961. Consolidated Edison's only asserted interest in these proceedings is the possibility that we might modify the area prices announced in our General Policy Statement. Since we hold that Statement not to govern these applications Consolidated Edison's petition should be denied.

The Commission orders:

(A) The decision of the Presiding Examiner issued March 12, 1962, herein, as hereinabove modified, is adopted as the Commission's decision and order in these proceedings.

(B) The petition to intervene filed by Consolidated Edison is denied.

DECISION

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 12, 1962)

PURDUE, *Presiding Examiner:* These consolidated proceedings concern the following applications for certificates of convenience and necessity under Section 7(c) of the Natural Gas Act:

(1) An application of American Louisiana Pipe Line Co. (Docket No. CP61–24) (which owns and operates an interstate natural-gas pipeline system) for authorization to construct and operate an 8-inch supply lateral extending from its existing 30-inch main line in Franklin Parish, Louisiana, approximately 25 miles to the Holly Ridge Field, in Tensas Parish, Louisiana. The field is located in northern Louisiana, near the easterly border of the state, and nearly one-third of the distance between the northerly and southerly borders.

(2) Applications of six independent producers, Tidewater Oil Co. (Docket No. CI61–125), Pan American Petroleum Corp. (Docket No. CI61–164), Socony Mobil Oil Co., Inc. (Docket No. CI61–254), Humble Oil & Refining Co. (Docket No. CI61–307), Union Producing Co. (Docket No. CI61–318), and J. Ray McDermott & Co., Inc. (Docket No. CI61–1240), for authorization to sell to Amer-

ican Louisiana natural gas produced in the Holly Ridge Field. The sales are to be made pursuant to gas purchase contracts entered into in May, June and July of 1960, and cover proved recoverable reserves of 29,930 Mcf (at 14.73 psia). Average daily takes are to be sufficient to deplete 91% of the committed reserves in 20 years, and American Louisiana may take between 75% and 125% of that average on any one day. The producers are to make delivery of the gas to American Louisiana in the Holly Ridge Field. The gas is to be delivered at sufficient pressure (but not in excess of 1050 pounds) to allow the gas to enter American Louisiana's lateral. The initial base price specified in each of the six gas purchase contracts is 18.25¢ per Mcf (at 15.025 psia). In each of the contracts, American Louisiana agrees to reimburse the producer for 75% of 2.0¢ of the severance tax presently imposed.

The proceeding came on for hearing before the Examiner on April 10, 11, 12, and 13, 1961, and September 6, 1961. Evidence both oral and documentary was introduced by the applicants; and documentary evidence, by the Commission Staff. Cross-examination of witnesses was conducted by the Staff.

Prior to the commencement of the hearing, the Public Service Commission of the State of New York filed a notice of intervention in the proceedings; and Consolidated Edison Co. of New York, Inc., a petition to intervene. Thereafter, most of the applicants filed "answers," "objections," "protests" or "motions to dismiss" whereby they requested that said state commission and company be denied leave to intervene. This Commission has not yet taken action in the premises. The Examiner permitted the State commission and company tentatively to participate in the hearing, and accorded them an opportunity to file briefs, subject to the granting by this Commission of leave to intervene, and with the qualification that if such leave be denied, the participation of the New York Commission and Consolidated Edison should go for naught.

On April 24, 1961, following the conclusion of the applicant's cases-in-chief, the Staff made a motion to dismiss the six independent producer proceedings. At the request of the Staff, the Examiner referred the motion to the Commission for determination. Thereafter, the Staff filed a brief in support of its motion, and all of the applicants except J. Ray McDermott & Co., Inc., filed briefs in opposition thereto. On May 24, 1961, the Commission directed that the motion to dismiss be referred to the Examiner for disposition in the instant decision.

On September 6, 1961, the proceedings were submitted for consideration and decision by the Examiner upon the evidence presented, the briefs filed with the Commission respecting the motion to dismiss, and a statement which the New York Public Service Commission made at the hearing respecting its position.

Applicants introduced evidence at the hearing in the attempt to show that the Commission should issue certificates to the six independent producers authorizing the sales at 18.25¢ per Mcf (at 15.025 psia), despite the Commission's Statement of General Policy No. 61–1 (F.P.C. *Rules of Practice and Procedure*, Sec. 2.56), which fixes a rate guidance standard of 17.0¢ per Mcf (at 15.025 psia) as the initial service rate for independent producer sales made in what the Commission has prescribed as the Northern Louisiana Area.

The New York Public Service Commission argues that the record is inadequate to justify unconditional certification of the sales; and that if the sales are authorized at all, the certificates should be so conditioned as to permit an initial price no higher than 15.5¢ per Mcf.

The Commission Staff hold to their position that the motion to dismiss should be granted. What the staff position is should the motion be denied, is not clear.

MOTION TO DISMISS

The Staff, in their motion to dismiss, aver,

> that an applicant who (1) proposes an out-of-line initial price, (2) is unable to adduce evidence sufficient in law to call for an exercise of Commission discretion as to the propriety of such price, and (3) has not commenced service under temporary authority, must himself "seek a certificate appropriately conditioned,"

This position is without merit. The producer applicants are entitled to undertake to establish that they should have a price higher than the guideline rate for the Northern Louisiana Area specified in Policy Statement No. 61–1. The Policy Statement declares as follows:

> * * * in the absence of compelling evidence calling for other action by us, proposed initial sales of natural gas by independent producers which include rates higher than those indicated in the appendix attached to this statement [which specifies 17.0¢ per Mcf (at 15.025 psia) for the Northern Louisiana Area] shall be denied a certificate or certificated only upon the condition that lower rates be filed, * * *

Applicants in good faith attempted to make a showing that a price higher than 17.0¢ is justified.

The motion to dismiss is denied.

CONSIDERATION OF MERITS OF APPLICATIONS

Applicants have failed to produce "compelling" evidence, or any persuasive evidence, that the producer sales should be authorized without the certificates being conditioned upon the sales being made at the area price level for northern Louisiana prescribed in Policy Statement No. 61–1. Accordingly, the certificates hereinafter issued to the six independent producers will be so conditioned.

As the Examiner interprets the briefs which have been filed, only applicants American Louisiana, Pan American and Tidewater now object to the price condition being imposed.

The arguments which these three applicants advance in the attempt to justify a higher price than 17.0¢ will be briefly adverted to. Said three applicants make a protest against Policy Statement No. 61–1; and in effect claim that the Commission's prescribing that all of northern Louisiana should be a separate area, and its prescribing a guide rate of 17.0¢ for all of such area, are not justified. In contradistinction to the 17.0¢ per Mcf (at 15.025 psia) for the Northern Louisiana Area (which embraces the Holly Ridge Field), the Policy Statement specifies a guideline rate of 21.25¢ per Mcf (at 15.025 psia) for southern Louisiana, which is designated the Southern Louisiana Area; and a guideline rate of 21.5¢ (at 15.025 psia) for Mississippi, which is designated the Mississippi Area.

American Louisiana introduced evidence that in the Southern Louisiana Area, it has been purchasing gas at 18.25¢ and 20.0¢ per Mcf for several years. It claims that the Holly Ridge Field is in the same or an analogous gas production area, and therefore that the 18.25¢ price for the Holly Ridge gas is warranted. Pan American argues similarly that the price of 18.25¢ for the sales made in the Holly Ridge Field is justified by the prices which producers charge in south Louisiana and Mississippi.

These attacks upon the establishment of all of northern Louisiana as a separate area, and the 17.0¢ per Mcf rate standard in such area, are specious; and fall before the considerations which led the Commission to adopt the various areas and price levels set out in Policy Statement No. 61–1.

736–330—64——53

In the Policy Statement, the Commission declared as follows:

> * * * The geographical areas which we have used are convenient and well known. * * *
>
> In arriving at the price levels for the various areas * * *, we have considered all of the relevant facts available to us. Such consideration included cost information from all decided and pending cases, existing and historical price structures, volumes of production, trends in production, price trends in the various areas over a number of years, trends in exploration and development, trends in demands, and the available markets for the gas.

And in *Panhandle Eastern Pipe Line Co.*, Opinion No. 350, 27 FPC 35 at 42, the Commission said:

> It would defeat our purpose of simplifying and clarifying producer regulation, if every individual proceeding were to become a forum for attacking the area standards and we were to begin varying those standards from case to case.

The promulgation of Policy Statement No. 61–1 was within the Commission's authority. *Wisconsin* v. *Federal Power Commission* (App. D.C.), decided Nov. 30, 1961, slip opin. pp. 7–8, 15–19. Two Courts of Appeals have expressed their approval of the Commission's action in issuing the Policy Statement. *J. M. Huber Corp.* v. *Federal Power Commission* (C.A. 3), 294 F. 2d 568, 570; *Sohio Petroleum Co. v. Federal Power Commission* (C.A. 10), decided Dec. 19, 1961, slip opin. p. 3.

American Louisiana, Pan American and Tidewater point to evidence that there are two certificated sales in the Northern Louisiana Area at prices higher that 17.0¢ (at 15.025 psia). One of these sales is to Gulf Oil Corp. at a price of 18.5¢; the other is to The California Co. from the Lake St. John Field in Tensas Parish at a price of 21.5¢. Said applicants also note that there are two intrastate sales in the Northern Louisiana Area at 18¢ and 19¢, respectively.

These sales do not militate against the soundness of the guideline rate for the Northern Louisiana Area being fixed at 17.0¢. Deliveries under The California Co. sales will not commence until in or about 1965. See *South Georgia Natural Gas Co*, 22 F.P.C. 211, 220. If in settling upon the area guide rate which it prescribed the Commission gave but little consideration to The California Co. sale and to the two intrastate sales, its method was in accord with judicial precedent. "* * * the 'line' referred to in Catco may properly be referenced to relevant existing producer prices under which substantial amounts of natural gas move in interstate commerce." *United Gas Improvement Co.* v. *Federal Power Commission* (C.A. 9), 283 F. 2d 817, 823. According to the evidence which applicants adduced, the sale to Gulf Oil Corp. is the only sale in the Northern Louisiana Area at a price in excess of 17.0¢ where the gas now moves in interstate commerce.

In contrast to this single sale, the Commission, in the period of one and one-half years immediately prior to the adoption of Policy Statement No. 61–1 on September 28, 1960, issued permanent certificates for sales in number and at base prices as follows in what is now the Northern Louisiana Area: one sale at 16.0¢ per Mcf; thirteen sales at 16.5¢ per Mcf; and two sales at 17.0¢ per Mcf (all at 15.025 psia).[1]

---

[1] Sale at 16.0¢ per Mcf: *Austin E. Stewart*, Docket No. G–17802 (certificate issued July 9, 1959). Sales at 16.5¢ per Mcf: *Mobley & Stephens*, Docket No. G–16562 (certificate issued June 19, 1959); *Pan American Petroleum Corp.*, Docket No. G–16465 (certificate

As the Commission said in *Panhandle Eastern Pipe Line Co., supra*, at page 44, concerning the "'Other' Oklahoma area," so here: "This pattern of presently certificated sales in the area establishes the line for the proposed sales and shows a reasonable relationship between the Policy Statement area ceiling and existing sales." Obviously, to the extent that the guide rate of 17.0¢ was based upon the pattern of existing prices in the area, such rate is justified.

American Louisiana introduced evidence that since 1953 it has followed a consistent policy of paying an initial price of 18.25¢ per Mcf for gas delivered in the fields to which it has to construct laterals. This circumstance is immaterial. The Commission's Policy Statement No. 61–1 takes precedence over American Louisiana's policy.

American Louisiana, Tidewater and Humble note that the Holly Ridge Field is situated some 130 to 150 miles closer to American Louisiana's markets than the gas located farther down its line, in southern Louisiana, where the price indicated by Policy Statement No. 61–1 for initial service is 21.5¢ per Mcf; and argue that, ergo, a price of at least 18.25¢ for the Holly Ridge gas is warranted. This argument is not convincing. Assuming for the purpose of the discussion that distance from market is an element which should enter into a determination of a proper initial price, such element is more than offset by other considerations of which the Examiner takes notice as matters of specialized knowledge. These are the following: northern Louisiana has a history of lower prices than southern Louisiana; sales in southern Louisiana started later than in northern Louisiana; competition for gas is stronger in southern Louisiana; drilling costs in southern Louisiana are higher; there are differences between northern and southern Louisiana gas fields in geological characteristics; and in southern Louisiana there are some off-shore production problems.

Lastly, Pan American correctly states that the 18.25¢ per Mcf price is not higher than American Louisiana's weighted average cost of purchased gas. In a similar vein, American Louisiana, Socony, Tidewater, Humble and Union correctly represent that the price proposed in the instant producer contracts (18.25¢ plus 1.5¢ tax reimbursement) is less than the weighted average cost of 19.29¢ exclusive of tax reimbursement for American Louisiana's gas purchased from producers. These circumstances are immaterial.

It is a justifiable inference from the record that the proposed sales of natural gas in question, either at 17.0¢ per Mcf or at 18.25¢ per Mcf, would not result in a triggering of general price rises in the area involved.

The position taken by the New York Public Service Commission that the sales should only be certificated at a price no higher than 15.5¢ per Mcf, is contrary to Policy Statement No. 61–1, and cannot prevail.

The evidence shows that there is a market for the gas which is the subject matter of the contracts here involved; that the six producers have the ability to

issued September 28, 1959); *Southwest Gas Production Co., Inc., et al.*, Docket No. G–16764 (certificate issued September 28, 1959); *Southwest Gas Production Co., Inc., et al.*, Docket No. G–17404 (certificate issued December 22, 1959); *Atlantic Refining Co.*, Docket No. G–15541 (certificate issued March 18, 1960); *W. C. Feasel, et al.*, Docket No. G–16922 (certificate issued May 5, 1960); *Pan American Petroleum Corp.*, Docket No. G–17877 (certificate issued May 5, 1960); *Hunt Oil Co.*, Docket No. G–18029 (certificate issued May 5, 1960); *Humble Oil & Refining Co.*, Docket No. G–18289 (certificate issued May 5, 1960); *Phillips Petroleum Co.*, Docket No. G–18300 (certificate issued May 5, 1960); *Socony Mobil Oil Co., Inc.*, Docket No. G–17955 (certificate issued July 14, 1960); *Bodcow Co.*, Docket No. G–18781 (certificate issued July 14, 1960); *H. L. Hunt et al.*, Docket No. G–20490 (certificate issued October 31, 1960). Sales at 17.0¢ per Mcf: *T. L. James & Co., Inc.*, Docket No. G–19407 (certificate issued July 14, 1960); *M. B. Rudman, et al.*, Docket No. G–19466 (certificate issued September 20, 1960).

furnish such gas; that upon the construction of the proposed supply lateral of American Louisiana, its facilities will be adequate to take the gas; that the reasonably-estimated cost of the supply lateral is $840,000; that such lateral is economically feasible; that American Louisiana will defray such cost from funds on hand; and that construction of the proposed lateral, in addition to enabling American Louisiana to purchase gas in the Holly Ridge Field, will give said pipeline company access to additional existing and potential gas reserves in the general area of such field.

FINDINGS AND CONCLUSIONS

Upon consideration of the evidence adduced and the briefs of counsel, it is further found and concluded that:

(1) Applicants American Louisiana Pipe Line Co., Tidewater Oil Co., Pan American Petroleum Corp., Socony Mobil Oil Co., Inc., Humble Oil & Refining Co., and Union Producing Co., are each a "natural-gas company" within the purview of the Natural Gas Act; and upon the commencement of the sale by applicant J. Ray McDermott & Co., Inc., hereinafter authorized, said last named applicant will become a "natural-gas company" within the purview of such Act.

(2) The sales of natural gas, hereinbefore described, by Tidewater Oil Co., Pan American Petroleum Corp., Socony Mobile Oil Co., Inc., Humble Oil & Refining Co., Union Producing Co., and J. Ray McDermott & Co., Inc., to American Louisiana Pipe Line Co. (more fully described in the application) will be made in interstate commerce, subject to the jurisdiction of the Commission; and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The facilities hereinbefore described involved in Docket No. CP61-24 (more fully described in the application in such proceeding), which American Louisiana proposes to construct and operate, are to be used for the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, as an integral part of American Louisiana's existing natural-gas pipeline system; and the construction and operation of such facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The facilities referred to in Finding and Conclusion (3) are adequate to render the service which American Louisiana proposes and which said applicant is hereinafter authorized to provide.

(5) American Louisiana, Tidewater, Pan American, Socony, Humble, Union, and J. Ray McDermott are each able and willing properly to do the acts and to perform the service proposed by them, respectively, in the proceedings Docket Nos. CP61-24, CI61-125, CI61-164, CI61-254, CI61-307, CI61-318 and CI61-1240; and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) The sales of natural gas by Tidewater, Pan American, Socony, Humble, Union, and J. Ray McDermott for which said applicants seek authorization, and the construction and operation for which American Louisiana seeks authorization, are required by the public convenience and necessity; and certificates therefor should be issued as hereinafter ordered and conditioned.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) Certificates of public convenience and necessity be and the same are hereby issued, in Docket Nos. CI61–125, CI61–164, CI61–254, CI61–307, CI61–318, and CI61–1240, upon the terms and conditions of this order to Tidewater Oil Co., Pan American Petroleum Corp., Socony Mobil Oil Co., Inc., Humble Oil & Refining Co., Union Producing Co., and J. Ray McDermott & Co., Inc., authorizing the sales by them to American Louisiana Pipe Line Co. involved in such proceedings, hereinbefore described and more particularly described in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor.

(B) A certificate of public convenience and necessity be and the same is hereby issued, in Docket No. CP61–24, upon the terms and conditions of this order, to American Louisiana Pipe Line Co., authorizing said applicant to construct and operate the facilities involved in such proceeding, hereinbefore described and more particularly described in its application, for the transportation and sale of natural gas as therein set forth.

(C) As a condition attached to each of the certificates issued to the producer applicants in paragraph (A) hereof, and to the exercise of the rights thereunder, the initial price for the sales by the respective producers shall be 17.0¢ per Mcf (at 15.025 psia), exclusive of tax reimbursement.

(D) The certificates issued in paragraphs (A) and (B) hereof shall be deemed to be accepted and in full force and effect, unless refused in writing and under oath within 30 days from the issuance of this order; and the facilities authorized by said certificates shall be constructed and placed in actual operation within six months from the issuance of this order.

(E) The general terms and conditions set forth in paragraph (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificates referred to in paragraph (A) hereof, and to the exercise of the rights granted hereunder; and the general terms and conditions set forth in paragraph (c)(1), (c)(3), (c)(4), and (e) of such section 157.20 shall attach to the issuance of the certificate referred to in paragraph (B) hereof, and to the exercise of the rights granted hereunder.

(F) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Commission's Regulations under the Natural Gas Act, requiring the filing of rate schedules for the service herein authorized; and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceedings now pending or hereafter instituted against the applicants. Further, the action taken in these proceedings shall not foreclose or prejudice any future proceedings or objection concerning any price for the gas sold under, or related provision in, the gas purchase contracts here involved.

HOWELL PURDUE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. G–19376

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 19, 1962)

On January 12, 1962, Columbia Gulf Transmission Company (Applicant) filed in Docket No. G–19376 an application in compliance with Paragraph (D) of the

Commission's order issued December 28, 1959, in said docket, for authority to acquire and operate an experimental compressor unit on a permanent basis, all as more fully set forth in the application.

In the order of December 28, 1959, Applicant received authority to construct and operate an additional 10,500 horsepower compressor engine unit, consisting of a gas turbine with modified aircraft jet engine driving a centrifugal compressor, at its existing compressor station No. 2 near Clementsville, Kentucky, for experimental purposes to test the feasibility of using this new type of compressor unit. If Applicant decided to acquire and operate the unit on a permanent basis, it was required by said order to file an application for authorization to acquire and operate the facility on a permanent basis at least 60 days prior to the end of the test period.

Accordingly, Applicant has filed the subject application and states that the experimental unit has proven to be a success and that it intends to use the facility for standby operations until sometime in the future when it will be used in connection with a system capacity increase.

The predicted construction cost of the subject facility was $1,554,000. The actual cost will be $1,647,200 due to a required increase in the size of the main building to accommodate the equipment.

Due notice of the filing of the subject application and opportunity for hearing has been given by publication in the Federal Register on March 23, 1962 (27 FR 2749).

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order of December 28, 1959, in Docket No. G–19376 (22 FPC 1149) be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order of December 28, 1959, in Docket No. G–19376 (22 FPC 1149) be and the same is hereby amended to authorize Applicant, Columbia Gulf Transmission Company, to acquire and operate the compressor unit hereinbefore described, as more fully described in the application in this proceeding, as a permanent installation for standby purposes unless authorized for other purposes in subsequent orders of the Commission.

(B) In all other respects the Commission's order of December 28, 1959, in Docket No. G–19376 (22 FPC 1149) shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–2206

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING WITHDRAWAL OF PETITIONS

(Issued April 19, 1962)

On October 6, 1961, El Paso Natural Gas Company (El Paso) filed a motion to withdraw petitions and a petition to amend the Commission's order, as amended, issued September 18, 1953, in Docket No. G–2206, 12 FPC 1234. The subject order authorized El Paso to construct and operate ten meter stations to serve natural gas to The Navajo Tribe (Tribe) for distribution in Window Rock, Hunters Point, St. Michaels, Ganado, Greasewood, and Leupp, all in Arizona, and Shiprock, Toadlena, Tohatchi, and Twin Lakes, all in New Mexico.

On October 11, 1954, El Paso filed a petition for an extension of time in which to commence construction of the foregoing facilities. On March 23, 1959, El Paso filed a petition to further amend the order of September 18, 1953, so as to delete the facilities necessary for service to Toadlena, Tohatchi, and Twin Lakes, New Mexico, and Hunters Point, Ganado, Greasewood, and Leupp, Arizona. Said petition also requested an extension of time to commence construction of facilities for service to St. Michaels and Window Rock, and further requested permission to withdraw the petition filed October 11, 1954. Facilities for natural gas service to Shiprock had been completed and placed in actual operation.

The subject motion and petition filed October 6, 1961, requests permission to withdraw El Paso's petitions filed October 11, 1954, and March 23, 1959, and, further, said motion and petition requests the Commission to amend the order issued September 18, 1953, so as to delete therefrom authorization for the facilities necessary for service to Toadlena, Tohatchi, and Twin Lakes, New Mexico, and Window Rock, Hunters Point, St. Michaels, Ganado, Greasewood, and Leupp, Arizona.

El Paso states that natural gas service for three new areas, to be rendered pursuant to a budget-type certificate authorization issued in another proceeding, together with continued service for the Shiprock area will satisfy the Tribe's present requirements for natural gas. The Tribe consents to the subject proposed deletion of authorization of facilities.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued September 18, 1953, in Docket No. G–2206, as amended, be further amended as hereinafter ordered.

(2) The motion to withdraw El Paso's petitions to amend filed on October 11, 1954, and March 23, 1959, in Docket No. G–2206, appears to be in the public interest and should be granted as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued September 18, 1953, in Docket No. G–2206, as amended, is hereby further amended by deleting therefrom authorization for the construction of facilities necessary to serve Toadlena, Tohatchi, and Twin Lakes, all in New Mexico, and Window Rock, Hunters Point, St. Michaels, Ganado, Greasewood, and Leupp, all in Arizona.

(B) The motion to withdraw El Paso's petitions to amend filed on October 11, 1954, and March 23, 1959, in Docket No. G–2206, is hereby granted.

(C) In all other respects, said order issued September 18, 1953, shall remain in full force and effect.

UNION ELECTRIC COMPANY, DOCKET NO. E–6927

OPINION AND ORDER UPON A DECLARATION OF INTENTION

(Issued April 19, 1962)*

Syllabus

1. Commission *holds* that the non-navigable East Fork of the navigable Black River is a stream over which Congress has jurisdiction under the Commerce Clause. P. 806.

---

* Designated Commission's Opinion No. 356; initial decision appears on p. 809. Rehearing denied by order issued June 20, 1962, 27 FPC 1366. Set aside, *Union Electric Company* v. *F.P.C.*, 326 F. 2d 535 (CA8–1964); cert. granted on October 12, 1964.

2. Rejecting view that "the interests of interstate commerce" in Section 23(b) [of the FPA] are limited to "effect upon navigable capacity", Commission *holds* [for the first time] that the development of power for interstate transmission and use is such an effect upon the interests of interstate commerce within the meaning of Sec. 23(b) that a project proposed for that purpose, which is to be constructed in and will utilize non-navigable waters over which Congress has jurisdiction under commerce clause, *must be licensed.* P. 808.
3. Instant proposal found sufficient evidence of East Fork's potential to affect interstate commerce to cause requirement of license, even if it were not shown that downstream navigable capacity will be affected—however Commission concurs in conclusion that it has license jurisdiction because of effect on downstream navigation. P. 808.
4. Commission *requires* Union Electric to obtain license for its proposed Taum Sauk project, pursuant to provisions of Federal Power Act. P. 809.

Duane Allen Patterson for Union Electric Company

Joseph B. Hobbs for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

Ross, *Commissioner*

The Commission is presented with the question whether or not a license is required under Part I of the Federal Power Act for the construction of a pumped storage, hydroelectric generating project upon a non-navigable tributary of an interstate navigable stream. The Union Electric Company (Union) proposes to build such a project, known as the Taum Sauk project, to develop 350,000 kw of peaking power for its interstate system by damming the East Fork of the Black River at its confluence with Taum Sauk Creek in Reynolds County, Missouri.

The project consists of a man-made upper pool on top of a mountain, at 1,515 to 1,625 ft. above sea level, capable of holding 4,350 acre feet of water. The upper pool is connected with two 175,000 kw generating-pumping turbines at 750 ft. elevation by a 6,400 ft. pressure tunnel and conduit. An open, tail water channel connects this plant with the adjoining lower pool which is created by a 60-foot high dam across the East Fork.

The dam spillway is at 750 ft. above sea level. It is planned to maintain the water level at 734 ft., there being 4,350 acre feet capacity between 734 and 750. During the project's eight-hour maximum 350,000 kw generating cycle, water from the upper pool at an average rate of 6,800 cfs will enter the lower pool. During the 11-hour pumping cycle, which requires an average of 392,000 kw, between 3,750 and 4,900 cfs will be pumped into the upper pool.

At 715 ft.—on the dam—there will be sluice gates capable of discharging 2,000 to 2,800 cfs, depending on the level of water behind the dam, into the natural stream bed of the East Fork. It is contemplated that, after the initial impounding of water, all of the natural flow into the lower pool will be released through the sluice gates. Because of the varying inflow and constantly changing head of impounded water above the gates, the sluices would require continual adjustment to permit the natural flow and only the natural flow to pass. But, absent mechanical or human failure or a change in the operation, it would be possible to so control the flow except in periods of high water.

The East Fork is a flashy, non-navigable stream with recorded flows from less than one cf to over 33,000 cfs, its estimated average flow at the proposed dam site being 105 cfs. The Black River is navigable from its confluence with the East Fork, four miles below the proposed dam site, and flows interstate, joining the White River in Arkansas.

All the basic facts in the record concerning the proposed project and its effect upon water resources related to it were stipulated. From the facts, as stipulated, the examiner found that the East Fork of the Black River is a non-navigable stream over which Congress has jurisdiction under the commerce clause. He found further that the project, under contemplated normal operation, would have an inevitable effect upon the navigability of the Black River during periods of extreme flows and that it created a capability to affect radically the navigable capacity of the Black River at any time. For these reasons he ruled that the project had to be licensed, citing *Citizens Utilities Co.* v. *F.P.C.*, 279 F. 2d 1 (1960), and *Carolina Aluminum Co.*, 19 FPC 704 (1958).

Section 23(b) of Part I of the Federal Power Act which concerns the licensing of projects on non-navigable streams reads in pertinent part as follows:

> * * * Any person, association, corporation, State, or municipality intending to construct a dam or other project works across, along, over, or in any stream or part thereof, *other than those defined herein as navigable waters, and over which Congress has jurisdiction under its authority to regulate commerce* with foreign nations and among the several States shall before construction file declaration of such intention with the Commission, whereupon the Commission shall cause immediate investigation of such proposed construction to be made, and *if upon investigation it shall find that the interests of interstate or foreign commerce would be affected by such proposed construction* such person, association, corporation, State or municipality shall not construct, maintain, or operate such dam or other project works until it shall have applied for and shall have received a license under the provisions of this Act. If the Commission shall not so find, and if no public lands or reservations are affected, permission is hereby granted to construct such dam or other project works in such stream upon compliance with State laws. [41 Stat. 1075, 49 Stat. 846; 16 U.S.C. 817] [Emphasis supplied.]

This subsection deals exclusively with projects to be located on non-navigable streams. A license is required for such a project only if the Commission finds (1) that Congress has jurisdiction over the non-navigable stream under its commerce powers and (2) that the proposed construction will affect the interests of interstate or foreign commerce. We will take these points up in order.

The Jurisdiction of Congress Over the Stream

We reach the question of whether or not the construction of the Taum Sauk project affects the interests of interstate commerce only if we first determine that Congress has jurisdiction over the East Fork of the Black River. The scope of Congress' jurisdiction over the water resources of the nation has been a matter of continuing controversy since the turn of the last century. We think it important, therefore, first to determine the scope of that jurisdiction under the commerce clause; in the light of the history of the Federal Power Act of 1920.

Before the turn of this century, private interests began to recognize the advantages to be derived from harnessing the nation's water power to produce large amounts of inexpensive electric energy. Since most of the best dam sites to accomplish this purpose were either on navigable waters, on public lands or on forest lands of the United States, an Act of Congress was required in order to develop the power. More and more bills were introduced in Congress to permit unhampered, private development of the nation's water resources, until in 1908, the conservationists, led by President Theodore Roosevelt, announced that they would attempt to block all such legislation that resulted in a free grant in perpetuity of the nation's water resources to private interests. The long and

often bitter fight which ensued resulted in the passage in 1920 of the Federal Water Power Act, now Part I of the Federal Power Act.

The jurisdiction of Congress over navigable waters was well established prior to 1900 as an incident of its commerce powers, although there was dispute for some years over what constituted "navigation." *United States* v. *Appalachian Power Co.*, 311 U.S. 377 (1940), reversing 107 F. 2d 769 (4th Cir., 1939); *Wisconsin Public Service Corp.* v. *F.P.C.*, 147 F. 2d 743 (7th Cir., 1945), *certiorari* denied, 325 U.S. 880.

The private interests attempting to secure favorable water power legislation insisted that Congress' sole jurisdiction over water resources was over those waters actually used for navigation. The conservationists, however, felt that a river system, navigable in part, was a unit from its forest headwaters to its mouth and that Congress had jurisdiction over the whole. In order to justify such broad jurisdiction in the Federal government under the law and attitudes then existing, the conservationists pointed out that navigation on the lower reaches of a river system could not be protected and developed unless Congress had jurisdiction over the upper portion to control floods, low water, hydraulic mining, soil erosion and stream pollution. Based on this reasoning, they felt it within the power of Congress to control the development of the whole river system in the national interest to insure its maximum development for all beneficial public purposes, including domestic and municipal water supply, agricultural and industrial use, the development of power and recreation as well as navigation.

The conservationists received support for their broad concept of jurisdiction when the United States Supreme Court ruled that under the Rivers and Harbors Act of 1890, 26 Stat. 454, Congress had jurisdiction under the commerce clause to prevent construction in a non-navigable river which affected the navigable capacity of downstream waters. *United States* v. *Rio Grande Dam and Irrigation Co.*, 174 U.S. 690 (1899). Using the rationale of the Supreme Court in that case, the Special Congressional National Waterways Commission, in its final report in 1912, concluded that the authority of Congress reaches to the sources of every stream (page 46). On this basis, the Waterways Commission further declared that Congress might withhold its permit for construction in or over streams, either navigable or non-navigable, or might grant its permit with conditions (pages 47, 48). The Commission stated:

> * * * With the increasing unity of our national life and the growing necessity of securing for human needs the maximum beneficial use of the waters of every stream it will become increasingly necessary to treat every stream with all its tributaries as a unit. In the nature of the case so comprehensive a policy could be successfully administered only by the Federal Government, and consequently the eventual desirability of Federal control is easy to predict (p. 52).

The legislative history of the Federal Water Power Act demonstrates the struggle between the two principal competing forces, the one desirous of using the power potential of the nation's water resources with as little restriction as possible and, therefore, attempting to limit the scope of Congress' exercise of jurisdiction over streams; the other struggling to preserve all possible water resources for their most beneficial use by present and future generations and, therefore, attempting to exercise Congress' jurisdiction to the full.

The definition of navigable waters in the House amendment to Senate Bill 1419, 65th Congress, 2d session, 1918, was broad enough to include the waters of a river system from its mouth to its source, thereby including the non-navigable tributaries of navigable waters. It provided:

> "Navigable waters" means all streams or parts of streams, and other bodies of water or parts thereof, over which Congress has jurisdiction under its authority to regulate commerce with foreign nations and among the several states.

The committee of conference, however, working under tremendous pressure in the 3d session of the 65th Congress, proposed the following definition:

> That the term "navigable waters" as used in this Act and as applied to streams shall be construed to include only such streams or parts of streams as are in their ordinary natural condition used for the transportation of persons or property in interstate or foreign commerce, or which through improvement heretofore or hereafter made have been or shall become usable in such commerce.

The new definition was limited to streams navigable in fact, and indeed, excluded the shoals and falls which held the major water power potential. This fact made the definition unacceptable to the conservationists and resulted in the La Follette filibuster in the closing hours of the session on March 4, 1919, which postponed any water power legislation until the next Congress.

The 66th Congress, by compromise, achieved the final definition, which is as follows:

> "Navigable waters" means those parts of streams or other bodies of water over which Congress has jurisdiction under its authority to regulate commerce with foreign nations and among the several states, and which either in their natural or improved condition notwithstanding interruptions between the navigable parts of such streams or waters by falls, shallows, or rapids compelling land carriage, are used or suitable for use for the transportation of persons or property in interstate or foreign commerce, including therein all such interrupting falls, shallows, or rapids, together with such other parts of streams as shall have been authorized by Congress for improvement by the United States or shall have been recommended to Congress for such improvement after investigation under its authority.

It is most significant, however, that when the definition of "navigable waters" was changed by the conference committee of the 65th Congress to exclude non-navigable tributaries, new language *specifically* dealing with the licensing of projects in waters *not* navigable under that definition was added to Section 23 of the proposed Act, which theretofore had dealt exclusively with pre-existing rights. That new language was amended to its final form in Section 23(b), as set forth above, and clearly manifests Congressional intent to claim its jurisdiction over non-navigable waters as well as waters navigable under the definition. The viewpoint of the conservationists thus prevail. As it pertains to this case, the question then becomes: Is the non-navigable East Fork of the navigable Black River a stream over which Congress has jurisdiction under the commerce clause?

The East Fork is one of three tributaries which join to form the Black River. Some of the waters of each of the three tributaries originate in the Clark National Forest which lies approximately seven air miles to the north and 5½ miles to the west of the proposed dam site of the Taum Sauk project. Fourteen and one-half stream miles south of the proposed dam site is the head of the existing Clearwater Dam flood control pool on the Black River.

The Clark National Forest was authorized by the National Forest Reservation Commission on August 30, 1933, under the provisions of the Act of March 1, 1911 (36 Stat. 961), which authorizes and directs the Secretary of Agriculture to locate and recommend for purchase forest land within the watersheds of navigable streams as in his judgment may be necessary to the regulation of the flow of

navigable streams or for the production of timber. The Clearwater Flood Control Dam was authorized by Act of June 25, 1938 (52 Stat. 1215), "for the benefit of navigation and the control of destructive floodwaters and other purposes."

Congress has, then, already exercised its commerce powers over water resources in connection with the river system whose source is upstream from the proposed project and which extends interstate to where it joins first the White River and then the Mississippi River in Arkansas and eventually empties into the Gulf of Mexico. The East Fork of the Black River is but a small part of this river system, but one over which we hold Congress has jurisdiction under the commerce clause.

The Effect of the Project Upon Interstate Commerce

Having established that Congress has jurisdiction over the stream, we must now determine whether the construction of the proposed project will affect the interests of interstate or foreign commerce. In the past the Commission has limited its investigations in this regard to a determination of whether a proposed project is capable of affecting the navigable capacity of any downstream navigable waters. The presiding examiner in this case similarly limited his decision.

On the basis of the facts stipulated, he found that construction of the proposed project would have an inevitable effect upon the navigable capacity of the Black River during periods of high water; and further that the project would have the capability of substantially affecting that navigability at all times.

Staff counsel urged the presiding examiner to find that the interests of interstate commerce would be affected in another regard. It had been stipulated that the proposed project would use the waters of the East Fork to develop 350,000 kilowatts of peaking power for transmission and utilization in interstate commerce. Staff counsel urged that this effect upon the interests of interstate commerce was sufficient, by itself, to require a license for the Taum Sauk project.

The examiner stated that he felt it unnecessary to decide the issue thus presented because of his findings concerning effect upon navigable capacity. Although he did not base his decision thereon, he did make the following finding of fact:

> The proposed Taum Sauk Project will be constructed. operated and maintained for the development of power to supply markets not only in Missouri but also in the State of Illinois, thereby affecting the interests of interstate or foreign commerce.

A similar argument was advanced by staff and rejected by the Circuit Court in *United States* v. *Appalachian Power Co.*, 107 F. 2d 769 (4th Cir., 1938), at the same time that that court endorsed a narrow concept of navigability. The Circuit Court was reversed on this latter ground by the United States Supreme Court at 311 U.S. 377 (1940) in a way which made it unnecessary to decide issues presented only in connection with non-navigable streams. This is the first time that the Commission itself has decided the issue, whether an effect on the interests of interstate commerce other than an effect on navigable capacity is sufficient to require the licensing of projects on non-navigable waters under the mandate of Section 23(b).[1] Although it may be technically unnecessary to the decision in this case, an issue of such importance must not be allowed to go unresolved any longer since there can be little doubt that this country in the

[1] In *California Oregon Power Company*, 13 FPC 1, 3, the Commission disagreed with the presiding examiner but did not state the basis for disagreement.

years ahead will become overwhelmingly more dependent upon the maximum development of its water resources in all their uses.

When in 1919, as discussed *supra*, specific provisions concerning the licensing of projects on non-navigable waters were first added to Section 23, they provided in part:

> * * * if the contemplated improvement is, in the judgment of the commission, desirable and justified in the public interest for the purpose of improving or developing a waterway or waterways *for the use or benefit of navigation in interstate or foreign commerce*, the applicant may receive a license under the conditions with all of the rights and privileges herein provided for streams or parts of streams used for the transportation of persons or property in interstate or foreign commerce in their ordinary, natural, or improved condition. [Emphasis supplied.]

These provisions failed of passage, together with the extremely narrow definition of navigable waters, as a result of the La Follette filibuster previously mentioned. When the next Congress passed the Water Power Act, most significantly all direct reference to navigation was removed from the above language and, instead, it was provided that the Commission shall require a license for a project on a non-navigable stream

> * * * if upon investigation it shall find that the interests of interstate or foreign commerce would be affected by such proposed construction * * *.

Union urges that the term "interests of interstate or foreign commerce" is limited in meaning under Section 23 to "navigable capacity of downstream navigable waters," and that these terms are synonomous as far as the purposes of the Federal Water Power Act are concerned. It points out that this was, in effect, the holding of the Circuit Court in the *Appalachian* case. In light of the explicit change wrought by the amendment to Section 23 noted above and our interpretation of the purposes of the Federal Water Power Act, we cannot agree with Union's contention.

In *First Iowa Coop.* v. *F.P.C.*, 328 U.S. 152 (1946), the United States Supreme Court recognized the Federal Water Power Act as "the outgrowth of a widely supported effort of the conservationists to secure enactment of a complete scheme of national regulation which would promote the comprehensive development of the water resources of the nation * * *" (p. 180). It stated further: "That it was the intention of Congress to secure a comprehensive development of national resources and not merely to prevent obstructions to navigation is apparent from the provisions of the Act" (pp. 180–1).

Contrary to the often suggested thesis that the 1920 Federal Water Power Act was concerned solely with promoting the use of water resources for the single purpose of power development while at the same time protecting navigation, the legislative history and the language of the Act, itself, indicate the broader intent to preserve the nation's water resources not only for power and navigational purposes, but for their most beneficial use, whatever its nature, in the present and the future. The conservationists reasoned that Congress could and should condition the use of the water resources over which it had jurisdiction in connection with its duty to protect and develop commerce to insure comprehensive development and use of these national resources for all "beneficial public uses," such as domestic and municipal supply, agriculture, industry and recreation. They noted that measures for the control of water for the purposes of power and navigation, such as reforestation and control of hydraulic mining, stream pollution and soil erosion, could also benefit these other public uses. Because of the essential nature of the resources, they did not wish it forever

committed to the single use of power development, and so they insisted on recapture provisions, to insure that if it is necessary in the public interest to emphasize a different use of a particular water resource in the future, this may be done upon a financial basis which is fair to all.

An example of the foresightedness of the early conservationists is to be found in a matter currently pending before the Commission. Plans are under consideration for a multi-purpose project for flood control, irrigation, recreation and 150,000 kw. power development which will inundate a single purpose 24,300 kw project licensed in 1929. The recapture provisions applicable to the early license, which was for a period of less than 50 years, may affect the economics of the proposed project if it is finally authorized.

If there had been any question concerning the broad purposes of the 1920 Act, they were removed by the amendments of 1935. At that time, for instance, all references to "navigation" were removed from Section 7 of the Act and reference to the development of "water resources for public purposes" was added. The Act in its present form clearly reflects the intent to permit the most comprehensive, multiple purpose development[2] of the water resources of the nation which is presently proposed, subject, however, to recapture by the people, at the end of the license period. The Act gives the Federal Power Commission the authority to refuse to license a project that does not make the most comprehensive and best use of the water resources of the region involved. The constitutional power of Congress to so condition the use of water resources under its jurisdiction was upheld by the Supreme Court in the *Appalachian* case, *supra*, at page 399, when it stated:

> In our view, it cannot properly be said that the constitutional power of the United States over its waters is limited to control for navigation. By navigation respondent means no more than operation of boats and improvement of the waterway itself. In truth the authority of the United States is the regulation of commerce on its waters. Navigability, in the sense just stated, is but a part of this whole. * * * That authority is as broad as the needs of commerce.

In view of these facts, we cannot hold, as requested by Union that "the interests of interstate commerce" in Section 23(b) are limited to "effect upon navigable capacity." On the contrary, we hold that the development of power for interstate transmission and use is such an effect upon the interests of interstate commerce within the meaning of Section 23(b) that a project proposed for that purpose, which is to be constructed in and will utilize non-navigable waters over which Congress has jurisdiction under the commerce clause, must be licensed.[3] If the water resource is one over which Congress has jurisdiction and if the water resource has the potential of affecting interstate commerce in any manner, it is our duty to license its use to preserve the rights of the people in the resource. In this case, the proposed development of power for interstate transmission and use is sufficient evidence of the East Fork's potential to affect interstate commerce to cause us to require a license, even if it were not shown that downstream navigable capacity will be affected. We concur, however, in the conclusion of the Examiner that the Commission has license jurisdiction because of effect on downstream navigable capacity.

History has proved the conservationists of the first years of this century correct and attests to the wisdom of the provisions of the Federal Power Act which preserved the nation's water resources for their most comprehensive and

---

[2] "including recreational purposes," (Section 10 as amended in 1935).

[3] The Commission's authority to issue a license for the proposed project on this basis is expressly set forth in Section 4(e).

beneficial use in the future while, at the same time, permitting their most comprehensive present proposed use. In a message to Congress on March 1, 1962, the President of the United States stated:

> Our nation's progress is reflected in the history of our great river systems. The water that courses through our rivers and streams holds the key to full national development. Uncontrolled, it wipes out homes, lives, and dreams, brings disaster in the form of floods; controlled, it is an effective artery of transportation, a boon to industrial development, a source of beauty and recreation, and the means for turning arid areas into rich and versatile cropland. In no resource field are conservation principles more applicable. By 1980, it is estimated, our national water needs will nearly double—by the end of the century, they will triple. But the quantity of water which nature supplies will remain almost constant.

The role of the Federal Power Commission in the control and preservation of our national water resources, when their use is proposed for power purposes, is to insure the most comprehensive and best use of those resources for the benefit of all of the people of the nation.

We adopt all of the findings of fact and decision of the presiding examiner as modified and supplemented by this decision.

The Commission orders:

(A) The request for oral argument is hereby denied.

(B) Union Electric Company is required to obtain a license for its proposed Taum Sauk Project works, pursuant to the provisions of the Federal Power Act.

DECISION

UPON A DECLARATION OF INTENTION

(Issued December 19, 1961)

BINDER, *Presiding Examiner:* This proceeding requires a determination whether a license is required under the Federal Power Act (Act) to construct, operate, and maintain a pumped-storage hydroelectric project known as the Taum Sauk Project to be located on the East Fork of the Black River at its confluence with Taum Sauk Creek, in Reynolds County, Missouri.

Union Electric Company (Union or Declarant) which proposes to construct, operate, and maintain such project contends that the Federal Power Commission (Commission or FPC) has no jurisdiction in the matter, that the granting of an FPC license is not required, and that the Taum Sauk Project may be constructed, operated and maintained upon compliance with State laws alone. In this connection Union filed a declaration of intention pursuant to Section 23(b) of the Act primarily for the purpose of obtaining an order holding that this Commission is without licensing jurisdiction in this matter. However, in view of the importance of the project to Union and its customers, Union filed with the Commission an application for a license authorizing the construction, operation, and maintenance of the project. The determination to be made in the licensing proceeding is not at issue here. This proceeding is limited to a determination whether the FPC has the power and authority to require a license authorizing the construction, operation and maintenance of the Taum Sauk Plant.

The project to be constructed will be a high-head pumped storage hydroelectric project. The proposed project works will consist of a concrete gravity dam approximately 60 feet high above its foundations and approximately 450 feet long, including 350 feet of overflow spillway with free crest at elevation 750

feet above mean sea level, U.S.G.S. datum, creating the "lower pool" with a total surface area of approximately 370 acres in the East Fork of the Black River and Taum Sauk Creek; the water impounded in the lower pool (consisting of approximately 6,000 acre-feet of which approximately 4,000 acre-feet would lie between elevations 735 and 750) being pumped against a dynamic head of approximately 811 feet into an energy storage reservoir designated the "upper pool"; the "upper pool," to be constructed on top of an adjoining mountain, to have a surface area of approximately 32 acres, and to impound approximately 4,000 acre-feet between elevations 1515 and 1625 within a rock-fill concrete-faced dike approximately 110 feet high; a 6,400-foot-long pressure tunnel and conduit, connecting the upper pool with a pumping and generating station on an open channel to the lower pool; two reversible units to pump water at night to the upper pool and to serve as generators during the day, each unit when generating to have a rated capacity of 175,000 kilowatts, two 138,000 volt transmission lines connecting the proposed installation with the Union Electric Company system.

The proposed project will be operated for the purpose of carrying peak loads on Declarant's system, for providing emergency generating capacity, and as otherwise appropriate to the operation of its system.

The facts with regard to the project works may be described generally as follows:

Initially, when the project plant is first employed in the generation of electric energy it is contemplated that the upper pool will have in storage up to a maximum of 4,350 acre-feet. The flow of water during generation of electricity from the upper pool to the lower pool will vary depending upon the amount of water contained in the upper pool. For example, when generating at a rate of 350,000 kilowatts, the rate of flow of water from the upper pool to the lower pool will vary depending on the amount of water in the upper pool. The lower the level of water in the upper pool the greater the rate of flow from the upper pool to the lower pool. For example, when the water in the upper pool is at a net head of 835 feet the flow from the upper pool to the lower pool is estimated to be at the rate of 5,800 cubic feet per second, and when the net head is 750 feet the rate of flow from the upper pool to the lower pool is estimated to be at 6,600 cubic feet per second.

It was also estimated that the average turbine discharge while generating would average as much as 6,800 cubic feet per second.

When the upper pool is filled there would be enough water stored to permit generation at the rate of 350,000 kilowatts to produce a total of approximately 2,750,000 kilowatt hours, corresponding to a full load operation of 350,000 kilowatts for about eight hours.

The operating cycle of the project works when pumping may be described as follows: When the project plant begins to pump water from the lower pool to the upper pool, the two units operating together at 200 revolutions per minute as a motor driven pump will deliver at approximately 4,900 cubic feet per second. Later when the upper pool is nearly filled, the rate of flow will decrease to about 3,750 cubic feet per second. It would take about 11 hours to fill the upper pool to 4,350 acre feet. The power absorbed by the motors varies from approximately 404,000 kilowatts when the upper reservoir is low to about 342,000 kilowatts when the reservoir is full, and at an average head about 392,000 kilowatts.

The dam for the lower pool will include an overflow spillway about 350 feet long with free crest at elevation 750 feet above mean sea level. The plans provide for a maximum water surface at the dam for the lower pool to be 763 feet above mean seal level, at which level the spillway would have a capacity to pass

a discharge of 70,000 cubic feet per second. An increase of one foot in the water surface at the spillway would result in a discharge capacity in the order of 80,000 cubic feet per second.

Union in the normal operation of the pool proposes to regulate the outflow through the dam when the water surface is at 750 feet above mean sea level, or less, by means of sluice gates capable of discharging from 2,000 to 2,800 cubic feet per second. Union intends to regulate the outflow through the dam to correspond to the inflow to the lower pool from the feeding streams by means of the sluice gates and appropriate gauging stations to record inflows and outflows. The sluice gates would control the flow through an outlet in the dam to be located on a center line at elevation 715 feet above mean sea level.

After Union filed its declaration of intention the Staff of the Commission made an investigation and concluded that the construction, operation, and maintenance of the proposed project would affect the interests of interstate and foreign commerce, *i.e.*, the Staff concluded that the licensing provisions of the Act were applicable.[1] Union requested a hearing and pursuant to Commission order such hearing was held on January 31, 1961.

On December 21, 1960, Union and the Staff executed a "Stipulation of Facts" which was made a part of the record and such stipulation stated, among other things, that "there are no unresolved factual matters, but only unresolved and disputed questions of law." In addition, extensive evidentiary material was received in evidence.

Despite the language above quoted, it appears clear from the stipulation, read as a whole, and the statements of counsel for Union and Staff counsel made during the hearing that there exists a substantial difference between the parties as to the meaning and effect reasonably attributable to the facts on which an agreement was reached. The Staff and Union disagrees regarding the effect which the proposed hydroelectric development will have or is reasonably capable of having upon the navigability of the Black River.

The Black River is downstream from the confluence of Taum Creek and the East Fork of the Black River and is part of the navigable waters of the United States, being navigable from a point at the mouth of the East Fork four miles below the site of the proposed dam, to the mouth of the Black River.[2]

The position of Union on the law [3] is to the effect that before the licensing provisions under the Act become applicable in this proceeding the Staff of the Commission must prove that the construction, maintenance, and operation of the project works on the navigability of the Black River will be "both substantial and inevitable."

The cases cited by Union do not contain any definition of the term "substantial" which could be said to be helpful in evaluating the facts agreed upon in this proceeding. Specifically, the cases cited do not spell out the degree to which navigability must be affected to be considered "substantial." A reading of the cases

[1] See Section 4(e) and 23(b) of the Federal Power Act.

[2] The "Stipulation of Facts" sets forth at page 11 that:

"There is a documentary evidence showing that the Black River is navigable from a point at the mouth of the East Fork, four miles below the site of the proposed dam, to the mouth of said Black River, House of Representatives Document No. 102, 73d Congress, 1st Session, notes on Appendix 1—Sheet No. 7, shows a Corps of Engineers' determination that 'the head of navigation for floating ties and timber' of the Black River is at or near the mouth of the East Fork. This determination was made in the engineering studies that preceded the construction of Clearwater Dam." There was no evidence of any facts to the contrary of the above quoted statements contained in the stipulation, or in the documentary material received in evidence. In the circumstances the only reasonable conclusion as to navigability is that set forth in the text hereinabove."

[3] See, for example, pp. 6 and 10 of Union's brief.

cited by Union [4] illustrates that the term "substantial" as used by Union has been interpreted by the courts or the Commission to mean an effect which is "serious," "appreciable," "measurable," or "pronounced," and not an effect which is merely "*de minimis*." The facts in the cases cited by Union demonstrate that despite the adjectives which have been quoted that what is meant by the courts as being "substantial" insofar as the effect on navigability is concerned is in large part dependent upon the evaluation of specific sets of circumstances by the persons authorized by law to decide the cases, *i.e.*, the regulatory agencies or the courts. This evaluation of the effect of a particular project works as being "substantial" or "appreciable" or the employment of some other adjective in describing the effect on navigability is largely a matter of judgment in particular circumstances and the circumstances of a past project are seldom so similar to a project under consideration as to be precedential.

In this case Union's position is that the construction, operation, and maintenance of the Taum Sauk project works, is capable of having only an insignificant or *de minimis* effect upon the navigability of the Black River.

The Staff's position, on the other hand, is that the facts agreed upon show that the project works are capable in certain circumstances of having a "measurable" or "pronounced" effect. The Staff's position is that the stipulated facts and the evidentiary support found in the exhibits received reflect a capability that the project works will have a substantial effect upon the navigability of the Black River and that therefore the license provisions are applicable. It will be observed, in this connection, that the test of jurisdiction invoked by the Staff is markedly different from that sought to be applied by Union. Union's position goes in an opposite direction to that advocated by the Staff as the appropriate test. It is Union's position that the "capability" test advocated by the Staff is not the law. Union urges on the contrary that to establish licensing jurisdiction it must be shown that the construction, operation, and maintenance of the project works will have an "inevitable" effect on the navigability of the Black River. As Union employs the term "inevitable" it means that Union considers that under the law the Staff must show that the construction, operation, and maintenance of the Taum Sauk project works will necessarily or will be practically certain to result in affecting the navigability of the Black River.

To support its claim that before the licensing provisions become applicable it is requisite that the Staff show that the operation of the project works will have an "inevitable" effect on navigation on the navigable waters of the United States, Union relied heavily upon opinions expressed in *United States* v. *Appalachian Electric Power Co.*, 23 F. Supp. 83, 105, and *United States* v. *Appalachian Electric Power Co.*, 107 F. 2d 769, 790. In connection with the opinion of the Court of Appeals in the Appalachian case Union pointed out that when the Supreme Court [5] reversed such court it held that the New River at the dam site was navigable and further held that the Federal Power Commission could impose license conditions having no relationship to navigation when the project works were to be constructed on navigable waters of the United States. Union contends, however, that the opinion of the Court of Appeals was not reversed by the Supreme Court insofar as such opinion sets forth standards by which it may be determined whether the license provisions under the Act are applicable to hydroelectric project works which are not situated on navigable waters of the United States, as is the instant case.

---

[4] *E.g., Presque Isle County Electric Cooperative Association*, 8 FPC 687, 688; *Niagara Mohawk Power Corp.*, 10 FPC 715, 716; *Citizens Utilities*, 21 FPC 233, 241; *Clam River Dam Company*, 2 FPC 953; *Brazos River Conservation and Reclamation District.*

[5] 311 U.S. 377.

The distinction sought by Union to be made between the present proceeding and the determination of the Supreme Court in the Appalachian case is that the project works in Appalachian were found by the Supreme Court to be on navigable waters of the United States whereas in this case the agreed upon facts are that the dam site is not on navigable waters. Based upon this distinction, Union contends that the Supreme Court decision in Appalachian was not a reversal of the principles adverted to in the Court of Appeals opinion where the Court considered that the dam site was not on navigable waters. Union contends that in the latter situation the Court of Appeals decision in Appalachian is still good law, and established a precedent which should be applied here.

It is true that in this case it is clear that the project works will not be on navigable waters of the United States. Union contends therefore that a factual showing that the construction and operation of the project works are not on navigable waters of the United States but will only have the capability of affecting the navigability in a stretch of water downstream which concededly is part of the navigable waters of the United States is not an adequate basis to establish that the Commission's licensing authority under the Federal Power Act is applicable.

The Staff has cited a number of recent cases to support its position as to the appropriate base on which to test jurisdictional authority, and *Citizens Utilities Co.* v. *Federal Power Commission*, 279 F. 2d 1 (1960), and *Carolina Aluminum Co.*, 19 FPC 704 (1958), cited by the Staff appear to be directly in point. These cases hold that where a showing is made that the construction, operation, and maintenance of hydroelectric project works located on non-navigable waters is capable of having a measurable effect on navigable waters of the United States downstream that then the licensing provisions of the Act are applicable.

In the *Citizens Utilities* case, the Court of Appeals for the Second Circuit held that the Commission had licensing jurisdiction where private hydroelectric dams were constructed across a river at a point where there was a question whether the river was navigable but where the operation of the dams was capable of affecting temporarily the flow of water at a lower point in the stream which was navigable and did so in the ordinary operations of such dams.[6]

Accordingly, it is clear that where dams are proposed to be constructed even on a non-navigable stream, which are capable in their ordinary operation of affecting measurably the flow of water at a lower point of the river which is navigable the law is that the Commission's jurisdiction attaches and the licensing provisions are applicable.

Further, it appears that the holding in the Citizen's case is inconsistent with the rigid test of "inevitability" to establish jurisdiction which would be imposed by Union.

In *Carolina Aluminum Company*, 19 FPC 704, the company proposed a dam on non-navigable water but it was found as fact that its operation was capable of having an effect on navigability at points downstream in navigable waters of the United States. The Commission held that the project works were

[6] The Court noted in this case that the Commission's presiding examiner had found that the Clyde River was not "navigable water of the United States" except for the first 4,800 feet from its mouth; that the Commission had reversed the examiner on this point and held that the river was navigable at the dam site; and that the company was required to obtain a license. The Court of Appeals, apparently, did not find it necessary to resolve the question as to the navigability of the river at the dam site holding that the licensing provisions of the Act were applicable because of the effect of the project works on the navigable waters downstream apparently without regard to whether the waters at the dam site were or were not navigable.

subject to the licensing provisions under the Act. In this connection, the Commission adopted language in the decision of the presiding examiner reading as follows:

> In determining the jurisdiction of this Commission based upon the down stream effect of any hydroelectric development on navigable capacity, such jurisdiction does not depend upon the manner in which a hydroelectric development has been operated in the past or is proposed to be operated in the future but upon the effect which such hydroelectric development *is capable of having upon navigable capacity at points downstream.* Moreover, each hydroelectric development may, for the purpose of determining the question of jurisdiction arising from downstream effect, be considered and treated as if no other hydroelectric development were located within the stream either above or below the development, which is the subject of the jurisdictional inquiry. [Emphasis supplied]

It appears that if a proposed hydroelectric development on a non-navigable stream is capable of having a measurable effect on navigable capacity at points downstream in waters of the United States which are navigable that then the proposed project works are subject to the licensing provisions under the Act, and the law does not require a showing that the effect on navigability is inevitable. For example, the fact that a stream has acted in a specific way numerous times in the past may establish the probability that it will act similarly again in the future and will surely establish that it has the capability of acting that way in the future. It would not necessarily establish, however, that it would do so inevitably. To require the establishment of an "inevitable" effect would be unrealistic.

As we have noted the Taum Sauk project works will involve, among other things, the construction of two pools, one of which has been referred to as the "lower pool" and the other the "upper pool." In general, it is contemplated that at night or during periods of lesser consumer demand for electric power, the company will pump water from the lower pool to the upper pool and that in the daytime or other periods when more power is required for carrying peak loads on Union's system, the water in the upper pool would in the generation of electricity flow down to the lower pool. It is expected that the water in the upper pool will be allowed to flow back through a long pressure tunnel or conduit (6,400 feet long) into the lower pool as part of a daily cycle, *i.e.*, there would be pumping during the off-peak hours using available steam-generated electric energy and releasing the stored energy during the peak hours.

The facilities are different from the type of hydroelectric facilities which use the potential energy in natural flows of the stream to generate electric energy and which alternately store and release the natural flows from a stream. As Union contemplates the operation water will be impounded only one time in the lower pool, causing a temporary reduction in the downstream stage and thereafter on a daily cycle the water in the lower pool will be pumped up to the upper pool and later released.

After the impounding of the water in the lower pool has been completed, it is expected by Union that water will be discharged through or over the dam in amounts equal to the inflow into the lower pool from the streams above and that, therefore, the streams below the project will not be affected by the existence or operation of the plant. On this basis it is claimed that there will be no effect on the navigability of the Black River.

The Staff, on the other hand, claims that when physical conditions are considered in connection with the construction, maintenance, and operation of the project works, particularly in regard to the drainage conditions in the Upper

Black River Basin and when the water flows which have been measured over past years are considered the only reasonable conclusion to be reached is that the project works have the capability of affecting the navigability of the Black River. The facts relating to the size, physical characteristics and operation of the project works have been described hereinabove.

Based upon the conceded facts regarding the drainage in the upper Black River Basin and readings made at four stream gaging stations[7] located below the site of the dam for the lower pool, mathematical calculations were made, which were not challenged, from which a flow duration curve was drawn indicating that the flows at the proposed dam of the lower pool have:

(1) equaled or exceeded 50 cubic feet per second approximately 50 percent of the time;

(2) equaled or exceeded 100 cubic feet per second about 25 percent of the time;

(3) equaled or exceeded 200 cubic feet per second about 10 percent of the time;

(4) have exceeded 2,000 cubic feet per second less than one-half of one percent of the time; and

(5) have exceeded 7,000 cubic feet per second on three occasions.

These varying flow conditions when considered together with the physical character of the project works are capable of affecting navigability on the Black River in differing degrees dependent in large part upon the flow conditions at the times being considered. In this connection, the Staff has given consideration to five situations where the proposed project works would be capable of affecting the navigability of the Black River, *to wit*, (a) the effect on navigable capacity during the filling period; (b) the effect of the navigable capacity during high flow periods; (c) the effect on navigable capacity during malfunctions of facilities; (d) the effect on navigable capacity during emergency operation of the Taum Sauk plant; and (e) the effect on navigable capacity during average flows and normal operation of the Taum Sauk project works.

Three of these situations involve flow conditions such as have actually existed in the comparatively recent past. A fourth situation involves the possibility of malfunctions of facilities, and the fifth situation involves the problem of emergency operation of the project works.

The first set of circumstances considered are those relating to the effect on navigable capacity during the filling perid. The company has considered that the filling period would occur only once in the operation of the project. The Staff has pointed out that the lower pool will be filled not only during the initial operation of the project but also that there will be an emptying of the lower pool regularly during the normal operation of the project. The effect on the navigable water during the normal cycle through the pumping of the water from the lower pool and the return of the water during periods of generation of electricity will be dependent upon flow conditions at the time, and these flow

[7] The four stream gaging stations are located as follows: (1) a stream gaging station at Lesterville on the East Fork of the Black River, 3.3 river miles downstream from the site of the dam for the lower pool which measures the flow from a drainage area of 94.5 square miles; (2) a stream gaging station called Annapolis on the Black River 11 miles below the mouth of East Fork which measures the flow from a drainage area of 484 square miles of the combined three forks of the Black River and of its main stem below the mouth of the East Fork; (3) a stream gaging station at Leeper, Missouri, about 37 miles below the mouth of the East Fork of Black River measuring the discharge from drainage area of 957 square miles; and (4) a stream gaging station 40 miles from the dam of the river at Poplar Bluff, Missouri, measuring the discharge from a drainage area of 1245 square miles.

conditions are unpredictable specifically as to time or volume years in advance but the records maintained in the past show a wide variance in flow conditions at various times. Moreover, there would be normally the problem of regular inspection and maintenance for repair of the project works which could require the emptying of either or both of the pools involved.

It is clear enough that the lower pool will initially hold back water from the East Fork of the Black River and that this will reduce the natural flow below the dam, thus affecting the storage and flow of the East Fork of the Black River. The degree to which this operation will affect the flow below the dam and the navigability in the Black River is dependent upon the amount of inflow to the lower pool from the East Fork and the amount of the total flow retained for storage. As has been pointed out the flows in the proposed dam of the lower pool have equaled or exceeded 100 cubic feet per second about one quarter of the time. Dependent upon how the operations were conducted, it appears that if the flow during the impoundage of the lower pool from the streams above the dam were at the rate of 105 cubic feet per second (as they are about one-fourth of the time) and if 50 cubic feet per second were stored, the lower pool would be filled in approximately 63 days. In the latter case, the stage or the water surface level of the Black River at the Annapolis gage during such circumstances would be reduced by about a tenth of a foot and the water surface level on the East Fork about 3.7 miles below the dam site would be reduced about one foot.

If the flow were at 105 cubic feet per second, and all the flow were retained the pool would be filled in somewhat less than 32 days and the stage of the Black River would be reduced by about two-tenths of a foot and the stage on the East Fork about 3.7 miles below the dam site would be reduced by about 2 feet.

If there were higher flows during impoundage, the pool could be filled very quickly.

While the flows in the proposed dam of the lower pool have exceeded 2,000 cubic feet per second, less than one-half of one percent of the time the fact is that such flows have occurred in the past, and there is no good reason to assume that such flows will not occur again. If the flow were 2,000 cubic feet per second and one-half of that were stored, the surface level in the Annapolis gage would be reduced about 0.5 feet and the stage 3.7 miles below the dam on the East Fork would be reduced by 0.8 feet.

There have been a number of occasions in comparatively recent years when high-flow conditions have been experienced. The record shows that there were high-flow conditions experienced during June 6–10, 1945, January 23–24, 1949, and May 9–10, 1960. Had the project works been in existence in the 1945 flood period the natural maximum stage below the dam of the upper pool would be reduced by about 0.3 feet, and the maximum peak flow past the dam would be reduced from 33,200 to 30,800 cubic feet per second.

In the high flow period of January 1949, the generating cycle would have added to the natural peak flow past the dam of the lower pool by increasing it from 17,600 cubic feet per second to 21,800 cubic feet per second and the dam at the lower pool would reduce the natural stage below the dam by 0.2 feet to 0.4 with no plant operation.

For high-flows, such as that of May 9–10, 1950, and with operation of the plant, the pumping cycle of itself would reduce the natural stage below the dam of the upper pool by about 0.8 feet, but the generating cycle would increase the stage below the dam above natural stage by about one foot.

During stream flows of 2,800 feet per second or less into the lower pool and for the normal cycles of generation and pumping for the project works there

would be no increase or decrease in the natural stage and flow below the project works, assuming no emergency operations, and no malfunctions of facilities. If an electric power emergency were to occur requiring a rapid change from a pumping cycle at the rate of about 5,000 cubic feet per second and the lower pool were about full there would be an increase of about 9,000 cubic feet per second in the flow below the dam.

As we have noted hereinabove when the two motor driven pumps to bring water to the upper pool are operating together at 200 revolutions per minute they will deliver about 5,000 cubic feet per second to the upper pool and the average turbine discharge while generating may average as much as 6,800 cubic feet per second. The change from pumping to generation in such circumstances would increase the stages as follows: 2.4 feet below the dam, 1.6 feet at Lesterville and about one foot at Annapolis gage.

It is clear that operation during emergency conditions has the capability to affect navigability on the Black River.

It cannot reasonably be said that the possibility of malfunction or mechanical failure does not exist in this project. There certainly exists the possibility of human or mechanical failure. In this project the possibility of such failure exists through the improper operation of stream gages, failure of the stream flow facilities to record correctly the inflows and outflows or to transmit flow information to the control points, clogging of the intake to sluiceway works, or failure of facilities. If there were malfunction during periods of flood and the generators were employed it would affect navigability severely, particularly because the effect of generation would be to add to the unusual accretion of water.

Under conditions where the natural flows were 105 cubic feet per second in the East Fork and 582 cubic feet per second in the Annapolis River at the Annapolis gage and if it be assumed that the lower pool were full to elevation of 750 feet above mean sea level, the sluice in the dam were closed and not operated, and a generating cycle were started and continued until all the water were withdrawn from the upper pool the result would be that the stage of the East Fork immediately below the dam would be increased by 7.0 feet; the stage at the Lesterville gage would be increased by 5.7 feet; the stage at the Annapolis gage would be 3.4 feet.

If under the described conditions there were a reversal from generation to pumping, all of the flow below the dam would be shut off and there would be a reduction at the Annapolis gage of 0.2 feet.

Another possibility, which as the Staff points out, could occur at any time, would be the effect on navigability of incorrect operation of the sluiceway. For example, during the month of August if there were a condition of low flow such as a flow of 5 cubic feet per second into the lower pool and 107 cubic feet per second in the Black River at the Annapolis gage and the Taum Sauk project works were not in operation, the abrupt release of water through the sluiceway could result in the dumping of 2,000 cubic feet per second from the lower pool. This would cause the stage just below the dam to rise about 5.5 feet; the stage at Lesterville would increase about 4.4 feet; and the stage at Annapolis would increase approximately 2.2 feet.

The flow conditions described hereinabove have been scientifically determined to have existed in the past. There is no reason to believe that they will not occur again. In fact, ordinary prudence would dictate an opposite conclusion. In addition the possibility of malfunction is always present. The impact of the flow conditions and the construction, operation, and maintenance of the project works upon the navigability of the Black River would vary from a *de minimis* effect

to a substantial effect. Most of the time navigability on the Black River would not be substantially affected but there will be times when it will be affected. The problem to be resolved, however, is not whether the Commission should extend its attention to situations where the effect on navigability is not always substantial or is not continuous but whether under the law navigability will be affected to a measurable degree by the maintenance, construction, and operation of the project works.[8] Here it will be so affected.

An additional issue raised by the Staff is whether Union was required to obtain a license under the Act because the Taum Sauk Project will be constructed, maintained, and operated by Union to supply markets outside the State of Missouri thereby affecting the interests of interstate or foreign commerce, The Staff contends that on this basis alone, a license would be required under the Act.

The sole issue in this case is whether or not Union is required to obtain a license to construct, operate, and maintain the Taum Sauk Project works. That issue has been decided in the affirmative for the reasons which have been set forth hereinabove. It is, therefore, unnecessary and may not be desirable to pass upon the second basis urged by the Staff for requiring Union to obtain a license. Sufficient ground has already been established upon which it must be held that the Commission has jurisdiction and that Union must obtain a license for its Taum Sauk Project works.

In connection with the additional issue raised by the Staff, the "Stipulation of Facts" shows that Union supplies markets outside the State of Missouri and that the operations of the Taum Sauk Project will serve to supply such markets. In substance, the facts contained in the stipulation show that Union operates an interstate electric system, including two hydroelectric stations, seven steam electric stations, transmission lines with voltages of 230 kv, 161 kv, 138 kv, 110 kv, and 69 kv, plus associated substation facilities, and distribution facilities; that it is a member of the Illinois-Missouri Pool, sharing in its operations, obligations and benefits; that it sells electric energy in the States of Missouri, Illinois and Iowa; that it is interconnected with other electric utilities including some which operate outside the State of Missouri; that power flows over transmission lines of Union, from Missouri to Illinois, from Illinois to Missouri, from Iowa to Missouri, from Iowa to Illinois and from Illinois to Iowa; that it has been receiving firm capacity and reserves from the Illinois-Missouri Pool; that the Taum Sauk Project will be interconnected via two 138 kv circuits to the Union interstate network; that the Taum Sauk Project works will provide an instantaneous reserve available to pick up load in event of breakdown of other generating equipment connected to the interstate network.

It has been concluded that it is requisite under the law with regard to the effect on navigability that Union obtain a license for the construction, maintenance and operation of its Taum Sauk Project works without regard to the fact that it will supply markets outside the State of Missouri with energy obtained through the operation of the Taum Sauk Project. Accordingly, it is not necessary to pass upon the legal effect insofar as the licensing requirements are concerned because of the supply of electricity which would be transmitted to interstate markets by reason of the construction and operation of the Taum Sauk Project. A showing that the Taum Sauk Project works will have a measurable effect on the navigability of the Black River which is part of the navigable waters of the United States is a sufficient showing to establish that a license must be obtained from the Commission.

---

[8] *Cf. Connecticut Co.* v. *F.P.C.*, 324 U.S. 515, 536.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record made in this proceeding, the "Stipulation of Facts," all the evidence adduced, the briefs filed herein, and the matters relevant to a decision herein, the Presiding Examiner finds and concludes in addition to the findings and conclusions hereinabove stated that:

(1) Union Electric Company (Union Electric or Declarant) is a Missouri corporation operating an integrated electric system in the States of Missouri, Illinois, and Iowa.

(2) Union Electric filed a declaration of intention pursuant to Section 23(b) of the Federal Power Act announcing its proposal to construct, operate and maintain pumped-storage hydroelectric project works which are referred to as the Taum Sauk Project.

(3) Taum Sauk Project will be located in Reynolds County, Missouri, in or along the East Fork of Black River, about 294 miles above the mouth of Black River and just below the confluence of Taum Sauk Creek with the East Fork.

(4) Taum Sauk Project will be located about 4 miles above the mouth of the East Fork of Black River.

(5) The East Fork of Black River empties into Black River about 289.5 miles above its mouth.

(6) The Black River, from its mouth to its confluence with the East Fork, is a navigable water of the United States.

(7) Taum Sauk Project works will include, among other things, a lower dam forming a lower pool backing water up the East Fork and Taum Sauk Creek, a powerhouse including two 175,000 kilowatt units each having pump-turbine and motor-generator equipment and associated facilities, and an upper pool.

(8) Union Electric has filed application for license and construction is now under way on project works of the Taum Sauk Project, except those which will affect the East Fork at the site of the lower dam.

(9) When the project works generate electric power and energy, water from the upper pool, up to a maximum of 4,350 acre-feet, will be discharged into the lower pool.

(10) When the project works pump water from the lower pool, up to a maximum of 4,350 acre-feet will be lifted to the upper pool.

(11) The dam for the lower pool of the project will have a free crest spillway capable of discharging 70,000 cubic feet per second when the water surface is 763 feet above mean sea level and 80,000 cubic feet per second at water surface elevation of 764 feet above mean sea level.

(12) A sluiceway will be provided in the dam for the lower pool, capable of discharging 2,000 to 2,800 cubic feet per second.

(13) An operating stream gaging station was established at Lesterville, Missouri, in January 1960, measuring the flow from a drainage area of 94.5 square miles of the East Fork of Black River.

(14) An operating stream gaging station, called Annapolis, was established in 1939 on the Black River about 11 miles below the mouth of East Fork, river mile about 279, measuring the flow from a drainage area of 484 square miles of the combined three forks of Black River and of its main stem below the mouth of the East Fork.

(15) The drainage area of the East Fork at the site of the dam of the lower pool of Taum Sauk Project is 88 square miles.

(16) The average flow of the East Fork of Black River at the site of the dam of the lower pool is about 105 cubic feet per second.

(17) The average flow of the Black River at the Annapolis gage over an 18 year period is 582 cubic feet per second.

(18) Except for high flows and for low flows, the flows of the East Fork of Black River at the dam site for the lower pool of Taum Sauk Project may be estimated with reasonable accuracy by applying the ratio of drainage areas to the measured discharges at the Annapolis gage.

(19) A maximum discharge of 45,400 cubic feet per second at the Annapolis gage occurred on June 8 and 10, 1945.

(20) The maximum discharge at the dam site of the lower pool of the Taum Sauk Project was about 33,200 cubic feet per second during the June 8–10, 1945, flood.

(21) The Federal Clearwater flood control dam is located on the Black River 30 miles downstream from the mouth of the East Fork of Black River.

(22) Some lands above the Taum Sauk Project within the drainage area of the East Fork were acquired as part of Clark National Forest in the interest of flood control and other purposes.

(23) During each and every impoundage of water in the lower pool from streams above, the stage and flow of the East Fork and of the Black River from its confluence with the East Fork downstream to the Annapolis gage and below would be reduced, the amounts depending on the inflow and the percentage thereof retained for storage.

(24) During each and every impoundage of water in the lower pool from streams above, the stage at Lesterville gage would be reduced by 0.8 to 3.7 feet.

(25) During each and every impoundage of water in the lower pool from streams above, the stage at Annapolis gage would be reduced by 0.1 to 0.5 feet, depending on the inflows and the portions retained.

(26) At times of inflows in excess of 2,000 to 2,800 cubic feet per second from streams above into the Taum Sauk lower pool and under the proposed method of operation of project works, the stage and flow of the East Fork below the dam and of the Black River from its confluence with the East Fork downstream to the Annapolis gage and beyond, would be changed from the stage and flow that would exist under natural conditions, sometimes there being an increase in stage and flow and at other times there being a decrease in stage and flow depending on the operating phase of the Tam Sauk Project works.

(27) At times of inflows of 9,000 cubic feet per second and above, from streams above into the Taum Sauk lower pool, generation at the project works would cause an increase of about 1 foot in stage at the Annapolis gage on the Black River.

(28) Under conditions of the lower pool being full, the sluice closed, and average flow in the East Fork and Black River, a generating cycle at full load for 8 hours at the Taum Sauk Project would cause increase in stages as follows: 7.0 feet below the dam, 5.7 feet at the Lesterville gage, and 3.4 feet at the Annapolis gage.

(29) An abrupt release of water through the Taum Sauk sluiceway during a low flow period, assuming no operation of project works, would cause increase in stages about as follows: 5.5 feet below the dam, 4.4 feet at Lesterville gage and 2.2 feet at Annapolis gage.

(30) An emergency operation of Taum Sauk Project would cause a change in stage and flow of Black River from its confluence with the East Fork and below to Annapolis gage and below if the flows are of large magnitude.

(31) The proposed Taum Sauk Project will be capable of affecting, and will affect the navigable capacity of the Black River downstream from its confluence with the East Fork to the Annapolis gage and beyond, thereby affecting the interests of interstate or foreign commerce.

(32) The proposed Taum Sauk Project will be constructed, operated and maintained for the development of power to supply markets not only in Missouri but also in the State of Illinois, thereby affecting the interests of interstate or foreign commerce.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal pursuant to its Rules of Practice and Procedure that Union Electric Company is required to obtain a license for its proposed Taum Sauk Project works, pursuant to the provisions of the Federal Power Act and the Commission's Rules of Practice and Procedure.

SAMUEL BINDER,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

FORT SMITH GAS CORPORATION, DOCKET NO. CP62-101

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 20, 1962)

On October 19, 1961, Fort Smith Gas Corporation (Applicant) filed in Docket No. CP62-101 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Mississippi River Fuel Corporation (Mississippi) to establish physical connection of its facilities with those which Applicant proposes to construct and operate, and to sell and deliver to Applicant natural gas for resale and distribution in the Towns of Biggers, Reyno, and Datto, Arkansas, and their environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a total of 1.69 miles of individual 2-inch lateral transmission pipelines extending from three separate connections on Mississippi's main line to each of the three towns. Through these facilities Applicant will supply the natural gas requirements of the communities which are estimated to be as follows:

Requirements in Mcf at 14.73 psia

	Year of Service		
	1st	2d	3d
Peak day	408	419	427
Annual	44,909	46,895	51,955

Applicant will finance the required facilities, estimated to cost $82,672, with funds obtained through the issuance of short-term notes which notes may be refinanced at a later date, if necessary, with the issuance of long-term financing.

Applicant has obtained franchises from the Towns of Biggers, Reyno, and Datto, and has obtained a certificate of public convenience and necessity from the Arkansas Public Service Commission.

Due notice of the filing of the subject application and opportunity for hearing thereon has been given by publication in the Federal Register on March 22, 1962

(27 FR 2712). No protest to the granting of the application or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Applicant, Fort Smith Gas Corporation, an Arkansas corporation having its principal place of business in Fort Smith, Arkansas, is a natural gas distribution utility under the jurisdiction of the Arkansas Public Service Commission and is duly authorized to sell and distribute natural gas in the State of Arkansas.

(2) Mississippi River Fuel Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G–291 (4 FPC 535).

(3) It is necessary and desirable in the public interest to direct Mississippi to establish physical connection of its transmission system with the facilities which Applicant proposes to construct and operate and to sell and deliver to Applicant up to 427 Mcf of natural gas per day for resale in Biggers, Reyno, and Datto, Arkansas, as hereinbefore described and as more fully described in the application in this proceeding.

(4) The requirement that Mississippi serve Applicant, as proposed herein, will not place an undue burden upon Mississippi nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Mississippi River Fuel Corporation be and it is hereby directed to establish physical connection of its transmission system with the facilities which Fort Smith Gas Corporation proposes to construct and operate and to sell and deliver up to 427 Mcf of natural gas per day for resale in Biggers, Reyno, and Datto, Arkansas, as hereinbefore described and as more fully described in the application in this proceeding, provided that Applicant is ready to accept service within one year from the date of this order.

(B) Mississippi shall report to the Commission in writing and under oath the date of commencement of service to Applicant hereunder within ten days thereof.

(C) In the event that Mississippi is unable to meet the requirements of Applicant from its existing capacity as it has been allocated in *Arkansas-Louisiana Gas Company, et al.*, Docket Nos. G–17567, *et al.*, Opinion No. 355, issued April 18, 1962, *supra* p. 697, and requires modification of the allocation made therein, then Mississippi may file an appropriate application for modification of said Opinion.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER APPROVING REVISED EXHIBIT L DRAWING

(Issued April 20, 1962)

On March 9 and 28, 1962, Sacramento Municipal Utility District, licensee for major Project No. 2101, filed for Commission approval revised Exhibit L drawing for the Loon Lake Dam.

The principal changes shown on the revised drawings are a redesign of the spillway at the Loon Lake Dam from a straight overflow type to a side channel type discharging into Gerle Creek near the toe of the dam, and elimination of

berms in the dam design. A ford is proposed across the spillway channel at its lower end rather than a roadway across the spillway.

In its March 7, 1962, letter transmitting the revised drawings, the licensee advised that realignment of the spillway was necessary because the Forest Service had objected to spill being directed down a deep ravine which would cause erosion problems. The ford across the spillway channel at its lower end has been agreed to by the Forest Service which specified that a road be built at either end of the ford to a grade not to exceed eight percent.

The removal of berms (not required by the license) from the dam design will not affect the safety of the structure, and a Commission staff check on the spillway capacity shows it to be adequate.

The Commission finds:

(1) The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, except to the extent that Exhibit L–98 (FPC No. 2101–160) and Exhibit L–100 (FPC No. 2101–162) show a road at either end of the ford built to a grade of 10 percent, which is 2 percent greater than the maximum grade agreed to with the Forest Service:

Exhibit L–98 (FPC No. 2101–160) entitled "Loon Lake Main Dam, General Arrangement, Plan and Profile," except for the indicated grade of the road at either end of the ford;

Exhibit L–99 (FPC No. 2101–161) entitled "Loon Lake Main Dam, General Arrangement, Sections and Details" and

Exhibit L–100 (FPC No. 2101–162) entitled "Loon Lake Spillway, Excavation, Plan, Profile, and Sections," except for the indicated grade of the road at either end of the ford;

(2) Exhibit L–18 (FPC No. 2101–139), now part of the license and which has been superseded, should be eliminated from the license.

The Commission orders:

The revised Exhibit L drawings described in finding (1) above are approved as parts of the license for Project No. 2101 to the extent indicated and the superseded Exhibit L drawing described in finding (2) above is eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHEASTERN POWER ADMINISTRATION, JOHN H. KERR AND PHILPOTT PROJECTS, DOCKET NO. E–7002

SUPPLEMENTAL ORDER AMENDING ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued April 20, 1962)

By order issued December 21, 1961, 26 FPC 913, in the above-entitled matter, the Commission, pursuant to the provisions of the Flood Control Act of 1944 (58 Stat. 887), confirmed and approved *inter alia* for a period beginning December 21, 1961, and ending June 30, 1965, Wholesale Dump Energy Rate Schedule KP–2, applicable to sales of dump energy generated at the John H. Kerr and Philpott projects to Virginia Electric and Power Company (Vepco) and Carolina Power and Light Company (Carolina Power).

By letter dated March 27, 1962, the Secretary of the Interior, on behalf of the Southeastern Power Administration, filed with the Commission for its confirmation and approval, for a period beginning with the date of issuance of the Commission's order and ending on June 30, 1965, Wholesale Dump Energy Rate Schedule KP–2 (Revised), which would supersede Rate Schedule KP–2 for sales of dump energy generated at the two projects to Vepco and Carolina Power. The revised rate schedule differs from its predecessor only in that the monthly energy charge to each company is an amount equal to 80 percent, instead of 85 percent, of the saving in the cost of fuel in the Company's operating generating stations due to the generation avoided therein by the receipt of dump energy from the afore-mentioned projects.

The Secretary of the Interior advised that the present rate schedule is unsatisfactory from the standpoint of maximum utilization of the Federal Government's power resources because sales thereunder result in a periodic waste of water and an accompanying loss of revenue.

The repayment study for the John H. Kerr and Philpott projects indicated that anticipated revenues from the sale of dump energy under the original Rate Schedule KP–2 would aggregate approximately $83,800 annually, but actual revenues totaled a smaller amount because of the lack of marketability of dump energy at that rate level. The Secretary states that sales of energy under the revised rate schedule will produce more revenue than under the original one, and that total revenues expected from such sales will be approximately $78,800 annually. Notwithstanding the reduction in previously estimated revenues from the sale of dump energy, it is anticipated that the investment costs of the projects will be repaid within a fifty-year repayment period.

The Commission finds:

Good cause has been shown and it is appropriate for the purposes of the Flood Control Act of 1944 that the Commission's confirmation and approval of the rates and charges for the John H. Kerr and Philpott projects contained in its order issued December 21, 1961, be modified as hereinafter provided.

The Commission orders:

The confirmation and approval of the rates and charges of the Southeastern Power Administration for the sale of power developed at the John H. Kerr and Philpott projects set forth in its order issued December 21, 1961, is hereby amended by substituting the rates and charges for the sale of fuel replacement energy contained in Wholesale Dump Energy Rate Schedule KP–2 (Revised) referred to in the recital above for those set forth in the original Wholesale Dump Energy Rate Schedule KP–2, which revised rates and charges shall be effective for a period beginning with the date of issuance of this order and ending June 30, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. E–7032

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued April 25, 1962)

Iowa Southern Utilities Company (Applicant), incorporated under the laws of the State of Delaware, qualified to do business as a foreign corporation in

the States of Iowa and Illinois, and doing business in the State of Iowa, with its principal place of business at Centerville, Iowa, filed an application on March 29, 1962, as amended April 16, 1962, for an order, pursuant to Section 204 of the Federal Power Act, authorizing it to issue and sell 75,000 additional shares of its Common Stock, par value $15 per share.

Applicant proposes to enter into a Purchase Agreement for the sale of the new shares of Common Stock, with a group of underwriters headed by A. G. Becker & Co. Incorporated, Chicago, Ill. These underwriters have agreed to underwrite the new shares of Common Stock at a fee of 2.12% of the offering price to the public. The afore-mentioned fee represents the lowest cost of underwriting the contemplated issue on the basis of proposals submitted to Applicant by three underwriting firms.

The new shares of Common Stock are to be offered publicly on or about April 25, 1962, by the underwriters referred to above at $42.25 per share. The last offering price on April 24, 1962, of the Applicant's outstanding Common Stock, which is traded on over-the-counter market, was $42.00 per share.

By letter dated March 9, 1962, Docket No. IN–950, the Commission, pursuant to Section 34.2(k)(2)(ii) of its Regulations under the Federal Power Act, authorized Applicant to enter into negotiations for the underwriting and sale of the proposed issuance of Common Stock. Applicant now requests that the proposed issuance be exempted from the competitive bidding requirements of Section 34.1a (b) and (c) of those Regulations upon findings as set forth in Section 34.1a (a)(4) thereof.

Applicant proposes to utilize the proceeds from the issuance and sale of the new shares of Common Stock, estimated at approximately $3,100,000, to discharge bank loans (outstanding in the principal amount of $700,000 on April 1, 1962) and toward the payment of the cost of Applicant's 1962 and 1963 construction programs, estimated to cost $3,010,000 and $4,290,000, respectively. Of the total $7,300,000 for the 1962-63 programs approximately $5,350,000 will be spent for electric system facilities, $1,350,000 for gas system facilities and $600,000 for general plant facilities. The electric facility construction program includes $100,000 in 1962 for the purchase of a site for a future generating station south of Burlington, Iowa; $575,000 in 1963 for installation of a 6,000 kw diesel peaking plant at Centerville, Iowa; $375,000 for installation of additional generating equipment; and, $260,000 in 1962 and $190,000 in 1963 for construction of a 20 mile 69 kv transmission line from Albia to Centerville, Iowa. The gas facilities in Applicant's construction program consist of gas system mains and distribution extensions.

Written notice of the application has been given to the Iowa State Commerce Commission and the Illinois Commerce Commission, and to the Governor of each of those States. Notice of the application was also given by publication in the Federal Register on April 7, 1962 (27 F.R. 3360), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest with the Federal Power Commission, Washington 25, D.C., on or before April 24, 1962. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 31, 1961, *Iowa Power and Light Company and Iowa Southern Utilities Company*, Docket No. E–6974 (25 FPC 1063).

(2) The proposed issuance of Common Stock as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) There is no affiliation, direct or indirect, through directors, officers or stockholders, or the ownership of securities, or otherwise, between Applicant and the underwriting firm of A. G. Becker & Co. Incorporated.

(4) The fees proposed to be paid to A. G. Becker & Co. Incorporated in connection with the proposed issuance of Common Stock do not appear to be unreasonable.

(5) Under the circumstances of this case, sufficient cause has been shown for exempting the proposed issuance of Common Stock from the competitive bidding requirements of Section 34.1a (b) and (c) of the Commission's Regulations under the Federal Power Act.

(6) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of Common Stock, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(7) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Common Stock, as described above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized, subject to the provisions of this order.

(B) This authorization shall expire unless the transaction hereby authorized is consummated within 60 days from the date of issuance of this order.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever which is now pending or which hereafter may come before this Commission or any other regulatory body.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NO. 2287

ORDER ISSUING LICENSE (MAJOR)*

(Issued April 25, 1962)

On December 27, 1960, Public Service Company of New Hampshire (Applicant) filed application for a license under Section 4(e) of the Federal Power Act (hereinafter referred to as "the Act") for its constructed Project No. 2287, known as the J. Brodie Smith Project, located on the Androscoggin River in the city of Berlin, Coos County, New Hampshire. The application recites that parts of the head included in the project have been used by various companies since the early 1850's, and that the dam serving the project was originally built

*Modified by order issued February 14, 1964, 31 FPC 417.

in 1885. All of the prior owners were industrial corporations which used the output in their respective businesses. Applicant, which was the first owner to utilize the entire head through a single development, acquired substantially all of the project lands by deed dated June 24, 1945, and immediately developed plans for reconstruction. Such reconstruction was commenced in August, 1945, and completed in May 1948.

In its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and a "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis for this finding was that the Androscoggin is presently, and for more than a century has been, used for the transportation of logs and other forest products by water.

Applicant requests a 50 year license effective as of the date of issuance. However, for reasons fully explained in our companion opinion No. 357 pertaining to Applicant's Project No. 2288 at Gorham, New Hampshire, we shall tender a license effective as of August 1, 1945—the first day of the month in which Applicant commenced its reconstruction with filing a license application or declaration of intention under Section 23(b) of the Act—and terminating December 31, 1993.[2]

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures insofar as the interests of navigation are concerned.

An Assistant Secretary of the Interior, in reporting on the application, recommended for inclusion in any license issued certain special conditions in the interest of fish life.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of New Hampshire and has submitted satisfactory evidence of compliance with the requirements of all applicable state laws insofar as necessary to effectuate the purposes of a license for the project.

(2) The project consists of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2287–1) General Map of Project Area; and
Exhibit K: (FPC Nos. 2287–2 and –3) Detail Map of Project Area.

(b) Project works consisting of:

A masonry and concrete gravity-type dam comprised of two overflow sections equipped with hinged steel flashboards, two overflow sections equipped with

[1] New Hampshire Water Resources Board, Docket No. E–6807, 20 FPC 99–101.

[2] In our companion opinion we observed that in a case where unauthorized construction subsequent to 1935 "results in the replacement of substantially all existing facilities and the material enlargement of the scale of the project, there might conceivably be some basis for prescribing a license term ending 50 years from the date of such improvements." The present application does not disclose the extent of the reconstruction undergone by the project. However, pending a contrary showing by the Applicant, we can reasonably assume that the reconstruction in the present case was not of the magnitude contemplated by the above quotation from our companion order.

wood pipe supported flashboards, one overflow section equipped with two steel roller-type sluice gates, and one non-overflow masonry abutment section; a concrete arch-type diversion dam located in a former river channel just upstream from the powerhouse; a small reservoir with an area of about 8 acres and a normal water surface at elevations 1,009.7 feet (USGS datum); a canal about 500 feet long extending from the dam to an intake section; a steel pipeline from the intake to a surge tank; a surge tank; a penstock from the surge tank to the powerhouse; a powerhouse containing one 20,500-horsepower turbine connected to a 15,000-kilowatt generator; a step-up transformer; a 115 kv transmission line extending to the East Side substation; a control cable; and appurtenant facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings.

FPC No.	Sheet No.	Description
2287-4	1	Dam Layout.
2287-5	2	Main Dam, General Plan and Elevation.
2287-6	3	Main Dam, Gate Piers.
2287-7	4	Main Dam, Flashboard Piers.
2287-8	5	Main Dam, Sections—Flashboard Spillway.
2287-9	6	Arch Diversion Dam, West Channel.
2287-10	7	Intake—General Plan.
2287-11	8	Intake—Upstream Elevation.
2287-12	9	Intake—Structural Steel Plan at El. 1016.0.
2287-13	10	Intake—Concrete Bascule Gate.
2287-14	11	Intake—Canal Walls and Floor.
2287-18	15	Surge Tank Location and Penstock Connection to Powerhouse.
2287-19	16	Grading and Paving Plan—Powerhouse Grounds.
2287-20	17	Powerhouse Equipment Plan Generator, Floor El. 955.75.
2287-21	18	Powerhouse—Basement Floor Plan.

2287-24	21	Powerhouse—Elevations Upriver—Substructure.
2287-25	22	Powerhouse—Elevations Downriver—Substructure.
2287-26	23	Powerhouse—Brickwork, West and North Elevations.
2287-27	24	Powerhouse—Brickwork South and East Elevations.
2287-28	25	Powerhouse—Draft Tube Gates Location and Dimensions.

Exhibit M: Twelve typewritten pages, "General Description of Mechanical and Electrical Equipment", filed in the Commission December 27, 1960.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(3) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests have been received.

(4) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) The project is best adapted to a comprehensive plan for improving and developing the Androscoggin River for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, under the terms and conditions hereinafter imposed.

(6) The following described transmission and electrical facilities are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project as hereinafter provided:

(a) the 6.9/115 KV step-up substation adjacent to the powerhouse.

(b) the 115 KV transmission line from the step-up substation to the East Side substation.

(c) the switching facilities at the substation associated with the 115 KV transmission line.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 20,000 horsepower.

(8) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The energy generated by the constructive project is distributed and sold by Applicant for public utility purposes.

(10) The exhibits designated and described in finding (2) above conform to the Commission's rules and regulations and should be approved as part of the license for the project as hereinafter provided.

The Commission orders:

(A) This license is issued to Public Service Company of New Hampshire under Section 4(e) of the Federal Power Act for a period effective August 1, 1945, and terminating December 31, 1993, for the continued operation and maintenance of the J. Brodie Smith Development, Project No. 2287, located on the Androscoggin River, a navigable water of the United States, in the City of Berlin, Coos County, State of New Hampshire, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This license is also subject to the terms and conditions set forth in Form L–3, December 15, 1953, entitled "Terms and Conditions of License for Constructed Major Project Affecting Navigable Waters of the United States" (17 FPC 385–389) which terms and conditions, designated as Articles 1 through 17, are attached hereto and made a part hereof, except for the last sentence of Article 11; and subject to the following special conditions set forth herein as additional articles:

Article 18. The Licensee shall pay to the United States the following annual charge, effective as of August 1, 1945:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act one (1) cent per horsepower on the authorized installed capacity (20,000 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made.

Article 19. The Licensee shall for the protection of navigation, construct, maintain, and operate at its own expense such lights and other signals on fixed project structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 20. The Licensee shall construct, maintain, and operate, or shall arrange for the construction, maintenance, and operation of artificial propagation facilities and such other permanent fish facilities and protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, provided, that such

modifications shall be reasonably consistent with the primary purpose of the project and not unduly impair the power value of the project, as may be prescribed hereafter by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the New Hampshire Fish and Game Department, after notice and opportunity for hearing and upon a finding based on substantial evidence that such modifications are necessary and desirable, and consistent with the provisions of the Act.

Article 21. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish handling facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 22. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 23. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project with such other power systems as the Commission may direct in the interest of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination.

(C) The exhibits designated and described in finding (2) above are approved as part of this license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NO. 2288

OPINION AND ORDER ISSUING LICENSE

(Issued April 25, 1962)*

Syllabus

1. Appropriate license term for projects constructed prior to 1935 amendments to Federal Power Act and operated thereafter in navigable waters without requisite federal authorization is 50 years from 1943, *i.e.*, December 31, 1993. P. 832.
2. Licenses for projects constructed subsequent to 1935 amendments to the Act should be made effective not later than date of construction of such projects. P. 832.

---

*Designated Commission's Opinion No. 357. Modified by order issued February 14, 1964, 31 FPC 417.

3. License from Federal Power Commission for an unlicensed project occupying navigable stream became mandatory upon adoption of Section 23(b) in 1935. P. 833.
4. A company whose project has enjoyed three or more decades of unregulated operation would reap a substantial windfall from its prolonged delay in filing were it granted a full 50 year license term from date of issuance. P. 833.
5. To extent feasible it is duty of sound licensing to minimize inequities. P. 833.
6. Commission prescribes license term commencing in 1943, for reason concept of navigability attained its present dimension then—citing *City of Spooner, Wisconsin*, *Wisconsin Michigan Power Company*, and *Wisconsin Public Service Corporation*. P. 833.
7. Commission exercises its discretion in making license effective as of July 1, 1958. P. 834.
8. In future cases (not involving prior finding of navigability, unauthorized construction subsequent to 1935, or other unusual circumstances), policy will be to tender licenses effective as of beginning of month present order is issued, *i.e.*, April 1, 1962, Commission concluding that to make future licenses effective as of date of issuance might encourage further delay in filing license application. P. 834.
9. In deciding not to impose retrospective charges for period prior to July 1, 1958, Commission gives some weight to possibility that to do so might deter potential applicants from complying with statute, should experience indicate such applicants are not voluntarily complying, Commission may wish to reconsider its policy on back dating. P. 834.
10. Commission *rejects* conclusion that a river does not become "navigable" or license necessary until Commission or some other authority so rules; *holds* Section 23 flatly proscribes the unlicensed operation of power project in "navigable waters," and Section 3(8) defining "navigable waters" is addressed directly to project owners no less than Commission. P. 835.
11. Effect of present order is to abandon premises enunciated in *Carolina Aluminum* and return to what Commission conceives to be sounder principles of *Metropolitan Edison*. P. 835.
12. Applicant had no right to rely on Commission finding prior to 1943, as to non-navigability of Androscoggin River, once narrow jurisdictional criteria formerly employed had been superseded. P. 836.
13. Replacement of one timber cribbed dam for another does not warrant the grant of 50 year license term from date of partial reconstruction; it would be anomalous to establish later termination date merely because applicant failed to comply with statute. P. 836.
14. Commission declines to anticipate approach it will take with license application embracing proposed as well as existing project works; present ruling as to termination and effective date is not to be followed mechanically in all cases involving pre-1935 projects on streams used for logging. P. 836
15. Commission *issues* license under Section 4(e) of the Federal Power Act; effective July 1, 1958, and terminating December 31, 1993. P. 838.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

Ross, *Commissioner*

On December 27, 1960, Public Service Company of New Hampshire (Applicant) filed application for a license under Section 4(e) of the Federal Power Act (hereinafter referred to as "the Act") for its constructed Project No. 2288, known as the Gorham Project, located on the Androscoggin River in the town

of Gorham, Coos County, New Hampshire. The application recites that the first generating plant and original dam at the Gorham site were constructed in 1894. The dam was rebuilt in 1903, 1927, and 1928. Two 400 kw generating units were installed in 1917 and the turbines replaced in 1937. Two 675 kw generating units were installed in 1923. The three sections of the powerhouse were constructed in 1909, 1917 and 1923, respectively, and have remained substantially unchanged since 1923. These early installations and changes were made by predecessors of Applicant, which acquired the facilities on December 12, 1943. In 1958 and 1959, Applicant removed the old timber-cribbed dam and built a new one, also timber-cribbed.

In its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and a "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis for this finding was that the Androscoggin is presently, and for more than a century has been, used for the transportation of logs and other forest products by water.

This application raises again a question which has perplexed the Commission for many years, *i.e.*, the appropriate license term to be accorded a project constructed prior to the 1935 amendments to the Act[2] and operated thereafter in navigable waters without requisite federal authorization. The resolution of this question calls for the exercise of sound discretion, for while Section 6 of the Act fixes a 50 year ceiling on license terms, it evidently contemplated that the Commission may prescribe a shorter period if circumstances so warrant. After evaluating all relevant factors, we propose to issue Applicant a license effective as of July 1, 1958, and terminating December 31, 1993. Since the reasons which lead us to prescribe the above license term will also guide the action we shall take upon pending and future applications involving other pre-1935 projects, it is important that those reasons be fully explained.

Section 23(b) of the Act declares it unlawful to construct, *operate*, or *maintain* hydroelectric works in navigable waters of the United States except under an FPC license or appropriate pre-1920 federal permit. This provision, one of several amendments enacted as part of the Public Utilities Act of 1935,[3] was intended as a concise restatement of a prohibition deemed by the draftsmen to be embodied already in Section 9 of the River and Harbor Act of 1899, when read together with Section 4(d) of the Federal Water Power Act of 1920.[4] While the relationship between the 1899 and 1920 statutes was not explicitly defined in

---

[1] New Hampshire Water Resources Board, Docket No. E-6807, 20 FPC 99-101.

[2] The construction of any project works *subsequent* to the enactment of Section 23(b) of the Act of 1935 without the concurrent filing of a license application or declaration of intention plainly violates that section. There is little room for dispute that licenses for such projects should be made effective not later than the date of construction of such project works.

[3] By Title II of the Public Utility Act of 1935, the original Federal Water Power Act of 1920, 41 Stat. 1063, was made Part I of the Federal Power Act and Parts II and III were added.

[4] H. Rep. No. 1318, House Comm. on Interstate and Foreign Commerce 26, 74th Cong., 1st Sess. (1935); S. Rep. No. 2796, Senate Comm. on Interstate and Foreign Commerce 47, 74th Cong., 1st Sess. (1935).

Section 9 of the River and Harbor Act of 1899, 33 U.S.C. § 401, declared it unlawful to construct certain kinds of structures, including dams, over any navigable water of the United States without the consent of Congress and the approval of plans by the Chief of Engineers and the Secretary of War. Section 4(d) of the Federal Water Power Act, 41 Stat. 1065, the forerunner of the present Section 4(e) of the Federal Power Act, authorized the Commission to issue licenses for hydroelectric project works situated on navigable waters of the United States, provided that no license affecting navigable capacity should be issued until plans for the contemplated structures had been approved by the Chief of Engineers and the Secretary of War.

either act, any uncertainty there might have been as to the legal status of an unlicensed power project occupying a navigable stream vanished with the adoption of Section 23(b) in 1935. From that point on, if not earlier, a license from this Commission was clearly mandatory. Unfortunately, the Commission has lacked sufficient funds or man power to enforce general compliance with the statute, and as a result a large number of projects, including the one involved in this application, have continued to operate without licenses. If a company whose project has enjoyed three or more decades of unregulated operation were granted a full 50-year license term from date of issuance, it would reap a substantial windfall from its prolonged delay in filing. Equally important, it would obtain an unmerited advantage over those companies which complied at an earlier date, inasmuch as projects of the latter will be subject to federal recapture well within the next 50 years. To the extent feasible, it is the burden of a sound licensing policy to minimize such inequities.

The above considerations might well justify the issuance of a license effective as of August 26, 1935 (or even earlier), and terminating August 26, 1985, as well as the imposition of annual charges for that entire period. We are persuaded, however, to allow for the fact that the concept of navigability has evolved only gradually and did not attain its present dimensions until 1943. Prior to that date, it might have been reasonable for a company to assume that the Commission would not assert jurisdiction over a project situated in a stream in which virtually the sole traffic had been the driving of logs. From 1920 to 1930, the Commission disclaimed jurisdiction in a majority of the cases in which declarations of intention were submitted to it. In 22 instances, rivers—many of which, including the Androscoggin, have subsequently been determined navigable—were found not to be navigable at project site even though they were known to have been used for the transportation of forest products. During that period the Commission apparently employed an extremely pragmatic criterion, namely, whether or not any actual or probable navigation was in fact likely to be endangered by the proposed hydroelectric project. From 1931 until 1942, the Commission accepted jurisdiction in 14 of the 39 declaration-of-intention cases which it acted upon but in only one such case made a finding of navigability at site. In 1940, the Supreme Court held in *United States* v. *Appalachian Power Co.*, 311 U.S. 377, that a stretch of river may be navigable in law even though improvements may be necessary to make it so in fact. While the *Appalachian* case was a major landmark in the development of the Commission's jurisdiction, it did not deal with a river which had been used chiefly for logging operations. In 1943, however, three Commission decisions based findings of navigability primarily upon evidence of log driving and rafting.[5] One of these decisions, involving the Tomahawk project on the Wisconsin River, was affirmed in 1945 by the Court of Appeals for the Seventh Circuit,[6] which concluded (at 147 F. 2d 748) that

> * * * the evidence as shown by this record, establishes a long, regular and commercially successful use of the stream for the transportation of logs and rafts, and forms a reasonable basis in law for the conclusion that the Wisconsin River was and is a navigable water of the United States.

At least as early as the 1943 decisions, the owner of every project located in a stream capable of being used for the transportation of logs was placed on notice

[5] *City of Spooner, Wisconsin*, 3 FPC 986 (April 20, 1943); *Wisconsin Michigan Power Company*, 3 FPC 449 (July 27, 1943); *Wisconsin Public Service Corporation* (Tomahawk), 3 FPC 495 (July 30, 1943).

[6] *Wisconsin Public Service Corporation* v. *F.P.C.*, 147 F. 2d 743 (7th Cir. 1945), *cert. den.*, 325 U.S. 880.

of the perils of further unlicensed operation. Such perils must have been particularly apparent to the present Applicant, for logging has been a continuing and conspicuous activity on the Androscoggin down to the present day. For the reasons stated, it is in our view appropriate that the license tendered herein be for a term ending December 31, 1993.

The same reasoning which commends the adoption of December 31, 1993, as a termination date would also warrant us in making the license effective as of January 1, 1944. Were we to do so, Applicant would be liable for annual charges commencing on such effective date and would be required as of January 1, 1964, to establish the amortization reserves provided for in Section 10(d) of the Act. While such retrospective treatment would be a legitimate exercise of our discretion, we are satisfied that under present circumstances the advancement of the termination date in the manner above described gives adequate weight of the unlicensed history of the Gorham project prior to July 1, 1958. Our discretion, however, should not be so exercised as to ignore either of the more flagrant breaches of statutory duty committed by Applicant in 1958 when it (a) failed to apply for a license even after our determination of jurisdiction over the Androscoggin in Docket No. E–6807; and (b) replaced its dam without filing either a license application or a declaration of intention, one or the other of which submission was required by Section 23(b) whether the Androscoggin was navigable or not. In the latter connection, it should be pointed out that if Applicant, subsequent to 1935, had built an entirely new project without securing the requisite authorization, we would not hesitate to adopt the date of such construction as the effective date of its license. We see no reason for different treatment merely because the unauthorized construction took the form of a replacement of an existing facility. Since the application now before us does not indicate the precise date upon which the construction was commenced, we are content to make the license effective as of July 1, 1958, the first day of the month in which we determined jurisdiction in Docket No. E–6807. In future cases which do not involve a prior finding of navigability as to the subject river, an unauthorized construction subsequent to 1935 or other unusual circumstances (e.g., the incurrence by the Commission of substantial administrative, investigative, or litigative expenses directly attributable to the applicant's recalcitrance) our policy will be to tender licenses effective as of the beginning of the month in which the present order is issued, *i.e.*, April 1, 1962. Our reason for not making future licenses effective as of the date of their issuance is that to do so might encourage still further delay in filing the license applications which the law requires.

In deciding not to impose retrospective charges for the period prior to July 1, 1958, we have given some weight to the possibility that imposition of such charges might seriously deter potential applicants from coming forward to comply with the statute. If, however, our experience during the next twelve months indicates that voluntary cooperation will in any event not be forthcoming, we may well wish to reconsider the position we now take on the question of backdating.

In prescribing a license term which takes into account the prior unlicensed operation of the project, we revive a policy repeatedly employed by the Commission from 1942 until 1957. During that period it was the Commission's practice to issue licenses effective as of January 1, 1938, and terminating either on June 30, 1970, the fiftieth anniversary of the adoption of the Federal Water Power Act of 1920,[7] or, in the case of projects constructed later than 1920, 50 years from the date of such construction. January 1, 1938, was utilized as the effective date, from which annual charges were computed, in order that each

[7] The Federal Water Power Act was approved on June 10, 1920, 41 Stat. 1063.

licensee might bear its fair share of the expenses incurred by the Commission in connection with a general investigation of unlicensed projects which it had initiated by order of December 23, 1937. The basis for the prescribed termination dates was spelled out in the following passage from the Commission's opinion in *Metropolitan Edison Company*, 6 FPC 189 (1947) (at 191–192):

> The applicant also requests that the license cover a longer period than merely to June 30, 1970, as prescribed in the order of November 7, 1944. Except in cases where an earlier date is appropriate, June 30, 1970, is the termination date prescribed by the Commission since 1938 in all licenses for constructed projects operating without prior Federal authority. The York Haven plant was first placed in operation in 1904 and a license should have been obtained as early as 1920 when the original Power Act became law. The obligation to obtain a license rests upon the owner of each hydroelectric project operating without appropriate Federal authority in streams subject to the jurisdiction of Congress. If a company could willfully violate the law and fail to obtain a license for 26 years as this applicant has done, and then receive a 50-year license from the date on which it filed the application, its license would run for 26 years more than if it had obtained the requisite authority in 1920. To grant this request of the applicant would be to accord it a special privilege not accorded to companies which applied for appropriate authority at an earlier date and not contemplated by the Congress in the statute limiting the license period to 50 years. Hence in this, as in other similar cases, the Commission has limited the term to June 30, 1970, and the request should be refused.

While the specific termination and effective dates previously utilized by the Commission are no longer desirable, and while, as mentioned earlier, we do not find it necessary to decide whether a license should have been obtained as early as 1920, we do subscribe to the basic reasoning set forth in the paragraph quoted above.

In *Carolina Aluminum Company*, Project No. 2197, and *Carolina Power and Light Company*, Project No. 2206, 19 FPC 704, consolidated cases decided in 1958, the Commission discarded its long established backdating policy and repudiated the logic of *Metropolitan Edison*. The position it took is that the Act does not require any company to apply for a license until such time as an authoritative determination has been made that the stream in which the company operates is navigable. Pursuant to this view, the Commission adopted a policy of issuing 50 year licenses effective as of the date on which its jurisdiction over the river in question was determined.[8] We find no basis, however, either in the language of the Act or its legislative history, for the conclusion that a river does not become "navigable," or a license necessary, until the Commission or some other authority has so ruled. On the contrary, Section 23(b) flatly proscribes the unlicensed operation of a power project in "navigable waters," and Section 3(8), which defines "navigable waters," is addressed directly to the project owners no less than to the Commission. The effect of our present order is to abandon the premises enunciated in the *Carolina Aluminum* case and to return to what we conceive to be the sounder principles of *Metropolitan Edison*.

Reference should be made to two aspects of the present application which might perhaps be thought to except it from the general rules discussed above. First, the Androscoggin River, as noted earlier, was one of several streams originally determined by the Commission to be non-navigable despite its use for logging purposes. It could be argued that by virtue of this determination,

[8] See, *e.g.*, *Duke Power Company*, Project No. 2232, 20 FPC 360 (September 17, 1958); *Marathon Corporation*, Project No. 2212 (April 28, 1959) (unreported); *Wisconsin Valley*

made in 1925 in response to a declaration of intention by the Dummer Power Company,[9] it was not unlawful for Applicant and its predecessors to operate the Gorham project without a license prior to the Commission's 1958 redetermination of the status of the river. We cannot accept that proposition. After 1943, the navigable character of the Androscoggin under then prevailing standards was no less obvious than that of other rivers which were similarly used for logging, but for which no prior determination had been made. Once it became clear that the narrow jurisdictional criteria formerly employed by the Commission had been superseded, Applicant had no greater right to rely upon the Dummer decision than upon any of the other decisions rendered on the basis of the outmoded criteria of the 1920's.[10]

The second noteworthy feature is that in 1958 and 1959, Applicant removed its old dam and built a new one. The contention might be made that, having invested additional funds in the Gorham project, Applicant should be granted a 50 year license term from the date of this partial reconstruction. In a case where construction results in the replacement of substantially all existing facilities and the material enlargement of the scale of the project, there might conceivably be some basis for prescribing a license term ending 50 years from the date of such improvements. The replacement of one timber-cribbed dam by another, however, does not warrant such treatment. Had the Gorham project already been under license as to the commencement of new construction, we would amend the license to include the new dam, not issue a new 50 year license for the entire project. It would be anomalous to establish a later termination date merely because Applicant had failed to comply with the statute.

While the license term prescribed in the instant case will serve as a model for future Commission action, it should not be viewed as a rigid formula to be followed mechanically in all cases involving pre-1935 projects on streams used for logging. There may well be circumstances in which the adoption of December 31, 1993, as a termination date or April 1, 1962, as an effective date would be unwise or inappropriate. Specifically, we decline to anticipate the approach we will take when presented with a license application embracing proposed as well as existing project works.

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures insofar as the interests of navigation are concerned.

An Assistant Secretary of the Interior, in reporting on the application, recommended for inclusion in any license issued certain conditions in the interests of fish life.

Improvement Company, Project No. 2113, 21 FPC 785 (May 28, 1959); *Tomahawk Power Company*, Project No. 2239, 22 FPC 1 (July 1, 1959); *Nekoosa-Edwards Paper Company*, Project No. 2255, 22 FPC 473 (September 1, 1959); *Consolidated Water Power Company*, Project No. 2256, 22 FPC 638 (October 5, 1959). This policy was foreshadowed by the Commission's decision in *Montana Power Company*, 15 FPC 1330 (April 23, 1956). That decision, however, which involved a proposed unit as well as existing structures, was based on the desirability of a uniform license term for all units of a single development rather than upon the doctrine expounded in *Carolina Aluminum*, and was not necessarily inconsistent with *Metropolitan Edison*.

[9] Fifth Annual Report of the Federal Power Commission, p. 57.

[10] We express no opinion as to how the matter might stand if Applicant, rather than the Dummer Power Company, had been the party which obtained the prior favorable determination. In the present case, at least, there is no question of collateral estoppel or *res judicata*.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of New Hampshire and has submitted satisfactory evidence of compliance with the requirements of all applicable state laws insofar as necessary to effectuate the purposes of a license for the project.

(2) The project consists of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2288–1) General Map of Project Area; and

Exhibit K: (FPC Nos. 2288–2 and –3) Detail Map of Project Area.

(b) Project works consisting of:

An L-shaped dam comprised of three sections, (1) a rock-filled timbercrib section faced with steel piling and normally surmounted by flashboards, (2) a rock-filled timbercrib section faced with wood planking and normally surmounted by hinged wood flashboards and (3) a concrete gravity section normally surmounted with flashboards and including a gated log sluice-way; a reservoir with normal water surface at elevation 773.53 feet (USGS datum); a canal used as a forebay extending to the powerhouse intake section; a powerhouse containing two 583 horsepower turbines connected to 400-kilowatt generators and two 1,000-horsepower turbines connected to 675-kilowatt generators; a 2.4 KV transmission line extending to the Gorham substation; remote control operating equipment; and appurtenant facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings

FPC No.	Sheet No.	Description
2288–4	1	Plan of Dam.
2288–6	3	Dam—Plan of Timber Section.
2288–7	4	Dam—Sections of Timber Section.
2288–8	5	Generator Floor Plan—Unit No. 1 and 2.
2288–9	6	Powerhouse—Transverse and Longitudinal Sections—Unit No. 1 and 2.
2288–10	7	Generator Floor Plan—Unit No. 3 and 4.
2288–14	11	Powerhouse—Longitudinal Section.
2288–15	12	Powerhouse—Transverse Section.

Exhibit M: Sixteen typewritten pages, "General Description of Mechanical and Electrical Equipment," filed in the Commission December 27, 1960.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use

or possession of which is necessary or appropriate in the maintenance and operation of the project.

(3) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests have been received.

(4) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project is best adapted to a comprehensive plan for improving and developing the Androscoggin River for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The following described transmission and electrical facilities are parts of the project within the meaning of Section 3 (11) of the Act and should be included in the license for the project as hereinafter provided:

(a) the 2.4 KV line to the Gorham substation.

(b) the 2.4/33 KV transformers in the Gorham substation.

(c) the 2.4 KV switching facilities.

(d) switching facilities necessary to connect the 2.4/33 KV transformers to the 33 KV bus at the Gorham substation.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 2,900 horsepower.

(8) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The energy generated by the constructed project is distributed and sold by Applicant for public utility purposes.

(10) The exhibits designated and described in finding (2) above conform to the Commission's rules and regulations and should be approved as part of the license for the project as hereinafter provided.

The Commission orders:

(A) This license is issued to Public Service Company of New Hampshire under Section 4(e) of the Act for a period effective July 1, 1958, and terminating December 31, 1993, for the continued operation and maintenance of the Gorham Project No. 2288, located on the Androscoggin River, a navigable water of the United States, in the town of Gorham, Coos County, State of New Hampshire, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This license is also subject to the terms and conditions set forth in Form L–3, December 15, 1953, entitled "Terms and Conditions of License for Constructed Major Project Affecting Navigable Waters of the United States" (17 FPC 385–389) which terms and conditions, designated as Articles 1 through 17, are attached hereto and made a part hereof, except for the last sentence of Article 11; and subject to the following special conditions set forth herein as additional articles:

Article 18. The Licensee shall pay to the United States the following annual charges, effective as of July 1, 1958:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act one (1) cent per horsepower on the authorized installed capacity (2,900 horsepower) plus two and one-half (2½) cents per 1,000 kilowatthours of gross energy generated during the calendar year for which the charge is made.

Article 19. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 20. The Licensee shall construct, maintain, and operate, or shall arrange for the construction, maintenance, and operation of artificial propagation facilities and such other permanent fish facilities and protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, provided, that such modifications shall be reasonably consistent with the primary purpose of the project and not unduly impair the power value of the project, as may be prescribed hereafter by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the New Hampshire Fish and Game Department, after notice and opportunity for hearing and upon a finding based on substantial evidence that such modifications are necessary and desirable, and consistent with the provisions of the Act.

Article 21. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish handling facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 22. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 23. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project with such other power systems as the Commission may direct in the interest of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination.

(C) The exhibits designated and described in finding (2) above are approved as part of this license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

COLUMBIA GULF TRANSMISSION COMPANY; KENTUCKY GAS TRANSMISSION CORPORATION; UNITED FUEL GAS COMPANY, DOCKET NO. CP62-56

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 26, 1962)

On August 31, 1961, as supplemented on September 6, 1961, and October 27, 1961, Columbia Gulf Transmission Company (Columbia Gulf) and Kentucky Gas Transmission Corporation (Kentucky Gas) filed in Docket No. CP62-56 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an interconnection between their pipelines in Madison County, Kentucky, and the delivery of natural gas through said interconnection by Columbia Gulf to Kentucky Gas in the event of an emergency on the latter's system. On January 18, 1962, United Fuel Gas Company (United Fuel) filed an amendment to the subject application and joined as an applicant herein. The proposed construction, operations, and sale are more fully set forth in the application, as supplemented and amended.

Applicants' proposed emergency connection will be made between Columbia Gulf's 30-inch main line and Kentucky Gas' 8-inch KA-1 pipeline at a point in Madison County, Kentucky. The KA-1 is an isolated line not connected to Kentucky Gas' main transmission system. The gas supply for this line is obtained solely from Tennessee Gas Transmission Company at a point near Richmond, Kentucky, which gas is delivered for the account of United Fuel Gas Company. Through Line KA-1 Kentucky Gas provides wholesale service to the City of Richmond, Kentucky, to Columbia Gas of Kentucky, Inc., and to Petroleum Exploration, Inc., all for resale in various Kentucky communities.

To insure continuous and interrupted service to Kentucky Gas' utility customers (served from Line KA-1) in the event of a break on, or loss of supply to that line, Applicants propose to establish the emergency interconnection. Any emergency deliveries to Kentucky Gas by Columbia Gulf would be made for the account of United Fuel, the latter being the only customer of Columbia Gulf and one of the suppliers to Kentucky Gas. United Fuel has requested Columbia Gulf to make the proposed connection and joins in the request for certificate authorization to establish the new delivery point to Kentucky Gas. There will be no new sale arising from the use of the proposed emergency connection. The proposed facilities will permit delivery of up to approximately 25,000 Mcf per day by Columbia Gulf to Kentucky Gas.

The total cost of the proposed facilities is estimated to be $28,300. Columbia Gulf proposes to construct and operate a 6-inch main line tap and a side gate valve on its line at an estimated cost of $4,400. Kentucky Gas proposes to construct a main line tap on its 8-inch line, a side gate, and a measuring and regulating station at an estimated cost of $23,900. United Fuel will not build anything nor bear any of the costs.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 17, 1762, respecting the matters involved in and the issues presented by the application, as supplemented and amended, herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure

be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the National Gas Act as heretofore found by the Commission in its order of November 5, 1958, in Docket No. G–15524 (20 FPC 681).

(2) Applicant, Kentucky Gas Transmission Corporation, a Delaware corporation having a principal place of business in Charleston, West Virginia, is a "natural-gas company" within the means of the National Gas Act as heretofore found by the Commission in its order of August 10, 1956, in Docket No. G–9689 (16 FPC 437).

(3) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G–341 (4 FPC 534).

(4) The facilities hereinbefore described, as more fully described in the application, as supplemented and amended, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of facilities and the delivery of natural gas as proposed by Applicants are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, Columbia Gulf Transmission Company, Kentucky Gas Transmission Corporation, and United Fuel Gas Company, to construct and operate the facilities hereinbefore described, and to deliver natural gas through said facilities on an emergency basis, all as more fully set forth in the application as supplemented and amended, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The time within which the subject facilities shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at 5 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

KENTUCKY WEST VIRGINIA GAS COMPANY, DOCKET NO. CP62-163

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, PERMITTING AND APPROVING ABANDONMENT AND ACCEPTING RATE FILING

(Issued April 26, 1962)

On January 9, 1962, Kentucky West Virginia Gas Company (Applicant) filed in Docket No. CP62-163 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing certain additional delivery points for its previously authorized exchange of natural gas with Inland Gas Company, Inc. (Inland), and for permission and approval to abandon certain delivery points in connection with the said exchange of gas with Inland.

In Docket No. G-272, Applicant was authorized to make deliveries of natural gas to Inland at certain points in Kentucky according to the terms of a letter agreement between Applicant and Inland. Applicant states that the agreement was amended from time to time and on October 9, 1950, the agreement was restated in the form that now appears in Applicant's FPC Gas Tariff, Original Volume No. 2, First Revised Sheet Nos. 7, 8, and 9. Applicant states further that since October 1950, there have been occasions when it was desirable to eliminate certain of the delivery points and at times to add others. The subject application seeks authorization for such additions and eliminations. These delivery point modifications have been embodied in an agreement, dated October 5, 1961, between Applicant and Inland.

The delivery points proposed to be abandoned and the reasons therefor are:

(1) *Johnson County* point, Johnson County, Kentucky. The gas delivered by Applicant at this point had a high sulfide content and Applicant had to pay 4 cents per Mcf to Inland to purify it. A decrease in gas available at this point, and a breakdown in Inland's purification plant resulted in the elimination of this delivery.

(2) *Lackey* point, Floyd County, Kentucky. Lackey was established as a balancing point, but very little gas was ever delivered from it by Applicant. Increased supplies of gas available to Inland from other sources eliminated the need for this delivery point.

(3) *Mousie* point, Knott County, Kentucky. The delivery pressure on Inland's gas system became greater than the pressure that was available from Applicant's facilities at the Mousie delivery point and it was therefore eliminated.

The following are the additional delivery points provided for in the agreement of October 5, 1961, for which Applicant herein seeks authorization:

(1) *Nelson Allen* delivery point, Magoffin County, Kentucky. Established by letter agreement, dated June 22, 1953, and restated in agreement, dated October 5, 1961.

(2) *Camp Branch*, Rockhouse Creek delivery point, Knott County, Kentucky. Established by letter agreement, dated April 2, 1956, and restated in agreement, dated October 5, 1961.

(3) *Abbott Creek*, Myrtle delivery point, Magoffin County, Kentucky. Established by letter agreement, dated October 9, 1953, modified by letter agreement, dated September 17, 1954, and restated in agreement, dated October 5, 1961.

(4) *Oakley Creek*, Magoffin County delivery point, Magoffin County, Kentucky. Subject of application in Docket No. CP61-343.

On January 12, 1962, Applicant filed the letter agreement, dated October 5, 1961, as Second Revised Sheet Nos. 6, 7, 8, and 9, and Original Sheet No. 9-A to its FPC Gas Tariff, Original Volume No. 2.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 16, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Kentucky West Virginia Gas Company, a West Virginia corporation having its principal place of business in Ashland, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 4, 1944, in Docket No. G-272 (4 FPC 476).

(2) The additional delivery points hereinbefore described, as more fully described in the application in this proceeding, are to be used in the exchange and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation of such delivery points by applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The additional delivery points proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The delivery points to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission, and abandonment of such delivery points is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as herinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(8) The letter agreement, dated October 5, 1961, and filed on January 12, 1962, should be accepted for filing as Second Revised Sheet Nos. 6, 7, 8 and 9, and Original Sheet No. 9-A to Applicant's FPC Gas Tariff, Original Volume No. 2, to become effective on the day this order issues.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Kentucky West Virginia Gas Company, to establish the additional delivery points for the exchange and delivery of natural gas, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Permission for and approval of the abandonment by Applicant of the delivery points hereinbefore described, all as more fully described in the application in this proceeding, be and the same is hereby granted.

(D) The letter agreement, dated October 5, 1961, and filed on January 12, 1962, is hereby accepted for filing as Second Revised Sheet Nos. 6, 7, 8, and 9, and Original Sheet No. 9–A to Applicant's FPC Gas Tariff, Original Volume No. 2 to become effective on the day this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E–7027

ORDER AUTHORIZING THE ISSUANCE OF PROMISSORY NOTES

(Issued April 26, 1962)

Montana-Dakota Utilities Co. (Applicant), incorporated under the laws of the State of Delaware and doing business in the States of Minnesota, Montana, North Dakota, South Dakota, and Wyoming, with its principal business office at Minneapolis, Minnesota, filed an application on March 12, 1962, as supplemented on April 12 and 20, 1962, for authority, pursuant to Section 204 of the Federal Power Act, to issue unsecured Promissory Notes in the aggregate principal amount of $12,000,000, outstanding at any one time. Each of the proposed Notes will be dated as of the dates of their respective issue, which will be not later than December 31, 1962; will mature not more than one year after their respective dates of issue and not later than December 31, 1963; and, will bear interest at the prime commercial bank rate in effect in New York City at the time of each borrowing.

Applicant proposes to issue the Notes to the First National City Bank of New York. Through separate agreements between this bank and the Northwestern National Bank of Minneapolis and the First National Bank of Minneapolis, the two Minneapolis banks will each have a 25% participation in each note. The application indicates that none of the Notes proposed to be issued will be resold to the general public and no finder's fee or other negotiation fee, commission or remuneration will be paid in connection therewith to any third person.

Applicant states that the proceeds to be obtained from the proposed issuance of Notes will be used to provide temporary financing for part of the cost of Applicant's 1962 construction program, estimated at $18,000,000, which is approximately equally divided between additions to Applicant's electric facilities and additions to Applicant's gas facilities. The principal item in the electrical program is $6,000,000 for the 66,000 kw generating unit addition to the R. M.

Heskett station near Mandan, North Dakota, scheduled to be completed in late 1963 at a total cost of $10,425,000. The principal items in Applicant's gas program are: $4,425,000 for 106 miles of twelve inch natural gas pipeline between Minot and Bismarck, North Dakota, with laterals to and distribution systems in six contiguous communities; $715,000 for 29 miles of six and four inch pipeline between Williston and Watford City, North Dakota; and $1,382,000 for 26 miles of twelve inch pipeline loop between the Little Beaver, Montana, and Belle Fourche, South Dakota, compressor plants and one 880 hp compressor unit at each plant. Applications for certification of the gas items are now pending before this Commission in Docket Nos. CP61-234, CP61-297, and CP62-225, respectively. Applicant states that none of the proposed Notes will be issued to obtain funds for the payment of the cost of construction of the afore-mentioned gas facilities prior to the issuance of certificates of convenience and necessity in accordance with the Natural Gas Act. The application indicates that Applicant expects to issue First Mortgage Bonds in the fall of 1962 to discharge all short-term Notes then outstanding.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the Montana Board of Railroad Commissioners, the North Dakota Public Service Commission, the South Dakota Public Utilities Commission, and the Wyoming Public Service Commission, and to the Governor of each of those States. Notice of the application was also published in the Federal Register on March 24, 1962 (27 F.R. 2780), stating that any person desiring to be heard or to make any protest with reference to said application should file a petition or protest, on or before April 9, 1962, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a Delaware corporation, owns and operates facilities, among others, which are used for the transmission and sale at wholesale of electric energy which is transmitted between the States of Montana and North Dakota, between the States of North Dakota and South Dakota, and from the State of Montana to the State of Wyoming, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electricity consumed wholly by the transmitter. Applicant is, therefore, a public utility within the meaning of that term as used in Section 204 of the Federal Power Act.

(2) The proposed issuance of Promissory Notes, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Promissory Notes, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Promissory Notes in the aggregate principal amount of $12,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) of the Act from the requirements of Section 204(a) of the Act.

(5) The proposed issuance of Promissory Notes, described above, will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of Promissory Notes, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes by the Applicant, in an aggregate principal amount of not to exceed $12,000,000 at any one time outstanding, upon the terms and conditions and for the purposes set forth in the application, is hereby authorized, subject to the provisions of this order.

(B) The authorization is expressed conditioned upon the final maturity of all Notes to be issued pursuant thereto, being not later than December 31, 1963.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE SUPERIOR OIL COMPANY, DOCKET NOS. G–15554, G–15555, G–15648, G–16335

ORDER DENYING REHEARING

(Issued April 26, 1962)

On April 3, 1962, Superior Oil Company (Superior) filed application in the above dockets for rehearing of the Commission's omnibus order of March 5, 1962 in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 441.* By that order we disposed of more than 400 proceedings, including those above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. In Docket Nos. G–15554, G–15555, and G–15648, with respect to rate schedules applicable to sales to Transcontinental Gas Pipe Line Corporation (Transco) and Texas Gas Transmission Corporation (Texas Gas), the effect of the March 5 order was to reinstate the Commission's order of February 21, 1961, in which Superior was required to refund tax-reimbursement amounts without regard to whether it had obtained corresponding tax refunds from the State of Louisiana. In Docket No. G–16335, involving sales to Trunkline Gas Company, the March 5 order in effect reinstated the Commission's order of May 29, 1961, which limited the refund obligation to amounts actually received by Superior from the State of Louisiana.

Superior's application recites that Superior paid the tax under protest and thus obtained a refund from the State of Louisiana; that in compliance with the Commission's order of February 21, 1961, Superior paid to each of its purchasers the amounts required to be refunded and secured from each purchaser

*Superior styled its filing a "Motion for Rehearing." We deem it, however, an application for rehearing within the meaning of Section 19(a) of the Natural Gas Act.

release of all claims with respect to the invalidated tax; that on July 5, 1961, Superior filed with the Commission a report of compliance, submitted release agreements for each sale subject to suspension under its dockets and requested that the Commission enter an order discharging Superior from all further refund obligations.

Superior assumes that the order of March 5 imposes a refund obligation additional to and different from that imposed by the February 21, 1961, order, with which it claims to have complied. On the basis of that assumption it requests that the ordering paragraphs of the March 5 order be modified so as to except the above dockets or, in lieu thereof, that the Commission enter an order discharging Superior from all further liability. In fact, however, the March 5 order was intended merely to revive the obligation originally imposed by the February 21, 1961, order but later abated (as to producers who received no tax refund) by the order of May 29. It will be observed that the operative language of ordering paragraph (A) of the March 5 order is substantially the same as that of ordering paragraph (A) of the February 21, 1961, order, both requiring refunds of "amounts collected under the respective agreements and undertakings filed in compliance with the Commission's [suspension] orders." Moreover, Superior must report to the Commission as required by ordering paragraph (C) of the March 5 order only "if it has not already done so." It is clear that if Superior has complied in full with the requirements of the February 21, 1961, order, as it alleges, it will *ipso facto* have complied with the order of March 5, 1962. To allay any uncertainties which may be troubling Superior, the Commission's Secretary will advise the company by letter whether it has satisfactorily demonstrated its compliance with the refund obligation imposed by the February 21, 1961, order and revived by the order of March 5.

In light of the foregoing discussion, we see no reason to modify the March 5 order or to grant Superior's application for rehearing.

The Commission finds:

Superior's application for rehearing of the Commission's order of March 5, 1962, should be denied.

The Commission orders:

Superior's application for rehearing of the Commission's order of March 5, 1962, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXACO INC., *ET AL.*,* DOCKET NOS. G–15546, *ET AL.*;* ARKANSAS LOUISIANA GAS COMPANY, *ET AL.*, ** DOCKET NOS. G–16125, *ET AL.*

ORDER DENYING APPLICATIONS FOR REHEARING AND GRANTING EXTENSION OF TIME

(Issued April 26, 1962)

By companion orders issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, and *Arkansas Louisiana Gas Company, et al.*, Docket Nos.

*As noted in Appendix A hereof under columns entitled "Docket Nos." and "Applicants." [Appendix A omitted in printing.]

**The Docket Nos. hereby designated are *Tennessee Gas Transmission Company*, G–15567; *Olin Gas Transmission Corporation*, G–15695; *Mississippi River Fuel Corporation*, G–15880; and *Mississippi River Fuel Corporation*, G–16468. In each of these dockets the applicant for rehearing is Southern Natural Gas Company, the purchaser.

G–16125, *et al.*, 27 FPC 441 and 437, respectively,[1] the Commission disposed of more than 400 proceedings, including those listed above, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. In certain of these proceedings, the March 5 order[2] directed producers to refund tax-reimbursement amounts collected from Transcontinental Gas Pipeline Corporation (Transco), Texas Gas Transmission Corporation (Texas Gas), and United Fuel Gas Company (United Fuel). In the remaining dockets, the Commission declined to order refunds on the ground that the purchasers by neglecting to file timely petitions for intervention or applications for rehearing of the order of May 29, 1961, 25 FPC 1058,[3] had allowed their rights to expire. Timely applications for rehearing of the March 5 order have been filed in the above dockets by producers who were ordered to make refunds and by direct and secondary purchases to whom refunds were denied.

In support of their applications, the producers advance various contentions to the effect that under Section 19 of the Natural Gas Act the Commission lacked jurisdiction to reconsider or disturb the finality of the May 29 order. In addition, some argue that they were deprived of the trial-type hearing allegedly required by the Administrative Procedure Act, the Natural Gas Act, and the Commission's regulations. Finally they challenge the merits of our decision to order refunds, urging among other things, that the 1958 suspension orders, construed in the light of contemporaneous certificate orders and letters from the Commission to the Louisiana Collector of Revenue, did not impose a refund obligation upon producers who elected not to protest the tax; that there were valid business reasons for declining to pay under protest; that the Commission erred in assuming that producers could protest the tax without being forced to initiate litigation; and that the Commission ignored the possibility that the refunded amounts might constitute a windfall to the pipelines.

With regard to the finality of the May 29 order and the adequacy of the hearing procedure, substantially all of the contentions set forth in the applications were considered by the Commission in its prior deliberations and were answered either in its order of March 5 or its order of April 13 denying an application for rehearing filed in certain proceedings by Pan American Petroleum Corporation.[4] One point, however, merits further comment. Several of the producers urge that since the May 29 order was itself issued upon reconsideration of a prior order, it was immune to further reconsideration by the Commission. As authority for this view they rely upon *Trunkline Gas Company et al.*, Docket Nos. G–15394, *et al.*, 21 FPC 394 (1959), and *Houston, Texas Gas and Oil Corporation*, Docket No. G–9262, 17 FPC 542 (1957). Neither of the cited cases, however, is apposite. In *Trunkline*, the Public Service Commission of New York (PSC) applied for rehearing of an order denying it intervention. The Commission granted rehearing, but later declined on the merits to accord PSC the requested status of an intervener. When PSC filed a second application for rehearing, substantially identical in aim and content with its first, the Commission ruled it out of order. In *Houston*, the Commission's Secretary rejected the tender of an application for rehearing addressed to an order which

[1] The *Texaco* order pertained to sales of gas by independent producers to pipeline companies; the *Arkansas Louisiana* order pertained to field sales by pipeline companies.

[2] The term "March 5 order," as used herein, shall refer to the order issued in Docket Nos. G–15546, *et al.*

[3] By that order, the Commission limited the producers' refund obligation to amounts recovered by the producers from the State of Louisiana.

[4] The dockets in which Pan American sought rehearing were Nos. G–15641, G–15650, G–15780, G–16065, G–16066, and G–16067.

itself had denied a similar application filed by the same party. Thus, the principle for which these cases stand is that where the Commission has responded negatively to an application for rehearing, either by denying the application itself or by deciding against the applicant upon reconsideration of the merits, the disappointed party's proper recourse is to petition for judicial review, not to importune the Commission with a further application. That principle, however, has no bearing upon the present proceedings, since the applications for rehearing of the May 29 order were the only ones to be filed by the three purchasers involved. Moreover, inasmuch as none of these purchasers was aggrieved by the order of February 21, 1961, it is difficult to see how they *could* properly have sought rehearing at any earlier stage. The only real question, therefore, is whether the attempt by Texas Gas to intervene in the proceedings subsequent to May 29 was still timely.[5] On this point we adhere to the conclusion expressed in our March 5 order. It should be emphasized that until April 14, 1961, when the Commission granted applications for rehearing filed by producers in thirteen of the sixty-one dockets involving sales to Texas Gas,[6] there was no reason to suspect that the producers' refund obligation would even be disputed. It might, perhaps, have been prudent for Texas Gas to seek intervention immediately thereafter in those proceedings which had been reopened by the April 14 order. However, in view of the fact that the Commission did not issue its customary notice fixing a time for intervention, invite statements of position, or otherwise establish procedures for litigating the refund issue, we do not believe that Texas Gas should be deemed to have forfeited its right to make its voice heard in these proceedings merely because it did not come forward prior to May 29.

On the merits of the refund question, the Union Oil Company of California (Union), one of the producer applicants, raises the only consideration not dealt with in our March 5 order. Union charges the Commission with having ignored the settled principle of restitution that a buyer can recover from his seller the amount of an invalid tax included as a separable component of the purchase price only if (i) the seller has been reimbursed by the taxing authorities and (ii) the refund will not unjustly enrich the buyer. As to the first of these two conditions, it must be noted that in the cases relied upon by Union the only noncontractual basis upon which the sellers' refund obligation could be predicated was that of unjust enrichment. In the instant proceedings, however, the producers' refund obligation is derived from suspension orders issued by this Commission in furtherance of its regulatory objectives under the Natural Gas Act. The purpose of the suspension orders was not merely to prevent the unjust enrichment of the producers, but also and primarily to insure that the customers would not be forced to pay a rate which included the amount of an invalid tax. Admittedly, if there had been no way by which the producers could have recouped from the State of Louisiana the amounts required to be refunded to their customers, we would have a different question. Procedures for obtaining a tax refund did exist, however, and the fact that some of the producers elected not to avail themselves of these procedures, and thus cannot at this late date be made whole, is not a sufficient reason to inflict upon their customers the burden of an invalid and readily avoidable tax.

The second branch of Union's argument is that the Commission, in considering the equities, failed to take into account the possibility that the refunds

[5] Transco had sought intervention, and United Fuel had been admitted as an intervener, prior to the May 29 order.

[6] The dockets referred to are those which are included both in Appendix B and Appendix E of the March 5 order.

might be a windfall to the recipient pipelines. The fact is, however, that before issuing the March 5 order, the Commission took steps to verify that its action would not yield a windfall. The records of the Commission confirm representations made by Transco in these proceedings to the effect that the increased costs attributable to the gathering tax were never passed on in the form of higher rates. Having absorbed the tax, Transco will not be unjustly enriched if it is allowed to retain the amounts refunded to it pursuant to our March 5 order. In Docket No. G–16316, United Fuel filed for a rate increase reflecting the increase in its tax-reimbursement obligations triggered by the Louisiana tax. The Commission permitted the rate to become effective subject to refund, as of September 23, 1958. Thus, the portion of the tax allocable to the period August 1, 1958, to September 23, 1958, was absorbed by the company. By order of September 15, 1960, in Docket No. G–16316,[7] the Commission approved a settlement agreement, the effect of which will be to require United Fuel to pass on to its wholesale customers their proportionate share of any refunds received by United Fuel under the March 5, 1962 order. In Docket No. G–16405, Texas Gas increased its rates, effective October 1, 1958, to cover its additional tax-reimbursement expenses. The costs allocable to the preceding two-month period were absorbed by the company. By order issued October 30, 1959, the Commission approved termination of the above docket on condition that Texas Gas refund to each of its customers whose rates were increased, the applicable portion of any refunds received by Texas Gas from its suppliers in the event that the gathering tax should be held invalid. In light of the above circumstances, it is clear that none of the pipelines entitled the above refunds in accordance with the March 5 order will be unjustly enriched thereby.

The contention chiefly relied upon by the purchasers in their applications is that the March 5 order, insofar as it denied to some purchasers the relief it granted to others, was inconsistent with the approach adopted in the May 29, 1961, order, which was applied uniformly to all dockets, not merely those in which the producers had sought rehearing of the February 21, 1961, order. It is our view, however, that the *sua sponte* action involved in the May 29 order was significantly different in character from that which would now be required were we to grant refunds in all dockets. The avowed purpose of our earlier order was to qualify the producers' refund obligation in conformity with what was stated to be the Commission's subjective intent at the time it issued its original suspension orders, as well as the order of February 21, 1961. The modification of the February 21 order can thus be viewed as an effort to rectify the omission of an intended provision. As such it falls within a category of *sua sponte* action which the Supreme Court has held to be proper.[8] A *sua sponte* order directing refunds to all purchasers could not be similarly justified.

Other arguments, too numerous for meaningful treatment herein, are contained in the purchasers' applications. All such arguments have been considered by the Commission and found to be without merit.

The application for rehearing filed by producer Sun Oil Company (Sun) is accompanied by an application to stay the effectiveness of ordering paragraphs (A), (B), and (C) of the March 5 order for a period of sixty days after final Commission action on Sun's application for rehearing and until final disposition of any petition for judicial review. Sun advises that in Docket Nos. G–15632 and G–15768, involving sales to Transco, it has already filed a petition for review

[7] United Fuel Gas Company, 24 FPC 467 (1960).

[8] *American Trucking Associations, Inc.* v. *Frisco Transportation Company,* 358 U.S. 133 (1958).

of the March 5 order in the Court of Appeals for the District of Columbia Circuit. For reasons stated in our order of April 13, 1962,[9] granting Pan American Petroleum Corporation an extension of time for compliance, we propose to extend the time within which Sun must comply with ordering paragraphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after conclusion of judicial review of that order in Docket Nos. G–15632, G–15633, G–15743, and G–15768. The extension is conditional, however, upon the payment by Sun to its customers Transco, United Fuel, and Texas Gas of interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5.

The Commission finds:

(1) The applications filed in the instant dockets for rehearing of the Commission's order of March 5, 1962, should be denied.

(2) There is good cause for extending the time within which Sun must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after conclusion of judicial review of that order in Docket Nos. G–15632, G–15633, G–15743, and G–15768, respectively.

(3) It is just and reasonable and in the public interest that Sun be required to pay its customers Transco, United Fuel, and Texas Gas interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after the issuance of our March 5 order.

The Commission orders:

(A) The applications filed in the instant dockets for rehearing of the Commission's order of March 5, 1962, are hereby denied.

(B) The time within which Sun must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962, insofar as applicable to Docket Nos. G–15632, G–15633, G–15743, and G–15768, respectively, is extended for a period ending 30 days after conclusion of judicial review of that order in each of those respective dockets.

(C) Sun shall pay Transco, United Fuel, and Texas Gas interest, at a rate of 7% upon the amounts to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962, order.

(D) The time within which Transco, United Fuel, and Texas Gas must comply with ordering paragraphs (B) and (D) of the March 5, 1962, order, insofar as applicable to Docket Nos. G–15632, G–15633, G–15743, and G–15768, respectively, is extended for a period ending 60 days after the conclusion of judicial review of that order in each of those respective dockets.

(E) The preceding paragraphs (B) through (D) hereof shall not be deemed operative with respect to Docket Nos. G–15633 and G–15743 unless and until Sun shall have filed a petition for review therein. Thus, if within 90 days after the issuance of the March 5 order, Sun shall neither have complied with ordering paragraphs (A) and (C) thereof nor petitioned for review, it shall be deemed in default. In the event that Sun's pending petition for review in Docket Nos. G–15632 and G–15768 are dismissed on grounds of prematurity and that no further petitions for review are filed therein within the time limit prescribed by Section 19(b) of the Natural Gas Act, the preceding paragraphs (B) through (D) hereof shall be deemed inoperative and of no effect.

OLIN GAS TRANSMISSION CORPORATION, DOCKET NO. CP62-125; JOSEPH E. SEAGRAM & SONS, INC., d.b.a. FRANKFORT OIL COMPANY, DOCKET NO. CI62-370

FINDING AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued April 27, 1962)

On November 20, 1961, Olin Gas Transmission Corporation (Olin) and on October 9, 1961, Joseph E. Seagram & Sons, Inc., d.b.a. Frankfort Oil Company (Frankfort), filed in Docket Nos. CP62-125 and CI62-370, respectively, applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the sale of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) from their respective interests in the North Gillis Field, Calcasieu Parish, Louisiana.

The proposed sale by Frankfort will be made pursuant to a contract dated March 21, 1961, between Frankfort and Texas Eastern. Olin has adopted and ratified said contract between Frankfort and Texas Eastern, and the proposed sale by Olin will be made pursuant thereto.

The sale of natural gas will be made at a proposed total initial price of 15.8007 cents per Mcf at 15.025 psia.

Concurrently with the filing of its application herein, Olin filed the gas purchase contract dated March 21, 1961, as its proposed FPC Gas Rate Schedule F-12.

By letter, dated October 24, 1961, Frankfort was granted temporary authorization to commence the subject sale of natural gas.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 19, 1962, respecting the matters involved in and the issues presented by the applications herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practices and Procedure.

The Commission finds:

(1) Applicant, Olin Gas Transmission Corporation, a Delaware corporation having its principal place of business in New Orleans, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 30, 1954, in Docket No. G-2335 (13 FPC 1012).

(2) Applicant, Joseph E. Seagram & Sons, Inc., d.b.a. Frankfort Oil Company, an independent producer of natural gas, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The sales of natural gas hereinbefore described, as more fully described in the applications in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sales by the Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The sales of natural gas by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) The gas purchase contract, dated March 21, 1961, filed by Olin concurrently with its application in Docket No. CP62–125, should be accepted for filing as Olin's FPC Gas Rate Schedule F–12 to become effective on the date this order issues.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued, upon the terms and conditions of this order, authorizing the sales by Applicants, Olin and Frankfort, of natural gas to Texas Eastern in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, as hereinbefore described, all as more fully described in the respective applications in this proceeding.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicants. Further, our action in this proceeding shall not foreclose or prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved.

(D) The gas purchase contract, dated March 21, 1961, filed by Olin concurrently with its application in Docket No. CP62–125, is hereby accepted for filing as Olin's FPC Gas Rate Schedule F–12 to become effective on the date this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodard.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP62–103

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 27, 1962)

On October 20, 1961, as supplemented on October 26, 1961, November 1, 1961, and January 24, 1962, Transcontinental Gas Pipe Line Corporation (Applicant)

filed in Docket No. CP62-103 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during a 12-month period and the operation of field booster compressor facilities and appurtenant equipment to enable Applicant to take into its certificated pipeline system volumes of natural gas which may be purchased in presently connected fields, at a total cost not to exceed $1,000,000 with no single installation to exceed a cost of $250,000, all as more fully set forth in the application, as supplemented.

In a number of fields connected to Applicant's system declining wellhead pressures are diminishing the volumes of gas which would otherwise be deliverable to Applicant by contract, thus necessitating the installation of the facilities for which authorization is sought herein.

No new sale or service is proposed in the application. The construction and operation of the subject facilities will not increase the delivery capacity of Applicant's main transmission system.

The proposed facilities will be financed from cash on hand or, alternatively, by short term bank loans.

The facts relevant to the need for additional compression are:

Field and County (Texas)

	South Karon and Coquat Field, Live Oak County	Goebel Field, Live Oak County	St. Charles Field, Aransas County	Kittiewest Field, Live Oak County	Arneckville Field, Dewitt County		South Pleasanton Field, Atascosa County

On December 11, 1961, Applicant was granted temporary authorization to construct and operate the proposed facilities in the Arneckville and South Pleasanton Fields on the condition that the independent producers involved file changes in their respective related rate schedules to reflect the lower delivery pressures to Applicant.

Installation of compressors in other fields may become necessary during the period for which authorization is hereinafter granted.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 17, 1962, respecting the matters involved in and the issues presented by the Application, as supplemented, herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 28, 1950, in Docket No. G–1277 (9 FPC 32).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction for a 12-month period and the operation of field booster compressor facilities to take natural gas from producers thereof in presently connected fields as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, not more than 60 days following the expiration of the authorization hereinafter granted, a statement under oath showing by installation: (a) names of fields in which facilities are installed, (b) a description of the facilities installed pursuant to the authorization hereinafter granted, (c) the costs of the facilities so constructed, and (d) the names of the independent producers (other than those mentioned herein) from whom gas is purchased through said facilities.

(6) The authorization hereinafter granted should be limited to construction for a 12-month period following the date on which the order issues, and the total expenditures for facilities to be constructed thereunder should be limited to $1,000,000, with no single installation to exceed a cost of $250,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas

Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) The authorization hereinafter granted should be subject to the condition that Robert Mosbacher (Operator) *et al.*, Atlantic Refining Company, Western Natural Gas Company, and Continental Oil Company file changes in their respective related rate schedules to reflect the changes in service, i.e., delivery of gas at lower pressures to Applicant; and further, if compression facilities are installed to receive gas from other producers under the authorization hereinafter granted, said authorization should be conditioned upon the filing by said producers of changes in their respective related rate schedules to reflect the changes in service, i.e., delivery of gas at lower pressures to Applicant.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Transcontinental Gas Pipe Line Corporation to construct during the 12-month period commencing on the date on which this order issues the proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, and to operate such facilities only to take natural gas supplies in presently connected fields purchased from producers who have received authorization from the Commission to sell natural gas to Transcontinental Gas Pipe Line Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit, not more than 60 days following the expiration of the authorization granted in paragraph (A) above, a statement under oath showing by installation: (a) names of fields in which facilities are installed, (b) a description of said facilities, (c) costs of the facilities so constructed, and (d) names of the independent producers (other than those mentioned herein) from whom gas is purchased through said facilities.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing with the date on which this order issues, and the total expenditures for facilities to be constructed hereunder are hereby limited to $1,000,000 with no single project to exceed a cost of $250,000.

(E) The authorization granted in paragraph (A) above is subject to the condition that Robert Mosbacher (Operator) *et al.*, Atlantic Refining Company, Western Natural Gas Company, and Continental Oil Company file changes in their respective related rate schedules to reflect the changes in service, i.e., delivery of gas at lower pressures to Applicant; and further, if compression facilities are installed to receive gas from other producers under the authorization hereinbefore granted, said authorization shall be conditioned upon the filing by said producers of changes in their respective related rate schedules to reflect the changes in service, i.e., delivery of gas at lower pressures to Applicant.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP62-143

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued April 27, 1962)

On December 8, 1961, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP62-143 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing an additional 421 Mcf per day of storage service to Elizabethtown Consolidated Gas Company (Elizabethtown) an existing customer.

Applicant states that it will provide the proposed additional volumes from the unallocated portion of its share of the Leidy Storage Field. The proposed storage service will be rendered initially under Applicant's presently effective LS Rate Schedule.

Presently Elizabethtown has 6,000 Mcf of natural gas per day allocated to it from the Leidy Field. The proposed additional volumes will be utilized by Elizabethtown to assist it in minimizing the high costs associated with peak shaving.

No additional facilities will be required to render the proposed service.

Elizabethtown will provide gas for injection into Leidy Field from its present allocations for future withdrawal of the additional 421 Mcf per day.

Concurrently the filing of the application herein, Applicant filed a proposed service agreement, dated December 4, 1961. Said service agreement is for a term of one year from the date the additional proposed service commences. Applicant states that it expects such agreement to be superseded by a new long-term agreement reflecting the additional service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 19, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G-1143 (7 FPC 139).

(2) The additional natural gas storage service for Elizabethtown as hereinbefore described and as more fully described in the application herein will be made in interstate commerce, subject to the jurisdiction of the Commission, and such additional service by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The additional service of natural gas hereinbefore described is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter to Applicant and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(6) The service agreement dated December 4, 1961, filed by Applicant concurrently with its application herein, should be accepted for filing to become effective on the date on which this order issues.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been defined by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to render additional natural gas storage service for Elizabethtown as hereinbefore described, all as more fully described in the Application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) The service agreement dated December 4, 1961, filed by Applicant concurrently with its application herein, is hereby accepted for filing to become effective on the date on which this order issues.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP61-194; NEW YORK STATE NATURAL GAS CORPORATION, CP61-198; TOWN OF LIBERTY, MISSISSIPPI, CP61-208; THE WIND GAP DIVISION OF BANGOR GAS COMPANY, CP61-222; THE HUGHESVILLE DIVISION OF JERSEY SHORE GAS & HEATING COMPANY, CP61-223; NEW YORK STATE NATURAL GAS CORPORATION, CP61-237; TEXAS EASTERN TRANSMISSION CORPORATION, CP61-238; NEW YORK STATE NATURAL GAS CORPORATION, CP61-238; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, CP61-238.

ORDER ADOPTING WITH MODIFICATIONS THE INITIAL DECISION OF THE EXAMINER

(Issued April 27, 1962)*

Syllabus

1. Commission *issues* certificates of public convenience and necessity to applicants under Section 7 of the Natural Gas Act. P. 863.
2. Commission *directs* Transcontinental to establish physical connection of its transportation facilities with applicants proposed facilities and deliver and sell natural gas to applicant under Section 7(a) of the Natural Gas Act. P. 863.

James B. Henderson, William H. Davidson, William N. Bonner, Jr., Richard J. Connor, John T. Miller, Jr., George Grantham, and *Horace C. Wells* for Transcontinental Gas Pipe Line Corporation.

* Initial decision appears on p. 863.

G. Kirby Herrington, Richard B. Gordon, C. William Cooper, Lawrence L. Gray, George N. Reed, and *Thomas G. Roderick, Jr.,* for New York State Natural Gas Corporation.

Martin L. Friedman, Michael J. Shea, Keith M. Pyburn, and *Jack D. Head* for Texas Eastern Transmission Corporation.

John Ware III, J. David Mann, John E. Holtzinger, Jr., and *John N. Schaffer, Jr.,* for The Wind Gap Division of Bangor Gas Company; The Hughesville Division of Jersey Shore Gas & Heating Company; and Pittston Gas Company.

Hugh Connor and *John P. Sinclair* for Delaware Power & Light Company.

F. Kent Burns for North Carolina Utilities Commission.

Samuel G. Miller, Vincent P. McDevitt, and *Henry P. Sullivan* for the Philadelphia Electric Company.

Robert C. Koury for South Jersey Gas Company.

J. David Mann for Philadelphia Gas Works Division of the United Gas Improvement Company.

J. Harry Mulhern, Edward S. Kirby, and *William R. Duff* for Public Service Electric and Gas Company.

Armour T. Beckstrand, W. C. Braden, Jr., William W. Bedwell, Lambert McAllister, and *Francis J. Walsh* for Tennessee Gas Transmission Company.

John R. Sailer for Elizabethtown Consolidated Gas Company.

Herbert E. Squires, Alen R. Squires, Joseph I. Lewis, and *Martin Toscan Bennett* for Pennsylvania Public Utility Commission.

Frank P. Cooke for Public Service Company of North Carolina, Inc.

David K. Kadane, Edward M. Barrett, Bernard Hulkower for Long Island Lighting Company.

H. D. McHenry, William S. Traver, Hugh J. Morgan, Jr., for Southern Natural Gas Company.

Edwin F. Russell and *Harry G. Hill, Jr.,* for Brooklyn Union Gas Company.

William W. Ross and *J. David Mann* for Eastern Shore Natural Gas Company.

Kenneth Brim, Harry S. Littman, and *Dale A. Wright* for Piedmont Natural Gas Company, Inc.

James O'Malley, Jr., Halcyon G. Skinner, Ronald D. Jones, and *John A. Lodge* for Consolidated Edison Company of New York, Inc.

Brooks E. Smith and *Daniel L. Bell* for the Manufacturers Light and Heat Company, and Atlantic Seaboard Corporation.

Reuben Goldberg, George Spiegel, and *Charles E. Thomas* for Pennsylvania Gas and Water Company.

E. W. Moise and *Norman A. Flaningam* for Atlanta Gas Light Company.

John W. Kern, III and *Cecil A. Beasley, Jr.,* for City of Lexington, North Carolina.

Frank P. Cooke for Carolina Natural Gas Company.

R. H. Martin and *Raymond Dale Hodges* for the town of Liberty, Mississippi.

L. R. McClung for Water, Gas & Electric Department of the City of Danville, Virginia.

John Paul Geneau for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

These matters are before us upon exceptions filed by Commission Staff (Staff) on March 22, 1962, to the initial decision of the Presiding Examiner which was issued in said proceeding on March 2, 1962. No other exceptions have been filed. The decision disposes of the applications on the merits by granting the various authorizations sought. The Commission is in accord with, and affirms, such disposition.

Staff Exception No. 6, the only Staff exception taking issue with the Examiner's disposition as to the merits of any of the matters involved, objected to the grant of the application in Docket No. CP61–238 because of the failure of the Examiner to resolve a dispute between Staff and New York Natural over the interpretation of the evidence of record relating solely to certain aspects of the need for additional top storage capacity at the Leidy storage pool as proposed in said docket. This dispute no longer exists. As a result of a subsequent conference and agreement between Staff and New York Natural presented to the Commission on motion and answer by New York Natural and Staff, respectively, Staff withdrew its Exception No. 6 and requests approval of said withdrawal. This motion for withdrawal has been noted and is approved.

As indicated above, the remainder of Staff's exceptions do not run to the merits of any of the applications involved in this proceeding. These remaining exceptions concern the form of the order. These exceptions are granted. This requires a modification of the finding and ordering sections of the decision which are set forth at pages 36 to 40, inclusive, of said decision.

The Commission finds:

(1) Staff's withdrawal of its Exception No. 6 should be approved and the decision of the Examiner as to the merits of the matters involved should be affirmed as hereinafter ordered.

(2) Staff's remaining Exceptions should be granted as hereinafter ordered and the finding and ordering sections of the decision modified in accordance therewith by substituting the following finding and ordering clauses, as specifically designated, for clauses 5, 7–16 inclusive, (A) and (B) of said decision, to wit:

5. The facilities proposed to be constructed and operated by Transco in Docket No. CP61–194, including the interconnection required to sell and deliver additional volumes of gas to Penn Gas and the interconnection required to deliver authorized volumes of gas to Penn Gas in the event of the specified emergency, will be used for the transportation and sale of natural gas subject to the jurisdiction of the Commission as integral parts of Transco's existing natural gas pipeline system, and therefore, said facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

7. The additional sales of natural gas, including those to Pittston and Penn Gas, and the storage services proposed to be made and rendered by Transco in Docket No. CP61–194 will be made in interstate commerce, subject to the jurisdiction of the Commission, and therefore, said sales and services are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

8. The operations, sale and storage service proposed to be rendered by New York Natural in Docket No. CP61–198 to Transco will be made in interstate commerce subject to the jurisdiction of the Commission, and therefore, said operations, sale and service are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

9. The development of the designated Greenlick gas field as an integral part of New York Natural's existing natural gas system for use as a natural gas storage pool, as proposed by New York Natural in Docket No. CP61–237, and the operation of said storage pool as a facility for the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

10. The further development and operation of additional underground storage capacity in the Leidy Pool and the construction and operation of facilities in connection therewith, as jointly proposed by New York Natural, Transco, and Texas Eastern in Docket No. CP61–238, for use in the transportation and sale

of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

11. The construction, operations, developments, sales and storage services referred to in Findings 5, 7, 8, 9, and 10 hereof are or will be required by the present or future public convenience and necessity, and therefore, the requests for certificates of public convenience and necessity in Docket No's. CP61–194, CP61–198, CP61–237, and CP61–238 should be granted and the applicants in said dockets authorized to perform the aforesaid acts, operations and services.

12. Public convenience and necessity require that the general terms and conditions set forth in paragraphs (a), (b), (c) (4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20) should attach to the certificates hereinafter issued in Docket No's. CP61–194, CP61–198, CP61–237, and CP61–238 and to the exercise of the rights granted thereunder, and that the time within which the facilities so authorized shall be constructed and placed in actual operation should be fixed at one year from the date on which this order shall become effective.

13. The Town of Liberty, Mississippi (CP61–208), a municipality, and The Wind Gap Division of Bangor Gas Company (CP61–222) and The Hughesville Division of Jersey Shore Gas & Heating Company (CP61–223), persons, are legally authorized, respectively, to engage in the local distribution of natural or artificial gas to the public.

14. It is necessary or desirable in the public interest that Transco be separately directed, pursuant to Section 7(a) of the Natural Gas Act, to:

(a) establish physical connection of its natural gas transportation facilities with the natural gas facilities proposed to be constructed and operated by The Town of Liberty, Mississippi (Liberty) in Docket No. CP61–208 and to sell and deliver up to a maximum volume of 531 Mcf per day of natural gas at 14.73 psia to Liberty for resale and distribution in Liberty, Mississippi, and environs including the community of Gillsburg as hereinbefore described in the application at Docket No. CP61–208, as amended, and on the record at the hearing and as hereinafter ordered and conditioned;

(b) establish physical connection of its natural gas transportation facilities with the natural gas facilities proposed to be constructed and operated by The Wind Gap Division of Bangor Gas Company (Wind Gap) in Docket No. CP61–222 and to sell and deliver up to maximum volume of 297 Mcf per day of natural gas at 14.73 psia to Wind Gap for resale and distribution in the Borough of Wind Gap and the Townships of Washington and Plainfield, Northampton County, Pennsylvania, as hereinbefore described in the application at Docket No. CP61–222, as amended, and on the record at the hearing and as hereinafter ordered and conditioned: *Provided further*, That Wind Gap demonstrates to the satisfaction of the Commission, within six months from the date of issuance of the Commission's order granting the instant application, that the Supradur Manufacturing Corporation has firmly committed itself to buy the estimated volumes of gas indicated in this proceeding; and

(c) establish physical connection of its natural gas transportation facilities with the natural gas facilities proposed to be constructed and operated by The Hughesville Division of Jersey Shore Gas & Heating Company (Hughesville) in Docket No. CP61–223 and to sell and deliver up to a maximum volume of 181 Mcf per day of natural gas at 14.73 psia to Hughesville for resale and distribution in the Borough of Hughesville, the Borough of Picture Rocks and in Wolf Township, Lycoming County, Pennsylvania, as hereinbefore described in

the application at Docket No. CP61–223, as amended, and on the record at the hearing and as hereinafter ordered and conditioned: *Provided further*, That Hughesville demonstrates to the satisfaction of the Commission, within six months from the date of issuance of the Commission's order granting the instant application, that the industrial customers involved have firmly committed themselves to buy the estimated volumes of gas indicated in this proceeding.

15. The ability of Transco to render adequate service to its existing customers will not be impaired and no undue burden will be placed upon Transco as a result of the directions contained in Finding 14 hereof.

16. Public convenience and necessity require that Transco shall report to the Commission, in writing and under oath, the dates of commencement of service to Liberty, Wind Gap, and Hughesville, respectively, within 30 days after the commencement of the respective service.

(A) Certificates of public convenience and necessity be and the same hereby are issued to Transco in Docket No. CP61–194, to New York Natural, in Docket Nos. CP61–198 and CP61–237, respectively, and to New York Natural, Transco, and Texas Eastern, jointly, in Docket No. CP61–238, respectively, authorizing the construction, operations, developments, sales and storage services referred to in Finding 11 hereof upon the conditions set forth in Finding 12 hereof and subject to all pertinent provisions of the Natural Gas Act and the Commission's regulations thereunder.

(B) Transco be and the same hereby is separately directed to establish physical connection of its natural gas transportation facilities with the natural gas facilities proposed to be constructed and operated by Liberty in Docket No. CP61–208, by Wind Gap in Docket No. CP61–222, and by Hughesville in Docket No. CP61–223, respectively, and to sell and deliver natural gas to Liberty, Wind Gap, and Hughesville, respectively, by means of said connections up to the volumes specified in, and in accordance with, Finding 14 hereof, and to report the commencement of each of said deliveries in accordance with Finding 16 hereof.

The Commission orders:

(A) The withdrawal of Staff Exception No. 6 is hereby approved and the decision of the Examiner upon the merits of the applications involved in this proceeding is hereby affirmed.

(B) The remaining Exceptions of Staff are hereby granted and the finding and ordering sections of the Examiner's decision are hereby modified as set forth in Finding (2) hereof.

DECISION

UPON APPLICATIONS PURSUANT TO SECTION 7(c) AND SECTION 7(a) OF THE NATURAL GAS ACT

(Issued March 2, 1962)

JENSCH, *Presiding Examiner:* Transcontinental Gas Pipe Line Corporation (Transco), a Delaware corporation, having its principal place of business in Houston, Texas, filed four separate applications seeking authority by the issuance of certificates of public convenience and necessity to render gas service in the manner more particularly later described herein and as fully set forth in the applications which were consolidated for purposes of hearing. In addition to Transco's request, there were consolidated for hearing the applications by two other pipelines, viz, Texas Eastern Transmission Corporation and New York State Natural Gas Corporation for authority to render service related to the initial proposals filed by Transco. Finally, there were also consolidated for

hearing certain Section 7(a) applications filed by certain existing and proposed gas distribution agencies seeking allocations of gas for their proposed service. At the conclusion of the hearings held [1] in these consolidated proceedings, requests were made for the submission of proposed findings and conclusions, in addition to briefs proposed to be filed, in an endeavor to expedite the consideration of the several issues involved herein, by an adoption thereof, if found consistent with the record of all of the evidence adduced herein. After due consideration of the said entire record, the proposed findings of fact reflected in the factual summary of the applications, and the facts developed at the hearing, submitted by the Staff, are accepted, and with some important modifications made to the proposed conclusions, the Staff proposals are substantially adopted and accepted and found consistent with and required by the public convenience and necessity, prescribed by the Natural Gas Act, as amended, and are adopted as the basis for this Decision.

On January 23, 1961, Transco filed an application in Docket No. CP61–194, as amended and supplemented on March 10, April 28, May 3, 5, and 8, and September 7, 1961, for a certificate of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act, authorizing the construction and operation of additional transmission storage and sales facilities. The authorization requested by Transco is to increase long-term contract demand and general service to 26 of its existing customers by 99,290 Mcf per day at 14.7 psia and also to increase long-term storage service to 11 existing customers by 150,000 Mcf per day. The additional contract demand and general service [2] and half of the additional storage service [3] is needed as of December 1, 1961, while the remaining half of the storage service is needed as of 1962–63 heating season.

In support of Transco's proposed additional storage service, the following three additional applications were submitted.

On January 23, 1961, New York State Natural Gas Corporation (New York Natural), a subsidiary of Consolidated Natural Gas System, filed an application in Docket No. CP61–198, as amended on March 10 and March 27, 1961, for certificate authority to render natural gas storage service to Transco.[4] It would provide ultimately up to 150,000 Mcf per day and 7,500,000 Mcf annually for Transco as of 1962–63 heating season. All of New York Natural's general sys-

---

[1] Pursuant to notice issued on July 19, 1961, a formal hearing in the above-captioned consolidated proceedings commenced on September 25, 1961. Thereafter, the hearing recessed on September 26, 1961, reconvened on October 24, 1961, and concluded on November 2, 1961. A motion to omit the intermediate decision procedure, made near the conclusion of the hearing, having been denied by order issued on November 8, 1961, provision for the filing of briefs was made. The last brief was filed December 22, 1961.

On February 15, 1962, notification was given by Tennessee of the requested withdrawal of all of its pleadings in this proceeding. This decision was in the final stages of preparation on February 15 and the withdrawal does not alter the results reached herein on the issues presented for consideration at the time of the hearing. No explanation was given for the withdrawal which was executed by a Vice President of the Company. Tennessee's position has been carefully analyzed since it filed its 98-page brief on December 8, 1961.

[2] Transco was granted temporary authorization on July 26, 1961, to construct a portion of the pipeline facilities and to operate the same for existing authorized service. On October 9, 1961, Transco was temporarily authorized to use the pipeline facilities for the proposed additional service.

[3] Transco was granted temporary authorization on June 26, 1961, to render only the 1961–62 storage service until May 1, 1962.

[4] On June 26, 1961, New York Natural was granted temporary authority to render storage service up to 75,000 Mcf per day for Transco only for the period ending May 1, 1962.

tem storage pools, both existing and proposed, would be used to render the proposed storage service.

On March 10, 1961, as amended May 2 and May 12, 1961, New York Natural filed an application in Docket No. CP61–237 for certificate authority to develop and operate existing properties and facilities for underground storage in the Greenlick pool,[5] which is located in northern Pennsylvania and which has an ultimate capacity of 53 billion cubic feet, when developed to its initial rock pressure. Only 5 billion cubic feet are to be injected initially (3 billion base and 2 billion top storage) with no additional facilities.

This additional underground storage development will be used by New York Natural to serve its existing customers and also to help it render the long-term storage service to Transco.

On March 10, 1961, as amended May 2, 1961, New York Natural, Texas Eastern, and Transco filed a joint application in Docket No. CP61–238, for authority to construct and operate certain facilities[6] in order to further develop and activate additional underground storage capacity in the Leidy storage pool, pursuant to Amendment No. 4, dated February 28, 1961, to the Leidy-Tamarack Transfer and Storage Agreement between the joint applicants.[7] The purpose of the 4th amendatory agreement is to provide 10,000,000 Mcf of top storage capacity in Leidy for New York Natural, which the latter company proposes to use in rendering the proposed storage service for Transco. The remaining additional underground storage capacity in the Leidy pool and the proposed capacity in the Greenlick project in Docket No. CP61–237 will enable New York Natural to take into its storage system commodity-cost gas which it has contracted to purchase and which it cannot utilize at the time, but which it can use later in winter, when needed, or when the cost of gas would be substantially higher.

The remaining applications and proposals involved in these proceedings are five in number and are set forth below. These requests were filed in conjunction with Transco's application in Docket No. CP61–194 and will be separately considered later herein.

Of these five proposals, three were filed as applications, pursuant to Section 7(a) of the Natural Gas Act, as follows:

Docket No. CP61–208—Town of Liberty, Mississippi.
Docket No. CP61–222—The Wind Gap Division of Bangor Gas Company.
Docket No. CP61–223—The Hughesville Division of Jersey Shore Gas & Heating Company.

The two remaining proposals consist of petitions for leave to intervene which are in the nature of applications under Section 7(a) of the Act. These two requests were filed by Pittston Gas Company and the Pennsylvania Gas and Water Company as heretofore noted.

The following table summarizes the temporary authorizations requested in the various dockets and the action taken by the Commission in each case:

---

[5] On June 23, 1961, New York Natural was granted temporary authority to develop and operate the Greenlick pool.

[6] On June 26, 1961, New York Natural was granted temporary authorization to construct and operate only station piping to connect its Line No. 280 to the Leidy Compressor Station to help it render the 1961–62 storage service for Transco.

[7] Transco was granted temporary authorization on June 26, 1961, to provide up to 5,300,000 Mcf of base storage gas to inject in the Leidy storage pool. Texas Eastern received similar authorization on the same date. This was to enable the rendition of the 1961–62 storage service by Transco and New York Natural.

Docket No.	Temporary authorizations	Estimated cost	Commission action
CP61-194...	First—Construction and operation of south Louisiana offshore gathering facilities.	$1,959,006	Granted May 8, 1961.
	Second—To render the proposed 1961-62 additional storage service (75,000 Mcf per day).	None	Granted June 26, 1961.
	Third—To construct and operate (only for the existing authorized service) the loop line facilities and the new 4,000 horsepower compressor station and its related appurtenances initially applied for.	31,100,000	Granted July 26, 1961.
	Fourth—To construct and operate all the main line and the Leidy line compression facilities initially applied for.	7,025,000	Denied September 21, 1961.
	Fifth—To operate the facilities authorized in the third application for temporary authority to render the proposed additional pipeline services as well.	None	Granted October 9, 1961.
	Sixth—To construct and operate the additional main-line compressor horsepower of 13,400 to render presently authorized firm service in Zone 3 as of the Spring of 1962.	3,980,000	Pending.
CP61-238...	Transco to provide 5,300,000 Mcf of base storage gas for injection in the Leidy pool.	None	Granted June 26, 1961.
CP61-238...	Texas Eastern to provide 5,300,000 of base storage gas for injection in the Leidy pool.	None	Granted June 26, 1961.
CP61-238...	New York Natural to construct and operate station piping to connect its line No. 280 to the Leidy Compressor Station.	100,000	Granted June 26, 1961.
CP61-198...	New York Natural to render storage service of up to 75,000 Mcf per day for Transco only for the period ending May 1, 1962.	None	Granted June 26, 1961.
CP61-237...	New York Natural to develop and operate the Greenlick storage field for the proposed total storage capacity of 5 billion cubic feet.	None	Granted June 23, 1961.

Each of the several dockets is described in greater detail later herein. These consolidated proceedings included intervention by many gas distribution customer companies of the pipeline applicants. In addition, Southern Natural Gas Company and Tennessee Gas Transmission Company intervened in accordance with their contentions that their interests were affected by the applications filed by the other applicant pipeline companies. Atlantic Seaboard Corporation intervened only in connection with its allegation that its interests in the then pending Transco rate proceeding might be affected by the decision rendered in this proceeding. The following interventions were permitted by the Commission orders issued on June 28, 1961, August 8, 1961, September 21, 1961, and November 27, 1961.[8]

Tennessee Gas Transmission Company (Tennessee)
Southern Natural Gas Company (Southern)
Atlantic Seaboard Corporation (Seaboard)
Pittston Gas Company (Pittston)
Pennsylvania Gas and Water Company (Penn Gas)
Public Service Electric and Gas Company
Delaware Power & Light Company
Philadelphia Electric Company
South Jersey Gas Company
The United Gas Improvement Company
Elizabethtown Consolidated Gas Company
Public Service Company of North Carolina, Incorporated
Long Island Lighting Company
The Brooklyn Union Gas Company

[8] In addition, notices of intervention were filed by the North Carolina Utilities Commission and the Pennsylvania Public Utility Commission.

Eastern Shore Natural Gas Company
Piedmont Natural Gas Company, Inc.
The Manufacturers Light and Heat Company
Consolidated Edison Company of New York, Inc.
City of Lexington, North Carolina
Atlanta Gas Light Company
City of Danville, Virginia

All of the 21 interveners listed above, with the exception of Tennessee, Southern and Seaboard, are existing customers of Transco and seek additional service or volumes of gas from Transco in Docket No. CP61–194. The 18 customer interveners are either in support of Transco's application in Docket No. CP61–194 or are not opposed to the grant of said application or the other remaining applications. Of this group of 18 interveners, two, viz., Pittston and Penn Gas, fall into a special category in that their interventions are in the nature of Section 7(a) applications and, consequently are considered separately herein.

Southern's intervention is very limited in scope. It is concerned only with that part of Transco's application in Docket No. CP61–194 whereby Transco proposes to render additional service, viz, storage service and increased volumes of gas, to the Atlanta Gas Light Company (Atlanta). Southern claims that it has an executed service agreement with Atlanta whereby Southern is to supply Atlanta with its natural gas requirements for the City of Atlanta except for 20,000 Mcf per day which Atlanta may purchase from Transco under Transco's CD–1 Rate Schedule and that the Southern-Atlanta agreement contemplates that Southern and Atlanta will negotiate in good faith for the sale and purchase of additional quantities of gas needed to meet any increase in Atlanta's natural gas requirements for areas now supplied with gas purchased from Southern (Item K by reference). In essence, Southern intervened only to determine whether the Transco-Atlanta proposal is in conflict or inconsistent with the alleged pre-existing and presently effective agreement between Southern and Atlanta. Southern presented no witness but did participate in cross examination and presumably obtained, as a result thereof, whatever information it needed in this respect to the extent that the same was available from the witnesses presented. The evidence does not show the Transco-Atlanta proposal to be inconsistent or in conflict with the Southern Atlanta agreement. Accordingly, Southern's participation as an intervener should have no effect on the merits of Transco's proposal to render service to Atlanta.

Seaboard is an existing customer of Transco but, as noted above, does not seek any additional service from Transco in these proceedings. Seaboard was permitted to intervene, as indicated above, in Transco's present rate proceeding in Docket No. RP61–13. In its petition to intervene in the present proceedings, Seaboard states that its intervention in Docket No. RP61–13 was "with respect to matters that may be affected by the outcome of this proceeding" and that "the arrangements proposed may affect Transco's cost of service and rates under which service is rendered to" Seaboard. The present proceedings, viz, CP61–194, *et al.*, involve *inter alia*, Transco's proposed General Storage Service (GSS) Rate Schedule and New York Natural's proposed General Storage Service (GSS–1) Rate Schedule. With respect to these two rate schedules, the Commission issued an order in Docket Nos. RP61–13 and G–19087 on July 31, 1961, wherein it stated *inter alia*, that "* * * it is appropriate that the Commission consider the justness and reasonableness of the changes set

forth in said filings and that such changes be incorporated for purposes of hearing with the respective proceedings in Docket Nos. G–19087 and RP61–13." Seaboard presented no witness but did participate in cross examination of certain witnesses. Seaboard did not voice any opposition to the grant of the application and, in essence, intervened only to protect its interest and participation in the RP61–13 rate proceedings. Seaboard stated that its participation in the present proceedings was and would be very limited because of the issuance of the aforesaid order on July 31, 1961. Accordingly, Seaboard's participation as an intervener does not raise any additional questions or problems with respect to the disposition of the applications on their merits.

Tennessee is the only intervener in opposition to the grant of any of the applications. It intervened in Docket Nos. CP61–194, 198, 237, and 238. In its petition to intervene, Tennessee claims an interest based on competition and further states that the storage proposals here involved are but another step towards ultimately excluding Tennessee from participation in the growth of the Philadelphia, New Jersey, and New York City market areas which are presently served by both Tennessee and the joint applicants. Tennessee also states that "Consolidated," the parent company of New York Natural, "has more than ample storage capacity to satisfy its storage needs for the present and indefinite furture"; that "New York Natural has excess storage capacity in its presently developed storage pools which is more than ample to cover the proposed service"; and that "it appears that Consolidated and New York Natural have agreed * * * to purchase * * * ACQ gas from Texas Eastern and Transco, with provisions to buy * * * more, while at the same time cutting back on lower priced gas from Tennessee" to the "financial injury" of Tennessee. Tennessee presented no witnesses but did participate extensively in cross examination.

In Docket No. CP61–194, Transco has applied to render the proposed 99,290 Mcf per day additional volumes of gas to 26 of its contract demand and general service customers, and also to increase long-term storage service to 11 of its existing customers. Transco proposes to construct and operate about 186.67 miles of 36-inch transmission pipeline loops, 23,400 horespower of compression, in existing and new compressor stations and 36.97 miles of 8, 6, 4 and 3-inch gas purchase laterals.

Transco was authorized, under temporary certificates, to construct all of the proposed pipeline loops and one new 4,000 horsepower compressor station on its gathering system in Louisiana. Construction of these facilities commenced soon after the granting of the temporary authorization. On September 21, 1961, the Commission declined to grant Transco temporary certificate to construct the remaining compressor facilities because of Tennessee's opposition. Transco contends that the additional compressor facilities are needed to provide the proposed additional storage service on a long-term basis and also to enable it to take the "valley" gas from south of the Potomac River in summer to customers north of the river to meet their full allocations. Transco further contends that the elimination of this summer bottleneck south of the Potomac has permitted it to operate at over 98 percent load factor in the past several years.

The tabulation below shows, in summary, the facilities for which Transco is seeking authorization herein and the costs of such facilities.

	Estimated cost
Part I—Main Line Facilities	
A—186.67 miles of 36-inch main line loops in the states of Louisiana, Mississippi, Alabama, Georgia, South Carolina, North Carolina, Virginia, and Maryland	$25, 936, 581
B—13,400 additional compressor horsepower and other related additional facilities at six existing main line compressor stations	3, 675, 730
Part II—Gathering Facilities	
C—New Intermediate Station No. 63 in southeast Louisiana with 4,000 compressor horsepower and the related piping and dwellings	1, 570, 000
D—36.97 miles of 8-, 6-, 4-, and 3-inch gas purchase laterals and six gathering meter and regulator stations offshore southeast Louisiana	1, 959, 006
Part III—Leidy Line	
E—New Intermediate Station No. 505 with 6,000 compressor horsepower and the related dwellings	2, 700, 400
Part IV—Sales Facilities	
F—Two meter and regulator stations one for Public Service and one for Atlanta Gas Light	63, 700
Total direct cost	35, 905, 417
Franchise, Consents, General Overheads, Interest during construction and Contingencies	4, 478, 583
Total estimated costs	40, 384, 000

The proposed facilities will increase Transco's sales capacity by approximately 107,893 Mcf per day, which would enable Transco to render the proposed additional contract demand and general services (total 99,290 Mcf per day at 14.73 psia), and have 8,603 Mcf per day of unallocated capacity available anywhere on the system. Transco's total peak day capacity is outlined in the following table:

	Mcf per day at 14.7 psia
Contract Demand and General Service:	
1—Firm allocations all previous dockets	1, 377, 521
2—Proposed pipeline allocations	99, 290
3—Unallocated firm pipeline capacity	8, 603
Subtotal	1, 485, 414
Storage and Transportation:	
4—Oakford storage allocations	136, 452
5—Leidy storage allocations	204, 000
6—Docket CP61-194 proposed storage allocations	150, 000
7—Transportation for Tennessee	56, 216
Total peak day capacity	2, 032, 082

Transco proposes to use the proposed facilities for the purpose of rendering long-term firm services to its existing customers as tabulated below:

Proposed additional pipeline service to existing customers

	Rate schedule	Mcf per day at 14.7 psia
Consolidated Edison Company of New York, Inc.	CD-3	38,000
Delaware Power & Light Company	CD-3	4,000
Elizabethtown Consolidated Gas Company	CD-3	1,000
Philadelphia Electric Company	CD-3	5,000
Public Service Electric & Gas Company	CD-3	15,000
South Jersey Gas Company	CD-3	7,000
United Gas Improvement Company, The	CD-3	5,000
Carolina Natural Gas Corporation	CD-2	700
Danville, Virginia, City of	CD-2	1,000
Fort Hill Natural Gas Authority	CD-2	2,610
Public Service Company of North Carolina, Inc.	CD-2	7,000
Atlanta Gas Light Company	CD-1	6,000
City Gas Company of New Jersey	G-3	680
Frederick Gas Company, Inc.	G-3	450
Manufacturers Light and Heat Company	G-3	310
Blacksburg, South Carolina, City of	G-2	50
Clinton, South Carolina, City of	G-2	1,710
Lexington, North Carolina, City of	G-2	800
Newberry, South Carolina, City of	G-2	900
South Carolina Gas Company, Division of United Cities Gas Company	G-2	200
Buford, Georgia, City of	G-1	330
Covington, Georgia, City of	G-1	400
Georgia Gas Company, Division of United Cities Gas Company	G-1	500
Lawrenceville, Georgia, City of	G-1	250
Maplesville, Alabama, City of	G-1	100
Monroe, Georgia, City of	G-1	300
Total		99,290

Proposed storage service

	Rate schedule	Mcf per day at 14.7 psia
Atlanta Gas Light Company	GSS	31,000
Brooklyn Union Gas Company	GSS	25,000
Consolidated Edison Company of New York, Inc.	GSS	15,000
City of Danville, Virginia	GSS	2,000
Delaware Power and Light Company	GSS	2,000
Elizabethtown Consolidated Gas Company	GSS	4,000
Long Island Lighting Company	GSS	10,000
Piedmont Natural Gas Company	GSS	15,000
Public Service Electric and Gas Company	GSS	31,500
South Jersey Gas Company	GSS	4,500
United Gas Improvement Company	GSS	10,000
Total		150,000

These additional volumes are required by these existing customers of Transco for normal growth in their present operations and are justified by the record, including the evidence of the market company witnesses, and the exhibits presented.

For the storage service, Transco is seeking to obtain from New York Natural 150,000 Mcf per day of storage service annually for 50 days during the winter season in order to render a like service to its customers. This volume indicates a need for top storage capacity of 7,500,000 Mcf.

The volumes of gas Transco's customers nominate for injection into storage, Transco delivers to New York Natural in western Pennsylvania at the Leidy storage pool where their two systems interconnect, and New York Natural will store the gas anywhere on its general system storage facilities. In winter when Transco's customers demand this storage gas, Transco notifies New York Natural, which will return the stored gas.

Transco is not proposing in this proceeding to develop any storage pool of its own. The storage service proposed by Transco will be rendered under a rate schedule called GSS which is before the Commission in Docket No. RP61–13.

The additional markets involved in Docket No. CP61–194 are as follows:

(1) Docket No. CP61–208—Town of Liberty, Mississippi—The town of Liberty and environs, including the community of Gillsburg, Mississippi, a municipality, filed a 7(a) application in Docket No. CP61–208 on February 8, 1961, as amended March 10 and July 12, 1961, for an order requiring Transco to supply it with the following volumes of gas at 14.73 psia under Transco's Rate Schedule G–1.

	1st year	2d year	3d year
Peak day	458	499	531
Annual	37,506	40,770	43,235

The facilities proposed by the town of Liberty, which include 15.5 miles of 3-inch lateral line and a distribution system, including regulator and metering appurtenances, are estimated to cost $275,000. This cost will be financed through the issuance of 30-year revenue bonds at 3⅜ percent interest. The debt coverage ratio, assuming gas purchases level off at the end of the 3rd year, would be 1.88, while the overall ratio of the 30-year bond issue would be 2.18. A letter of commitment by Allen & Co., Hazelhurst, Mississippi, confirms the financing program.

The area is mainly agricultural and the estimated number of customers is based on an actual house to house survey. The estimated cost of the construction is based on the lowest bid. The annual system expenses are based on experience in several of the neighboring towns and communities.

The Public Service Commission of the State of Mississippi has granted the town of Liberty a certificate authorizing the instant project. No question appears to be raised concerning the economic and financial feasibility of Liberty's project in view of the receipt of the certificate from the State.

(2) Docket No. CP61–222—The Wind Gap Division of Bangor Gas Company, a subsidiary of Penn Fuel Gas, Inc., filed a 7(a) application in Docket No. CP61–222 on February 28, 1961, as amended June 27, July 20, and October 23, 1961, for an order directing Transco to establish physical connection with the contemplated facilities of Wind Gap and to supply it with the following volume of gas at 14.73 psia under Transco's Rate Schedule G–3.

	1st year	2d year	3d year
Peak day	223	259	297
Annual	47,240	51,460	56,100

Of these volumes, about 50 percent is proposed to be sold to one industrial consumer, namely, Supradur Manufacturing Co. The President of Wind Gap testified as follows:

> Wind Gap Gas Company possesses all requisite state authorization, and by that I mean appropriate corporate authority and franchise authority conferred by the Pennsylvania Public Utility Commission, to serve in the Borough of Wind Gap and the Township of Washington and Plainfield, Northamton County, Pennsylvania.

On March 7, 1960, the Borough of Wind Gap enacted Ordinance No. 193 which conferred upon Penn Fuel Gas, Inc., the authority to enter upon the streets of the Borough. On March 1, 1961, Penn Fuel assigned all its rights under that ordinance to Bangor Gas Company.

The Wind Gap facilities, which include 4,200 feet of 4-inch lateral line from a tap on Transco's Leidy line in Northampton County to the Borough of Wind Gap and the contemplated distribution system, are estimated to cost $80,000. This is to be financed by advances from the parent company, Penn Fuel Gas, Inc. The rate of return is estimated at 11.9 percent.

The estimated number of customers is based on an actual house to house survey. Wind Gap's witness claims that the largest prospective industrial customer, the Supradur Manufacturing Company, has committed itself to buy from Wind Gap 145 Mcf per day of natural gas.

This "commitment" was based on a letter[9] (Item G by reference) which indicates that Supradur would be interested in buying gas if the price were competitive with other fuels. Accordingly, the authorization provided herein for the service in Wind Gap is conditioned on its showing within six months, that Supradur has firmly committed itself to buy the volumes estimated.

(3) Docket No. CP61-223—The Hughesville Division of Jersey Shore Gas & Heating Company, a subsidiary of Penn Fuel Gas, Inc., filed a 7(a) application in Docket No. CP61-223 on February 28, 1961, as amended on May 31 and October 23, 1961, for an order requiring Transco to establish physical connection with the contemplated facilities of Hughesville and to supply it with following volumes of gas in Mcf at 14.73 psia under Transco's Rate Schedule G-3.

	1st year	2d year	3d year
Peak day	97	128	181
Annual	24,570	32,760	46,360

Authorization by the Pennsylvania Public Utility Commission is pending. Authorizations by the Boroughs of Picture Rocks and Hughesville have been granted.

The Hughesville facilities which include 16,000 feet of 4-inch pipeline extending from a tap on Transco's Leidy line in Lycoming County to the Boroughs of Picture Rocks and Hughesville and the contemplated distribution system are estimated to cost $144,960. This is to be financed by advances from the parent company, Penn Fuel Gas, Inc. The rate of return is estimated at 6.7 percent.

The estimated number of customers is based on an actual house to house survey. Hughesville's application as supplemented, indicates that 65 percent of its estimated requirements is for industrial customers; but that only four industrial customers have committed themselves to buy from Hughesville 3,320 Mcf annually, if natural gas becomes available at Hughesville. This constitutes about one-tenth of that part of the annual requirement, which is earmarked for industrial customers. Accordingly, the authorization provided herein for service in Hughesville is conditioned on its showing, within six months, that the industrial sales are firmly committed as estimated.

(4) Pittston Gas Company, a subsidiary of Penn Fuel Gas, Inc., and an existing customer of Transco, petitioned to intervene in order to secure an additional

[9] This is the letter which is dated October 20, 1961, included in Wind Gap's Third Supplement to its application in Docket No. CP61-222. Wind Gap's reference in its brief to "an intent to purchase by Supradur" is a reference to this letter.

allocation of gas. The additional volume sought by Pittston to meet its increased requirements in its existing market area is 401 Mcf per day. Pittston's peak day gas requirement and supply in Mcf per day at 14.7 psia are as follows:

	1961–62	1962–63	1963–64
Requirement	1,142	1,386	1,623
Supply:			
Existing	741	741	741
Proposed	401	401	401
	1,142	1,142	1,142

(5) Pennsylvania Gas and Water Company, a customer of Transco, also intervened. It buys gas from Transco for an isolated small system near Dallas, Pennsylvania, which is not involved in these proceedings.

Pennsylvania Gas and Water's other natural gas operations are in two separate unconnected market areas, namely the western and the eastern market areas. For its western market area, which is not involved in these proceedings, Penn Gas gets its natural gas supply from The Manufacturers Light and Heat Company. Its intervention here concerns its eastern market area, which consists of Uniondale, Carbondale, Scranton, Nanticoke, Wilkes-Barre, numerous boroughs and townships in Lackawanna County, and in Luzerne County and also the Borough of Factoryville, Wyoming County. For this area it gets its gas supply from Tennessee. The annual peak day gas requirements of Penn Gas's Eastern System in Mcf at 14.73 psia, to which the instant request for additional supply from Transco refers, are as follows:

	1961	1962	1963
Annual	3,653,100	4,198,200	4,670,100
	1961–62	1962–63	1963–64
Peak day	15,733	18,231	20,553

Penn Gas has a long-term allotment of 13,200 Mcf per day from Tennessee for this area and a short-term or interim allocation of 2,533 Mcf per day (CP61–295, et al.) from Tennessee, or a total of 15,733 Mcf. The interim volume extends only until November 30, 1962. At that time, Penn Gas wants to start buying 2,533 Mcf per day from Transco, in lieu of Tennessee on a long-term basis. It desires this, along with two new connections with Transco's Leidy line in this area, to assure the area of service in case of an emergency break on its system. It states that this break could occur, cutting off all existing service, because the area is subject to subsidence due to anthracite coal mining. It already has had difficulties in this respect.

The service and connections with Transco plus the connection and existing long-term service from Tennessee would solve its problems. Neither Transco nor Tennessee opposes the proposal. In its amended application in CP60–94, Tennessee proposes to sell additional long-term gas to Penn Gas for the 1962–63 winter to meet the increasing needs of the area. This volume converts the 2,533

Mcf [10] of interim gas to long-term and adds 2,498 Mcf of additional long-term gas, or a total of 5,031 Mcf.

The cost of the proposed connections and facilities to Penn Gas is estimated as follows:

East side of Susquehanna River connection and measuring and pressure reduction station	$50,000
West side of Susquehanna River emergency connection involving 14,000 feet of 10-inch pipeline and skeletonized meter and pressure reduction station	150,000
Total	200,000

As it has been shown, Transco's system (including the proposed facilities) has the firm unallocated capacity of 8,603 Mcf per day at 14.7 psia. The five allocations requested above add up to 3,943 Mcf per day, and if Transco is ordered to supply this amount, then Transco's remaining firm unallocated capacity will be 4,660 Mcf per day.

The cost of Transco's entire project in its application in Docket No. CP61–194 is estimated to be $40,384,000 including $4,478,583 for overheads, interest during construction, contingencies, franchises and consents. The estimates appear to be in line with the 1960 average cost figures available to the staff. No changes in rates are proposed. The present rates have been in effect, subject to refund in Docket No. RP61–13, since April 17, 1961.

Transco estimates its system return for the first three years of the proposed service to be respectively 6.58 percent, 6.57 percent, and 6.63 percent based on rate schedules filed in Docket No. RP61–13. The incremental return attributable solely to the instant proposal is calculated to be approximately 11.39 percent for 1962, 12.1 percent for 1963 and 12.4 percent for 1964. This reflects an estimated system average cost of gas of 18.50 cents per Mcf in 1962, 18.7 cents per Mcf in 1963 and 18.7 cents per Mcf in 1964.

The financing of the proposed project and other facilities already authorized or still pending before the Commission is to be accomplished by the issuance of securities in the amount of $40,000,000 as set forth below in addition to $35,000,000 of five percent first mortgage pipeline bonds which were issued May 2, 1961, and which are due in 1981.

	Principal amount	Proposed date of issuance
Debentures: 5¾%, due 1982	$25,000,000	Feb. 1, 1962
Preferred stock: Cumulative 5¾%	15,000,000	Feb. 1, 1962
Total proposed securities	40,000,000	

No questions are raised concerning the financing of Transco's proposals.

For its proposed service, Transco relies on independent natural gas producers who have received temporary or permanent certificates. In its application in the subject Docket No. CP61–194, Transco proposes lateral facilities in the Ship Shoal South Pelto area to receive offshore gas from ODECO in the two

[10] The authority granted herein renders duplicative the application by Tennessee in Docket CP60–94 to serve the same volume of 2,533 Mcf to Penn Gas. It is understood that Tennessee recognizes that its application is unnecessary in view of Tennessee's withdrawal of opposition to the service by Transco.

applications described below. Transco asked for and was granted temporary authorization on May 8, 1961,[11] to construct and operate the related offshore facilities.

On April 10, 1961, Ocean Drilling & Exploration Company filed an application in Docket No. CI61–1469 on its own behalf and, as the operator, on behalf of Burmah Oil Western Company to sell natural gas to Transco from Block 113 unit, Ship Shoal area, offshore Louisiana in conformity with their sales contract of March 8, 1961, with Transco.

On May 29, 1961, ODECO also filed for authority in Docket No. CI61–1708 to sell gas to Transco from W/2 Block 19 and Block 20 units, South Pelto area, offshore Louisiana.

These sales are to be heard in the area proceedings, Docket No. AR61–2. Pending their final authorizing, ODECO on September 5, 1961, filed applications for temporary authorization with respect to these two sales. ODECO was granted temporary authorizations on October 17, 1961. The authorizations are subject to ODECO refunding to Transco any amounts collected, plus interest at 7 percent per annum, in excess of the rate determined to be required by the public convenience and necessity.

The adequacy of Transco's gas supply was demonstrated by substantial evidence of its sufficiency. No participant in the proceeding raised any question with respect to Transco's gas supply. Transco's estimates of reserves and deliverability are set forth in Exhibit 8. A summary of Staff's analysis is set forth below:

All Volumes @ MMcf @ 14.73 psia

(1) Total recoverable gas reserves available to Applicant by contracts as of 1–1–61:	
Flow tested	7,790,241
Tested with Formation Tester	130,530
Non-flow tested	536,329
Pipeline purchases	924,255
Total by contract	9,381,355
(2) Spot gas purchases estimated @ 5% of firm gas purchases for 21 years	460,893
(3) Total estimated gas available for 21 years	9,842,248
(4) Market requirements 21 years	11,193,907

	Flow tested only	Non-flow tested included
(5) System's reserve life index (years):		
Transco's method	16.1	17.2
Staff's method	15.6	16.6
(6) System's deliverability life as of 1–1–62 (years):		
Transco's method	12.91	13.97
Staff's method	12.00	13.00

As shown in the tabulation, 130,530 MMcf of the gas reserves have been shown by Transco as being flow tested, but not through tests in which gas was produced at the surface. The proof of the existence of gas in the formation was based on tests conducted with the Schlumberger Formation Tester. A witness employed by Schlumberger testified in the hearings as Transco's witness in regard to the Tool's principles, its method of operation, and compared the predictions provided by the tests, with actual later production data. The Staff is in agreement that the formation tester could be used to establish proof of gas in a formation in productive quantities, but it is also of the opinion that the tester has limi-

[11] On May 8, 1961, ODECO was granted conditional temporary authorization to sell gas to Transco from its Ship Shoal area Block 67, South Louisiana.

tations in its use. The 130,530 MMcf of gas, claimed by Transco as proven, are believed to be reasonable and within the limits of the dependability so established.

To meet the additional demands on its storage service (by Transco and other customers), New York Natural is seeking authorization in the following three applications.

New York Natural seeks a certificate in Docket No. CP61–198 authorizing it to render storage service to Transco in the 1961–62 season in the amount of 3,750,000 Mcf and to double that volume as of April 1, 1962 and thereafter.

New York Natural requested temporary authorization in order to commence gas injection during the injection season and prior to its withdrawal next winter. Temporary authorization to render storage service up to 75,000 Mcf per day for Transco only for the period ending May 1, 1962, was granted on June 26, 1961.

New York Natural's entire natural gas facilities are divided into two groups. One is designated the "OSS System," and the service rendered by this system is mainly to applicant's affiliates. It comprises Oakford and South Bend storage pools near Pittsburgh, Pennsylvania, and the pipeline facilities extending westerly from these pools to two of its affiliates, namely, the East Ohio Gas Company and the Peoples Natural Gas Company.

The other group of facilities is called the "General System," and the service rendered by this system is mainly (but not exclusively), to 16 non-affiliated companies in Pennsylvania and New York for resale. The proposed storage service to Transco is to be rendered from this system, particularly from its five existing storage pools, and such additional storage facilities which New York Natural may develop and activate in the future, including those proposed in its applications in Docket Nos. CP61–237 and 238 described later herein.

New York Natural's General System consists of its main pipeline system, which extends in a northeasterly direction, from the West Virginia-Pennsylvania border in Greene County, Pennsylvania, through the State of Pennsylvania into the State of New York to points near such cities as Buffalo, Rochester, Syracuse, Auburn, Utica, and Albany. The General System also includes five existing active underground storage pools with claimed existing top storage capacity of 111 billion cubic feet at 15.025 psia and several additional pools with a claimed ultimate capacity of 153 billion cubic feet at 15.025 psia, including storage development requested in these proceedings.

New York Natural and Transco have executed a precedent agreement, dated January 6, 1961, covering the proposed storage service. The agreement is for 20 years from April 1, 1961. According to this agreement, for the period ending March 31, 1962, New York Natural will receive and store, during the injection period of the year 1961 (April through October), for the account of Transco, the maximum volume of 3,750,000 Mcf and will withdraw, for the account of Transco, during the withdrawal period (November 1961 through March 1962), the maximum volume of 75,000 Mcf per day. The agreement further provides that for the period beginning April 1, 1962, and thereafter, New York Natural will receive and store, during the injection period of each year, for the account of Transco, the maximum volume of 7,500,000 Mcf and will withdraw, for the account of Transco, during the withdrawal period of each year, the maximum daily volume of 150,000 Mcf. New York Natural further agrees to increase its annual and daily storage commitments to Transco respectively to 10,000,000 and 200,000 Mcf as of April 1, 1963, 1964, or 1965 for the remaining term of the agreement, if Transco shall give 18 months prior notice. Only the proposed service of up to 150,000 Mcf per day is covered by the instant application in Docket No. CP61–198. Authorization for the service of up 200,000 Mcf per day will require a further application by New York Natural.

The instant application is for authorization to render the proposed storage service to Transco under New York Natural's proposed new Rate Schedule GSS–1. The point of delivery to Transco will be the existing interconnection of the pipeline system of New York Natural and Transco at the Leidy storage pool, Clinton County, Pennsylvania. However, New York Natural is not restricted to the use of Leidy to render the GSS–1 service. It proposes to use any or all of its available general system storage pools to render the proposed storage service to Transco.

New York Natural seeks a certificate in Docket No. CP61–237 authorizing it to develop and operate existing properties and facilities for underground storage of gas in an Oriskany sand, known as the Greenlick pool, which is located in northern Pennsylvania, near Leidy and which has a claimed ultimate capacity of 53 billion cubic feet, when developed to its initial rock pressure.

New York Natural states that the Greenlick field is a gas producing field at present, owned and operated by New York Natural. It claims that Greenlick field can easily be converted into a storage pool with the use of existing production and gathering facilities in the field. No additional facilities are proposed in this application.

New York Natural anticipates that when the authorization requested herein is granted, it will commence injection of gas into Greenlick. During the injection season it estimates that 5 billion cubic feet of natural gas can be injected into the pool with its existing facilities. It states that of the 5 billion cubic feet, two billion cubic feet will be cycled as top storage gas.

This development is indicated to be a continuation of New York Natural's policy to further develop its underground storage facilities for serving its existing customers and also to enable it to render the long-term storage service to Transco as proposed in its application in Docket No. CP61–198.

The company further states that with the development of Greenlick storage pool, it will be able, during off-peak periods, to inject "commodity—cost-gas," which it has contracted to purchase, but which cannot otherwise be utilized by the system. Such gas would be available in winter periods to replace higher cost gas.

It was indicated that the temporary authority requested in this docket will help New York Natural store gas available to it from its suppliers, in off-peak periods in 1961, for which it has no other use at that time and also help it render the proposed 75,000 Mcf per day of storage service to Transco.

New York Natural was granted temporary authorization on June 23, 1961, to develop and operate the Greenlick storage field for the proposed total storage capacity of 5 billion cubic feet. Gas injection into the pool started on June 28, 1961.

New York Natural, Texas Eastern Transmission Corporation, and Transco seek a certificate in Docket No. CP61–238 authorizing the construction and operation of certain facilities in order to further develop and activate additional underground storage capacity in the Leidy storage pool, pursuant to Amendment No. 4, dated February 28, 1961, to the Leidy-Tamarack [12] Transfer Storage and Agreement between the joint applicants. The portion to be developed is one-third of New York Natural's share of the Leidy storage capacity. Its share is one-half of the total Leidy capacity. Texas Eastern and Transco have already been authorized to develop their respective one-fourth shares. The top storage capacity of the Leidy pool is 54 million Mcf and the top storage capacity of the Tamarack pool is 6 million Mcf.

[12] Shortened herein to "Leidy."

The three joint applicants entered into amendatory agreements Nos. 1, 2, and 3, dated March 2, 1959, July 6, 1959, and April 14, 1960, respectively, which provide for the development of Transco's and Texas Eastern's shares of Leidy top storage capacity of 15,000,000 Mcf each.

Authorization for their respective development and activation was granted in Docket Nos. G–13793 and G–18961.

On February 28, 1961, the three joint applicants entered into the 4th amendatory agreement to further develop the Leidy Storage pool to provide 10,000,000 Mcf of New York Natural's 30,000,000 Mcf of top storage capacity, which would make a total of 40,000,000 Mcf of developed top storage capacity. The application in Docket No. CP61–238 is for authorization to install and operate the requisite facilities outlined below to attain the proposed additional development and activation of the Leidy storage pool. The 4th amendatory agreement further indicates that at the completion of the instant project, there will be a total of 41,000,000 Mcf of base storage gas in Leidy and it provides that Transco and Texas Eastern will each supply half of the base gas. Of this total volume, Transco and Texas Eastern have already supplied 30,400,000 Mcf of base storage gas. The remaining volume of 10,600,000 Mcf of base storage gas will have to be supplied by them in equal portions prior to the completion of the proposed program. As indicated earlier, it is believed Transco will have no difficulty in providing this quantity, nor should Texas Eastern, through the use of off-peak capacity.

The proposed facilities of New York Natural in Leidy and their estimated costs are as follows:

Two new wells to be drilled	$218,840
Pipelines and measuring equipment	159,460
Compressor station addition (4,000 horsepower)	2,484,000
Total proposed additional facilities	2,862,300

The estimated cost to date of the development of the Leidy pool is given to be $22,090,125. Together with the proposed facilities, the total cost will be $24,952,425 (not including base storage gas) and this will be shared by the joint applicants.

The Staff has submitted computations and an extensive analysis of New York Natural's gas supply and storage capacity and has concluded that the existing storage capacity plus the requested Greenlick storage pool will be adequate to render all of New York Natural's proposed service, without the activation of the Leidy pool. New York Natural has commented in its reply brief that both Tennessee and New York Natural are agreed at least on one factor in this consideration, that it is necessary to note the important distinction made by New York Natural in its gas supply and requirements, between the requirements of annual withdrawal of 55,805 MMcf and the peak day withdrawal of 981 MMcf, emphasizing that both such peaks cannot occur during the same withdrawal season. From this premise, New York Natural has contended that the Staff has made its computations on the basis that both such peaks could occur in the same withdrawal season, and that such is the error that is the basis of the equally erroneous conclusion respecting the lack of need of the Leidy field. The record confirms the New York Natural assertion that its computations and estimates of needs for gas withdrawal for these two peak periods, were based on the premise that both would and could not occur in the same withdrawal season. The record also supports the conclusion that there will exist the following general system annual and peak day storage capacity in New York Natural storage pools:

45,905 MMcf at 15.025 psia (46,824 at 14.73 psia) for annual capacity and 517 MMcf at 15,025 psia (527 at 14.73 psia). These computations compare with anticipated requirements for the 1963–64 requirements of 46,116 MMcf annually and 968 MMcf peak day on the 15.025 basis. The difference between available storage supply and requirements represents the need for which both the Greenlick and Leidy storage pools are required, and authorization for which is provided herein.

The rate aspect of the storage service proposed to be rendered by New York Natural to Transco was most strenuously contested by Tennessee, partly on the asserted ground that base storage costs were not adequately reflected in the rate proposed by New York Natural for this service, and also partly contested by the contention that the level of this rate represented a device undertaken by New York Natural to ultimately deprive Tennessee of the maximum sales of gas that Tennessee desires to sell New York Natural under an existing contract. Tennessee contends that if New York Natural would not reduce, or cut back, on its purchases of Tennessee gas, in the future years, that New York Natural gas supply costs would be less, and therefore it is in the public interest to require New York Natural to continue maximum purchases from Tennessee.[13] As to this latter contention, the reduction or cut back in gas purchases by New York Natural is presumably proposed in accordance with contract rights, which were a part of an unrelated proceeding before the Commission, when New York Natural presented this gas supply contract for consideration and approval. The exercise of rights by New York Natural in accordance with an Order of this Commission, approving the inclusion of the Tennessee contract as a part of gas supply is beyond the collateral attack on that order in this proceeding. If the exercise of those rights for a reduction in the amounts of gas purchased is not in the public interest, as Tennessee has indicated, then some other proceeding might or should be utilized, perhaps with Tennessee as an informant urging the Commission to act in its own capacity to inquire into these charges. This process may permit Tennessee to have the opportunity to develop all the facts it possesses, or, perhaps Tennessee, as a party, might seek to reopen the gas supply proceedings, of which its contract with the cut back provisions was a part, so that all aspects of this contract performance can be available for consideration by the Commission. The economic basis utilized for the justification of this Tennessee gas supply contract, in the initial and authorizing proceeding, which Tennessee contends will be cut back or reduced, cannot be reached in this consolidated [14] hearing.

The additional claim by Tennessee that adequate base storage costs, for the proposed service to Transco, are not adequately shown in the record, rests in part upon its assertion that the entire operations, with revenues and costs, of the Consolidated Natural Gas System, of which New York Natural is a part, must be presented. While it is true that New York Natural is operated as a part of the system, and that its gas supply is in a sense "pooled" according to over all system requirements, that is, the supply is dispatched from one part of the system to another, the evidence in this record is that such dispatching of gas is undertaken only when the sender has a surplus over requirements. The

[13] New York Natural denies this Tennessee contention and NYN asserts that Tennessee gas is the highest priced gas available on the entire Consolidated system. In addition, New York Natural asserted that if the Leidy field is activated, purchases of Tennessee gas will be larger than in previous periods. Neither of these assertions on gas costs is supported by the record.

[14] Likewise, the contention of a somewhat modified unfair competition, as asserted by Tennessee, if it rests on this same factual basis, which was not otherwise supported in this record, may also be a part of another proceeding.

rate aspect contested by Tennessee seeks to inject matters beyond the scope of a review of rate justification necessary in a certificate proceeding, as to which the consideration of adequacy and reasonableness of a proposed rate is less extensive than in a formal rate case. Sufficient for this proceeding is the necessity of the finding that the proposed service is feasible upon the basis of the proposed rate. In this respect, both the evidence by New York Natural, including Exhibit 54, and by Tennessee, including its Exhibit 60, amply support the finding, here made, that upon the costs and revenues reflected by the evidence in this record, and the gas supply available and deliveries required, the rate proposed by New York Natural will render the proposed gas storage service for Transco feasible and reasonably compensatory, to provide adequate basis that in this certificate proceeding the proposed rate is reasonable and therefore is accepted.

Remaining contentions by Tennessee respecting New York Natural operations, are largely concerned with the mode of operation of the New York Natural system, and related operations of the Consolidated Natural Gas System, particularly the storage pools, and also the assignment of gas supply, in some instances, to purchasers affiliated with New York Natural in the Consolidated system. Bearing in mind that Tennessee did not support its intervention by any direct evidence from witnesses, its contentions largely rest upon computations of costs and quantities of gas supply that do not appear fully in conformity with all of the evidence from which its computations were derived. It may be that if Tennessee's position had been set forth by direct evidence from witnesses, its contentions would be more firmly established, and would have permitted cross examination by those opposing, who must now rely upon answering argument based on different premises, for, as Tennessee concedes, in effect, in its brief,[15] it is difficult to know the New York Natural costs, or to ascertain the facts which would definitely establish Tennessee's position. On the basis of this record, the remaining contentions of Tennessee respecting New York Natural and its applications, as well as Tennessee's proposed findings and conclusions submitted in conformity with it contentions, are rejected for lack of adequate proof to support the positions asserted. The serious character of the allegations made by Tennessee in its petition to intervene respecting unfair competition, monopoly of gas supply in the New York City market,[16] and lack of public

[15] Tennessee states in its brief:

"In view of the fact that no evidence whatsoever has been adduced with respect to the Consolidated Natural System, of which New York Natural is an integral part, and notwithstanding the attempts by Tennessee to obtain such information, it is impossible to determine the relative costs to New York Natural of gas purchases from various suppliers."

This lack of knowledge and absence of factual presentation does not aid an affirmative showing needed for Tennessee's position.

[16] In its brief, Tennessee concludes, without positive assertion, by stating:

"The cutting of prices by two natural gas companies in order to obtain a competitive advantage to the detriment and damage of another pipeline company serving the same customers, may well be a violation of stringent Federal law which condemns such unfair practice."

These are serious charges to be made within the gas industry, and Tennessee did not specify the particular Federal law alleged to be infringed.

The absence of a direct presentation by Tennessee indicates either that Tennessee preferred not to provide a complete support for these alleged trade practices, or, preferred to rely upon the hope that its attorney could discover enough weaknesses in the case presented by the adversaries to support the affirmative charges that Tennessee authorized to be made.

Implicit with every order by the Commission granting intervention is the obligation to make a direct presentation of evidence to support the petition, especially if objections are asserted to the allegations thereof, unless the person, in whose proceeding the intervention was granted, accords recognition or stipulates to the interest asserted.

interest in a proposed reduction, or cut back, in purchases by New York Natural of Tennessee gas have not been established by sufficient and substantial evidence. Tennessee's position was developed principally by cross examination, only, of the several witnesses presented by the applicants in this proceeding. This conclusion is not in any sense a dismissal of such charges, if a basis exists for consideration thereof; but on this record, there is insufficient foundation for Tennessee's assertions of an affirmative case, based upon its cross examination, and the computations and arguments made, therefrom.

Tennessee has also attacked Transco's rates for the storage service, by utilizing computations and references to Transco's evidence in a then pending rate case showing a loss for storage service, for Tennessee's contention that the Transco rate is too low. While Transco did not concede that its rate case claims were somewhat exaggerated, the evidence that Transco presented in this case, with the costs shown at $2,198,582, reflected by the expected payment to New York Natural for the service, and anticipated revenues of $4,222,166 from the storage customers provides a substantial credit to be applied to over all pipeline system costs incurred for the gas procurement and its transportation. Equally important is the indication by the Commission that a determination would be made in the pending Transco rate case [17] of the reasonable storage rate for the service here involved.

In any event, this record contains adequate and substantial evidence sufficient to accept, in this certificate proceeding, the level of the rate reflected in Transco's proposal. Tennessee raised the question concerning a winter peaking service, alleged to be offered by Transco as a part of the storage service. This aspect of the service was not developed on the record; the terms of the tariff indicate that the service is optional. This phase of the tariff may warrant precise inquiry if and when service is rendered according to options asserted for the service.

The Natural Gas Act requires the finding in the positive that the rates are shown to be reasonable, and Transco has presented the same general support for the storage and alleged peaking service rate, heretofore identified, for the complete feasibility showing. This over all presentation supports the rates proposed in the storage tariff as reasonable and compensatory to render the service economically feasible; that is, in a consideration of all of the evidence there is substantial basis to permit the finding that sufficient revenues are expected from the proposed rate to pay the reasonably supported costs of the service. As Tennessee concedes,[18] a certificate proceeding is not the occasion to determine if the rate is just and reasonable, but whether the service will be rendered with rates to make the project feasible. On this basis, the Transco rate fulfills the test. Tennessee contends, as to the winter peaking service; "* * * these rates could just as well have been pulled out of the air." As indicated herein,

[17] With an existing rate case actually in progress at the time of this hearing, it is somewhat illogical to undertake a duplicate rate analysis in this proceeding, especially if we are to avoid the complaint of "Due Processitis" set forth by Davis (Aug. 1961 Am. B. Jour.). That author, however, in undertaking to espouse a popular theme, failed to observe, or recognize, the force of a statute compelling the identified agency to convene the hearings, in accordance with the Administrative Procedure Act, the compliance with which the author apparently objected.

[18] Tennessee states in its brief:

"We wish to emphasize that we do not contend that the justness and reasonableness of any rate or rates must be established in a certificate proceeding under Section 7 of the Natural Gas Act. What we do say * * * is that Transco (having stipulated a loss on storage service for test year in its rate case) * * * cannot avoid a clear showing that the rendition of the total service it proposes under that rate is economically feasible." [Summary in the parentheses added.]

It is concluded that this test of economic feasibility has been fulfilled in these proceedings.

another proceeding and another inquiry, if any, should proceed without prejudice from the determination here made in this regard.

The Staff questioned the necessity of Transco's proposed Compressor Station 505, which would be constructed on Transco's Leidy line extending from a point near Princeton, New Jersey to western Pennsylvania. The Staff position was that if Leidy pool were not to be authorized, Compressor Station 505 would not be necessary. Transco answers by stating that the record evidence shows this Station 505 is needed for general service requirements whatever be the determination respecting Leidy. The Staff did not question Transco's market evidence as presented by Transco customer companies. Such evidence establishes a need for the gas storage service, some of which will be rendered from the Greenlick field, which the Staff recommended for authorization. The need for Station 505 is the more so required with the authorization of Leidy, not only to move the volumes of gas, but to achieve the pressures needed.

Tennessee's position did not refer specifically to Station 505, but Tennessee did urge in its brief that Transco is overbuilding its pipeline system, not to serve needs of existing customers, but because Tennessee alleges that Transco will later seek authority from the Commission to render a new service, which might be authorized solely because no new facilities are needed. Tennessee continues in its brief: "There is no way to tell what further extra-capacity is being built into Transco's facilities under the guise of 'firm requirements' * * *." This lack of evidence does not establish an overbuilding, and consequently Tennessee's contention in this regard is rejected.

In regard to matters of gas supply, markets and proposed financing, none of which was the basis of cross examination, Transco represents that based upon estimated total system requirements for twenty years of 10,712,351 MMcf at 14.73 psia (including the additional sales proposed herein), Transco's total system gas reserves as of January 1, 1962, of 9,197,221 MMcf have a life index of 17.2 years. The deliverability life of Transco's dedicated gas reserves is estimated to be 13.97 years from January 1, 1962. Transco contends that if no credit whatsoever were given to Transco's dedicated proven gas reserves which were not flow tested, Transco would have a life index of 16.1 years from January 1, 1962, and deliverability life of 12.91 years from January 1, 1962. Transco has adequate gas reserves and deliverability to support both its presently authorized service and the additional service of existing customers herein proposed.

These facilities proposed by Transco to render the service sought to be authorized are adequate for the acquisition of gas supplies and the rendition of additional service proposed by Transco in Docket No. CP61–194. Without these facilities, Transco contends that it could not adequately provide its presently authorized firm service and the additional firm pipeline and storage service proposed in Docket No. CP61–194.

Upon completion of the proposed facilities, Transco will have an allocable system capacity of 1,485,414 Mcf, excluding storage service, and 1,975,866 Mcf, including storage. After the additional firm service proposed in this proceeding has commenced and the proposed facilities have been installed, Transco will have on its system 8,603 Mcf per day of capacity which will be available on a year-round basis to meet additional requirements for firm pipeline service.

The costs of the proposed facilities have been based on past experience in constructing similar facilities and upon current price quotations. The estimated costs are concluded to be reasonable and adequate.

During the years 1963, 1964, and 1965, the first three full calendar years following installation of the facilities proposed herein, and commencement of all the proposed firm pipeline and storage service for which authorization is herein

sought, Transco estimates that it will earn sufficient revenues from presently authorized service together with the service proposed herein, at presently effective rates,[19] to produce an estimated system utility rate of return of 6.57%, and 6.63%, and 6.63%, respectively. These data were prepared by Transco on the basis of the Leidy development authorized by the Commission in Docket Nos. G–13793 and G–18961, and as proposed in these proceedings in the joint application in Docket No. CP61–238. When considered on the basis of the Leidy development authorized by the Commission in Docket Nos. G–13793 and G–18961, the estimated system utility rate of return for the years 1963, 1964 and 1965 is 6.55%, 6.62%, and 6.61%, respectively. A comparison of these results shows the effect on Transco of the joint application in Docket No. CP61–238.

Transco asserts that the estimated system utility rate of return, under either set of facts, would be lower in each year but for the expansion program for which authorization is herein sought. Revenues from the proposed service exceed the estimated cost of service on the proposed facilities (including a 6½% rate of return) in each of the three years by at least $3,000,000.

In making these computations, revenues were calculated on the basis of estimated system sales and transportation deliveries to present customers, including those presently certified and those for which authorization is herein sought. The cost of gas was obtained by applying the contract price to the volumes to be purchased from each field, which volumes are based on projected withdrawals of the volumes required for the period indicated. Operating and maintenance expenses are based upon Transco's actual experience adjusted for known and experienced changes, including expenses applicable to the facilities proposed herein. Depreciation was computed in accordance with the Company's present policy.

On May 2, 1961, Transco sold $35,000,000 of first mortgage pipeline bonds, which funds are presently available to the Company for the purpose of completing its current construction program. In addition, Transco anticipates that it will sell approximately $40,000,000 of additional debentures and preferred stock in connection with the proposed construction program. This financing is designed to cover the cost of certain facilities heretofore authorized by the Commission in other dockets, certain facilities involving minor applications not yet granted, miscellaneous plant additions and the facilities for which authorization is sought in Docket No. CP61–194.

Upon completion of the proposed financing, Transco will have the following capital structure:

		Percent
Long-term debt	$394,306,000	64.2
Preferred stock	92,575,000	15.1
Common equity	127,127,482	20.7
Total	$614,008,482	100.0

The evidence in this record demonstrates the need by Transco's existing customers of the proposed additional firm pipeline service of 99,290 Mcf per day, and the proposed additional storage service of 150,000 Mcf per day. All of

[19] Transco's presently effective rates for the sale of gas for resale and transportation are the rates collected subject to refund at Docket No. RP61–13. The revenues applicable to the proposed additional storage service have been computed by applying the rates set forth in Rate Schedule GSS set out in Exhibit 14 in evidence, which rates are identical to those found in Transco's currently effective Rate Schedule LS.

this service will be provided to existing customers. Transco does not propose to serve any new area in this proceeding.

Southern Natural intervened and its participation has developed the request that a condition be attached to any certificate issued herein, so that gas deliveries by Transco to Atlanta Gas Light Company, from the authority issued in this proceeding, be prohibited from entry to or use in the Atlanta area. Southern contends that it has an all-requirements supply contract to furnish all the gas Atlanta Gas Light Company needs for the Atlanta area. Southern concedes that Transco is already supplying some gas for the Atlanta area. The circumstances by which this Transco service was provided were not detailed for this record. Southern apparently contends, nevertheless, that it has a rigid all-requirements supply obligation; whether it has heretofore been found that Southern cannot fulfill that obligation is not discernible on this record. In its brief, however, Southern states that Transco can deliver the gas for the Atlanta area, when Southern has limited Atlanta to its contract demand. This contention appears as an antithesis to delivering the full gas requirements. More importantly here, however, is that Atlanta Gas Light Company has asserted that all of the gas sought in these consolidated proceedings is for the Athens and Franklin areas. No evidence suggests anything to the contrary. It is here found that it is reasonable to rely upon these representations of Atlanta Gas Light Company. Southern injected a reference to another, but unconsolidated Transco proceeding where different issues might arise. Whatever those issues may be, and what is the force left to Southern's exclusive obligation to supply gas for all the requirements in the Atlanta area can better be determined in another proceeding.[20] On this record, it is unreasonable to impose the condition urged by Southern and its request therefor is denied.

In addition to the foregoing findings and conclusions which accept, modify and reject, as herein shown, the proposed findings and conclusions, submitted by the participants in this proceeding, specifically, it is determined that Tennessee's proposed findings and conclusions numbers 1, 2, 3, 7 (as to the first sentence only), 9 (as to the first sentence thereof), are accepted and numbers 4, 5, 6, 7 (as to the second sentence only), 8, 9 (as to the second sentence only), 10, 11, 12, 13, 14, 15, and 16, are rejected, as well as are rejected Tennessee's unnumbered conclusions. Staff proposed findings and conclusions which are described as recommendations numbers 1, 2, 3, 4, 5, 6, and 8 are accepted, and numbers 7 and 9 are rejected.

By way of summary, and supplementary to the foregoing findings and conclusions, also based upon a consideration of the entire record in this consolidated proceeding, the evidence adduced and the briefs filed, are the following findings and conclusions:

1. Transcontinental Gas Pipe Line Corporation (Transco), a Delaware corporation with its principal place of business at Houston, Texas, is engaged in the transportation and sale of natural gas in interstate commerce and hence is a natural gas company within the meaning of the National Gas Act, as heretofore found by the Commission in its Order of April 28, 1950 (Docket No. G–1277–9 FPC 32).

[20] It would be interesting to consider the development by Southern of its contention that it is in the public interest, apparently, for one pipeline to assert a prohibition under an alleged all-requirements obligation supply contract, in order to exclude another supplier, which could supplement a gas supply to a total amount which Southern cannot fully deliver. Southern would thus seek to assert a right to exclude another pipeline supplier, based upon Southern's obligation to supply gas rather than upon its performance; Southern must contend that it has a right to demand compliance by Atlanta, even though Southern is in default.

2. New York State Natural Gas Corporation (New York Natural), a New York corporation, having its principal place of business at Pittsburgh, Pennsylvania, is engaged in the transportation and sale of natural gas in interstate commerce and hence is a natural gas company within the meaning of the Natural Gas Act, as heretofore found by the Commission in its Order of October 27, 1942 (Docket No. G–312–3 FPC 844).

3. New York Natural is an integral part of the Consolidated Natural Gas System (Consolidated Natural) which System is composed of New York State Natural Gas Corporation, The East Ohio Gas Company (East Ohio), The Hope Natural Gas Company (Hope), Lake Shore Pipeline Company (Lake Shore), The Peoples Natural Gas Company (Peoples), and The River Gas Company (River).

4. Texas Eastern Transmission Corporation (Texas Eastern), a Delaware corporation, having its principal place of business in Shreveport, Louisiana, is engaged in the transportation and sale of natural gas in interstate commerce, and is a natural gas company within the meaning of the Natural Gas Act, as heretofore found by the Commission in its Order of October 10, 1947 (Docket No. G–880–6 FPC 148).

5. The facilities proposed to be constructed and operated under the authority sought in these consolidated proceedings would be used for the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation of these facilities and sale of natural gas from these facilities, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

6. Transco, New York Natural, and Texas Eastern are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission, issued thereunder.

7. The construction and operation of the facilities described in the applications and amendments thereto, filed by Transco, New York Natural, and Texas Eastern and the sales of natural gas from these facilities in interstate commerce, subject to the jurisdiction of the Commission, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter provided.

8. The sale by Transco of additional amounts of natural gas as requested by Pittston Gas Company in interstate commerce, subject to the jurisdiction of the Commission, is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter provided.

9. The sale by Transco of the amounts of natural gas, sought by Pennsylvania Gas and Water Company in these proceedings, and the construction and operation of the facilities needed for said sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter provided.

10. The construction and operation of the facilities described in the Section 7(a) application and amendments thereto, of the Town of Liberty, Mississippi, in Docket No. CP61–208 and the sale of natural gas by Transco to the said town, as well as facilities needed to render such sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter provided.

11. The construction and operation of the facilities described in the Section 7(a) application and amendments thereto, of The Wind Gap Division of Bangor

Gas Company in Docket No. CP61–222, and the sale of natural gas by Transco to said company, as well as the facilities needed to render such sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are required by the public convenience and necessity subject to the condition that said company demonstrate to the satisfaction of the Commission, within six months from the date of issuance of the Commission's order granting the instant application, that the Supradur Manufacturing Corporation has firmly committed itself to buy the estimated volumes of gas indicated in this proceeding and a certificate therefor should be issued as hereinafter provided.

12. The construction and operation of the facilities described in the application, and amendments thereto, of The Hughesville Division of Jersey Shore Gas & Heating Company in Docket No. CP61–223 and the sales of natural gas by Transco to said company, as well as the facilities needed to render such sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are required by the public convenience and necessity, subject to the condition that said company demonstrate to the satisfaction of the Commission, within six months from the date of issuance of the Commission's order granting the instant application, that the industrial customers have firmly committed themselves to buy the estimated volumes of gas indicated in this proceeding, and a certificate therefor, subject to this condition, should be issued as hereinafter provided.

13. The development and operation of the designated Greenlick gas field as a natural gas storage pool, as described in the application, and amendments thereto, by New York Natural in Docket No. CP61–237 as integral parts of natural gas facilities used for sales of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter provided.

14. The construction and operation of the facilities described in the joint application and amendments thereto of New York Natural, Texas Eastern, and Transco in Docket No. CP61–238 respecting and related to the designated Leidy gas storage pool for use in connection with transportation, storage and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter provided.

15. The construction and operation of the facilities described in application of New York Natural in Docket No. CP61–198 and the sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter provided.

16. Public convenience and necessity require that the general terms and conditions set forth in paragraphs (a), (b), (c), and (e) of Section 157.20 of the Commission's Regulations, under the Natural Gas Act (18 CFR 157.20) should attach to the certificates hereinafter issued to the companies and to the town designated in the foregoing findings and to the exercise of the rights granted thereunder, and that the time within which the facilities authorized by this order shall be constructed and in actual operation should be fixed at one year from the date on which this Order shall become effective.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice, that:

(A) Certificates of Public Convenience and Necessity are hereby issued, subject to all pertinent provisions of the Natural Gas Act, and the Commission's Regulations thereunder, including to the extent applicable paragraphs (a), (b), (c), and (e) of Section 157.20 of such Regulations, to the companies and to the town designated in the foregoing findings, authorizing the construction and operation of facilities and the sale of natural gas in interstate commerce, described in all of the applications, and amendments thereto in these consolidated proceedings, subject to the conditions specified for Wind Gap Division of Bangor Gas Company, and The Hughesville Division of Jersey Shore Gas & Heating Company, and all subject to the jurisdiction of the Commission.

(B) The certificates issued in Paragraph (A) above shall be void and without force or effect unless accepted in writing thirty days from the date on which this order becomes effective, and in accordance with the provisions of paragraph (a) of Section 157.20 of the Commission's Regulations under the Natural Gas Act.

SAMUEL W. JENSCH,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ORGANIZATION OF COMMISSION—DELEGATION OF AUTHORITY, DOCKET NO. R-214

ORDER NO. 245

ADOPTING REVISED STATEMENT OF ORGANIZATION

(Issued April 30, 1962)*

On April 29, 1959, the Commission, acting pursuant to Section 3(a)(1) of the Administrative Procedure Act (60 Stat. 238; 5 U.S.C. 1002), issued Order No. 213, *Statement of Organization* (21 FPC 601, 24 F.R. 3654), which described the then current central and field organization, including delegations of final authority and other information required by the Administrative Procedure Act.

Since the issuance of Order No. 213, the Commission has reorganized its staff in numerous respects and has issued additional delegations of final authority.

It thus appears that it is desirable and in the public interest to issue a revised statement describing our current organization and cumulating currently effective delegations of final authority.

The Commission finds:

The amendment to its general rules adopted hereby involves matters of agency organization and procedure which do not require notice and hearing under Section 4(a) of the Administrative Procedure Act and good cause exists to make the amendment effective forthwith. *The Commission*, acting pursuant to authority granted by Section 309 of the Federal Power Act and Section 16 of the Natural Gas Act (16 U.S.C. 825h; 15 U.S.C. 7170) and in accordance with Section 3 of the Administrative Procedure Act (5 U.S.C. 1002), *orders:*

(A) Subchapter A, General Rules, Chapter I of Title 18 of the Code of Federal Regulations, is amended by adding a new Part 3 to read as set forth in the attachment hereto:

*Published in Federal Register on May 4, 1962 (27 F.R. 4276).

(B) Order No. 213, issued April 29, 1959 (21 FPC 601, 24 F.R. 3654), is hereby superseded.

(C) The new Part 3 prescribed hereby shall become effective upon the issuance of this order.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

ATTACHMENT

SUBCHAPTER A—GENERAL RULES

* * *

PART 3—ORGANIZATION

Sec.
3.1 Purpose.
3.2 Nature and responsibilities of Commission.
3.3 Functions.
3.4 Organization.
3.5 Delegations of Final Authority.
3.6 Offices of Commission; information and submittals.

§ 3.1 *Purpose.* This part describes the central and field organization of the Federal Power Commission, including delegations of final authority and the established places at which, and methods whereby, the public may secure information or make submittals or requests. The statement of organization adopted by the Commission in its Order No. 213, dated April 29, 1959 (24 F.R. 3654–3656), is hereby superseded.

§ 3.2 *Nature and responsibilities of the Commission.* The Federal Power Commission, established as an independent agency of the Federal Government by the Act of June 23, 1930 (46 Stat. 797), is responsible for: Administration and enforcement of the Federal Power Act and the Natural Gas Act; certain duties under the Flood Control Act of 1938 and subsequent Flood Control Acts, the River and Harbor Act of 1945 and subsequent River and Harbor Acts, and a number of other statutes, pertaining principally to Federal power projects; and certain functions pursuant to Executive Order 10485 (18 F.R. 5397, 3 CFR 1948–1953 Comp., p. 970) relating to electric power and natural gas facilities located on the borders of the United States.

§ 3.3 *Functions.* The principal functions of the Commission are:

(a) *Hydroelectric Resources.* Licensing hydroelectric power projects on waters over which the Congress has jurisdiction, or on Federal lands, or utilizing surplus water or water power from Federal dams; determining original costs and making analysis of reserve requirements of hydroelectric licensees; collecting and recording data concerning developed and undeveloped water power resources of the Nation; making surveys and studies, including power market surveys, of the requirements for comprehensive development of river basins for hydroelectric power and other purposes; analyzing plans for and making recommendations concerning hydroelectric power installations at Federal river development projects; and making determinations of payments for benefits provided by headwater improvements to downstream power projects.

(b) *Electric energy.* Regulating the rates, accounts, depreciation practices, security issues, property dispositions, mergers, consolidations, exportation of electric energy and border facilities therefor, interconnections, and coordination of facilities, of public utilities engaged in the transmission and sale for resale of electric energy in interstate commerce; gathering, compiling, and publishing statistical and other information concerning electric power and the electric

power industry in the United States; and analyzing and serving as the central source of information concerning national and regional power supply and requirements.

(c) *Natural gas.* Issuing certificates of public convenience and necessity for the construction and operation of facilities for the transportation or sale for resale of natural gas in interstate commerce; granting import, export, and border permits; ordering extensions of facilities or service; authorizing abandonment of such facilities or service; regulating the rates, accounts, and depreciation practices of certificated natural gas companies; compiling and publishing statistical and other information concerning the natural gas industry in the United States. These activities embrace full consideration of all aspects of the public interest in balancing natural gas exploration, conservation, supply, interstate transport, storage and ultimate consumption on a national scope.

(d) *Federal power rates.* Allocating costs, and approving accounts, rates, and related matters, for certain Federal hydroelectric power projects.

§ 3.4 *Organization.* The Federal Power Commission as an agency of Government consists of: The five-man Commission; the immediate offices of the individual Commissioners; the Chairman as executive and administrative head of the agency; the Executive Director; and the technical and administrative staff.

(a) *The Commission.* Except as provided below with respect to executive and administrative functions, the Commission is responsible for all plans, programs, and actions of the agency. The members of the Commission are appointed by the President, by and with the consent of the Senate. The Chairman is designated by the President. A Vice Chairman is elected annually by the members of the Commission. Any three members of the Commission constitute a quorum for the transaction of business.

(b) *Commissioners' offices.* Each Commissioner's immediate office is subject to his exclusive jurisdiction. Persons employed there regularly and full time are selected by him, perform such duties as he may assign, and are responsible to him alone.

(c) *Chairman.* The Chairman is the principal executive officer of the agency, responsible for all executive and administrative functions except those reserved to the Commission by Reorganization Plan No. 9 of 1950 (64 Stat. 1265).

(d) *Executive Director.* The Executive Director, under the direction of the Commission on substantive matters, and as the Chairman's delegate on executive and administrative matters, is responsible for and takes action to insure the effectiveness and efficiency of staff operations.

(e) *The Staff.* The Commission's staff is comprised of eleven bureaus and offices, as follows:

(1) *The Bureau of Natural Gas,* responsible for all staff activities pertaining to the natural gas industry, except: Legal matters; the uniform systems of accounts; original cost and reclassification studies; financial and related statistical matters, including rate-of-return studies; and other matters responsibility for which is assigned to other elements of the staff. The Bureau consists of the Office of the Chief, the Pipeline Division, the Producer Division, the Planning and Control Divison and a field office in Houston, Texas (under the administrative control of the Planning and Control Division). The field office performs work assigned by the Pipeline and Producer Divisions including field audits, engineering, geological, and accounting investigations arising from the production and transportation of natural gas for sale in interstate commerce for resale.

(2) *The Bureau of Power*, responsible for all staff activities pertaining to water resources, hydroelectric power, and the electric power industry, except: Legal, accounting, financial, and related statistical matters; and other matters responsibility for which is assigned to other elements of the staff. The Bureau is divided into a headquarters office at Washington and five regional offices. The headquarters office consists of the Chief of the Bureau of Power and his immediate staff, a Division of Licensed Projects, a Division of Electric Resources and Requirements, and a Division of River Basins. The Regional offices, at New York, Atlanta, Chicago, Fort Worth, and San Francisco, are responsible within their respective geographic areas for Bureau functions which can be done most effectively and efficiently in the field, including field investigations and studies, consultations, and inspections.

(3) *The Office of Accounting and Finance*, responsible for all staff activities pertaining to accounting, financial and related statistical matters (including rate-of-return studies), except: Legal matters; accounting investigations relating to rates and charges for electric power and natural gas; statistics on hydroelectric resources, power systems, power supply and requirements, power production and capacity, fuel consumption and stocks, electric utility systems loads, and electric plant construction costs and production expenses; and other matters responsibility for which is assigned to other elements of the staff. The office consists of the Chief Accountant and his immediate staff, a Division of Accounts and a Division of Finance and Statistics. The Division of Accounts includes field units with headquarters in San Francisco, California, and Houston, Texas. The Chief Accountant, in addition to his duties as head of the office, has personal responsibility for the overall correlation and adequacy of the accounting and related functions of all bureaus and offices of the staff.

(4) *The Office of the General Counsel*, responsible for the legal phases of all Commission functions, including litigation in the courts.

(5) *The Office of the Secretary*, responsible for the secretariat functions of the Commission, including the duties of the Secretary as set forth in this chapter, and for action on behalf of the Commission pursuant to the delegations of final authority described in § 3.5 hereof.

(6) *The Office of Hearing Examiners*, responsible for discharging the functions and exercising the powers of presiding officers in hearings, in accordance with the provisions of Sections 7 and 8 of the Administrative Procedure Act and § 1.27 of this chapter.

(7) *The Office of Special Assistants to the Commission*, responsible for assisting the Commission in the preparation of opinions, orders, and other legal documents, and for analyzing exceptions, preparing summaries of facts and issues, and performing related duties, as assigned. The Office is under the direction of the Commission or individual members thereof on substantive matters, but is under the administrative supervision of the General Counsel.

(8) *The Office of Economics*, responsible for obtaining and evaluating economic and statistical information necessary in the administration of the Federal Power Act and the Natural Gas Act; appraising the economic implications of proposed policies, and assisting the Commission in the formulation of economic policies required in the administration of the Federal Power Act and the Natural Gas Act.

(9) *The Office of Administration*, responsible on a Commission-wide basis for budget and fiscal activities, general administrative services, and management services, including administration of the automatic data processing program and services. The Office consists of the Director of Administration and his

immediate office, the Division of Budget and Finance, the Division of General Services, and the Division of Management Assistance.

(10) *The Office of Personnel*, responsible for the Commission's personnel management activities and the personnel security program.

(11) *The Office of Public Information*, responsible for the public information activities of the agency, including issuance of press releases, sale and distribution of publications, and public reference service.

§ 3.5 *Delegations of Final Authority.* The Commission has authorized:

(a) The Secretary, or in his absence, the Acting Secretary, to:

(1) Sign official correspondence on behalf of the Commission.

(2) Prescribe the time for filing by electric utilities, licensees, natural gas companies, and other persons, answers to complaints, petitions, motions, and other pleadings and documents, provided that no answers shall be required to be filed in less than ten days after the date of service of the pleading or document to which answer is made.

(3) Schedule hearings and issue notices thereof.

(4) Accept for filing, subject to the order of the Commission, notices of intervention and petitions to intervene by State commissions and Federal agencies.

(5) Reject petitions to intervene filed in a period later than ten days next preceding the date the matter is set for hearing, unless good cause is shown for the late filing.

(6) Consolidate proceedings for hearing simultaneously on a record, and sever proceedings which have been consolidated.

(7) Deny motions or requests for extensions of time filed later than the time prescribed by the rules unless good cause is shown for the late filing.

(8) Reject pleadings, briefs, and other documents filed later than the time prescribed by an order, rule, or regulation of the Commission unless good cause is shown for the late filing.

(9) Waive requirements of the Commission's rules and regulations, when consistent with the public interest in a particular case.

(10) Pass upon questions of extending time for electric public utilities, licensees, natural gas companies, and other persons to file required reports, data, and information and to do other acts required or allowed to be done at or within a specific time by any rule, regulation, license, permit, certificate, or order of the Commission, not to exceed in any event an extension of six months beyond the time or period originally prescribed.

(11) Accept service of process upon behalf of the Commission.

(12) Accept for filing bonds or agreements and undertakings submitted in rate suspension proceedings when they are found to be satisfactory.

(13) Take the following action on rate schedule and certificate filings submitted by independent producer natural gas companies prior to issuance on September 27, 1956, of Order No. 190 (16 FPC 492, 21 F.R. 7616, October 4, 1956) involving non-signatory parties or percentage sales which may be found to be in conflict with said order: Vacate the orders previously issued granting certificates of public convenience and necessity, and cancel the prior acceptances of, and reject, the related rate schedules, after the applicant or filing party has been advised that such action is contemplated and given 15 days for filing a response to the letter of notification, or upon request of an independent producer who is a non-operating signatory party, cancel the prior acceptance of and reject the rate schedules where certificate applications have been or are concurrently being rejected; advise the filing party of final action by appropriate letter.

(14) Take the following actions on certificate and rate schedule filings of independent producers, where the sales involved are not of an interstate char-

acter, or where proposed interstate sales were never made: (i) Upon request of the filing party, vacate the order previously issued granting a certificate of public convenience and necessity; and (ii) cancel the prior acceptance of and permit withdrawal of the related rate schedule upon request of the filing party or where the certificate application is concurrently being or has been previously withdrawn.

(15) Publish Notice of Land Withdrawals under Section 24 of the Federal Power Act.

(16) Approve, with respect to particular parcels of land within the project area of a licensed water-power project, the conveyance by the licensee to another legal entity of an interest therein for use for a non-project purpose, subject to the right of the licensee, its successors and assigns to use the land for all project purposes contemplated by the license for the project.

(17) Accept for filing initial rate schedules and rate changes submitted by natural gas companies and electric utilities where no rate increase other than for state gathering, production, or similar tax is involved and where no waiver of statutory notice is required and advise the filing party of such acceptance, the designation of the rate schedule and effective date thereof.

(18) Issue notices of applications filed under the Federal Power and Natural Gas Acts, fixing the time for filing comments, protests or petitions to intervene and schedule hearings on such applications when appropriate or required by law.

(19) Accept for filing rate schedules and supplements thereto, if any, submitted in compliance with conditions in certificates of public convenience and necessity, both temporary and permanent, issued under Section 7 of the Natural Gas Act, when they meet the requirements prescribed by such certificates and advise the filing party of such acceptance, the designation of the rate schedule and effective date thereof.

(20) Pass upon, when appropriate, applications, petitions, and requests submitted under General Instruction No. 12 of the Uniform System of Accounts prescribed for natural gas companies for approval to group certain gathering systems, or certain transmission mains, or certain compressor stations for the purpose of complying with that portion of General Instructions No. 12 (formerly covered by General Instruction No. 11, prior to January 1, 1961) requiring a segregation of the cost of operating and maintaining each plant.

(21) Accept for filing amendments to agreements and contracts or rate schedules submitted in compliance with Commission orders accepting offers of rate settlements if such filings are in satisfactory compliance with such orders.

(22) Issue notices requiring that the rates under suspension be charged where a motion to make such a rate effective is filed by the independent producer concerned, and to accept for filing the bond or agreement and undertaking when deemed to be satisfactory.

(23) Reject a rate filing in accordance with Section 1.14(a)(2) of this chapter, if it fails to comply with applicable statutory requirements, Commission rules or regulations, or Commission orders.

(24) Accept for filing data and reports required by Commission orders and presiding examiner's initial decisions when such filings are considered to be in satisfactory compliance with the orders or decisions, and when appropriate, to notify the filing party of such acceptance.

(b) The *Chief Accountant*, or in his absence the Acting Chief, to issue interpretations of the Uniform Systems of Accounts for Public Utilities, Licensees, and Natural Gas Companies.

(c) *Regional Engineers* of the Bureau of Power, or, in the absence of a regional engineer, the Acting Regional Engineer, to grant 30-day extensions of time for filing Power System Statements (Forms 12, 12A, etc.).

(d) *The Chief Examiner*, and the examiners designated to preside at hearings, to exercise the functions and powers stated and enumerated for presiding officers in the Commission's Rules of Practice and Procedure, particularly Section 1.27 (18 CFR 1.27).

§ 3.6 *Offices of the Commission; information and submittals.*

(a) *Headquarters* of the Federal Power Commission are in the General Accounting Office Building, 441 G Street NW., Washington, D.C. Information concerning matters for which the Commission is responsible may be obtained in person at that office, or by written request addressed to the Federal Power Commission, Washington 25, D.C. All formal requests, filings, and submittals should be addressed to the principal office of the Commission, pursuant to 18 CFR 1.1(g).

(b) *Regional offices* of the Bureau of Power, to which should be submitted all prescribed Power System Statements, and from which may be obtained information concerning power matters assigned to them, are located as follows:

(1) New York Regional Office, at 346 Broadway, New York 13, N.Y., serving: Connecticut; Delaware; District of Columbia; part of Kentucky; Maine; Maryland; Massachusetts; New Hampshire; New Jersey; New York; part of Ohio; Pennsylvania; Rhode Island; Vermont; and parts of Virginia and West Virginia.

(2) Atlanta Regional Office, at Peachtree-Seventh Building, 50 Seventh Street NE., Atlanta 23, Georgia, serving: Alabama; Florida; Georgia; parts of Kentucky and Mississippi; North Carolina; South Carolina; Tennessee; and parts of Virginia and West Virginia.

(3) Chicago Regional Office, in the United States Custom House, 610 South Canal Street, Chicago 7, Illinois, serving: Illinois; Indiana; Iowa; part of Kansas; Michigan; Minnesota; parts of Missouri, Montana, and Nebraska; North Dakota; parts of Ohio and South Dakota; Wisconsin; and part of Wyoming.

(4) Fort Worth Regional Office, at 289 University Plaza Building, 100 North University Drive, Fort Worth 7, Texas, serving: Arkansas; Colorado; part of Kansas; Louisiana; parts of Mississippi, Missouri, Nebraska and New Mexico; Oklahoma; part of South Dakota; Texas; and part of Wyoming.

(5) San Francisco Regional Office, in the United States Custom House, 555 Battery Street, San Francisco 11, California, serving: Alaska; Arizona; California; Hawaii; Idaho; part of Montana; Nevada; part of New Mexico; Oregon; Utah; Washington; and part of Wyoming.

(c) *Public files and records*, described in 18 CFR 1.36, are available for public inspection in the Office of Public Information at Agency headquarters.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. G-20464

ORDER GRANTING PETITION TO REOPEN PROCEEDING FOR THE PURPOSE OF TAKING ADDITIONAL EVIDENCE

(Issued April 30, 1962)

On April 11, 1962, Transwestern Pipeline Company (Transwestern) filed a petition, as supplemented by a telegram as of the same date,* requesting that the

*The telegram requests that "a date for rehearing in the reopened proceeding not be fixed until such time as Transwestern has filed a certificate application in connection with its proposed sale of gas to Cities Service Gas Company and a hearing date has been fixed on such application."

above-captioned Section 7(c) proceeding be reopened for the purpose of taking additional evidence. This proceeding has been heard and, on February 27, 1962, the presiding examiner issued his decision denying Transwestern's application for a certificate of public convenience and necessity. The examiner found that Transwestern had not made a showing in the record in this case, especially as to markets and economic feasibility, of the necessity at this time or within the reasonably foreseeable future for the additional supplies of natural gas which would be made available by the field facilities proposed in this proceeding. The time within which to file exceptions to the examiner's decision has been extended to and including May 14, 1962.

On April 12, 1962, the Public Utility Commission of the State of California filed a telegraphic answer not objecting to the petition to reopen. On April 16, 1962, the Pacific Lighting Companies (Pacific Lighting Gas Supply Company, Southern California Gas Company, and Southern Counties Gas Company of California) filed an answer objecting to the reopening unless the hearings in the reopened proceedings are postponed for consolidation with the application to be filed by Transwestern for authorization to make additional sales.

Transwestern asserts that subsequent to the closing of the record and the issuance of the examiner's decision in this case, material changes occurred in its market situation which remove any question as to the sufficiency of its market and the economic feasibility of the proposed facilities. Transwestern alleges that its sales of natural gas to Pacific Lighting Gas Supply Company (Gas Supply) increased substantially in the last six months and that it recently entered into a letter agreement with Cities Service Gas Company (Cities Service) whereby it proposes to sell 100,000 Mcf of natural gas per day to Cities Service, commencing on January 1, 1964, and increasing to 200,000 Mcf per day on or before January 1, 1966. Transwestern seeks to adduce additional evidence to support these contentions and also requests to present evidence to show that its construction of certain field facilities, involved in this proceeding, was not a willful violation of Section 7(c) of the Natural Gas Act.

Although in this proceeding Transwestern apparently did not rely on a showing of new markets or additional sales, the presiding examiner made it very clear that Transwestern would not be foreclosed from renewing its application at some future time when, and if, it could demonstrate a need for the additional supplies of natural gas. In view of this, we believe that the alleged change in Transwestern's market situation is sufficient cause for reopening this proceeding. Since the proceeding will be opened and in order to give it every opportunity to explain the construction of the field facilities not covered by the temporary certificate, Transwestern will also be permitted to present evidence to show that there has been no violation of Section 7(c).

The date of the further hearings in this proceeding will be fixed by a future notice after Transwestern has filed an application for a certificate of public convenience and necessity in connection with its proposed sale of gas to Cities Service.

The Commission finds:

Good and sufficient cause has been alleged for the granting of the petition to reopen proceeding for the purpose of taking additional evidence filed by Transwestern Pipeline Company.

The Commission orders:

The petition to reopen proceeding for the purpose of taking additional evidence, filed by Transwestern Pipeline Company, is granted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHWESTERN POWER ADMINISTRATION, DOCKET NO. E-6975

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued April 30, 1962)

Pursuant to the Flood Control Act of 1944 (58 Stat. 887), the Assistant Secretary of the Interior (Secretary) on behalf of the Southwestern Power Administration (SWPA) on November 3, 1961, submitted for confirmation and approval the rates and conditions of service for the sale of "Hydro Peaking Power" and "Seasonal Peaking Power" service set forth in a proposed new rate schedule, designated as P-2. Service under the new rate schedule would be available to wholesale power customers who contract for the purchase of such power delivered from the 138-161 kv main grid transmission system owned by, or made available through contract to, SWPA. Approval was requested for a period from the date of the Commission's action until July 1, 1967.

On January 17, 1962, the Secretary submitted a revision of the proposed Rate Schedule P-2 and requested that it be substituted for the proposed rate schedule submitted November 3, 1961. The revised rate schedule specified the amount of energy to accompany the "hydro and seasonal peaking power" service.

SWPA is an agency of the United States established in the Department of the Interior to execute the purposes of the Flood Control Act of 1944 (Flood Control Act) with respect to the disposition of electric power and energy made available to the Secretary of the Interior from the reservoir projects under the control of the Department of the Army in the area comprising all of Arkansas and Louisiana and portions of Missouri, Kansas, Texas and Oklahoma. At the present time, the Department of the Army has constructed and is operating nine such projects in this area. The installed capacity of these projects, including two generating units under construction at the Bull Shoals project is 881,000 kilowatts (kw). In addition, SWPA has leased from certain REA generating and transmission cooperatives, under long-term agreements, the output of three steam-electric generating plants, with a total capacity of 85,000 kw.

These Army projects and REA steam plants, with the exception of the isolated Narrows and Whitney projects located in Arkansas and Texas, respectively, and the interconnecting transmission lines owned or leased by SWPA and others leased from the REA generating and transmission cooperatives in the area compose an integrated system.

The proposed Rate Schedule P-2 would be applicable to wholesale power customers who, by contract, purchase "Hydro Peaking Power" service and/or "Seasonal Peaking Power" service. For such service, the customer would be guaranteed a minimum of 1200 kilowatt hours (kwh) per kw of demand each contract year. This is equivalent to an annual load factor of 13.7 percent. The service would be from, and at the voltage of, the 138 kv or the 161 kv transmission facilities owned by or available to SWPA, or at lower or intermediate voltages from substations directly connected to such transmission facilities. The demand charge would be $14.40 per year per kw of "Hydro and/or Seasonal Peaking Power," payable at the rate of $1.20 per month per kw. The energy charge would be 2.0 mills per kwh.

The rates and conditions of service in the proposed Rate Schedule P–2 are consistent with those in SWPA's approved Rate Schedule SP which is a schedule of wholesale rates for special peaking power service. Under Rate Schedule SP, SWPA supplies 1200 kwh of energy per kw of contract demand during each fiscal year. The energy charge is 2.0 mills per kwh. The basic demand charge is $19.20 per year per kw of contract demand but a discount of $4.80 per kw is allowed if the delivery of power is made from, and at the voltage of, the 138 kv or 161 kv transmission facilities owned or leased by SWPA. Thus, the demand charge is the same, $14.40 per year per kw, as the demand charge proposed in Rate Schedule P–2 when conditions of service are the same.

SWPA is negotiating two new contracts for the sale of 478,000 kw of power at the rates specified in the proposed new Rate Schedule P–2. One of the proposed contracts is with Kansas City Power & Light Company, Missouri Public Service Company and The Empire District Electric Company (Companies). The other is with the Associated Electric Cooperative, Inc. (Associated). Associated is an electric cooperative corporation, organized under the laws of the State of Missouri to engage in the purchase, generation, interchange, transmission, and supply of electric power and energy for its member cooperatives, referred to in the contract as the "Federated Cooperatives," as follows:

Central Electric Power Cooperative, Jefferson City, Missouri.
KAMO Electric Cooperative, Inc., Vinita, Oklahoma.
M&A Electric Cooperative, Poplar Bluff, Missouri.
Northeast Missouri Electric Power Cooperative, Palmyra, Missouri.
N.W. Electric Power Cooperative, Inc., Cameron, Missouri.
Sho-Me Power Corporation, Marshfield, Missouri.

In addition to the afore-mentioned contracts, Associated and the Companies are negotiating an integration contract whereby they would interconnect their transmission systems and operate as a single integrated system, so as to pool and utilize the hydroelectric power and energy available to them under the contracts between SWPA and Associated and SWPA and Companies.

Under the contract with the Companies, SWPA would sell "Seasonal Peaking Power" in amounts graduating in yearly contract amounts from 12,000 kw at the start of service in 1962 to 190,000 kw beginning in June 1965 and thereafter for the duration of the contract which terminates May 31, 1985. During periods when the total generating capability of the Bull Shoals and Table Rock projects is less than the total nameplate rating of their installed capacity, SWPA would be permitted to reduce the above amounts of Seasonal Peaking Power, except during the months of June, July, August, and September. SWPA would sell the Companies 1200 kwh of energy per kw of Seasonal Peaking Power during each contract year.

Under the contract with Associated, SWPA would sell "Hydro Peaking Power" in amounts graduating in yearly contract amounts from 125,000 kw at the start of service in 1962 to 288,000 kw beginning in June 1965 and thereafter for the duration of the contract which terminates May 31, 2000. The contract specified the minimum and maximum amounts of energy which Associated would be required to purchase and SWPA would be required to sell. The minimum energy specified is 1,200 kwh per kw of "Hydro Peaking Power" during each contract year. The maximum energy to be sold is computed by a formula which takes into account several factors, including the amount of energy generated at the

Bull Shoals and Table Rock projects and the amount of energy SWPA is obligated to deliver the Companies.

The contract with Associated, in addition to providing for the sale of power by SWPA to Associated, covers services to be provided by Associated to SWPA. These services include among others, providing SWPA with transmission service over the Associated 161 kv System and providing SWPA with reserve generating capacity from the Associated System. For the total services to be supplied, SWPA would make a credit payment to Associated of $4,140,000 per year, increasing to $4,656,000 per year upon completion of construction of certain transmission lines and substations by Associated.

In support of the proposed marketing arrangements, SWPA presented a study with estimates of annual costs and revenues assuming, first, a continuation of present contractual arrangements for marketing power in the Missouri area and, second, contractual arrangements for marketing power under the new contracts which are being negotiated with Associated and the Companies. In each case, SWPA assumed the sale of 540,000 kw of capacity and associated energy. For the present marketing arrangements, the power was assumed to be sold under existing Rate Schedules P–1, SP, F–1, and EE. The contractual costs were those that would be incurred under existing lease and service contracts with six G&T Cooperatives, plus allowance for losses and reserves. Under the proposed marketing arrangements the power was assumed to be sold under proposed Rate Schedule P–2 and existing Rate Schedule F–1. The contractual costs were those that would be incurred under the proposed contract with Associated plus certain firming costs. Costs common under both assumptions, such as hydro plant operation and maintenance costs, were omitted. It is believed that these estimates by SWPA represent a reasonable financial comparison of present and proposed marketing arrangements in the Missouri area. The results of this study are as follows:

	Present arrangements	Proposed arrangements
Annual revenues	$12,967,000	$10,753,000
Annual costs	9,863,000	5,877,000
Net revenues	3,104,000	4,876,000

The above comparison indicates that SWPA's proposed new marketing arrangements for the Missouri area would provide an increased annual benefit to SWPA of $1,772,000 when compared to a continuation of present marketing arrangements.

Notice of the request for the approval of the proposed rate schedule was sent to State officials, other interested parties and was published in the Federal Register on November 18, 1961 (26 F.R. 10818), stating that any comments or suggestions should be submitted on or before December 4, 1961. None were received.

Although the action taken herein is confined to the confirmation and approval of the proposed Rate Schedule P–2 pursuant to the provisions of Section 5 of the 1944 Flood Control Act, we note that the contracts discussed above, pursuant to which Companies and Associated propose to render service and make sales,

will be subject to the rate schedule filing requirements of Section 205[1] of the Federal Power Act to the extent that the facilities utilized to render the services are subject to the jurisdiction of the Commission.[2]

The Commission finds:

The proposed rate schedule for the sale of "Hydro Peaking Power Service" and "Seasonal Peaking Power Service" and accompanying energy in SWPA's service area designated as SWPA Rate Schedule P–2, for a period beginning with the date of this order and expiring July 1, 1967, will not be inconsistent with the provisions of the Flood Control Act of 1944.

The Commission orders:

The proposed SWPA Rate Schedule P–2 filed November 3, 1961, as modified by filing of January 17, 1962, all as set forth above is confirmed and approved for a period beginning with the date of the issuance of this order and terminating July 1, 1967.

---

[1] Subsection 205(c) of the Federal Power Act provides:

"Under such rules and regulations as the Commission may prescribe, every public utility shall file with the Commission, within such time and in such form as the Commission may designate, and shall keep open in the convenient form and place for public inspection schedules showing all rates and charges for any transmission or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services."

[2] Previously, the Commission found and determined each of the above Companies to be "public utilities". See *Interstate Power Company, Kansas City Power & Light Company,* 17 FPC 663, 665; *Missouri Public Service Co., The Empire District Electric Co.,* 13 FPC 745, 746–7. Associated, being a corporation within the meaning of Section 3(3) of the Federal Power Act, comes within the definition of "person" in Section 3(4) of the Act. A "person" who "owns or operates facilities subject to the jurisdiction of the Commission" (Sec. 201(e)) has the status of a "public utility" under Part II.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

DUNLAP OIL CORPORATION, DOCKET NO. G–19935

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDING

(Issued May 1, 1962)

On March 29, 1962, Dunlap Oil Corporation (Dunlap) submitted, in accordance with the provisions of Section 1.18(e) of the Commission's Rules of Practice and Procedure, an offer of settlement of the suspension proceeding in Docket No. G–19935 involving its jurisdictional sale of natural gas to Tennessee Gas Transmission Company (Tennessee Gas) in the Seeligson Field, Jim Wells County, Texas (Railroad Commission District No. 4).

In the offer, Dunlap proposes to reduce the increased rate[1] of 15.0952¢ per Mcf, which became effective subject to refund on April 1, 1960, to a settlement rate of 14.6¢ per Mcf at 14.65 psia. Under the terms of the settlement offer the favored-nation and price redetermination provisions are to be eliminated from the rate schedule and the tax reimbursement clause is to be revised to provide for reimbursement of three-fourths of any increase in tax occurring after November 1, 1959. The 14.6¢ per Mcf settlement rate, as proposed, would take effect as of April 1, 1960 and continue until November 1, 1964, with a 1.0¢ per Mcf escalation on November 1, 1964 and at five-year intervals thereafter through November 1, 1974.

Tennessee Gas has joined in the Offer of Settlement and approves the proposed contract amendment. No objections to the proposed settlement have been received in this proceeding.

Since the proposed rate of 14.6 cents per Mcf at 14.65 psia is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1 [18 CFR, Chapter I, Part 2, Section 2.56] issued December 20, 1960, for jurisdictional sales of natural gas for Texas Railroad Commission District No. 4, it appears that the public interest will best be served by accepting Dunlap's proposed settlement as herein provided.

However, we desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Dunlap under the periodic escalation provisions or otherwise.

The Commission finds:

The proposed settlement of this rate proceeding on the basis described herein, as more fully set forth in the Offer of Settlement filed by Dunlap with the Commission on March 29, 1962, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Dunlap with the Commission on March 29, 1962, in Docket No. G–19935, is hereby approved in accordance with the provisions of this order.

(B) Within 30 days from the date of issuance of this order, Dunlap shall file, subject to approval of the Commission, a supplement to the subject rate schedule reflecting the provisions of the settlement offer herein approved, and shall refund

[1] Designated Supplement No. 1 to Dunlap's FPC Gas Rate Schedule No. 2.

to Tennessee Gas, with interest at the rate of 7 percent per annum to date of refund, all amounts collected for gas sold on and after April 1, 1960, in excess of the settlement rate of 14.6¢ per Mcf. Within 45 days from the date of issuance of this order Dunlap shall report to the Commission, in writing and under oath, the amount of refunds paid to Tennessee Gas, showing the calculation thereof including the separate amounts of principal and interest; and Dunlap shall file an acknowledgment signed by a responsible officer of Tennessee Gas that said amounts satisfy the obligations under the settlement offer.

(C) Upon full compliance by Dunlap with all the terms and conditions of this proceeding shall be terminated.

(D) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against Dunlap.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP62-14; THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP61-155

ORDER FIXING DATE FOR HEARING AND DEFINING ISSUES

(Issued May 1, 1962)

On March 22, 1962, Tennessee Gas Transmission Company (Tennessee) filed in the above-entitled proceeding a motion for reconsideration or in the alternative for prompt hearing with defined issues.

Tennessee alleges that it filed an application in the above-captioned proceeding for authorization to transfer the deliveries of 35,000 Mcf of natural gas per day that is presently being delivered to United Fuel Gas Company (United) in Tennessee's Eastern Rate Zone to The Manufacturers Light & Heat Company (Manufacturers) for the account of United in Tennessee's Northern Rate Zone. Tennessee proposes that its transfer of deliveries will take place during the six-month period commencing on November 1, 1961, and ending on April 30, 1962, and for each six-month period thereafter that commences on November 1 and ends on April 30, for the term of years coextensive with the term of the presently effective gas sales contract between Tennessee and United.

Tennessee alleges that pursuant to temporary authorization issued August 18, 1961, to transfer said deliveries as proposed in its application, Tennessee and United entered into a gas sales contract dated October 10, 1961, which, Tennessee alleges, provides for "the transfer of deliveries as proposed and temporarily authorized for a term of years ending on November 1, 1979." Tennessee further alleges that this contract was permitted to take effect on November 1, 1961, the date upon which the deliveries of natural gas to Manufacturers for the account of United was commenced.

Tennessee alleges that at the hearing hereon held December 18, 1961, the only issue raised was "that of the proper sharing, between United and Manufacturers, of the increased rate which United pays to Tennessee for deliveries made in Tennessee's Northern Rate Zone over the rate United pays for deliveries in Tennessee's Eastern Rate Zone." No party, it is alleged, raised any question as to the term of the transfer. Tennessee further alleges that all parties

stipulated that: (1) Manufacturers should reimburse United for the net amount of such increased costs; (2) a condition with respect to such reimbursement should be included in the order issuing a certificate of public convenience and necessity to Tennessee and Manufacturers; (3) on or before January 2, 1962, Staff Counsel would serve upon all parties a copy of a draft of the proposed order containing such reimbursement condition; and, (4) the hearing should reconvene on January 15, 1962, for the purpose of offering the parties an opportunity to comment on the proposed order and to submit same to the Examiner.

Tennessee states that at the reconvened hearing no party objected to the provisions of the proposed order; that subsequent to the conclusion of the hearing the Pennsylvania Public Utility Commission requested the Commission to modify the proposed order so as to provide that United and Manufacturers would share the additional zone differential charges from Tennessee in proportion to their estimated costs, as if Manufacturers had constructed the facilities which were originally proposed, but which were rendered unnecessary by the proposed transfer of deliveries. It is pointed out that the Pennsylvania Commisssion did not urge a reopening nor raise a question as to the term of the transfer service.

Tennessee asserts that unless such transfer is authorized on a long-term basis as proposed, Manufacturers will still be required to construct additional duplicate facilities.

The Commission in its order of February 20, 1962, said that it appeared to the Commission that there was a serious question as to whether the granting of the applications would not place Manufacturers in the position of making payments to United for a service which United did not render and that it would not be appropriate for United to make a charge for a service it did not render.

Tennessee has submitted no new facts which would warrant issuance of permanent authorization to it at this time. However, for the purpose of clarification of the issues, the Commission will indicate in the ordering paragraph herein the issues to be tried at the hearing to determine the propriety of the charge to be made by United.

The Commission finds:

Good cause has been shown for the granting of Tennessee's motion for reconsideration or in the alternative for prompt hearing with defined issues to the extent that the proceeding will be set for hearing and the issues defined as hereinafter ordered.

The Commission orders:

The above-docketed proceedings be and the same are hereby set for further hearing on June 4, 1962 and the issues to be developed upon such hearing shall include the following:

(1) Does United in fact render a service for which it should be reimbursed? (2) If United renders a service, is the proposed basis of reimbursement just and reasonable? (3) Does the arrangement properly fall within the scope of a Volume No. 2 tariff filing, or is it in conflict with Section 154.52 of the Commission's Regulations? (4) Does the arrangement improve the reliability of service and offer additional flexibility in operating techniques to the integrated Columbia System? (5) Does the arrangement represent an accommodation to the Columbia System, resulting in benefiting the System as a whole, rather than primarily benefiting Manufacturers?

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 2058

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued May 2, 1962)

Application was filed on July 1, 1957, and supplemented on March 19, 1962, by The Washington Water Power Company, licensee for major Project No. 2058, to exclude from that project lands necessary for the operation of the licensee's licensed Project No. 2075, known as the Noxon Development. Filed as part of the March 19, 1962 supplement were Exhibit K, Sheet 9 of 10 (FPC No. 2058–44), revised March 7, 1962, showing the project boundary line of Project No. 2058 after deletion therefrom of the lands transferred to Project No. 2075, and Exhibit F, a tabulation of Project No. 2058 lands. Commission approval of the latter exhibit is not required.

Application to include in Project No. 2075 the lands transferred from Project No. 2058 is pending in the Commission.

The Commission finds:

(1) No lands of the United States are involved herein.

(2) The revised Exhibit K mentioned above conforms to the Commission's rules and regulations and should be approved as part of the license for Project No. 2058 and Exhibit K, Sheet 9 of 10 (FPC No. 2058–39), now part of the license for that project and which has been superseded, should be eliminated from the license for that project—all as hereinafter provided.

The Commission orders:

The revised Exhibit K referred to in finding (2) above is approved as part of the license for Project No. 2058, and the exhibit referred to in the same finding as being superseded is eliminated from the license for that project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

GULF STATES UTILITIES COMPANY, DOCKET NO. E–7030

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued May 4, 1962)

Gulf States Utilities Company (Applicant), incorporated under the laws of the State of Texas and doing business in that State and the State of Louisiana, with its principal business office at Beaumont, Texas, filed an application on March 28, 1962, as amended on April 9, 18 and 26, 1962, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $17,000,000, principal amount of First Mortgage Bonds, due 1992.

Applicant proposes to issue the Bonds under its Indenture of Mortgage, dated September 1, 1926, as supplemented and modified by twenty supplemental indentures and as to be further supplemented and modified by the Twenty-first Supplemental Indenture dated as of May 1, 1962, under which the Manufacturers Hanover Trust Company of New York is Trustee.

On or about May 9, 1962, Applicant proposes to invite sealed written bids for the purchase of the Bonds by newspaper publication and by distribution of a "Public Invitation for Bids for the Purchase of the Bonds", setting forth terms and conditions relating thereto. All bids, whether from a single bidder or group of bidders, must be in writing on the Form of Bid furnished by Applicant and must be for the purchase of the entire issuance of Bonds. Each bid must specify, among other things, (1) the interest rate of the Bonds, which shall be a multiple of ⅛th of 1%; (2) the price, exclusive of accrued interest, to be paid to Applicant for the Bonds, which shall be not less than 100% nor more than 102½% of the principal amount thereof; (3) that Applicant shall be paid the amount of the accrued interest, if any, on the Bonds from the date of the Bonds to the date of payment therefor and delivery thereof; and (4) that the initial public offering price shall not exceed the amount of the bid plus 1½% of the principal amount of the Bonds, or, alternatively, that no public offering of the Bonds for resale is intended.

Unless postponed, all bids for the purchase of the proposed issuance of Bonds must be presented to Applicant at Manufacturers Hanover Trust Company, Room A, 70 Broadway, New York 15, New York, before 12 noon, New York time, on May 21, 1962. Unless Applicant shall reject all bids (which it reserves the right to do) or shall exclude a bid or bids for reasons specified in the Public Invitation, it will accept the bid which provides the lowest cost of money to it, determined as provided in the Public Invitation. Each bid must be accompanied by a certified or official bank check or checks in the aggregate amount of $510,000.

The Commission, in an order issued on December 21, 1961 (Docket No. E–7016), authorized Applicant to issue up to $20,000,000, principal amount of short-term notes. The notes were to be issued between December 29, 1961 and December 31, 1962; they were to mature on December 31, 1962, and bear interest at the New York prime rate. According to the present application, Applicant expects to have $16,000,000, principal amount of the notes outstanding at the time Applicant receives the proceeds from the proposed issuance of Bonds.

Applicant states that the proceeds to be obtained from the proposed issuance of Bonds will be utilized to reimburse Applicant's treasury, in part, for construction expenditures heretofore made, which will enable Applicant to pay in full all of its short-term notes outstanding as of the date of issuance of the proposed Bonds, and to carry forward its current construction program, estimated to require the expenditure of $114,000,000 for the three-year period 1962 to 1964, inclusive, of which approximately $38,000,000 will be required during 1962. The major items of the 1962 construction expenditures include: $1,703,238 for completion of the 220 mw Unit #1 and $10,188,416 for continuing installation of the 220 mw Unit #2 at Applicant's Sabine Station; $5,075,627 for the 220 mw Unit #2 at the Willow Glen Station; $10,105,497 for transmission lines, substations and other transmission facilities; $9,544,421 for distribution lines, substations and other distribution facilities; $579,000 for electric general plant; $554,000 for steam heating facilities; and, $650,000 for gas distribution facilities.

Written notice of the application has been given to the Texas Railroad Commission and the Louisiana Public Service Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on April 7, 1962 (27 FR 3360), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before April 23, 1962, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 27, 1957, *Gulf States Utilities Company*, Docket No. E–6785 (18 FPC 701).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204 (f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2 (k) (3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2 (k) (4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

INTERSTATE POWER COMPANY, DOCKET NO. E-7028

ORDER AUTHORIZING THE ISSUANCE OF PROMISSORY NOTES

(Issued May 4, 1962)

Interstate Power Company (Applicant), incorporated under the laws of the State of Delaware and doing business in the States of Illinois, Iowa, Minnesota and South Dakota, with its principal business office at 1000 Main Street, Dubuque, Iowa, filed an application on March 23, 1962, as supplemented April 30, 1962, for authority, pursuant to Section 204 of the Federal Power Act, to issue unsecured Promissory Notes in the aggregate principal amount of $7,000,000, outstanding at any one time.

Applicant proposes to issue $1,350,000, principal amount, of the proposed Notes, to evidence bank loans to be secured under a credit agreement, dated March 14, 1962, with the following commercial banks located in Iowa and Minnesota:

Name of lending bank	Principal amount to be loaned
The First National Bank of Alberta Lea, Alberta Lea, Minnesota	$40,000
Freeborn National Bank of Albert Lea, Albert Lea, Minnesota	40,000
The City National Bank of Clinton, Clinton, Iowa	120,000
Clinton National Bank, Clinton, Iowa	40,000
American Trust & Savings Bank, Dubuque, Iowa	400,000
The First National Bank, Dubuque, Iowa	160,000
Dubuque Bank & Trust Company, Dubuque, Iowa	200,000
The First National Bank of Mason City, Mason City, Iowa	175,000
United Home Bank & Trust Company, Mason City, Iowa	175,000
Total	1,350,000

Each of the proposed Notes evidencing loans from the above-named Iowa and Minnesota banks will be dated as of June 15, 1962; will mature on May 31, 1963; and, will bear interest at the prime commercial rate of The Chase Manhattan Bank, of New York City, for unsecured borrowing prevailing three business days prior to the date of issuance.

Applicant proposes to issue additional Notes not exceeding $5,650,000 in principal amount to evidence loans from The Chase Manhattan Bank and the Manufacturers Hanover Trust Company, both of New York City, under a credit agreement dated March 16, 1962. Under the terms of that agreement, each of the afore-mentioned New York banks will make loans to Applicant in an amount not exceeding $2,825,000. The loans are to be evidenced by Notes to be issued from time to time prior to December 31, 1962. Each Note will mature 360 days from the date of the first borrowing under the agreement or on May 31, 1963, whichever date shall be earlier, and will bear interest at the prime commercial rate of The Chase Manhattan Bank, of New York City, for unsecured borrowing prevailing three business days prior to the date of issuance.

The application states that no underwriter's or finder's fee will be paid in connection with proposed issuance of Notes, and that none of the proposed Notes will be resold to the general public.

Applicant states that it will use the proceeds from the issuance of the proposed Notes to finance, in part, its 1962 construction program, estimated to cost $10,611,300. Principal items of expenditure are, as follows: $1,800,000 for con-

struction of the 75,000 kw Unit #3 (total cost estimated at $10,052,000) at Applicant's Sherburn steam-electric generating plant, Fox Lake, Minnesota; $2,928,100 for major electrical distribution system additions; and, $925,800 for extensions to and replacements in Applicant's gas facilities. Included in Applicant's 1962 gas program are: the construction of 1.5 miles of 8-inch pipeline, at a cost estimated at $150,000, to provide an additional crossing of the Rock River, in Illinois, for its Hooppole-Clinton line; and the construction of 5.5 miles of 6-inch pipeline, at a cost estimated at $240,000, to extend natural gas service to the Town of Camache, Iowa. Applicant states that it intends to file, in the near future, applications for certificates of convenience and necessity for the afore-mentioned gas facility construction; and the present application is subject to the condition that none of the proposed Notes will be issued to obtain funds for the payment of the cost of construction of those facilities prior to the issuance by this Commission of such certificates in accordance with the Natural Gas Act.

Written notice of the application has been given to the Illinois Commerce Commission, the Iowa State Commerce Commission, the Minnesota Railroad & Warehouse Commission, and the South Dakota Public Utilities Commission, and to the Governor of each of those States. Notice of the application was also published in the Federal Register on April 4, 1962 (27 F.R. 3216), stating that any person desiring to be heard or to make any protest with reference to the application should, on or before April 17, 1962, file a petition or protest with the Federal Power Commission, Washington 25, D.C. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 2, 1961, *Interstate Power Company*, Docket No. E-6985 (25 FPC 889).

(2) The proposed issuance of Promissory Notes, as described above, will constitute an issuance of securities within the preview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Promissory Notes, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Promissory Notes in the aggregate principal amount of $7,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) of the Act from the requirements of Section 204(a) of the Act.

(5) The proposed issuance of Promissory Notes, described above, will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a (a) (2) thereof.

(6) The proposed issuance of Promissory Notes, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Promissory Notes by the Applicant, in an aggregate principal amount of not to exceed $7,000,000, at any one time outstanding, upon the terms and conditions and for the purposes set forth in the application, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant thereto, being not later than May 31, 1963, and that none of the notes will be issued to obtain funds for the payment of the cost of construction of the gas facilities described in the application prior to the issuance by this Commission of certificates of public convenience and necessity in accordance with the Natural Gas Act.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. CP61-269

FINDINGS AND ORDER DIRECTING ESTABLISHMENT OF PHYSICAL CONNECTION OF TRANSPORTATION FACILITIES AND DELIVERY OF NATURAL GAS

(Issued May 4, 1962)

Iowa Southern Utilities Company (Applicant) a Delaware corporation with its principal place of business in the City of Centerville, Iowa, filed an application on April 13, 1961, for an order pursuant to section 7(a) of the Natural Gas Act, directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to install a gas measuring station and related facilities to provide city gate delivery of natural gas to Applicant for delivery in Danville, Iowa.

Applicant proposes to construct and operate a natural gas distribution system in Danville, Iowa. The third year estimated cost will be $69,355. Applicant indicates that it will be unnecessary to construct lateral facilities to connect with Michigan Wisconsin.

Applicant proposes to finance the cost of construction of these facilities as part of its construction budget which will be financed by interim bank loans and internally generated funds. The permanent types of financing has not yet been determined.

Applicant estimated the requirements of Danville, Iowa, as follows:

Year	Volumes in Mcf	
	Peak day	Annual
1	133	15,132
2	215	23,841
3	252	28,471

Applicant indicates that the proposed gas supply would be provided by the present maximum daily quantity and annual contract quantity available from Michigan Wisconsin.

Applicant states that it has already received a franchise for service in Danville, Iowa.

Notice of the aforesaid application was issued on November 7, 1961 and published in the Federal Register (26 F.R. 10707). Michigan Wisconsin filed a response to said application on May 29, 1961, stating that it was willing to provide the natural gas service requested, provided Applicant constructs and operates the necessary regulating equipment and the lateral extending from Danville to Michigan Wisconsin's existing pipeline facilities. Applicant indicated in its application that the ¼ mile lateral which would be necessary to attach to Michigan Wisconsin would be used as a distribution line to serve customers along its route.

No other protests, petitions to intervene or notices of intervention were filed.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Applicant, Iowa Southern Utilities Company, a Delaware corporation having its principal place of business in the city of Centerville, Iowa, is duly authorized to sell and distribute natural gas in the State of Iowa.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to establish physical connection of its transmission system with the facilities which Applicant proposes to construct and operate and to sell and deliver, within Iowa Southern's authorized contract demand, natural gas for resale in Danville, Iowa, as hereinbefore described and as more fully described in the application in this proceeding.

(4) The requirement that Michigan Wisconsin serve Applicant, as proposed herein, will not place an undue burden upon Michigan Wisconsin nor impair its ability to render adequate service to its existing customers.

(5) The directive hereinafter issued should be conditioned upon Applicant's commencing taking of natural gas thereunder within one year from the date of issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and it is hereby directed to establish physical connection of its transmission system with the facilities which Iowa Southern Utilities Company proposes to construct and operate, and to sell and deliver, as part of Iowa Southern Utilities Company's authorized contract demand, volumes of natural gas, under Michigan Wisconsin's appropriate gas rate schedules on file with the Commission, for resale in Danville, Iowa, as hereinbefore described and as more fully described in the application in this proceeding, providing Iowa Southern Utilities Company commences the purchase of such natural gas within one year from the date of issuance of this order.

(B) Michigan Wisconsin Pipe Line Company shall report to the Commission in writing and under oath the date of commencement of service to Applicant hereunder within ten days of the commencement thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP62-164

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1962)

On January 11, 1962, Michigan Gas Storage Company (Applicant) filed in Docket No. CP62-164 an application pursuant to Section 7(c) of the Natural

Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities, and the sale and delivery of natural gas to Consumers Power Company (Consumers) for resale and distribution in the City of Coleman, Midland County, Michigan, all as more fully set forth in the application.

Applicant proposes to establish a new delivery point to Consumers and to construct and operate the necessary metering and regulating facilities at that point. At the present time no natural gas service is being rendered in the City of Coleman. The proposed service will be provided with gas presently available to Consumers from Applicant, and no additional supplies will be required. The new delivery point will be located on Applicant's 12-inch Missaukee Line extending from its Muskegon River Compressor Station in Clare County, Michigan, southeasterly to its M–20–30 junction in Midland County, Michigan.

Consumers estimates the market requirements for the City of Coleman for the first and third years of service to be as follows:

	First year	Third year
	Mcf	*Mcf*
Peak day	482	501
Annual	66,090	76,622

The proposed facilities will cost $19,000, and will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 24, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed sale and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities and the proposed sale of natural gas to Consumers Power Company for resale are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to construct and operate the facilities and to sell and deliver natural gas to Consumers Power Company for resale, all as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The time within which the facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

SOUTHERN CALIFORNIA EDISON COMPANY, DOCKET NO. CP61-172; TENNESSEE CALIFORNIA GAS TRANSMISSION COMPANY, DOCKET NO. CP61-173; CALIFORNIA GAS TRANSMISSION COMPANY, DOCKET NO. CP61-174; TENNESSEE CALIFORNIA GAS TRANSMISSION COMPANY, DOCKET NO. CP61-212

ORDER DEFERRING RULING ON MOTION FOR APPLICANTS TO SHOW CAUSE WHY THEIR APPLICATIONS ARE NOT LEGALLY INSUFFICIENT UNLESS TEXAS PRODUCERS FILE CERTIFICATE APPLICATIONS

(Issued May 4, 1962)

On March 30, 1962, Southern California Gas Company, Southern Counties Gas Company of California, and Pacific Lighting Gas Supply Company Movants), interveners in the above-entitled proceedings filed a motion for applicants to show cause why their applications are not legally insufficient unless Texas producers file certificate applications. The California Public Utilities Commission orally joined in the motion during the presentation of its opening statement in the hearing in these proceedings.

The Movants allege that natural gas purchased in Texas is to be mingled with gas purchased in the Republic of Mexico and that a portion of this total gas stream, after entry into California, will be resold by the purchaser, Southern California Edison Company (Edison).* This being so, they argue, then Section

*Edison proposes to purchase gas in Texas Railroad Commission District Number Four from the Humble Oil & Refining Company, Pan American Petroleum Corporation, Sun Oil Company and the Shell Oil Company.

1(b) of the Natural Gas Act (Act) requires the Texas producers to obtain certification of their sales to Edison pursuant to Section 7(c) of the Act. Noting that Edison's contracts with the Texas producers prohibit the resale of Texas produced gas, the Movants rely on our decision in *Lo-Vaca Gathering Company*, 26 FPC 606, Opinion No. 348 and order issued October 23, 1961; petition for review filed in *Lo-Vaca Gathering Company* v. *FPC*, No. 19478 (CA5), for the proposition that a sale of gas in interstate commerce for resale cannot be transmuted into something else by contract.

Answers to the motions were filed by Edison and jointly by Tennessee California Gas Transmission Company (Tenncal) and California Gas Transmission Company (CalGas). The answers, in substance, contend that while it is true that Edison proposes to make natural gas available for peaking service to local distributing utilities in California, contracts for such a service have not been executed, and therefore, Movants have failed to show that a jurisdictional sale of natural gas for resale will be consummated.

The factual circumstances surrounding Edison's proposal are, at this juncture of the record, too ambiguous for us to discern the precise nature of the peaking service. For example, it is unclear as to whom the actual and potential users of the service will be and the form of service agreement Edison is willing to execute. Nor does the record contain *pro forma* copies of rate schedules or tariffs setting forth the terms and conditions and particularly the availability of the service. Insofar as we are able to ascertain the content of Edison's proposal, it is apparent that if any portion of the total gas stream, consisting of gas produced in both Texas and Mexico, is to be resold by Edison or CalGas to other companies, then the producers of the Texas produced gas would be required to file for certificates of public convenience and necessity pursuant to the provisions of the Natural Gas Act.

As a consequence of the presently undeveloped state of the record on Edison's peaking service proposal, decision on the motion should be deferred at this time and the motion should be referred to the presiding examiner to be ruled upon as a part of his recommended initial decision.

The Commission finds:

The Commission deems it appropriate and advisable in the public interest that the motion for issuance of an order directing the present applicants to show cause why their applications are not legally insufficient, filed on March 30, 1962 and orally joined by the California Public Utilities Commission on April 10, 1962, be referred to the presiding examiner to be ruled upon in connection with, and as a part of his initial decision after the conclusion of the hearing in this proceeding.

The Commission orders:

The motion for issuance of an order directing the present applicants to show cause why their applications are not legally insufficient, filed on March 30, 1962 and orally joined by the California Public Utilities Commission on April 10, 1962 is referred to the presiding examiner to be ruled upon, in connection with, and as a part of his initial decision after the conclusion of the hearing in this proceeding.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP62-112

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 4, 1962)

On November 1, 1961, as supplemented on December 15, 1961, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP62-112 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an 8-inch tap and appurtenant equipment to serve an emergency connection between Applicant's 36-inch main transmission line and the 16-inch main transmission line of North Carolina Natural Gas Corporation (North Carolina Natural) near the Cowan's Ford Project of the Duke Power Company in Iredell County, North Carolina, all as more fully set forth in the application, as supplemented.

The proposed emergency connection between the two systems will be used as an alternative delivery point to provide natural gas service to North Carolina Natural, an existing customer, for resale, in the event that North Carolina Natural's main 16-inch pipeline should be damaged subsequent to its flooding by the Cowan's Ford Project. North Carolina Natural has requested the proposed connection to avoid possible interruption or impairment of service to its customers.

The proposed facilities are estimated to cost approximately $12,300 and will be initially financed by Applicant from company funds. North Carolina Natural has agreed to reimburse Applicant for the entire cost of the facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 26, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 28, 1950, in Docket No. G-1277 (9 FPC 32).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities and the transportation of natural gas as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate an emergency interconnection with the facilities of North Carolina Natural Gas Corporation and to transport natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The time within which the subject facilities shall be completed and placed in regular operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, is hereby fixed at three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP62-147

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 7, 1962)

On December 14, 1961, Cities Service Gas Company (Applicant) filed in Docket No. CP62-147 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas on a firm basis to Tri-City Gas Company (Tri-City) for resale in and about the Towns of Edna and Bartlett, Kansas.

Applicant states that it has sold and delivered natural gas to Tri-City for resale in Edna and Bartlett as well as for resale in Chetopa, Kansas, under its emergency service FPC Gas Rate Schedule E. However, Applicant states further that Tri-City has advised that its present local source of gas for Edna and Bartlett is diminishing and that it must obtain at least 60 percent of its requirements for those communities from Applicant on a firm basis. Service for Chetopa will continue under Rate Schedule E.

The estimated peak day and annual natural gas requirements for Edna and Bartlett in the third year of service are:

	Mcf at 14.73 psia	
	Third year	Applicant's portion at 60% service
Peak day	450	270
Annual	56,371	33,822

The proposed sale and delivery of natural gas will be made by Applicant pursuant to its FPC Gas Rate Schedules F–2, C–2 and I–2.

No additional facilities will be required to render the proposed service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 24, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The sale and delivery for resale of natural gas at the proposed delivery point hereinbefore described, as more fully described in the application in this proceeding, are to be made in interstate commerce subject to the jurisdiction of the Commission, and such proposed sale and delivery by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale and delivery for resale of natural gas at the proposed delivery point by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (3) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to sell and deliver for resale natural gas to Tri-City, at the proposed delivery point, as hereinbefore

described, all as more fully described in the application, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (3) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. G–19040, RP61–23, AND RP62–6; NORTHERN NATURAL GAS COMPANY (FORMERLY PERMIAN BASIN PIPELINE COMPANY), DOCKET NO. G–19041

ORDER APPROVING RATE SETTLEMENT AGREEMENT AND TERMINATING PROCEEDINGS

(Issued May 7, 1962)

On December 21, 1961, the Commission issued an order approving a rate settlement agreement in Docket Nos. G–19040 and G–19041, prescribing refunds, and terminating the proceedings in Docket Nos. G–19040, G–19041 and RP61–23, 26 FPC 901, excepting for the issue of rate design in said dockets as it applies to the relative levels of the commodity charges and demand charges of the rates provided for in the settlement agreement. On February 2, 1962, the Commission issued an order consolidating the proceedings in Docket No. RP62–6 with the other proceedings involved herein.

Pursuant to the notice of the Secretary of the Commission, issued on February 23, 1962, the hearing in these proceedings was reconvened on March 27, 1962, at which time the presiding examiner granted a request for continuance for the purpose of permitting the parties to confer regarding a proposed stipulation of settlement. Subsequent to such conferences, on April 12, 1962, there was incorporated in the record of the proceeding a statement of a proposed settlement (Tr. 1887 to 1893) which is attached hereto as Appendix I. All parties present concurred in the proposed settlement, or voiced no opposition thereto. The Coal Interveners [1] reserved making a statement of position at that time.

On April 13, 1962, said Coal Interveners advised the presiding examiner by letter that they "will interpose no objection to the proposed stipulation agreement as set forth at transcript pages 1887–1893, incl." Consequently, all parties to these proceedings have either affirmatively concurred in the proposed settlement agreement, or have stated that they have no objection thereto.

The proposed settlement agreement provides that Northern will file revised tariff sheets with the Commission, on or before November 27, 1962, to be effective December 27, 1962, containing rates which will result in increasing the present commodity rates in all rate schedules in Zones 1, 2, and 3 and rate schedules PL-b and PO-B by 1¢ per Mcf, with a compensating reduction in the demand charges under such rate schedules. The present rates in all other rate schedules in Zones B and C would remain unchanged.

The Commission finds:

(1) The settlement of the rate design issue in the proceedings in Docket Nos. G–19040, G–19041, RP61–23 and RP62–6, on the basis of the settlement agree-

[1] Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., Upper Lake Docks Coal Bureau, Inc., and The Chesapeake and Ohio Railway Company.

ment attached hereto as Appendix I is reasonable, proper and in the public interest in carrying out the provisions of the Natural Gas Act and should be approved and made effective subject to the terms and conditions hereinafter ordered.

(2) Good cause exists for terminating the proceedings in Docket Nos. G–19040, G–19041, RP61–23 and RP62–6 subject to the terms and conditions hereinafter ordered.

The Commission orders:

(A) The settlement of each of the rate design issues in these proceedings as proposed in the settlement statement discussed above, and appended hereto, subject to the terms and conditions hereinafter specified, is approved and made effective.

(B) Northern shall file tariff sheets, acceptable to the Commission, which shall effectuate the rates and charges shown in Section 1 of the settlement agreement, appended hereto, on or before November 27, 1962, to be effective December 27, 1962.

(C) Except as modified or superseded, the Settlement Agreement approved by the order issued December 21, 1961, aforementioned, and the terms and conditions set forth in said order, remain in full force and effect.

(D) Subject to the conditions contained in the order issued December 21, 1961, and in this order, the proceedings in Docket Nos. G–19040, G–19041, RP61–23 and RP62–6 hereby are terminated.

(E) This order is without prejudice to any findings or orders which have heretofore been made or may hereafter be made by the Commission in any of the above-captioned proceedings, and is without prejudice to claims or contentions which may be made by the Commission, the Commission staff, Northern, or any other party hereto in any other proceedings now pending or hereafter instituted by or against Northern or any other companies, persons or parties affected by this order.

STATEMENT OF PROPOSED SETTLEMENT

By order issued December 21, 1961 in the above-captioned matters (except Docket No. RP62–6), the Commission approved a rate settlement disposing of all issues in the above-captioned matters except the issue of rate design in Docket Nos. G–19040, G–19041 and RP61–23. Specifically this issue applies to the relative levels of the commodity charges and demand charges of the rates provided for in the settlement agreement, and which are required to produce the annual revenues to Northern on the basis of said settlement agreement.

Pursuant to such settlement agreement Northern filed with the Commission revised tariff sheets, to be effective December 27, 1961, containing the following rates:

Rate schedule (zone)	Demand charge	Commodity charge
		Cents
CD–1 (Zone 1)	$3.314	21.9
R–1 (Zone 1)	None	21.9
CD–2 (Zone 2)	3.624	22.4
R–2 (Zone 2)	None	22.4
CD–3 (Zone 3)	3.944	22.9
R–3 (Zone 3)	None	22.9
PL–3 (Zone 3)	3.994	22.9
PO–3 (Zone 3)	None	22.9
CD–B (Zone B)	3.714	25.97
R–B (Zone B)	None	25.97
CD–C (Zone C)	4.034	26.47
R–C (Zone C)	None	26.47

Such rates were accepted by the Commission by letter dated January 19, 1962 and, under the provisions of the aforesaid settlement agreement, are to remain in effect until December 27, 1962 or until six months after the date of any Commission order in respect to adjustments in such demand and commodity charges, whichever date is later.

By order issued February 2, 1962 in Docket No. RP62–6 the Commission suspended rate schedules PL–B and PO–B which had been tendered by Northern on January 4, 1962 covering the sale of up to 75,000 Mcf per day to Michigan-Wisconsin Pipe Line Company (Michigan-Wisconsin) in Northern's Rate Zone B as authorized in Docket No. G–20571 by order and Opinion No. 345 issued June 28, 1961. On or about February 19, 1962 Northern filed a motion to effectuate such rates, and, pursuant to the provisions of said order issued February 2, 1962, such rates became effective on February 28, 1962. By further provisions of said order of February 2, 1962 the proceedings in Docket No. RP62–6 were consolidated for the purposes of hearing and decision with the proceedings in Docket Nos. G–19040, *et al.*

By order issued February 23, 1962 the Commission reconvened the hearing in the above-captioned matters on March 27, 1962 and thereafter, upon motion of Staff Counsel, concurred in by all parties, the hearing was recessed from time to time to permit the parties to confer in an effort to compromise and settle the sole remaining issue of rate design in such dockets.

For the purpose of settling all remaining issues involved in the above-captioned proceedings the parties agree that the following proposal be submitted to the Commission, to-wit:

SECTION I

Future Rates

Northern will, after issuance of a Commission order approving this proposed settlement, file revised tariff sheets with the Commission on or before November 27, 1962, to be effective December 27, 1962, containing the following rates:

Rate schedule (zone)	Demand charge	Commodity charge
		Cents
CD-1 (Zone 1)	$3.062	22.9
R-1 (Zone 1)	None	22.9
CD-2 (Zone 2)	3.372	23.4
R-2 (Zone 2)	None	23.4
CD-3 (Zone 3)	3.692	23.9
R-3 (Zone 3)	None	23.9
PL-3 (Zone 3)	3.692	23.9
PO-3 (Zone 3)	None	23.9
CD-B (Zone B)	3.714	25.97
R-B (Zone B)	None	25.97
PL-B (Zone B)	4.009	24.4
PO-B (Zone B)	None	24.4
CD-C (Zone C)	4.034	26.47
R-C (Zone C)	None	26.47

The above filings will result in increasing the present commodity rates in all rate schedules in Zones 1, 2 and 3 and rate schedules PL–B and PO–B by 1¢ per Mcf, with a compensating reduction in the demand charges under such rate schedules, and leaving unchanged the present rates in all other rate schedules in Zones B and C.

SECTION II

Other Conditions and Provisions

If as a result of the increases in the commodity charges of the rate schedules set out in Section I above, Northern loses any jurisdictional or nonjurisdictional interruptible sales during 1963 as compared with such sales as made in 1960, then Northern may file on or before October 27, 1963, to be effective December 27, 1963, the necessary increases in the demand charges in such rate schedules in an amount equivalent to the difference between the annual revenues lost based upon the rates in Section I above, and the annual variable costs during 1960 attributable to such sales lost during 1963 as a result of filing such increased commodity rates and any suspension thereof will be shortened so that Northern will be permitted to collect such increased demand charges, subject to refund, from and after December 27, 1963; provided, however, that the only portion subject to refund shall be those revenues attributable to such increases in demand charges; provided further, that the supporting data to be filed with such increases and the proof to be offered at any hearing thereon, shall be limited to that data necessary to support the claim of the loss of such sales as a result of the increases in commodity charges set out in Section I above, the volumes of sales lost, and the revenues and the variable costs associated therewith; and, provided further, however, that if Northern, prior to December 27, 1963, commences collecting increased rates under the rate schedules here involved as a result of filing increased rates based on increased costs of service, then the provisions of this Section II shall be of no further force and effect.

SECTION III

Miscellaneous Provisions and Conditions

A. *Acceptance by the Commission.* The agreement reached by the parties and set forth in this Statement of Proposed Settlement is expressly conditioned on the Commission's acceptance of all of the terms of this proposed settlement.

B. *Waiver.* With respect to the rate schedules to be filed pursuant to Section I hereof, and proposed to be made effective December 27, 1962, it is requested that the Commission, by special provision in its order approving this settlement, waive compliance by Northern with the requirements of the Commission's regulations under the Natural Gas Act, particularly Part 154 thereof (18 CFR, Part 154), to the extent, if any, necessary to carry out the provisions of this agreement as provided in said Sections I and II.

C. *Reservations.* By making this agreement, neither the Commission Staff, Northern, any other party hereto, nor any affected person is to be considered as agreeing with any cost of service determinations or allocations, or with any principles underlying or supposed to underlie cost of service determinations or allocations or rate design used in arriving at the rates and charges to be applicable in the future as agreed upon herein, and neither the Commission Staff, Northern, any other party hereto, nor any affected person is to be prejudiced or bound thereby in any future proceeding or proceedings.

Except as provided in Section IV, Paragraph D, of the Settlement Agreement approved by the Commission in its order of December 21, 1961, nothing contained herein shall be construed as limiting Northern's right to file new or amended rate schedules at any time, nor is it to be considered that by making this agreement Northern, any other party, or any affected person has waived any legal right or right of action which it might have with respect to matters other than those herein specifically agreed upon, including, but not limited to, the right here-

after to contest the differentials in commodity rates between zones or the propriety of more than one level of commodity rate in any given zone.

Except as modified or superseded herein, the Settlement Agreement approved by the Commission order issued December 21, 1961 in Docket Nos. G–19040, *et al.*, remains in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITY OF PASADENA, CALIFORNIA, PROJECT NO. 1250

ORDER GRANTING EXEMPTION FROM PAYMENT OF ANNUAL CHARGES

(Issued May 8, 1962)

Application was filed on March 26, 1962, by the City of Pasadena, California, licensee for Project No. 1250, for exemption from payment of the net amount of annual charges under the license for the project for the calendar year ended December 31, 1961, pursuant to the provisions of Section 10(e) of the Federal Power Act (Act) and regulations of the Commission thereunder, on the ground that the balance of project power not used for municipal purposes was sold to the public without profit.

The annual charges under the license for the project for the year involved amounted to $157.42. However, in accordance with the Commission's regulations, the statement of annual charges rendered by the Commission for the project for the year involved, billed the licenseee for $142.18, or 90.32 percent of the total charges assessable, representing the ratio of the power sold by the licensee during the year 1961 to the total power generated.

The application shows that the project operations for the year 1961 resulted in a net loss of $27,919.41, and that the balance of the power was sold by the licensee only to ultimate consumers without profit.

The Commission finds:

(1) The licensee is a municipality within the meaning of Section 3(7) of the Act, and is entitled to claim exemption from payment of annual charges under Section 10(e) of the Act.

(2) The licensee is entitled to exemption of the net amount of annual charges for which it was billed for the year 1961.

The Commission orders:

The licensee is hereby exempted from liability under the license for Project No. 1250 for payment of the net amount of annual charges for which it was billed for the calendar year 1961.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

UNITED STATES DEPARTMENT OF THE INTERIOR, BONNEVILLE POWER ADMINISTRATION, DOCKET NO. E–7023

ORDER CONFIRMING AND APPROVING EXCEPTION TO GENERAL RATE SCHEDULE PROVISIONS

(Issued May 8, 1962)

By order issued December 16, 1959, *Bonneville Power Administration*, Docket No. E–6887 (22 FPC 1046), the Federal Power Commission confirmed and approved Bonneville Power Administration's Wholesale Power Rate Schedules

and the General Rate Schedule Provisions applicable thereto for a five-year period beginning December 20, 1959, and ending December 19, 1964.

On February 7, 1962, the Secretary of the Interior, on behalf of the Bonneville Power Administration (Bonneville), filed with the Commission for confirmation and approval, pursuant to the provisions of the Bonneville Act (50 Stat. 731), an exception to Bonneville's General Rate Schedule Provisions applicable to the Pacific Northwest Coordination Agreement (1961–1962) and similar coordination agreements which Bonneville may execute for the period ending August 31, 1962.

Section 6(k) of the aforesaid Coordination Agreement reads as follows:

> The Adjusted Load actually served by a System (exclusive of secondary loads which can be served within the limitations of the foregoing provisions of this section) shall not exceed that System's Firm Load Carrying Capability during the Drawdown Period. A System may modify its Firm Load Carrying Capability at any time during the seven-month period starting September 1 so long as the accumulation of such modified average monthly energy capabilities does not exceed the accumulation of the monthly totals tabulated in Exhibit 2 by more than seven minus N (7—N) percent in which N is the number of whole months since 12:01 a.m., September 1. * * *

Exhibit 2, which is referred to above in Section 6(k), is a table which sets forth certain monthly firm load carrying capabilities for the one-year period ending August 31, 1962, for each party to the Coordination Agreement.

The above-stated Section 6(k) differs from Subsection B(2), Section 2.3 of Bonneville's General Rate Schedule Provisions in that it provides for modification of a System's Firm Load Carrying Capability in an "after-the-fact" manner. Subsection B(2) requires that determinations of assured monthly capabilities be made prior to the beginning of each operating year.

The Secretary of the Interior states that the purpose of the provision in the Coordination Agreement is the realization of optimum power production from existing facilities by allowing flexibility in the operation of each System's resources, and that similar provisions are expected to be offered to all purchasers similarly situated for the period ending August 31, 1962.

Information supplied by Bonneville shows that application of the provisions of Section 6(k) instead of Subsection B(2), Section 2.3 of the General Rate Schedule Provisions would result in a maximum reduction of approximately $90,000 in Bonneville's revenues for the year ending August 31, 1962. However, that information also indicates that the Coordination Agreement will result in a net increase in revenues for that period of between $400,000 and $500,000. The flexibility of operations permitted by Section 6(k) is essential to the attainment of the objectives of the Coordination Agreement.

Notice of the proposed exception to Bonneville's currently effective General Rate Schedule Provisions was published in the Federal Register on March 17, 1962 (27 F.R. 2576), stating that any person desiring to make comments or suggestions with respect thereto should submit the same on or before March 30, 1962. No comments or suggestions have been received.

The Commission finds:

It is appropriate for the purposes of the Bonneville Act that the proposed exception to Bonneville's General Rate Schedule Provisions contained in Section 6(k) of the Pacific Northwest Coordination Agreement and in similar coordination agreements to be executed by Bonneville for the period ending August 31, 1962, be confirmed and approved for the period ending August 31, 1962.

The Commission orders:

(A) The proposed exception to Bonneville's General Rate Schedule Provisions contained in Section 6(k) of the Pacific Northwest Coordination Agreement and in similar coordination agreements to be executed by Bonneville for the period ending August 31, 1962, hereby is confirmed and approved for the period ending August 31, 1962.

(B) The foregoing confirmation and approval of the exception to Bonneville's General Rate Schedule Provisions contained in Section 6(k) of the Pacific Northwest Coordination Agreement is without prejudice to any headwater benefit determination by this Commission pursuant to the provisions of Section 10(f) of the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

YADKIN, INC., PROJECT NO. 2197

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued May 8, 1962)

Application was filed on December 14, 1961 by Yadkin, Inc., licensee for major Project No. 2197, for further amendment of its license for the project located on the Lower Yadkin stretch of the Yadkin-Pee Dee River in Stanly, Montgomery, Davidson and Rowan Counties, North Carolina.

The application seeks amendment of the license to exclude therefrom a 30,000 kva transformer bank located at the Narrows development, and a double circuit 110 kv transmission line between that development and the Badin substation, with the exception of about 1100 feet which will be utilized in connection with other project transmission facilities. The licensee proposes to dismantle the 110 kv transmission line and dismantle and retire the transformer bank. Filed as part of the application and for Commission approval were revised Exhibits J, K and M showing revisions in the project boundary and changes in equipment to reflect the exclusion of the transmission line and transformers.

The 110 kv line and transformers were formerly used to provide for the interchange of power between the licensee and Carolina Power and Light Company or the licensee and Duke Power Company. The licensee has been engaged in rebuilding its Badin substation, which is not a part of the project, and with the completion of the first phase of the rebuilding there is now a continuous three-way interconnection at that substation between the systems of the licensee, Carolina Power and Duke. Therefore, the 110 kv transmission line and the transformers are no longer necessary to provide the interchange connection. The aforesaid 30,000 kva transformer bank and the 110 kv Narrows-Badin transmission line, except for 1100 feet parallel to the High Rock-Badin 88 kv line, are not used or useful for project purposes.

There are four 13.2 kv lines, which are part of the project, extending between the Narrows development and the Badin substation. These four existing lines are used to transmit the entire output of the Narrows plant to the Badin substation.

The Commission finds:

(1) The license, further amended as hereinafter ordered, is in the public interest.

(2) The aforesaid transformer bank and the 110 kv Narrows-Badin transmission line, with the exception of the 1100 foot section, should be eliminated from the license for the project as hereinafter provided.

(3) The following described revised exhibits filed as part of the application conform to the Commission's rules and regulations and should be approved as part of the license for the project and the exhibits hereinafter described as being superseded should be eliminated from the license—all as hereinafter provided:

Exhibit J (Second Revision) (FPC No. 2197–77), superseding Exhibit J (FPC No. 2197–9) now part of the license;

Exhibit K, Sheets 3 and 4 (First Revisions) (FPC Nos. 2197–78 and –79) superseding Exhibit K (FPC Nos. 2197–15 and –16) now part of the license; and

Exhibit M, Page 7 filed in the Commission on December 14, 1961, superseding Exhibit M, Page 7 filed in the Commission February 6, 1956.

The Commission orders:

(A) The revised exhibits described in finding (3) above as conforming to the Commission's rules and regulations are approved as part of the license for Project No. 2197 and the exhibits described in the same finding as being superseded are eliminated from the license for the project.

(B) The license for Project No. 2197, as amended, is further amended, effective as of March 1, 1962, to eliminate from the project works of the Narrows development the 110-kv Narrows-Badin transmission line (described in subparagraph (b)(3) of the license as a two-circuit 100- and 110-kv transmission line extending to Badin substation), and the 30,000 kva transformer bank at the Narrows powerhouse.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license as heretofore amended.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this amendment of license. In acknowledgment of the acceptance of this amendment of license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Harold C. Woodward.

COLUMBUS AND SOUTHERN OHIO ELECTRIC COMPANY, OHIO-MIDLAND LIGHT & POWER COMPANY, SOUTH CENTRAL RURAL ELECTRIC COOPERATIVE, INC., DOCKET NO. E–7036

ORDER AUTHORIZING SALE, ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued May 9, 1962)

Columbus and Southern Ohio Electric Company (Columbus) filed an application on April 26, 1962, as amended April 30, 1962, for an order, pursuant to Section 203 of the Federal Power Act, authorizing Columbus to acquire certain electric facilities from Ohio-Midland Light & Power Company (Midland) and to transfer and sell certain other electric facilities to Midland. On May 3, 1962, South Central Rural Electric Cooperative, Inc. (South Central) and Midland joined in the application, further requesting authorization for Midland to exchange the afore-mentioned electric facilities with Columbus,

for Midland to transfer to South Central those facilities acquired from Columbus together with its facilities remaining after the sale of certain other facilities to Columbus, and for South Central to acquire those facilities transferred to it by Midland. Columbus is a corporation organized under the laws of the State of Ohio and doing business in that State, with its principal business office at Columbus, Ohio. Midland, a corporation organized under the laws of the State of Ohio and doing business in that State, with its principal business office at Canal Winchester, Ohio, is a wholly-owned subsidiary of South Central and purchases all of its electric energy requirements from Columbus. Columbus and Midland supply electric energy to residential and commercial consumers in the same general locality in Franklin, Pickaway and Ross Counties, Ohio. South Central, a corporation organized under the laws of the State of Ohio and doing business in that State, with its principal place of business at Lancaster, Ohio, is a rural electric cooperative serving parts of Fairfield, Fayette, Franklin, Hocking, Licking, Madison, Muskingum, Perry, Pickaway and Ross Counties in south central Ohio. Neither Midland nor its parent South Central has any generation facilities.

Under the terms of a contract, dated October 9, 1961, between Columbus and Midland, Columbus proposes to transfer to Midland certain electric utility properties located west of Circleville, Ohio and in and adjacent to Ashville, Ohio in exchange for Midland's electric utility properties located in Groveport, Ohio and Obetz Junction, Ohio. In addition, Midland will sell to Columbus certain other electric utility facilities located in the City of Columbus, in the City of Circleville, in and adjacent to Hilliards and Reynoldsburg, and north of Chillicothe—all in the State of Ohio—and its railroad in Pickaway County, Ohio, including approximately two miles of trackage, rights-of-way, easements, locomotives, real estate and all other railroad properties. The agreement provides for the payment by Columbus to Midland of a base sum of $6,460,000, subject to certain adjustments between the date of the agreement and the closing date. The consideration as of March 31, 1962, would have been $6,063,000. Midland proposes to transfer the facilities obtained from Columbus together with its facilities remaining after the sale of certain facilities to Columbus to its parent South Central; Midland will then be dissolved.

Columbus proposes initially to reflect its proposed acquisition and disposition of properties by debits and credits to Account 102, Electric Plant Purchased or Sold, and, as this account is cleared, to charge the Electric Plant Acquisition Adjustment with respect to the transactions, subject to the approval of this Commission, directly to Account 216, Unappropriated Earned Surplus.

The tentative amounts shown on the books of Columbus as of March 31, 1962, would have been as follows:

	Acquired by Columbus from Ohio-Midland	Sold by Columbus to Ohio-Midland	Net amount
Estimated original cost of properties	$3,000,000	$145,000	$2,855,000
Estimated accumulated provision for depreciation on properties	400,000	37,000	363,000
Net amount	2,600,000	108,000	2,492,000
Consideration to be paid by Columbus			6,063,000
Acquisition adjustment on books of Columbus—acquisition adjustment to be charged to earned surplus			3,571,000

Columbus states in the application that it has reason to believe that its estimate of original cost of the property to be acquired may be conservatively low and the amount of the plant acquisition adjustment may be high, and that, for this reason the plant acquisition figure of $3,571,000 should be considered tentative and subject to change.

As stated in the application, Columbus has kept records of the original cost of its facilities by plant accounts, but the basis for such records has not been examined or approved by this Commission; depreciation with respect thereto has been kept only in the aggregate. Midland has not kept records of the original cost of its facilities, nor of the depreciation thereon, comparable to the records as prescribed in the Commission's Uniform System of Accounts. On the basis of a mixture of book amounts and of estimated original cost, it appears that Midland after the completion of the proposed transaction between Midland and Columbus will have a hybrid amount of plant of about $5,789,510 and a hybrid amount of applicable provision for depreciation of about $873,263 to transfer to the books of South Central. On this basis, pending the determination of the original cost in compliance with the Commission's Uniform System of Accounts, the computation is, as follows:

	Ohio-Midland per books as of December 31, 1961	Estimated original cost to be acquired from Columbus	Estimated original cost to be transferred to Columbus	Balance for transfer to South Central
Utility plant	$8,644,510	$145,000	($3,000,000)	$5,789,510
Accumulated provision for depreciation	1,236,263	37,000	(400,000)	873,263
Net plant	7,408,247	108,000	(2,600,000)	4,916,247

The application states that with respect to all of the areas to be acquired by Columbus, the lines of Columbus and Midland intersect and duplicate one another. Similarly, the lines of Midland and South-Central intersect and duplicate one another within the areas constituting a boundary between the two systems. The areas to be acquired by Columbus have generally had only one source of supply of electric energy. As Columbus incorporates these areas into its system, it will add additional sources of supply, thereby insuring more reliable service. Acquisition by South-Central of the facilities from Midland, will substantially strengthen South-Central's system and ultimately benefit its customers. The railroad operated by Midland will be taken over by Columbus, which is the only company making use of it at present in hauling coal to its Pickaway generating station. Applicants further state that the proposed consolidation of facilities of Columbus and South-Central will eliminate present uneconomical duplication of service and facilities.

As a result of the proposed transactions, those customers of Midland who will become customers of Columbus and who reside outside of the municipalities will experience some rate increase as a result of the application of rates recently approved by the Public Utilities Commission of Ohio. However, a substantial majority of the customers transferred to Columbus reside in municipalities, where the present rates will continue in effect. On the other hand, those customers of Midland who are transferred to South-Central will receive a rate decrease.

Written notice of the application has been given to the Public Utilities Commission of Ohio and to the Governor of that State. Notice of the application was also published in the Federal Register on April 28, 1962 (27 F.R. 4109),

stating that any person desiring to be heard or to make any protest with reference to said application should, on or before the 8th day of May, 1962, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Public Utilities Commission of Ohio, by order entered March 15, 1962, approved the transactions proposed by Applicants herein, together with the abandonment by Midland of service as a public utility.

The Commission finds:

(1) Columbus, a corporation organized and existing under the laws of the State of Ohio, owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is generated in Indiana and West Virginia and consumed in Ohio, all of which facilities are in addition to, and do not include facilities used for the generation of electric energy, facilities used in local distribution, or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter, and Columbus is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) Midland, a corporation organized and existing under the laws of the State of Ohio, owns and operates facilities, among others, for the transmission of electric energy which is generated in Indiana and West Virginia and consumed in Ohio, all of which facilities are in addition to, and do not include facilities used for the generation of electric energy, facilities used in local distribution, or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter, and Midland is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(3) South Central, a corporation organized and existing under the laws of the State of Ohio, owns and operates facilities, among others, for the transmission of electric energy which is generated in Indiana and West Virginia and consumed in Ohio, all of which facilities are in addition to, and do not include facilities used for the generation of electric energy, facilities used in local distribution, or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter, and South Central is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(4) By the proposed transactions, as described above, Columbus will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Commission, electric facilities located in Groveport and Obetz Junction, in the City of Columbus, in the City of Circleville, in and adjacent to Hilliards and Reynoldsburg, and north of Chillicothe—all in the State of Ohio—which facilities are the property of Midland, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act; and, Midland will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Commission, electric facilities located west of Circleville, Ohio, and in and around Ashville, Ohio, which facilities are the property of Columbus, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(5) By the proposed transactions, as described, above, Midland will, subsequent to the consummation of its transactions with Columbus, transfer all of its electric facilities to South-Central, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act; and, South-

Central will acquire all of the electric facilities of Midland, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(6) The proposed acquisition of Columbus' electric facilities by Midland, and the proposed acquisitions of Midland's electric facilities by Columbus and by South-Central, as described above, upon the terms and conditions specified in the application and subject to the provisions of this order, will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed acquisition and merger or consolidation by Midland of certain electric facilities of Columbus; the proposed acquisition and merger or consolidation by Columbus of certain electric facilities of Midland; and the subsequent transfer to South-Central of all the electric facilities of Midland and the acquisition thereof and merger or consolidation thereof by South-Central, all as described above, are hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Columbus shall eliminate the electric plant acquisition adjustment which will be created by the transaction between Columbus and Midland by a charge to Account 216, Unappropriated Earned Surplus.

(C) Columbus and South-Central shall make determinations of the original cost and of the applicable accumulated provisions for the properties involved in the respective acquisitions from Midland and shall record the transactions herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) This authorization shall expire unless the transactions hereby authorized are consummated within 90 days from the date of issuance of this order.

(E) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever which is now pending or which may come before this Commission or any other regulatory body.

(F) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

SOUTH CAROLINA ELECTRIC & GAS COMPANY, PROJECT NO. 1894

ORDER APPROVING FACILITIES

(Issued May 9, 1962)

On March 8, 1962, South Carolina Electric & Gas Company, licensee for major Project No. 1894, filed application for approval of facilities for its Parr Shoals project on Broad River, South Carolina, to convert its operation from manual to remote control.

The licensee states that the installation of the remote control equipment will improve operations.

Upon completion of such installation, the licensee should file revised exhibits to reflect the addition of the remote control operating equipment, pursuant to Article 3 of the license for the project.

The Commission finds:

The installation and operation of the remote control operating equipment at the Parr Shoals project is desirable in the public interest.

The Commission orders:

(A) The installation and operation of the equipment mentioned in the above finding is approved.

(B) Pursuant to Article 3 of the license for Project No. 1894, the licensee shall, upon completion of the installation of the remote control operating equipment, file for Commission approval revised exhibits to reflect such installation, in conformity with the Commission's rules and regulations.

(C) This instrument in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Harold C. Woodward.

CONTINENTAL OIL COMPANY, DOCKET NO. G-11024; THE ATLANTIC REFINING COMPANY, DOCKET NO. G-11034; CITIES SERVICE PRODUCTION COMPANY, DOCKET NOS. G-11046, G-15330; TIDEWATER OIL COMPANY, DOCKET NO. G-11049

ORDER AMENDING ORDER GRANTING MOTION FOR STAY

(Issued May 10, 1962)

On March 12, 1962, this Commission issued an order in these consolidated proceedings granting in part a motion for stay filed by the applicants herein on February 12, 1962, 27 FPC, 498. By said order we stayed ordering paragraphs (B), (C) and (D) of the order accompanying Opinion No. 351, issued January 22, 1962, herein, for a period of 60 days following the Commission's final action upon any application for rehearing or reconsideration filed herein.

On April 23, 1962, the Applicants filed a joint and several motion requesting the Commission to amend its order of March 12, 1962, so as to extend the stay of said ordering paragraphs to (a) "30 days after conclusion of judicial review of the order accompanying the Commission's Opinion No. 351, issued January 22, 1962" or (b) "90 days after final action by the Commission upon the applications for rehearing filed in these proceedings."

We have reconsidered the motion filed by Applicants herein on February 12, 1962, the answer filed in opposition filed by Long Island Lighting Company on February 20, 1962, and the answer filed by the Public Service Commission of the State of New York on February 23, 1962 (both of which are more fully described in our order of March 12, 1962, aforementioned), and upon considera-

tion of the said motion to amend filed on April 23, 1962, we do not believe that the public interest will be adversely affected by deferring the payment of refunds, with interest, we have found to be proper in the order accompanying Opinion No. 351 for a period of 30 days after conclusion of judicial review of the said order, nor do we find that the public interest will be adversely affected by extending to Applicants a stay of 90 days from the date of our final action in these proceedings, i.e., the date of the issuance of our order denying rehearing which was March 22, 1962, to place into effect the rates set forth in ordering paragraph (B) of the said order accompanying Opinion No. 351, aforementioned.

The Commission finds:

Good cause exists for granting, in part, the motion filed by Applicants on April 23, 1962, for an amendment to the order issued herein on March 12, 1962, so as to stay the actions required by ordering paragraphs (C) and (D) for a period of 30 days after conclusion of judicial review of the order issued January 22, 1962, aforementioned, and to stay the effect of the conditions set forth in ordering paragraph (B) of said order until 90 days from the date of our order of March 22, 1962, aforementioned.

The Commission orders:

(A) The conditions and requirements set forth in ordering paragraph (B) of the order accompanying Opinion 351, issued January 22, 1962, to and as a part of the permanent certificates of public convenience and necessity issues thereby, are hereby stayed until 90 days from the date of the order denying rehearing issued herein on March 22, 1962.

(B) The completion of the acts and compliance with the requirements set forth in ordering paragraphs (C) and (D) of the said order accompanying said opinion, are hereby stayed for a period of 30 days after conclusion of judicial review of said order issued January 22, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2106

ORDER TERMINATING HEARING AND AMENDING LICENSE

(Issued May 10, 1962)

This matter comes before the Commission at the request of the State of California and the licensee, Pacific Gas and Electric Company, and upon the recommendation of the Presiding Examiner after a prehearing conference called for the purpose of discussing the issues set forth in the order of October 19, 1961, granting the State's application for rehearing.

Question was raised as to certain conditions in the order of August 18, 1961, issuing a licensee under the Federal Power Act for the McCloud-Pit development in California.

These conditions would require the licensee to construct fish hatchery facilities, if after proper study and investigation such facilities are found by the Commission to be necessary and desirable for the protection of fishery resources, provide for ultimate determination of the responsibility for the costs of maintaining and operating such fish hatchery facilities, and require the licensee to make certain water releases down the Pit River below Pit 6 and Pit 7 dams for the preservation of fish and aquatic life.

The State of California and the licensee have now agreed upon the language to carry out those license conditions and have submitted it for our consideration.

The Commission finds:

The license conditions hereinafter imposed are necessary and desirable in the public interest to protect the aquatic and fish life in the area affected by the proposed development.

It is no longer necessary to have a hearing as provided in the order of January 30, 1962 and that order should be rescinded.

The Commission orders:

(A) The order of August 18, 1961 issuing a license under the Federal Power Act for Project No. 2106 is hereby amended by adding the following further conditions:

Article 47. (A) The Licensee shall construct such fish trapping, egg taking, hatching, rearing, and planting facilities in compensation for loss of spawning areas in the Pit River and in the interest of maintaining fish populations dependent upon said river, as may be required by the Commission after notice and opportunity for hearing; provided that such determination shall be made and the exact nature and capacity of such facilities shall be prescribed by the Commission after consideration of recommendations of the California Department of Fish and Game, the United States Fish and Wildlife Service and the Licensee based upon information developed during a period of not less than two or more than four years following the first year of impaired access of fish to the natural spawning grounds above Pit 6 and/or Pit 7; provided further that prior to such impaired access and during said period Licensee shall construct and operate or otherwise provide such temporary facilities as are required to protect and maintain the fish resource affected by the construction of the project; and provided further that the responsibility for providing the funds for operation and maintenance of said fish trapping, egg taking, hatching, rearing and planting facilities shall be as determined by the Commission, after notice and opportunity for hearing, at the same time that the nature and capacity of such facilities are prescribed.

(B) The Licensee shall maintain a flow of 150 c.f.s. at all times in the Pit River downstream from Pit 6 and Pit 7 dams for the preservation of fish and aquatic life; provided that after Pit 7 dam is completed and in operation the flow release shall be maintained only downstream from Pit 7 dam; provided further that at times when the pool of Shasta Lake is at an elevation as high or higher than the Pit 7 powerhouse draft tube invert only such releases as may be required for operation of fish handling facilities need be made.

(B) The order of January 30, 1962, fixing the time and place for hearing and prescribing procedure, is hereby rescinded.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TRUNKLINE GAS COMPANY, DOCKET NOS. G–12884, G–19479, AND RP60–6

ORDER APPROVING RATE SETTLEMENT, PRESCRIBING REFUNDS AND TERMINATING PROCEEDINGS

(Issued May 10, 1962)

These proceedings arise under Section 4 of the Natural Gas Act and relate to increases and changes in rates and charges tendered for filing by Trunkline Gas Company (Trunkline), a wholly-owned affiliate of Panhandle Eastern Pipe Line Company (Panhandle).

The proceeding in Docket No. G–12884 principally concerns the revised tariff sheets tendered for filing by Trunkline on June 14, 1957, whereby it proposes to change the form of its rate for service to Panhandle from a cost of service rate form [1] to a demand-commodity or two-part rate form (P–1) together with an interruptible excess rate schedule (R–1). In addition, a new general service rate schedule (G–1) was also proposed, applicable to entire requirement loads in excess of 2,000 Mcf per day, but optional for customers taking less than 2,000 Mcf per day (receiving service under rate schedule SG–1). Trunkline stated that the proposed changes would result in no increase in charges over those resulting from the rates previously in effect. By order issued July 17, 1957, the Commission suspended these proposed changes until January 1, 1958, at which time they became effective subject to hearing and refund requirements.

The proceeding in Docket No. G–19479 concerns the proposed increased rates and charges tendered for filing by Trunkline on August 31, 1959. By order issued September 28, 1959, the Commission suspended the proposed increased rates and charges until March 1, 1960, at which time they became effective subject to hearing and refund requirements. In support of these proposed rates, the company asserted a need for an annual increase in jurisdictional revenues in its Zone 1 rates of $9,580,000.[2] In support of that increase Trunkline cited increased costs resulting from increased plant investment and higher prices for new gas supply and claimed a need for a 6¾ percent rate of return.

The proceeding in Docket No. RP60–6 relates to the proposed increased rates and charges tendered for filing by Trunkline on March 2, 1960. By order issued March 29, 1960, the Commission suspended the proposed increased rates and charges until July 1, 1960, at which time they became effective subject to hearing and refund requirements. In support of the proposed increased rates and charges, the company asserted a need for an annual increase in jurisdictional revenues of $5,365,000 over the rates subject to refund in Docket No. G–19479. The company based its claim entirely upon asserted increases in purchased gas costs and related increased severance taxes.

Upon the opening of the hearings which were convened in these consolidated proceedings on April 24, 1962, counsel for Trunkline Gas Company (Trunkline) submitted for the record a stipulation and agreement, dated April 19,1962, as subsequently amended,[3] together with a series of documents which represented Trunkline's cost of service studies. These documents had been submitted to all

---

[1] Trunkline's cost of service rate form was prescribed by the Commission in *Trunkline Gas Supply Co., et al.*, order issued May 4, 1950, 9 FPC 721, 729.

[2] Sales at and south of Tuscola, Illinois, the termius of its system prior to the expansion and extension authorized by Opinion No. 321 in Docket No. G–15394. Zone 2 comprises the new extension north of Tuscola.

[3] Subsequent amendments reduced the SG–1 rate to 39.2 cents per Mcf and the SG–2 rate to 46.6 cents per Mcf, as shown on Appendix A, footnotes "1" and "2".

parties during a series of rate settlement conferences held in conference rooms of the Commission commencing March 20, 1962. Counsel for Trunkline requested that the Presiding Examiner certify the proposed settlement agreement to the Commission for its consideration and recommended that the rates and charges and refunds therein set forth be accepted and made effective as therein proposed.

Commission staff counsel also submitted for the record certain cost of service studies which had been prepared by the staff and submitted to all parties in the said conferences. Staff counsel then stated that the staff had agreed to the stipulation and agreement, as amended, and that the staff recommended that the settlement be approved by the Commission and made effective as requested. The record also reflects the agreement of all the parties represented at the hearing. No objections have been made to the proposed settlement.

The Presiding Examiner has certified to us the proposed settlement agreement and the record in these proceedings and has recessed the hearings subject to the further order of the Commission.

Briefly stated, the proposed settlement agreement provides as follows:[4]

(1) The rate schedules included in Appendix C to the settlement agreement include Rate Schedules P–1 and R–2, providing for a demand-commodity, or two-part, rate and an interruptible excess rate, respectively, for service to Panhandle, to become effective as of April 1, 1962. Likewise, additional rate schedules are included in Appendix C covering general service in Zone 1 (G–1), small general service in both Zones 1 and 2 (SG–1, SG–2), firm service in Zone 2 (P–2), and excess interruptible service in Zone 2 (R–2).[5] All rate schedules are proposed to become effective as of April 1, 1962.

(2) The rates and charges proposed by Trunkline subject to proceedings in Docket No. RP60–6 are reduced for gas delivered on and after April 1, 1962, as shown in Appendix A hereto, to provide a reduction in revenues in the annual amount of 4¼ million dollars, based upon the twelve months' test period ended June 30, 1961, as adjusted.

(3) Refunds in the total amount of $7,423,737.78 (Appendix D hereto), will be made covering deliveries of gas during the period July 1, 1960, through March 31, 1962. This refund results from the reduction in rates set forth in Appendix B hereto (based upon the test year ending June 30, 1961, as adjusted) for the period July 1, 1960 through December 31, 1961, and from the rates set forth in Appendix A hereto (not including footnotes "1" and "2" and based upon the test year ending June 30, 1961, as adjusted) for the period January 1, 1962, through March 31, 1962.

(4) Interest on the above refunds is to be paid at the rate of 7 percent per annum from the date of receipt by Trunkline of the revenues to be refunded to the date of payment to customers.

(5) Trunkline will also make refunds and reduce its rates if it receives refunds from its suppliers or such suppliers reduce their rates which are subject to the proceedings specifically set forth in Appendix E hereto. Such refunds and reductions are to be distributed in proportion to the volumes of customer purchases, provided, however, that no refunds are to be passed on by Trunkline

[4] For convenience only, Appendices A, B, D and E to the proposed agreement are attached hereto. The text of the agreement is summarized hereinafter. Appendix C contains the proposed revised tariff sheets, identical to those, tendered for filing on April 26, 1962.

[5] Rate Schedules P–1, R–1 and G–1 were originally tendered for filing in Docket No. G–12884. Rate Schedules P–2 and R–2 were originally tendered for filing pursuant to Opinion No. 321 and were made subject to these proceedings. Likewise, Rate Schedule SG–2 was originally tendered for filing pursuant to Opinion No. 339 and was made subject to these proceedings.

until they accumulate to the amount of $250,000 or more (except final refunds not less than $25,000); and also provided that such rate reductions are limited to reductions in the weighted Trunkline's average cost of purchased gas (18.26 cents per Mcf).

(6) Trunkline will not file for any increase in rates and charges so as to become effective, after suspension, prior to July 1, 1963, unless it has incurred or will incur within six months from the date of filing of such increased rates, increases in costs in the total amount of $400,000 per annum arising from either (a) new taxes or increases in tax rates, or (b) increases in rates paid gas suppliers over and above those effective March 30, 1962.

(7) By redefinition of the designation "Small General Service Buyer," the availability of the SG rates is increased from 2,000 Mcf per day to 4,000 Mcf per day.

The agreement also contains a request that the Commission waive compliance with its Rules and Regulations to the extent necessary to effectuate the settlement agreement, and a request that the Commission accept all the terms of the agreement as being essential to the mutuality of the agreement. Finally, no party is deemed to have approved or agreed to any ratemaking principle or method, and no party is to be prejudiced by agreement herein with respect to any other proceeding.

On April 26, 1962, Trunkline tendered for filing 13 revised tariff sheets identical to those included in Appendix C to the said agreement and requested that they be permitted to become effective as of April 1, 1962, pursuant to the agreement. These revised tariff sheets set forth the rates and charges contained in Appendix A hereto as well as the increased availability for Small General Service customers. These revised sheets are:

> Fifth Revised Sheet No. 4, First Revised Sheet No. 5–A; Fourth Revised Sheet No. 6–A, Third Revised Sheet No. 6–B; Second Revised Sheet No. 6–C, Fourth Revised Sheet No. 7; Fifth Revised Sheet No. 9, Second Revised Sheet No. 9–D; Second Revised Sheet No. 9–F, Third Revised Sheet No. 9–G; First Revised Sheet No. 9–P, First Revised Sheet No. 9–R; Second Revised Sheet No. 10.

In addition, the agreement provides that no modifications are required with respect to the following revised tariff sheets now effective subject to hearing and refund in these proceedings and that they should be permitted to remain in effect.

> Fifth Revised Sheet No. 5, Second Revised Sheet No. 6–D, Second Revised Sheet No. 8, Original Sheet No. 9–Q, Second Revised Sheet No. 24, Second Revised Sheet No. 31, and Second Revised Sheet No. 32.

The Commission finds:

(1) The proposed increased rates and charges which became effective July 1, 1960, subject to hearing and refund in Docket No. RP60–6, as hereinabove described, have not been shown to be just and reasonable, or otherwise lawful under the terms and provisions of the Natural Gas Act, and the tariff filings containing such rates and charges should be disallowed and denied as hereinafter provided and ordered.

(2) The settlement of these proceedings on the basis proposed and agreed to by the parties and certified to us by the Presiding Examiner for our consideration on April 25, 1962, as above described and as more specifically set forth in said stipulation and agreement, is reasonable and proper in the public interest in carrying out the provisions of the Natural Gas Act and such proposed settlement agreement should be approved and be made effective, subject to the terms and conditions hereinafter provided and ordered.

The Commission orders:

(A) The proposed increased rates and charges contained in rate filings referred to in paragraph (1) above, are disallowed and denied.

(B) The settlement of these proceedings on the basis and terms contained in the settlement agreement as hereinabove described, is approved and made effective, subject to the terms and conditions hereinafter ordered.

(C) Trunkline shall make refunds of excess charges to its jurisdictional customers, including interest thereon at 7 percent per annum, within fifteen days from the date of the issuance of this order, as provided in Article III of the said agreement and Appendix D hereto.

(D) Within 20 days after refunds have been made as provided in paragraph (C) hereof, Trunkline shall report to the Commission, in writing and under oath, the amount of the refunds made to each of its utility customers, and shall serve a copy of such report upon each of its customers receiving a refund. Concurrently therewith, Trunkline shall file with the Commission releases from its jurisdictional customers showing receipt of principal and interest so paid.

(E) Trunkline shall make future refunds and necessary rate reductions to reflect refunds and rate reductions of its suppliers, as provided in Article IV of said agreement, subject to approval by the Commission.

(F) The following 13 revised tariff sheets affecting Trunkline Gas Company's FPC Gas Tariff, Original Volume No. 1, as tendered for filing on April 26, 1962, are accepted for filing and shall become effective as of April 1, 1962:

Fifth Revised Sheet No. 4, First Revised Sheet No. 5–A, Fourth Revised Sheet No. 6–A, Third Revised Sheet No. 6–B, Second Revised Sheet No. 6–C, Fourth Revised Sheet No. 7, Fifth Revised Sheet No. 9, Second Revised Sheet No. 9–D, Second Revised Sheet No. 9–F, Third Revised Sheet No. 9–G, First Revised Sheet No. 9–P, First Revised Sheet No. 9–R, Second Revised Sheet No. 10

(G) The following 7 tariff sheets now on file are hereby permitted to remain in effect without being subject to refund requirements:

Fifth Revised Sheet No. 5, Second Revised Sheet No. 6–D, Second Revised Sheet No. 8, Original Sheet No. 9–Q, Second Revised Sheet No. 24, Second Revised Sheet No. 31, and Second Revised Sheet No. 32.

(H) Upon payment of the amounts of refunds provided in Article III of the agreement (Appendix D hereto), and upon compliance by Trunkline with the terms and conditions of paragraphs (C) and (D) of this order, the proceedings in Docket Nos. G–12884, G–19479 and RP60–6 shall be terminated, subject only to Trunkline's obligations under paragraph (E) and Article IV of the agreement.

(I) Nothing contained in this order shall be construed as a waiver of the requirements of Section 7 of the Natural Gas Act, as amended; nor shall it be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract or practice affecting such service or rate provided for in the above-described tariff sheets; nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate.

(J) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Trunkline, the Commission staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Trunkline Gas Company or any other persons or parties affected by this order.

APPENDIX A

COOS-CURRY ELECTRIC COOPERATIVE, INC., PROJECT NO. 2172

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR LICENSE (MAJOR) AND TERMINATING PROCEEDING

(Issued May 11, 1962)

On May 21, 1958, Coos-Curry Electric Cooperative, Inc. (Applicant), filed an application for license for proposed major Project No. 2172 to be located on the Illinois River at the Bald Mountain site, in Curry and Josephine Counties, Oregon.

In October 1960, Applicant advised us that it had abandoned its plans for development of the Bald Mountain site and was making studies of a site downstream from the Bald Mountain site, and upon completion of its studies, Applicant would amend its pending application to embrace the alternate development

and abandon the Bald Mountain development. Further correspondence concerning the matter between Applicant and our staff culminated in the filing by Applicant on March 26, 1962 of an application for withdrawal of its long-pending application for license for Project No. 2172.

The State of Oregon, acting by and through the Oregon State Game Commission and the Fish Commission of Oregon, was permitted to intervene in this proceeding by our order issued November 3, 1958.

The Commission finds:

It is appropriate to permit the withdrawal of the afore-mentioned application for license.

The Commission orders:

Permission to withdraw the afore-mentioned application for license for proposed Project No. 2172 is granted and this proceeding is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

THE MONTANA POWER COMPANY, PROJECT NO. 5

ORDER APPROVING PROJECT EXHIBITS

(Issued May 11, 1962)

On June 26, 1959, The Montana Power Company, licensee for major Project No. 5 on the Flathead River, Montana, filed for Commission approval substitute drawings of Exhibit L, Sheets 2 of 5, 3 of 5, and 5 of 5, and an amendment to supplemental Exhibit M. The changes shown by these filings related to the use of one 60,000 kilovolt-ampere three-phase transformer in lieu of three single-phase transformers for the third generating unit. The purpose of the changes is to conserve space.

Commission consideration of the above-described filings was delayed pending the conclusion of the proceeding on an application for amendment of the license for Project No. 5 to include a third generating unit and a determination of additional Indian rentals in connection therewith.

The above-mentioned Exhibit L, Sheet 5 of 5 is a one-line wiring diagram for the third unit, which requires no Commission approval.

The Commission finds:

(1) The following described substitute Exhibit L drawings and amendment to Exhibit M conform to the Commission's rules and regulations and should be approved as part of the license for the project, as hereinafter provided:

Exhibit L	Number		Title
	FPC	Company	
Sheet 2 of 5	5-119	F-117098	Powerhouse extension for 3d unit.
Sheet 3 of 5	5-120	F-117099	Section thru 3rd unit.

and "Amendment to Supplemental Exhibit 'M', General Description of Plant and Equipment".

(2) The following described Exhibit L drawings, now part of the license for the project and which have been superseded, should be eliminated from the license for the project, as hereinafter provided:

Exhibit L	Number		Title
	FPC	Company	
Sheet 2 of 5	5-110	F-117098	Powerhouse plans.
Sheet 3 of 5	5-111	F-117099	Powerhouse cross section.

The Commission orders:

The substitute Exhibit L drawings and amendment to Exhibit M described in finding (1) above are approved as part of the license for Project No. 5, and the superseded Exhibit L drawings described in finding (2) above are eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2105

ORDER APPROVING REVISED EXHIBIT L DRAWING

(Issued May 11, 1962)

On February 6, 1962, Pacific Gas and Electric Company, licensee for major Project No. 2105, filed for Commission approval a revised Exhibit L drawing relating to the Lake Almanor development of the project.

The revised drawing proposes various alterations to the Lake Almanor earthen dam to reduce water percolation and the possibility of local slides. The proposed alterations would consist of: flattening of the upstream slope of the dam; provision for additional grouting of the foundation of the dam; installation of steel sheet pile cut-off and additional compacted earth fill near the upstream portion of the dam in order to create an impervious barrier; and other miscellaneous changes.

Before the license for Project No. 2105 was issued, it was recognized that the Lake Almanor dam required certain corrective measures to reduce water percolation through it if operated at elevation 4,500 feet as provided for in the license. Consequently, the project has been operated with a maximum water surface elevation of 4,474 feet.

Construction of new peaking hydroelectric plants by the licensee has made it desirable to operate its hydroelectric plants on the North Fork Feather River at a higher load factor to maximize the hydroelectric dependable capacity of the licensee's system. This requires the use of more storage capacity at Lake Almanor to increase the low flows available for power.

The gain in system dependable capacity, as a result of raising the maximum water surface at Lake Almanor to elevation 4,500 feet, amounts to at least 100,000 kw valued at about $2,000,000 per year. The capital cost of modifying the Lake Almanor dam is estimated at $6,750,000 and the annual cost at about $800,000. Since the annual benefits exceed the annual costs, it is economical to modify Lake Almanor Dam so as to permit the physical operation of the water surface to elevation 4,500 feet.

Lake Almanor, one of the largest artificial bodies of water in California, lies within both the Plumas and Lassen National Forests. Since construction of the original Lake Almanor dam about 30 years ago, the shoreline has been developed for recreational purposes, including many cottages, a large campground on the shore of the lake maintained by the U.S. Forest Service, and a small community known as Chester situated close to the shoreline. Hence, it does not appear feasible to consider a higher elevation for the water surface of Lake Almanor than that provided for in the license, namely, 4,500 feet.

The alterations to the Lake Almanor dam were planned to commence this past March with completion by December, 1963.

The Commission finds:

The following described revised Exhibit L drawing conforms to the Commission's rules and regulations and should be approved as part of the license for Project No. 2105, and Exhibit "K–2", entitled "Enlargement of Lake Almanor Dam, Map and Cross-Section of Dam" (FPC No. 616–3), now part of the license, and which is superseded, should be eliminated from the license—all as hereinafter provided:

Exhibit L–1A entitled "Alterations to Lake Almanor Dam, Plan and Cross Sections" (FPC No. 2105–13).

The Commission orders:

The revised Exhibit L drawing described in the above finding as conforming to the Commission's rules and regulations is approved as part of the license for Project No. 2105, and the Exhibit K drawing described in the same finding as being superseded is eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

CITY OF SLATER, MISSOURI, DOCKET NO. CP61–337

ORDER GRANTING PERMISSION FOR WITHDRAWAL OF APPLICATION

(Issued May 11, 1962)

On April 26, 1962, the City of Slater, Missouri (Applicant), filed a notice of withdrawal of its application herein.

Said notice of withdrawal recites that hearings have been held on said application on April 9, 10 and 11, 1962, during which extensive evidence was developed of record pertaining to the delivery capacity of Cities Service Gas Company's Ottawa-Sedalia-Carrollton main transmission line and the Marshall, Missouri lateral. Said hearings are now scheduled to resume on May 8, 1962, for presentation of rebuttal evidence by Applicant and cross examination by other parties.

Applicant alleges, among other things, that since the close of the hearings herein, Applicant has considered the evidence adduced and has concluded that further prosecution of its application would be inimical to its interests, and that termination of this proceeding would not only redound to the benefit of the citizens of Slater, but would also be in the general public interest.

The Commission finds:

Good cause has been shown for permitting the City of Slater, Missouri to withdraw its application herein.

736–330—64——62

The Commission orders:

The City of Slater, Missouri be and it is hereby permitted to withdraw its application herein, without prejudice to its right to refile said application at some appropriate time in the future or its right to intervene in an appropriate Cities Service Gas Company's expansion proceeding for the purpose of obtaining an allocation of gas.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

SUN OIL COMPANY, DOCKET NOS. G–6650 AND RI62–418; SOUTH-TEX CORPORATION, DOCKET NO. RI62–419; ASSOCIATED OIL & GAS COMPANY, DOCKET NO. RI62–420

ORDER GRANTING REHEARING, REINSTATING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, TEMPORARILY REACCEPTING RATE SCHEDULE, PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE, ALLOWING RATE CHANGE TO BECOME EFFECTIVE SUBJECT TO REFUND, AND TO SHOW CAUSE

(Issued May 11, 1962)

On April 12, 1962, Sun Oil Company (Sun) filed in Docket No. G–6650, an application for rehearing of the action of the Secretary of the Commission[1] whereby he rescinded the prior acceptance of Sun's FPC Gas Rate Schedule No. 31, and vacated the certificate of public convenience and necessity which authorized the sale of natural gas under said rate schedule. The sales of natural gas involved herein are made pursuant to an agreement, dated November 1, 1953, between Sun and South-Tex Corporation (South-Tex) whereby the parties agreed that South-Tex would process all of the gas produced from Sun's E. M. Brownlee Lease, Nueces County, Texas, and would deliver the quantity of residue gas equal to 95% of the daily quantity of gas delivered by Sun to South-Tex to Tennessee Gas Transmission Company under South-Tex's sales contract with Tennessee.

On November 30, 1954, Sun filed with the Commission its November 1, 1953 contract with South-Tex, and related documents, which were accepted for filing and designated as said Rate Schedule No. 31. Concurrently, Sun filed its application for a certificate of public convenience and necessity authorizing it to continue the afore-mentioned sales of natural gas to Tennessee. On May 28, 1956, the Commission issued an order in Docket No. G–6650, granting such certificate authority.[2]

On October 24, 1960, South-Tex filed a proposed increased rate for the gas delivered by it to Tennessee, except for that portion of the gas it was delivering on behalf of Sun. South-Tex did not file on behalf of Sun because Sun's portion of the gas was delivered under Sun's own Rate Schedule No. 31. South-Tex's proposed increased rate was suspended by order of the Commission in Docket No. RI61–243 until May 1, 1961.[3]

---

[1] See § 3.5(a)(23), Subchapter A—General Rules, 18 CFR 3.5 (a)(23).

[2] *Howard W. Fleet, et al.*, Docket Nos. G–3275, *et al.*

[3] On March 6, 1961, South-Tex submitted an offer of settlement in Docket No. RI61–243. The offer of settlement did not cover that portion of the gas delivered by South-Tex to Tennessee on behalf of Sun. By order issued April 6, 1961, the Commission accepted and approved the offer of settlement made by South-Tex. The Commission's order recognized that Sun's gas was excluded from the settlement.

On December 22, 1960, Sun filed a proposed increased rate for its portion of the gas delivered by South-Tex to Tennessee. Sun designated such filing as Supplement No. 10 to its Rate Schedule No. 31. Pursuant to Section 154.91 (d) of the Commission's Regulations Under the Natural Gas Act, the Secretary by letter of January 18, 1961, rejected Sun's proposed rate increase without prejudice to its resubmittal if and when Sun establishes signatory status to the contract between South-Tex and Tennessee. Additionally, the Secretary advised Sun that its Rate Schedule No. 31 was subject to rejection, and the certificate covering said sale subject to being vacated, pursuant to the aforesaid Section 154.91(d). However, the Secretary took no action at that time, affording Sun thirty days in which to comment. On February 14, 1961, Sun advised the Commission by letter that it was taking action on the matter and would make supplemental filings.

On February 6, 1961, Sun by letter requested Tennessee to enter into a ratification agreement with it covering Sun's portion of the gas delivered by South-Tex to Tennessee. In response, Tennessee advised Sun by letter, dated February 27, 1961, that it did not wish to enter into such a ratification agreement with Sun.

On July 14, 1961, the Secretary of the Commission wrote to Sun making inquiry about the supplemental filings Sun had stated, on Febraury 6, 1961, that it would make. Sun did not respond until September 28, 1961, and then it filed an instrument which is no more than an affirmation of Sun's averment that South-Tex is its agent for the purpose of processing and delivering natural gas to Tennessee under South-Tex's sales contract. Consequently, the Secretary of the Commission, on March 13, 1962, rejected Sun's Rate Schedule No. 31, and vacated the certificate issued it in Docket No. G–6650.

In its afore-mentioned application for rehearing, Sun now advises the Commission that Sun "believes" Associated Oil and Gas Company (Associated) has succeeded "to all the rights and duties of South-Tex", and that it, Sun, wrote Associated on March 23, 1962, to request Associated to file Sun's proposed rate increase on Sun's behalf.[4] Sun avers that Associated refused so to do. Concurrently, Sun requested South-Tex to file Sun's proposed rate increase. On April 9, 1962, South-Tex declined to file for Sun. Sun's application for rehearing merely avers that Sun "believes" Associated succeeded to the processing plant of South-Tex. No filings have been made with the Commission by South-Tex or Associated to indicate such a transfer or acquisition.

Upon review of all of the above circumstances, and the due consideration of the same, we find that it is proper to grant Sun a rehearing of this matter. Therefore, we shall accept Sun's FPC Gas Rate Schedule No. 31, at least until the date of the final order in this matter, we shall reinstate Sun's certificate of public convenience and necessity previously granted Sun in Docket No. G–6650, until the date of final order in this matter, we shall permit Sun to file its proposed change in rate (Supplement No. 10 to its Rate Schedule No. 31) suspend the same, and order a hearing thereon. The increased rates and charges so proposed may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful. Additionally, because Sun evidently does not now know whether South-Tex or Associated is now receiving, processing and delivering its gas to Tennessee, but avers it "believes" it is now Associated, and because the files of the Commission show that it is South-Tex, we shall institute show cause proceedings against South-Tex and Associated to determine (1) if there has been any transfer of jurisdictional facilities without

[4] By letter dated April 18, 1962, Associated advised the Commission that it is not the successor to South-Tex as Sun avers.

Commission authorization, and (2) why the operator of the processing plant, whether it be South-Tex or Associated refuses to comply with Section 154.91 (b) of this Commission's regulations which requires an operator who is a signatory party to a gas sales contract to make rate filings for non-signatory co-owners.

The Commission orders:

(A) The application for rehearing filed by Sun on April 12, 1962, in Docket No. G–6650, is hereby granted, and the proceedings are hereby reopened for further proceeding.

(B) The certificate of public convenience and necessity granted Sun in Docket No. G–6650 on May 28, 1956, which was vacated by action of the Secretary of the Commission on March 13, 1962, is hereby reinstated until final order of the Commission in this matter.

(C) Sun's FPC Gas Rate Schedule No. 31, as supplemented, is hereby reaccepted for filing, and will remain in force and effect until final order of the Commission in this matter.

(D) The proposed increased rate filed by Sun on December 22, 1960, as Supplement No. 10 to its FPC Gas Rate Schedule No. 31, and re-tendered by it on April 12, 1962, is hereby accepted for filing, *Provided, However*, pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act, a hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed change in rate and charges contained in Sun's Supplement No. 10.

(E) Pending hearing and decision thereon, the above-designated rate supplement is hereby suspended in Docket No. RI62–418 and the use thereof deferred until May 14, 1962, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(F) Upon making the proposed increased rate effective, in accordance with the provisions of the Natural Gas Act, concurrently therewith Sun shall file, with the Secretary of the Commission, its agreement and undertaking to comply with the refunding and reporting procedures required by the Natural Gas Act and Section 154.102 of the Regulations thereunder, together with a certificate showing service of a copy of the same upon Tennessee.

(G) South-Tex in Docket No. RI62–419 and Associated in Docket No. RI62–420 shall show cause, if any there be, under oath and in writing, within thirty days from the issuance of this order why the Commission should not find and determine upon the allegations and averments made by Sun.

(1) That South-Tex has transferred or conveyed facilities used for the sale of natural gas within the jurisdiction of this Commission to Associated, and that Associated has acquired the same, all without having received the authority of this Commission so to do in compliance with the provisions of the Natural Gas Act.

(2) That South-Tex and Associated, or either of them, have refused and declined to comply with Section 154.91(b) of the Commission's Regulations under the Natural Gas Act, in that they have refused or declined to make or tender to this Commission a proposed rate change on behalf of a non-signatory co-owner when requested by such so to do, and that this action by them, or either of them, constitutes a willful and knowing violation of the Natural Gas Act.

(H) That public hearings regarding the matters for which South-Tex and Associated are hereby ordered to show cause, and the proceedings thereon, shall be consolidated with Docket No. G–6650, and shall convene at the time and place fixed by the notice of the Secretary provided for in Paragraph (D) above.

(I) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.37(f)) on or before June 27, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

AREA RATE PROCEEDING, DOCKET NO. AR61–1, CLAUDE E. AIKMAN, DOCKET NO. G–18466, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., DOCKET NO. CI60–435, ET AL.

ORDER DENYING MOTION AND AMENDING, IN PART, ORDER RELATING TO THE TYPE OF EVIDENCE TO BE CONSIDERED IN AREA RATE PROCEEDING

(Issued May 14, 1962)

On April 16, 1962, the People of the State of California and the Public Utilities Commission of the State of California (California) filed a motion requesting that copies of Appendices A and B filed by respondents in compliance with our order of August 2, 1961, herein, be made available to California, or alternatively that those of Phillips Petroleum Company and Shell Oil Company be made available. Our order of August 2, required the filing of data set forth in Appendices A and B, provided for compilation of the data in composite form by the Commission staff for introduction in the proceedings, and specified that the data should not be available to the parties until the data in composite form have been introduced in evidence in these proceedings. We stated that thereafter the individual filings would be made available to all parties to the proceedings.

Answers opposing the motion were filed jointly by Texaco Inc., Tidewater Oil Company, Continental Oil Company, Gulf Oil Corporation, The Superior Oil Company, and Humble Oil & Refining Company, and severally by Shell Oil Company, Sun Oil Company, Phillips Petroleum Company and the Commission staff.

California states that if it gains access to the data at this time it can begin work on its studies and exhibits and thereby expedite the proceedings. The staff answer points out that it proposes to make the composite data from Appendices A and B available in June of this year and has so announced on the record in these proceedings, while California's request anticipates receipt of the composite data in September.

Release of some or all of the Appendices at this time would not be in the interest of orderly procedure, would constitute an undue administrative burden on the Commission staff, and might prolong the time required for preparation of the data in composite form. Moreover, access to the data should be granted to all parties to the proceedings at the same time. For the foregoing reasons, California's motion to modify our order of August 2, 1961, should be denied.

The staff answer states that portions of the compilations have been identified and distributed to the parties in advance of introduction in the record and that it will continue to distribute other portions as they are completed. When all compilations under either Appendix are completed, distributed to the parties and identified in the record, the individual responses should be made available to the parties, even though the compilations have not technically been admitted in evidence in the proceedings.

By their answers Texaco *et al.* and Shell object to California's request since they state that the data are to be used in the preparation of rate base cost-of-service studies, which, under our order of April 5, 1961, herein, are not admissible in evidence. The order of April 5 did so provide, and we adhere to such

ruling insofar as rate base cut-of-service studies relate to the operations of an individual producer. However, we do not believe that the parties should be deprived of the opportunity to introduce in evidence composite rate base cost-of-service studies relating to a significant segment of industry operations in this area, and our order of April 5 is modified to the extent necessary to permit introduction of such evidence. Such composite studies may not suffer from the deficiencies which exist in individual company studies of this type. The value of such studies to our ultimate determinations in this proceeding or the weight, if any, to be accorded composite rate base cost-of-service studies must be determined on the whole record of the proceeding.

The Commission orders:

(A) The California motion filed April 16, 1962, herein, is hereby denied.

(B) Our orders of April 5, 1961 and August 2, 1961, herein, are hereby modified to the extent inconsistent herewith

Commissioner Ross although not present when this order was adopted asked that he be recorded in favor of the order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

COLORADO-WYOMING GAS COMPANY, DOCKET NO. CP62-149

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 14, 1962)

On December 15, 1961, as supplemented on February 15, 1962, Colorado-Wyoming Gas Company (Applicant) filed in Docket No. CP62-149 an application pursuant to Sections 7(b) and 7(c), respectively, of the Natural Gas Act for permission and approval to abandon facilities and for a certificate of public convenience and necessity to construct and operate the following facilities:

1. Approximately 8 miles of 8-inch transmission line around the City of Fort Collins, Colorado;

2. Approximately 1.5 miles of 4-inch transmission lateral extending from a point near the Ideal Cement Company plant meter station to Applicant's existing La Porte Town Border Station in Larimer County, Colorado;

3. A meter station at or near the north bank of the Cache La Poudre River in the NW¼ of Section 12, Township 7 North, Range 69 West, Larimer County, Colorado;

4. During 1962, mainline taps to render service to existing customers, at a total cost not to exceed $15,000, with no single tap to exceed a cost of $2,000; and

5. During 1962, facilities consisting of minor system reinforcements, extensions, relocations, and related facilities as may be required to render service to existing customers at a total cost not to exceed $50,000, with no single project to exceed a cost of $20,000.

Applicant seeks permission and approval to abandon the following facilities:

1. Approximately 5.15 miles of transmission line and related metering and other facilities located in and near the City of Fort Collins, Colorado;

2. Approximately 1.5 miles of existing 2-inch transmission lateral extending from a point near the Ideal Cement Company plant meter station to Applicant's existing La Porte Town Border Station in Larimer County, Colorado;

3. The Reynolds Beasley Group Tap (Station 2221+08) along the route of Applicant's 8-inch line in Boulder County, Colorado; and

4. The Grosball Tap (Station 26+63) near the westerly terminum of Applicant's 6-inch Loveland-Greeley lateral in Larimer County, Colorado.

Applicant sells natural gas from its Mesa-Boulder transmission line to Public Service Company of Colorado (Public Service) through a number of meter stations, for resale and distribution in and around Fort Collins. The Mesa-Boulder line must be operated at a high pressure in order to maintain adequate service for the retail customers farther north. Since a 5.15-mile section of this line traverses the recently urbanized area in and around Fort Collins, Applicant proposes to construct and operate a new 8-mile 8-inch line that will by-pass this congested area and tie in with the Mesa-Boulder line north of Fort Collins where a new meter station will be constructed. The 5.15-mile section, together with 8 meter stations, group taps, and farm taps thereon, will be abandoned by sale to Public Service for use in local distribution. The new meter station, along with the existing meter station located south of Fort Collins, will be used by Applicant to supply the distribution requirements of Public Service in Fort Collins and adjacent areas. The proposed relocations will eliminate the hazard of excessively high pressures being carried by one of Applicant's oldest lines on its system through a highly urbanized area.

The Reynolds Beasley and Grosball farm taps, located on the Mesa-Boulder line south of Fort Collins, will be abandoned since they are no longer in use. The areas previously served by Public Service through said taps are now being served by Public Service through its distribution facilities.

The 1.5 miles of 4-inch lateral line which Applicant proposes to construct will be used to replace an existing 2-inch lateral which Applicant proposes to abandon. The existing line is now and the proposed line will be used to supply Public Service with gas for resale and local distribution. The distribution load in this area has almost doubled during the year 1961, and the proposed line is necessary in order to meet the increased requirements and the anticipated load growth in the future.

Applicant also requests authorization to construct and operate unspecified minor "budget-type" farm tap facilities during the calendar year 1962 to enable Applicant to assure adequate natural gas service to existing resale customers in existing market areas and to relocate existing transmission facilities when necessary to make way for highway construction.

The total estimated cost of all the proposed construction, including the "budget-type" facilities, is $352,100, which will be financed from working funds and short term loans from Public Service. Public Service will pay Applicant the net book cost, less depreciation, of the facilities proposed to be transferred, which is estimated to be $21,380.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 1, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Colorado-Wyoming Gas Company, a Delaware corporation having its principal place of business in Denver, Colorado, is a "natural-gas company" wherein the meaning of the Natural Gas Act as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-285 (4 FPC 938).

(2) The proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportion and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and, regulations of the Commission thereunder.

(5) The facilities to be abandoned, as hereinbefore described, and as more fully described in the application, as supplemented, in this proceeding, are subject to the jurisdiction of the Commission, and abandonment of said facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(6) Such abandonment by Applicant is permitted by the public convenience and necessity, and an order permitting and approving same should be issued as hereinafter ordered.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations; and further, with regard to the construction and operation of the facilities other than the "budget-type" facilities, the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with the general terms and conditions set forth in paragraphs (b), (c)(3), and (c)(4) of Section 157.20 of such Regulations.

(8) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit for the "budget-type" facilities, on or before March 1, 1963, a statement under oath showing by project: (a) location of said project or projects, (b) description of said project or projects, (c) the resale customer served by said project or projects, (d) facilities relocated, if any, (e) use to which the gas is to be put, and (f) the actual final cost of the facilities constructed.

(9) The "budget-type" authorization hereinafter granted should be limited to construction during the calendar year 1962. The total cost of the miscellaneous relocation facilities should be limited to a maximum of $50,000, with no single project to exceed a cost of $20,000; the total cost of the unspecified taps should be limited to a maximum of $15,000, with no single tap to exceed a cost of $2,000. The "budget-type" facilities should be used only for sales to authorized resale customers within the effective contract demand or delivery obligations set forth in Applicant's FPC Gas Tariff.

(10) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado-Wyoming Gas Company, to construct and operate the proposed facilities, as hereinbefore described and as more fully de-

scribed in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations; and further, with regard to the construction and operation of the facilities other than the "budget-type" facilities, the certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with the general terms and conditions set forth in paragraphs (b), (c) (3), and (c) (4) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized, other than the "budget-type" facilities shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

(D) The "budget-type" authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962. The total cost of the miscellaneous relocation facilities is limited to a maximum of $50,000, with no single project to exceed a cost of $20,000; the total cost of the unspecified taps is limited to a maximum of $15,000, with no single tap to exceed a cost of $2,000. The "budget-type" facilities are to be used only for sales to authorized resale customers within the effective contract demand or delivery obligations set forth in Applicant's FPC Gas Tariff.

(E) Applicant shall submit for the "budget-type" facilities, on or before March 1, 1963, a statement under oath showing by project: (a) location of said project or projects, (b) description of said project or projects, (c) the resale customer served by said project or projects, (d) facilities relocated, if any, (e) use to which the gas is to be put, and (f) the actual final cost of the facilities so constructed.

(F) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully set forth in the application, as supplemented, in this proceeding, be and the same is hereby granted.

(G) Applicant shall advise the Commission of the date of the abandonment within 30 days from the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP62-26

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued May 14, 1962)

On July 31, 1961, as supplemented on September 25, November 2, and December 13, 1961, The Ohio Fuel Gas Company (Applicant) filed an application pursuant to Section 7 of the Natural Gas Act for permission and approval to abandon resale natural gas service to Ohio Gas Company (Ohio Gas) for its Millersburg Division, Holmes and Coshocton Counties, Ohio; and for a certificate of public convenience and necessity authorizing the acquisition and operation of certain jurisdictional facilities of Ohio Gas' Millersburg Division in Holmes County.

Applicant states that all of the Millersburg Division properties of Ohio Gas will be acquired and operated by Applicant. Specifically, the jurisdictional facilities involved are:

> Approximately 26,050 feet of 6-inch pipeline, 20,000 feet of 4-inch pipeline, 62,200 feet of 3-inch pipeline, 850 feet of 2-inch pipeline, and a 50 BHP Compressor Station, together with all appurtenant facilities.

The applicant shows that the Millersburg Division is far removed from Ohio Gas principal operating area at Bryan, Ohio; furthermore, the Millersburg and Bryan Divisions are not interconnected and the distance factor has caused problems in supervision and administration. Ohio Gas, therefore, desires to sell the subject facilities. None of Applicant's facilities presently being used to serve Ohio Gas will be abandoned. Such facilities, together with those proposed to be acquired, will be used by Applicant in the distribution of natural gas at retail in the Millersburg area.

Applicant will acquire the Millersburg Division at a price based on the depreciated original cost of the properties less contributions in aid of construction on the closing date. The estimated price for the properties as of December 31, 1960, is $409,035; of this amount an estimated $142,165 is attributable to jurisdictional facilities.

Applicant states that it will operate the subject facilities without interruption of service to existing consumers.

The Public Utilities Commission of Ohio has approved the proposed acquisition of facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on April 30, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) The facilities proposed to be acquired and operated by Applicant, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding, will be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The transportation of natural gas by means of facilities to be acquired by Applicant from Ohio Gas, as more fully described in the application, as supplemented, in this proceeding, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such transportation is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The acquisition and operation of the facilities and the related transportation of natural gas, as proposed by Applicant, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The natural gas service to be abandoned, as heretofore described and as more fully described in the application, as supplemented, in this proceeding, is subject to the jurisdiction of the Commission, and abandonment of such

natural gas service is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(6) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(7) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d), and (e) of Section 157.20 of such Regulations.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing The Ohio Fuel Gas Company to acquire and operate the facilities and to transport natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of such Regulations.

(C) The acquisition hereinabove authorized shall be consummated and operation begun by Applicant within 6 months of the date hereof.

(D) Permission for and approval of the abandonment by Applicant of natural gas service to Ohio Gas hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, be and the same is hereby granted.

(E) Applicant shall advise the Commission of the date of the abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-198

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 14, 1962)

On February 21, 1962 Southern Natural Gas Company (Applicant) filed in Docket No. CP62-198 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the 12-month period commencing

August 7, 1962, at a total cost not to exceed $3,000,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas which will be purchased from producers thereof in various areas generally coextensive with said system.

Applicant will finance the subject facilities from cash on hand or cash which will be available from current operations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 3, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction of the facilities during a 12-month period and the operation thereof, as proposed by Applicant, to take natural gas purchased from producers thereof are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) The authorization hereinafter granted should be limited to construction during the 12-month period commencing August 7, 1962, and the total expenditures for facilities to be constructed hereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before October 7, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual final costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record

and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Southern Natural Gas Company to construct during the 12-month period commencing August 7, 1962, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Southern Natural Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing August 7, 1962, and the total expenditures for facilities to be constructed hereunder are limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

(D) Applicant shall submit, on or before October 7, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the actual final costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

AMERICAN GAS COMPANY *v.* MICHIGAN WISCONSIN PIPE LINE COMPANY AND MILWAUKEE GAS LIGHT COMPANY, DOCKET NO. CP62-84

ORDER DISMISSING COMPLAINT

(Issued May 15, 1962)

On September 29, 1961, American Gas Company (American), an existing natural-gas utility with its principal place of business at 546 South 24th Avenue, Omaha 5, Nebraska, filed a "Complaint and Petition for Issuance of Declaratory Order and for Other Relief" in the above-entitled docket. In its complaint, American alleges that through its wholly-owned subsidiary, American Gas Company of Wisconsin, Inc., it has obtained natural gas distribution franchises in about 14 communities in north central Wisconsin and that it proposes to provide natural-gas service to these communities by obtaining from Midwestern Gas Transmission Company a supply of gas pursuant to Section 7(a) of the Natural Gas Act.[1]

[1] American filed an application on October 23, 1961, in Docket No. CP62-104 seeking an order from the Commission directing Midwestern Gas Transmission Company to sell and deliver the necessary gas for its project. This application has been scheduled for hearing to commence May 17, 1962.

American further alleges that it filed on August 29, 1961, an application with the Public Service Commission of Wisconsin for certificate authority to construct and operate the facilities necessary to render natural-gas service in these communities and that on the same day that American filed its application with the Wisconsin Commission, Milwaukee Gas Light Company (Milwaukee Gas) also filed an application with the Wisconsin Commission proposing service to six of the same communities proposed for service in American's application.

In view of the action to be taken in this order, it is unnecessary to recite herein the nature of American's complaint against Milwaukee Gas and Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) other than to note that Michigan Wisconsin and Milwaukee Gas filed separate answers on November 6, 1961, denying that there was any basis for the allegations made in American's complaint.

Milwaukee Gas' answer also states that on October 20, 1961, Milwaukee Gas filed a motion with the Wisconsin Commission requesting permission to withdraw its application to serve the Wisconsin communities to which American had referred in its complaint, and that on October 25, 1961, the Wisconsin Commission had granted Milwaukee Gas' motion to withdraw its application. On page 13 of its answer, Michigan Wisconsin states: "This action may have the effect of rendering moot American's complaint to this Commission".

The Commission finds:

Since American Gas Company's complaint against Milwaukee Gas Light Company and Michigan Wisconsin Pipe Line Company was based upon the filing by Milwaukee Gas of an application to render service in some of the same communities proposed for service by American, American Gas Company's complaint has been rendered moot by Milwaukee Gas' withdrawal of its application filed with the Public Service Commission of Wisconsin, as hereinbefore described.

The Commission orders:

The complaint filed on September 29, 1961, by American Gas Company in Docket No. CP62–84 is hereby dismissed.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

AREA RATE PROCEEDING, DOCKET NO. AR61–2; ALADDIN EXPLORATION COMPANY, INC., ET AL., DOCKET NO. CI61–1564, ET AL.; AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. RI60–18, ET AL.

ORDER ADDING RESPONDENTS AND CONSOLIDATING PROCEEDINGS

(Issued May 15, 1962)*

On May 10, 1961, the Commission issued an order "Instituting Rate Proceeding for the Southern Louisiana Area, Consolidating Proceedings and Prescribing Preliminary Procedure" which, among other things, instituted a proceeding to establish just and reasonable rate or rates for the sales of natural gas produced in the Southern Louisiana area as defined in the order and making respondents in the proceeding all persons named in Appendix "A" thereto and all parties on

*Published in the Federal Register on May 22, 1962 (27 F.R. 4820).

whose behalf such persons had filed FPC gas rate schedules for sales in such area, and consolidating therein a number of certificate proceedings listed in Appendix "B" thereto, as well as a number of rate suspension proceedings listed in Appendix "C" thereto. The said order was published in the Federal Register on May 17, 1961 (26 F.R. 4296) (25 FPC 942). By subsequent orders certain dockets were severed from and others were consolidated with the Docket No. AR61–2 proceedings.

Attached hereto as appendices are: (1) Appendix "A" (Supplement), a listing of additional persons having rate schedules on file for sales in the area who were not heretofore made respondents in the proceedings; (2) Appendix "B" (Supplement), a listing of additional proceedings on applications for certificates of public convenience and necessity which have not heretofore been consolidated with the said proceedings; and (3) Appendix "C" (Supplement), a listing of additional rate suspension proceedings which have likewise not heretofore been consolidated with the said proceedings. Since the persons and proceedings listed in said appendices are concerned with the sale of gas produced in the Southern Louisiana area, we have decided that these persons should be added as respondents and the listed proceedings should be consolidated for hearing with the Docket No. AR61–2 proceedings.

The Commission finds:

Good cause exists to join as respondents the persons listed in Appendix "A" (Supplement) hereto and all parties on whose behalf such persons have filed FPC gas rate schedules for sales in the Southern Louisiana area and to consolidate for the purpose of hearing all of the proceedings designated in Appendices "B" (Supplement) and "C" (Supplement) hereto with the Docket No. AR61–2 proceedings,

Pursuant to the provisions of the Natural Gas Act, particularly Sections 4, 5, 7, 10, 14, 15 and 16 thereof,

The Commission orders:

(A) The persons listed in Appendix "A" (Supplement) and all parties on whose behalf such persons have filed FPC gas rate schedules for sales in the Southern Louisiana area be and they are hereby made respondents in the proceedings in Docket Nos. AR61–2, *et al.*

(B) The pending proceedings designated in Appendices "B" (Supplement) and "C" (Supplement) be and they are hereby consolidated for the purposes of hearing with the proceedings in Docket Nos. AR61–2, *et al.*

(C) A copy of this order will be served upon each of the Respondents set out in Appendix "A" (Supplement).

SOCONY MOBIL OIL COMPANY, INC. (SUCCESSOR TO MAGNOLIA PETROLEUM COMPANY), DOCKET NO. G–11742, ET AL., AND G–19516

ORDER AMENDING OUTSTANDING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY TO REFLECT CHANGE IN HOLDER, AND CANCELLING DOCKET NUMBER

(Issued May 15, 1962)

On September 21, 1959, Socony Mobil Oil Company, Inc. (Socony), joined by Magnolia Petroleum Company (Magnolia), filed in Docket No. G–19516 an ap-

plication for authorization to continue certain services previously authorized to Magnolia in the docket numbers listed, with their related certificate order designations, in APPENDIX I which is attached hereto and made a part hereof.

Such action was prompted by merger, effective September 30, 1959, between Socony and Magnolia (Socony's wholly-owned subsidiary) whereby Socony acquired all rights, privileges, obligations, etc., previously held by Magnolia.

Subsequent to the filing of the aforesaid application, Socony filed twenty-eight motions to amend, revising certain services originally authorized to Magnolia and now to be continued by Socony, all as reflected in APPENDIX II which is also attached hereto and made a part hereof. These amendments require considerations not encompassed in this order.

The Commission finds:

(1) It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act to amend the respective orders issuing certificates of public convenience and necessity to Magnolia in the docket numbers listed in APPENDIX I attached hereto to reflect Socony as the certificate holder in each case.

(2) The twenty-eight motions to amend Socony's application in Docket No. G–19516, reflected in APPENDIX II attached hereto, should be construed as petitions to amend the authorizations in the related original dockets and no action on the disposition of these petitions to amend should be taken in this order.

(3) The docket designation of Docket No. G–19516, previously assigned to Socony's application to continue the services heretofore authorized to Magnolia, should be cancelled.

The Commission orders:

(A) The outstanding certificates of public convenience and necessity heretofore granted to Magnolia by orders of the Commission listed in APPENDIX I attached hereto and made a part of this order, be and the same are hereby amended by substituting Socony Mobil Oil Company, Inc. for Magnolia Petroleum Company as holder thereof.

(B) In all other respects, said certificate authorizations shall remain in full force and effect as issued.

(C) The twenty-eight motions to amend Socony's application in Docket No. G–19516 are hereby construed as petitions to amend the related original docket authorizations as reflected in APPENDIX II attached hereto and made a part hereof, and no action on said petitions is taken herein.

(D) The docket designation of Docket No. G–19516 assigned to Socony's subject application is hereby cancelled.

APPENDIX I

Certificate of public convenience and necessity have been issued to Magnolia Petroleum Company, Magnolia Petroleum Company, Operator, or Magnolia Petroleum Company (Operator), *et al.* in the following dockets by the below-identified orders:

Docket Nos. G–11742, G–11863, G–11864, G–11866 through G–11869, G–11893, G–11894, G–11918, G–11931 through G–11933, G–11935 through G–11952, G–11954, G–11957 through G–11961, G–11989, G–11995 through G–11997, G–12000 through G–12006, G–12070 through G–12074, G–12079, G–12080, G–12082 through G–12084, G–12086, G–12087, G–12089, G–12090, G–12092, G–12098, G–12103 and G–12431. SOUTHWESTERN PUBLIC SERVICE COMPANY, DOCKET NO. E-7038

ORDER INSTITUTING INVESTIGATION, PROVIDING FOR HEARING AND SUSPENDING PROPOSED RATE SCHEDULE CHANGES

(Issued May 15, 1962)

Data currently available to this Commission indicate the need for a formal investigation concerning the lawfulness of all rate schedules filed pursuant to Section 205 of the Federal Power Act by Southwestern Public Service Company

(Southwestern), Amarillo, Texas. At present 22 rate schedules of that Company are on file with this Commission for wholesale electric service which the Company renders to three investor-owned utility resale customers and 17 rural electric cooperative resale customers. Twelve rate schedules were proffered for filing by Southwestern on March 28, 1962 to supersede existing rate schedules for service to twelve of its rural electric cooperative customers. Unless suspended by order of the Commission, as hereinafter provided, the latter rate schedules would become effective May 19, 1962.

The foregoing schedules including the proposed rate schedule changes are designated in the files of the Commission as follows:

Customer	Designation of currently effective rate schedules	Designation of proposed changed rate schedules
New Mexico Electric Service Co. Hobbs, New Mexico.	FPC No. 14, Supplement No. 1.	
Cochran Power & Light Co. Morton, Texas.	FPC No. 15, Supplement Nos. 1 & 2; FPC No. 34.	
Lea County Electric Cooperative, Inc. Lovington, New Mexico.	FPC No. 16; FPC No. 35; Supplement No. 1.	
Community Public Service Co. Fort Worth, Texas.	FPC No. 17, Supplement No. 1.	
Bailey County Electric Cooperative, Inc., Muleshoe, Texas.	FPC No. 18	FPC No. 36.
Swisher County Electric Cooperative, Inc., Tulia, Texas.	FPC No. 19, Supplement No. 1.	FPC No. 47, Supplement No. 1.[1]
Central Valley Electric Cooperative, Artesia, New Mexico.	FPC No. 20	FPC No. 37.
Tri-County Electric Cooperative, Inc., Hooker, Oklahoma.	FPC No. 21	
South Plains Electric Cooperative, Inc., Lubbock, Texas.	FPC No. 22, Supplement No. 1.	FPC No. 46.
Roosevelt County Electric Cooperative, Inc., Portales, New Mexico.	FPC No. 23	FPC No. 45.
Rita Blanca Electric Cooperative, Inc., Dalhart, Texas.	FPC No. 24	
North Plains Electric Cooperative, Inc., Perryton, Texas.	FPC No. 25	
North Fork Electric Cooperative, Inc., Sayre, Oklahoma.	FPC No. 26	FPC No. 44.
Lyntegar Electric Cooperative, Inc., Tahoka, Texas.	FPC No. 27	FPC No. 43.
Lighthouse Electric Cooperative, Inc., Floydada, Texas.	FPC No. 28, Supplement No. 1.	FPC No. 40, Supplement No. 1.[2]
Lamb County Electric Cooperative, Inc., Littlefield, Texas.	FPC No. 29, Supplement No. 1.	FPC No. 42.
Greenbelt Electric Cooperative, Inc., Wellington, Texas.	FPC No. 30	FPC No. 41.
Farmers Electric Cooperative, Inc. of New Mexico, Clovis, New Mexico.	FPC No. 31	FPC No. 39.
Deaf Smith County Electric Cooperative, Inc., Hereford, Texas.	FPC No. 32	FPC No. 38.
Pioneer Cooperative Association, Inc., Inc., Ulysses, Kansas.[3]	FPC No. 33	

[1] Supplement No. 1 to FPC No. 47 is a redesignation of an existing rate schedule providing for facility construction and wheeling arrangements. (Supplement No. 1 to FPC No. 19).

[2] Supplement No. 1 to FPC No. 40 embodies an agreement dated December 12, 1961 covering operational practices and facility payments by Southwestern to Lighthouse which Southwestern appears to regard as related to its power supply agreement with Lighthouse dated November 27, 1961, designated as Rate Schedule FPC No. 40. The two agreements were submitted for filing concurrently.

[3] With the exception of Rate Schedule FPC No. 33, all of Southwestern's effective and proposed rate schedules embody written contractual agreements between Company and the respective customers and provide for all requirements electric service or supplemental electric service. Rate Schedule FPC No. 33 provides for the rendition of emergency service only.

Southwestern's Rate Schedule FPC No. 14 and Supplement No. 1 (New Mexico Electric) Nos. 15 and Supplements 1 and 2, 34 (Cochran Power) and No. 17 and Supplement No. 1 (Community Public Service) provide for the following rates and charges:

FPC No. 14, Supplement No. 1—*demand charge* $1.50/kw demand/mo. (first 12,000 kw) and $1.15/kw demand/mo. (above 12,000 kw); *energy charge* .55¢ /kwh for first 360 kwh/kw demand/mo. and .425¢/kwh for all additional kwh/mo.; fuel adjustment clause based upon approximately 20,000 BTU/kwh.

FPC No. 15, Supplement Nos. 1 and 2—*demand charge* $2.20/mo./kw of computed demand; *energy charge* .5¢/kwh; minimum charge clause; and power factor clause.

FPC No. 34—*demand charge* $370 for first 200 kw, or less demand/mo. and $1.25/kw demand/mo. above 200 kw; *energy charge* .75¢/kwh for first 300 kwh used/mo./kw demand or first 120,000 kwh used/mo. whichever is greater, and .50¢/kwh for all additional kwh/mo.; ratchet and minimum charge clauses; power factor clause; primary service discount; and fuel adjustment clause based upon approximately 20,000 BTU/kwh.

FPC No. 17, Supplement No. 1—*demand charge* $370 for first 200 kw, or less, demand/mo., $1.25/kw demand/mo. for next 1800 kw, and $1.15/kw demand/mo. thereafter; *energy charge* .75¢/kwh for first 200 kwh used/mo./kw demand or first 80,000 kwh used/mo. whichever is greater, and .50¢/kwh for all additional kwh/mo.; ratchet and minimum charge clauses; power factor clause; primary service discount; facility payment; and fuel adjustment clause based upon approximately 20,000 BTU/kwh.

Southwestern's Rate Schedule FPC Nos. 16, 35 and Supplement No. 1 (Lea County Electric Cooperative) and No. 33 (Pioneer Cooperative) provide for the following rates and charges:

FPC No. 16—*demand charge* $2.00/mo./kw demand; energy charge none first 125 kwh/kw of demand, 1.25¢/kwh next 125 kwh/kw of demand, and .8¢/kwh for excess over 250 kwh/wh of demand; ratchet and minimum charge clauses; power factor clause; prompt payment discount; and fuel adjustment clause based upon 25,000 BTU/kwh, based on generation at a single plant.

FPC No. 35, Supplement No. 1—*demand charge* $1.725/kw demand/mo. including 100 kwh/kw demand; *energy charge* .46¢/kwh for all kwh/mo. in excess of 100 kwh/kw demand; ratchet and minimum demand clauses; and fuel adjustment clause based upon approximately 15,000 BTU/kwh. The demand charge is not applicable during months of January, February, March, October, November and December.

FPC No. 33—*energy charge* 1¢/kwh for all kwh used/mo.; fuel adjustment clause based upon approximately 20,000 BTU/kwh.

Southwestern's Rate Schedule FPC Nos. 18, 19 and Supplement No. 1, 20, 21, 22 and Supplement No. 1, 23, 24, 25, 26, 27, 28 and Supplement No. 1, 29 and Supplement No. 1, 30, 31 and 32, for service to the other rural electric cooperatives, as above-named, provide for the following rates and charges: *demand charge* $1.725/kw demand/mo. including 100 kwh/kw demand; *energy charge* .46¢/kwh for all kwh/mo. in excess of 100 kwh/kw demand; and fuel adjustment clause based upon approximately 15,000 BTU/kwh. The demand charge is not applicable during the months of January, February, March, October, November and December.

Southwestern's proffered rate schedule changes, as designated above, would decrease Company's present rates to the twelve Cooperatives concerned by approximately $79,639 (2.08%) per annum for the twelve customers based upon estimated 1962 deliveries of power and energy. For the twelve-month period ending December 31, 1962, Southwestern's revenues from those customers under present rate schedules are estimated to total $3,820,507. Based upon the same estimated deliveries, Southwestern's operating revenues under the proposed rates would be $3,740,868. The reduction would be accomplished through elimination of fuel adjustment clauses, establishment of a maximum annual average bill of 7.5 mills per kwh; and an increase of .4 mill per kwh in Company's present energy charge.

Review and analysis of available office data indicate that certain of Southwestern's Rate Schedule FPC Nos. 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25,

26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46 and 47, as supplemented and more fully described above, may result in excessive rates or charges; certain of them may place an undue burden upon other of Southwestern's electric utility customers; and some or all of those schedules may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable and unlawful within the meaning of the Federal Power Act. Additional factual data necessary for a resolution of those questions must be obtained. Accordingly, it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 304, 307, 308 and 309 thereof, that the Commission enter upon a hearing and investigation concerning the lawfulness of all of Southwestern's rate schedules as supplemented and proposed to be changed as described above; that the operation or effectiveness of Southwestern's Rate Schedule FPC Nos. 36, 37, 38, 39, 40 and Supplement No. 1 thereto, 41, 42, 43, 44, 45, 46, and 47 be suspended and the use thereof deferred; and that Southwestern be directed to submit cost and revenue data all in the manner as hereinafter provided.

The Commission orders:

(A) A public hearing be held concerning the lawfulness of Southwestern's Rate Schedule FPC Nos. 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28. 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, and Supplements thereto, all as described above, at a time and place to be specified by notice of the Secretary.

(B) Pending that hearing and decision of the Commission the operation under the Federal Power Act of Southwestern's Rate Schedule FPC Nos. 36, 37, 38, 39, 40 and Supplement No. 1 thereto, 41, 42, 43, 44, 45, 46, and 47 is hereby suspended and the use of those schedules deferred until October 19, 1962. On that date those rate schedules shall take effect in the manner prescribed by the Federal Power Act, subject to further order of the Commission, unless this proceeding has been disposed of at a date previous thereto. During the period of suspension Southwestern's Rate Schedule FPC Nos. 18, 19, 20, 22 and Supplement No. 1 thereto, 23, 26, 27, 28 and Supplement No. 1 thereto, 29 and Supplement No. 1 thereto, 30, 31, 32 and Supplement No. 1 to 47, all as now on file with this Commission, shall remain and continue in effect. Unless otherwise ordered by the Commission, Southwestern shall not change the terms or provisions of any rate schedules specified in this paragraph until this proceeding has been disposed of or until the period of suspension has expired.

(C) Southwestern shall file, on or before July 16, 1962, cost and revenue data showing Company's costs of rendering service to each wholesale for resale customer served under the Rate Schedules referred to in paragraph (A) above, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period the calendar year 1961 showing both historical revenues and *pro forma* adjustments thereto due to the proposed reductions and due to prospective changes in Southwestern's boiler fuel costs under all new gas supply contracts which the company may have entered into during the past thirty-six month period, a prudent net investment rate base, and a fair rate of return thereon.

(D) The foregoing showing shall not preclude or limit any additional showing by Southwestern or others and shall be without prejudice to any future action taken by the Commission or its staff, or to any future position Southwestern or others may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(E) The foregoing showing shall be submitted in writing with sufficient copies to provide this Commission with six copies, to provide each State Commission

affected with a like number of copies and to provide one copy each to all other parties as may be granted intervention in this proceeding.

(F) Notices of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before June 15, 1962 and in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP62–190

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 15, 1962)

On February 12, 1962, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP62–190 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the 12-month period commencing May 22, 1962, at a total cost not to exceed $1,500,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various areas generally coextensive with said system.

Applicant will finance the subject facilities from cash on hand or short term bank loans.

Pursuant to due notice a public hearing was held in Washington, D.C., on May 1, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 28, 1950, in Docket No. G–1277 (9 FPC 32).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, within 90 days from the end of the 12-month period for which authorization is hereinafter granted, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual final costs of said facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing May 22, 1962, and the total expenditures for facilities to be constructed thereunder should be limited to $1,500,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Transcontinental Gas Pipe Line Corporation to construct during the 12-month period commencing May 22, 1962, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Transcontinental Gas Pipe Line Corporation.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 90 days from the end of the 12-month period for which authorization was granted in paragraph (A) above, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinbefore granted, (d) the location of said project or projects, (e) the actual final costs of said facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing May 22, 1962, and the total expenditures for facilities to be constructed thereunder are hereby limited to $1,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross, and Harold C. Woodward.

SIERRA PACIFIC POWER COMPANY, DOCKET NO. E-7031

ORDER AUTHORIZING THE ISSUANCE OF PROMISSORY NOTES

(Issued May 16, 1962)

Sierra Pacific Power Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of California and Nevada, with its principal place of business at Reno, Nevada, filed an application on March 29, 1962, as amended on April 17, 1962, for an order or orders, pursuant to Section 204 of the Federal Power Act, authorizing the issuances, as separate and independent transactions, of the following securities: (1) Short-term Promissory Notes in the aggregate principal amount of not in excess of $5,000,000 outstanding at any one time, and (2) $5,000,000, principal amount of First Mortgage Bonds, due 1992. Applicant now requests that an order be issued authorizing the proposed issuance of Promissory Notes.

The proposed Promissory Notes, in the aggregate principal amount of $5,000,000, including the total amount of all Notes presently outstanding under Section 204(e) of the Act,* will be issued to evidence bank loans to Applicant, and will bear interest at a rate per annum not in excess of one-quarter of 1% over the prime rate in effect in New York City, at the time of the borrowing or the renewal or extension of the loans, for short-term commercial loans to depositors. Each Note will be dated as of the date of issuance and delivery thereof and will mature not later than September 30, 1962.

The application states that no underwriter's or finder's fee will be paid in connection with the proposed issuance of Notes, and that none of the proposed Notes will be resold to the general public. The Notes will be discharged from the proceeds of the $5,000,000, principal amount of First Mortgage Bonds, due 1992, which Applicant proposes to issue in June or July, 1962.

Applicant states that it will use the net proceeds from the issuance of the proposed Notes, pending the sale of the proposed issuance of First Mortgage Bonds, to reimburse Applicant for construction expenditures heretofore made and to finance, in part, Applicant's 1962 construction program, estimated to cost $11,659,900. Principal items of expenditure are, as follows: $2,898,000 for continuing installation of Unit No. 1 and $1,014,000 for gas turbines, at Applicant's Frank A. Tracy Station, 17 miles east of Reno; $1,170,100 for transmission lines and substations, including $340,000 for the Buckeye-Tahoe Valley 120 kv line (total cost estimated at $540,000, to be completed in 1963) and $344,600 for the 120 kv Brunswick-Minden line; $3,048,900 for improvements to power plants, transmission and distribution system, for distribution and transmission substations, and for extensions, meters, services and transformer needed to serve new customers; $2,016,000 for extensions and improvements to existing facilities, reservoirs and flumes of Applicant's water department; $386,100 for Applicant's gas department; and $1,064,400 for general plant.

Written notice of the application has been given to the California Public Utilities Commission and the Nevada Public Service Commission, and to the

*Applicant, on May 3, 1962, filed a Certificate of Notification under Section 204(e) of the Federal Power Act, for the issuance of an unsecured promissory note in the amount of $1,600,000, payable to the First National Bank of Nevada, dated April 24, 1962, due on July 23, 1962, interest at 4½% per annum.

Governor of each of those States. Notice of the application was also given by publication in the Federal Register on April 7, 1962 (27 F.R. 3362), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before the 24th day of April, 1962 with the Federal Power Commission, Washington 25, D.C. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 2, 1961, *Sierra Pacific Power Company*, Docket No. E–6984 (25 FPC 904).

(2) The proposed issuance of Promissory Notes, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Promissory Notes, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Promissory Notes in the aggregate principal amount of $5,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) of the Act from the requirements of Section 204(a) of the Act.

(5) The proposed issuance of Promissory Notes, described above, will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of Promissory Notes, as hereinafter authorized will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes by the Applicant, in an aggregate principal amount of not to exceed $5,000,000, at any one time outstanding, upon the terms and conditions and for the purposes set forth in the application, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant thereto being not later than September 30, 1962.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

AMERICAN LOUISIANA PIPE LINE CO., DOCKET NO. G-2306; MICHIGAN WISCONSIN PIPE LINE CO., G-2327; AMERICAN LOUISIANA PIPE LINE CO., G-10396; PANHANDLE EASTERN PIPE LINE CO., G-11061; TRUNKLINE GAS CO., CP60-22 (PHASE TWO); PANHANDLE EASTERN PIPE LINE CO., CP60-40; PANHANDLE EASTERN PIPE LINE CO., CP60-60; PANHANDLE EASTERN PIPE LINE CO., CP61-36; CITIZENS GAS CO., CP61-54; CITY OF LACYGNE, KANSAS, CP61-69; CENTRAL ILLINOIS LIGHT CO., CP61-114; CENTRAL ILLINOIS LIGHT CO., CP61-115; PANHANDLE EASTERN PIPE LINE CO., CP61-136; ILLINOIS POWER CO., CP61-160; CITIZENS GAS CO., CP61-191; CITIZENS GAS CO., CP61-192

ORDER AFFIRMING INITIAL DECISION OF PRESIDING EXAMINER

(Issued May 17, 1962)*

Syllabus

1. Under facts and circumstance of this proceeding Commission *finds* 10-cent formula should apply to construction of laterals for service to North Central Public Service Co. and Wisconsin Power and Light Co., however such finding should not be construed as necessarily foreclosing Michigan Wisconsin from contesting application of formula in future proceedings. P. 969.
2. Commission *directs* Panhandle Eastern and Trunkline, under Section 7(a) of the Natural Gas Act, to establish and maintain physical connection of their transportation facilities with applicants' proposed facilities, and deliver and sell natural gas to applicants. P. 969; 983.
3. Commission *directs* Michigan Wisconsin, under Section 7(a) of the Natural Gas Act to extend its transportation facilities; establish and maintain connection of such facilities with applicants' proposed facilities, and deliver and sell natural gas to applicants. P. 983.

Charles V. Shannon, Louis Flax, and *Arthur R. Seder* for American Louisiana Pipe Line Company and Michigan Wisconsin Pipe Line Company.

Raymond N. Shibley, J. William Via, Jr., John A. McGuinn, G. R. Redding, and *Wendell J. Doggett* for Panhandle Eastern Pipe Line Company.

Leland F. Cadenhead and *Raymond N. Shibley* for Trunkline Gas Company.

Q. P. Dorschell, Robert S. Hunt, and *John V. Gilhooly* for Village of Savoy, Illinois and Illinois Power Company.

C. V. Hern, Jr., Bradford Ross and *Sherman S. Poland* for Central Illinois Light Company.

Daryal A. Myse for Citizens Gas Company.

Albert J. Feigen for City of LaCygne, Kansas.

J. W. McAuliffe and *Phebe Eppes Gordon* for Battle Creek Gas Company.

John F. Zimmermann for Wisconsin Natural Gas Company and Wisconsin Michigan Power Company.

John C. Lawyer and *Edmund A. Schroer* for Northern Indiana Public Service Company.

N. J. Lesselyoung and *Vernon A. Swanson* for Milwaukee Gas Light Company.

William E. Torkelson for Wisconsin Public Service Commission.

Seymour Tabin for Wisconsin Public Service Corporation.

Robert R. Batton and *Albert L. Harker* for Central Indiana Gas Company.

Robert R. Batton and *Albert L. Harker* for Indiana Gas Distribution Corporation.

Reuben Goldberg and *George Spiegel* for Michigan Gas and Electric Company.

Wilson W. Snyder for the Toledo Edison Company.

*Initial decision appears on p. 969.

William Herron and *Julian De Bruyn Kops* for the Dayton Power and Light Company.

Robert R. Batton and *Albert L. Harker* for Greenfield Gas Company, Inc.

Samuel H. Olsen, David R. Kaplan, and *F. Clifton Lind* for County of Wayne, Michigan.

Robert R. Batton and *Albert L. Harker* for Pendleton Natural Gas Company.

Paul L. Adams and *A. C. Stoddard* for Michigan Public Service Commission.

Gebhard, Hogue & Dwyer for Ohio Gas Company.

John Helm Pratt and *Patrick J. Smith* for Citizens Gas and Coke Utility.

Will W. Reller, Robert R. Batton, and *Albert L. Harker* for Richmond Gas Corporation.

R. P. Duff, J. B. Falahee, James Boorsch, and *J. Phillip Bahn* for Michigan Gas Storage Company and Consumers Power Company.

Elmer Nafziger for Central Illinois Public Service Company.

Glen H. Bell for City Gas Company, Merrill Gas Company, and Wisconsin Fuel and Light Company.

Nathaniel H. Goldstick, and *Robert Reese,* for City of Detroit.

Charles R. S. Anderson for Iowa Southern Utilities Company.

Sprague, Wilcox, and Houts for St. Joseph Light and Power Company.

C. B. Dushane and *E. J. McManus* for Keokuk Gas Service Company.

John E. Fell for Kokomo Gas and Fuel Company.

R. J. Sutherland and *Eugene O. Gehl* for Wisconsin Power and Light Company.

Glen D. Evans for Missouri Public Service Commission.

James D. McKinney, Jr. and *Charles E. McGee* for Missouri Public Service Company.

Sherman S. Poland for Central Illinois Electric and Gas Company.

Thomas F. Ryan, Jr. for Citizens Gas Fuel Company.

Ned Willis for North Central Public Service Company.

Milo J. Fleming, Cecil A. Beasley, Jr., Arthur Weichelt, and *Orville N. Foreman* for Village of Milford, Illinois.

Cecil A. Beasley, Jr., and *Arthur Weichelt* for Village of Louisville, Illinois.

George C. Williams, Robert C. Weber, C. William Cooper, Lawrence L. Gray, and *Norman A. Flaningam* for the East Ohio Gas Company.

Jerome J. McGrath, John A. McGrath, and *Charles W. Stadell* for Mid-West Coal Producers Institute, Inc.

Arthur R. Seder, Jr., Charles V. Shannon, and *Louis Flax* for Michigan Consolidated Gas Company.

Edwin K. Steers, Ira L. Haymaker, and *Donald M. Mosiman* for Indiana Public Service Commission.

Thomas F. Ryan, Jr. for Michigan Gas Utilities Company.

James A. Gammon, John A. McGrath, and *Jerome J. McGrath* for Fuels Research Council, Inc.

James A. Gammon, John A. McGrath, and *Robert E. Lee Hall* for National Coal Association.

James A. Gammon, John A. McGrath, Jerome J. McGrath, and *Welly K. Hopkins* for United Mine Workers of America.

James A. Gammon, John A. McGrath, and *Jerome J. McGrath* for The Chesapeake and Ohio Railway Company.

John F. Gaston for Iowa Electric Light and Power Company.

John H. Groves for Indiana Gas and Water Company, Inc.

Walter D. McQuie, Cecil A. Beasley, Jr., and *John W. Kern, III* for City of Montgomery, Missouri.

Albert J. Feigen, and *Ira D. Beynon* for Ohio Valley Gas Corporation.

Willard S. Stafford for Madison Gas and Electric Company.

Mark McElroy, Andrew R. Sarisky, and *Herbert T. Maher* for Public Utilities Commission of Ohio.

W. F. Laird, Ralph N. Mahaffey, John F. Sisson, and *William C. Hart* for The Ohio Fuel Gas Company.

David R. Goller for Missouri Western Gas Company.

Paul Hess, Cecil A. Beasley, Jr., John W. Kern, III for City of Macon, Missouri.

U. S. Collins, Cecil A. Beasley, Jr., John W. Kern, III, and *Arthur Weichelt* for City of Bushnell, Illinois.

George R. Perrine for Illinois Commerce Commission.

William C. Moore for The Waterville Gas and Oil Company.

Mark McElroy, Andrew R. Sarisky, and *Herbert T. Maher* for Ohio Public Utilities Commission.

Ralph S. Locher and *James L. Harkins, Jr.* for City of Cleveland, Ohio.

Lewis Carroll, William I. Harkaway, William E. Hynan, and *Milton J. Grossman* for Staff of the Federal Power Commission.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

On April 11, 1962, the Presiding Examiner issued his decision in the above-entitled consolidated proceedings, limited specifically to the issues relating to certain Section 7(a) applications and to interveners in the nature of Section 7(a) applicants. His decision was limited to specific parties in the consolidated proceeding who sought gas from Panhandle Eastern Pipe Line Company, Trunkline Gas Company and Michigan Wisconsin Pipe Line Company for service to new communities.

Exceptions were filed by Michigan Wisconsin Pipe Line Company to the decision of the Presiding Examiner on May 1, 1962, contesting certain statements of the examiner concerning the application of Michigan Wisconsin's so-called "10-cent formula."

Upon consideration of the evidence, the briefs filed, the Examiner's initial decision, the exceptions thereto, and the entire record, the Commission finds that the Presiding Examiner's findings and conclusions in the above-listed dockets are supported by the record and should be adopted by the Commission. This finding should not be construed to mean that Michigan Wisconsin Pipe Line Company is necessarily foreclosed from contesting the application of the so-called "10-cent formula" in future proceedings. We find only that it is applicable under the facts and circumstances of these proceedings and that it should apply to the construction of laterals for service to North Central Public Service Company at West Point, Iowa, and Wisconsin Power and Light Company at McFarland, Wisconsin.

The Commission orders:

The Findings and Orders of the Presiding Examiner issued in the above-listed dockets on April 11, 1962, be and they are hereby affirmed.

DECISION

OF THE PRESIDING EXAMINER ON THE ISSUES RELATING TO CERTAIN SECTION 7(a) APPLICATIONS AND TO THE INTERVENERS IN THE NATURE OF SECTION 7(a) APPLICANTS

(Issued April 11, 1962)

ELLIS, *Presiding Examiner:*

Nature of the Case: This is the initial decision of the Presiding Examiner on a group of applications filed by a number of municipalities and distributor com-

panies which have requested an order from the Federal Power Commission directing the pipelines serving their area to establish a facility for the sale of natural gas to them. Most of them also require an allocation from their pipeline supply of a sufficient quantity of gas to serve their needs. The applicants invoke section 7(a) of the Natural Gas Act, 15 U.S. Code 717f(a), or they are interveners who, in the course of their participation in a pending matter of their pipeline, have requested that the Commission attach conditions to the certificate issued to the line to the end that gas service be required to be rendered to them. The intervener-applicants are here treated together with, and in all material respects as, applicants under section 7(a). 3 F.P.C. 598, 606; 16 *id.* 897, 898.

Procedural Background: Beginning well over a year ago, that is on January 31, 1961, hearings have been held practically continuously on pipeline expansion applications filed by the Panhandle Eastern Pipe Line Company and the Trunkline Gas Company and on certain other but related matters involving the American Louisiana Pipe Line Company and the Michigan Wisconsin Pipe Line Company. The principal subject of the hearings was Panhandle Eastern's proposal to abandon its substantial and long continued sale at Detroit to an affiliate of the American Louisiana Pipe Line Company, which has been in litigation for some years,[1] and the consummation of which would have required certain reallocations of the supply of American Louisiana and of another affiliate, the Michigan Wisconsin line. Quite a number of applications by communities along the lines of Panhandle Eastern, Trunkline and Michigan Wisconsin had filed with the Commission applications for orders under section 7(a) of the Natural Gas Act for an allocation of gas for new service to them. Also a number of interveners filed similar requests. The Commission's orders of December 1, 1960, *et seq.*, consolidated all the various matters for hearing, 25 FPC 1137.

Hearings on the group of issues continued through 1961 and were nearing their close on March 1, 1962, when, at the suggestion of Staff counsel, motion was adopted to sever all issues related to the requests for service to the applicant-communities and distributors, to set a final date for rebuttal testimony and for early briefing of these issues (except for two towns whose cases were not immediately terminable). The rebuttal cases were completed on March 2, 1962, and briefs and counterbriefs were to be filed by March 29.

Communities Covered: In the case of the following communities, the projects have been agreed to by the Staff of the Federal Power Commission; all other parties, including the pipelines called upon to serve them, have indicated their concurrence or have voiced no objection (see the hearing transcript at 186T29, 515–8), and no briefs have been received by March 29, 1962, except a very helpful and comprehensive coverage of all the projects in the initial brief of the F.P.C. Staff, and a reply brief on one collateral issue, as discussed below.

Catlin, Illinois
Mount Pulaski, Illinois
San Jose, Illinois
Hume, Illinois
Pesotum, Illinois
Tolono, Illinois
LaCygne, Kansas
Louisville, Illinois
McFarland, Wisconsin
Savoy, Illinois
Sherman, Illinois
West Point, Iowa
Williamsville, Illinois

The applications of two companies to serve Montrose, Iowa, have resolved itself into a certain controversy, which is covered separately. Applications to serve Milford and Bushnell, Illinois, have not yet been fully tried as of the time of this writing, and will be the subject of a later decision. In the case of the fol-

[1] *Michigan Consolidated Gas Company* v. *F.P.C.* (CADC, 1960), 283 F. 2d 204.

lowing towns, the applications have been requested to be withdrawn as a result of changes in the circumstances and no decision with respect to them is contemplated: Omro, Wisconsin; Winneconne, Wisconsin; Tremont, Illinois; and Cerro Gordo, Illinois (see FPC orders of September 26, 1961, and March 20, 1962, and 186T29,468).

The Applicants: The applications for orders from the Power Commission directing the respective pipelines to establish connections and provide service for the communities listed above are grouped as follows:

1. *Panhandle Eastern Pipe Line Company.*

Central Illinois Electric and Gas Company seeks to serve Catlin, Mt. Pulaski, and San Jose, Illinois (intervener).

Central Illinois Light Company seeks to serve Williamsville, Illinois (CP61–114), and Sherman, Illinois (CP61–115).

Citizens Gas Company seeks to serve Pesotum, Illinois (CP61–54), Hume, Illinois (CP61–191), and Tolono, Illinois (CP61–192).

Illinois Power Company seeks to serve Savoy, Illinois (CP61–160).

The City of LaCygne, Kansas, a municipal corporation, seeks to serve that city (CP61–68).

2. *Trunkline Gas Company.*

The Village of Louisville, Illinois, a municipal corporation, seeks to serve that community (intervener).

3. *Michigan Wisconsin Pipe Line Company.*

North Central Public Service Company seeks to serve West Point, Iowa (intervener).

Wisconsin Power and Light Company seeks to serve McFarland, Wisconsin (intervener).

Standards Applied: Following the standards set forth in 15 FPC 1421 and 16 FPC 897, the evidence has been considered for its bearing on the issues essential to a Commission order under section 7(a) of the Natural Gas Act, as follows:

(a) whether the pipeline is the most feasible source of supply;
(b) whether there is public need for, and benefit to be expected from, the service of natural gas;
(c) whether the project can adequately be financed;
(d) whether the project is economically feasible; and
(e) whether the project will unduly impair the pipeline's ability to serve its customers or otherwise unduly burden the pipeline.

See also 17 FPC 118 and 127; 24 FPC 482.

Natural Gas Reserved for New Service: By orders issued July 28, 1961, and September 22, 1961, in these dockets, the Commission issued temporary authorizations to Panhandle and Trunkline and directed the allocation of quantities of natural gas made thereby avaliable. 8,000 Mcf per day were reserved for possible service to new communities and in the interim order to be deliverel to Michigan Consolidated Gas Company.

On March 1, 1962, Panhandle expressed its view that the requests granted for new service in these consolidated proceedings would necessitate the diversion of equivalent quantities of gas from this delivery to Michigan Consolidated, and this position was subscribed to by Michigan Consolidated (186T29,519).

Accordingly, the 8,000 Mcf per day delivery to Michigan Consolidated by Panhandle should be decreased by 4,338 Mcf per day, the amount of gas to be here

allocated to the new communities to be served by Panhandle. This decrease will assure the use of natural gas in accordance with expressed Commission purpose. This covers also the Trunkline community (Louisville). Cf Ex. 49–A.

The two Michigan-Wisconsin distributors will supply the new areas from their present total allotments.

The longer-range needs of the distributors, including those of the new areas, are under continued hearings in these dockets, also in the case of the two Michigan-Wisconsin distributors, they will be considered in another pending expansion proceeding of that line, docket CP62–212, which is Item CB by reference here.

Statistics Respecting the Service Requested: Each applicant presented a fully detailed exhibit, and its operating official was examined and cross examined at the hearing, with the result that there were developed the following data as to each of the 13 projects. The historical figures were presented as actual, while those pertaining to the number and types of customers, the expected gas usage, the initial investment and the operating revenues, were based on the best estimates of the applicants derived from engineering studies of the areas proposed to be served and, in the case of the 11 privately-owned utility projects, upon the experience of the utilities in serving other communities in the general area and developing new projects in the past. The following table collects the data so derived, the cost and other figures essentially being those predicted for the third full year of operation:

Applicant	Cen. Ill. El. & Gas Co.			Cen. Ill. Lt. Co.		Citizens Gas Co.			Ill. Power	City of La Cygne	Village of Louisville	No. Cen.	Wis. P & L

The Projects in Summary

Mt. Pulaski, San Jose and Catlin, Illinois

The Central Illinois Electric and Gas Company has presented a combined exhibit for the three separate unconnected projects, the total investment somewhat exceeding half a million dollars. The company is well established, with assets of $95,000,000, and presently serves both electricity and gas in a number of areas in Illinois. It holds the local franchises from the three communities and a certificate of public convenience and necessity issued by the Illinois Commerce Commission, which on its face satisfactorily evidences the need for the service and the benefit to be derived, as well as its feasibility. The investment per customer, $535, is not unusually large, nor are its predicted usage factors out of line. The figure shown in the table for the residential use per unit of population (.304 Mcf/d for Mt. Pulaski) is derived from (a) the company prediction of .1 Mcf per customer requirement on a maximum day for general use and 1.8 Mcf/d for the entire use of the average residential heating customer, (b) applying those figures to the prediction of the number of customers at the end of the third year in each category, and (c) dividing the total by the population figure cited to us. In the case of Catlin, there are particular indications of community growth upon the basis of which the slightly higher heating saturation figure was derived. Company funds appear to be available to finance the projects and the company is satisfied that it will yield a satisfactory return, at the announced rates, which appear to be comparable to others in the area, and, in any event, are subject to the jurisdiction of the Illinois Commerce Commission.

Williamsville and Sherman, Illinois

These are two small residential towns located a short distance north of Springfield and serving, in effect, as residential suburbs. The Central Illinois Light Company ("CILCO"), which is now the largest general service distributor on the Panhandle Eastern line and serves over 100,000 customers, seeks to add these communities to their service area, on the basis of franchises granted and accepted two years ago and certificates of public convenience and necessity issued by the Illinois Commerce Commission. This is part of its broad program for expansion into a total of ten area communities. A Federal permit is required for these two towns only because the interstate pipeline's branch runs near the town borders, necessitating a tap off the Panhandle line and a regulator station, for which the Federal Power Commission's certificate is required by the Natural Gas Act, 15 U.S.C. 717f.

Williamsville is a town of 730, on U.S. Highway 66, only ten miles north of Springfield. Certain new subdivisions planned for may explain the slightly high estimate of 341 customers after three years, when the net operating income is computed at $6,810, or 4.8 percent of the then investment. Company funds are available for construction (and in Sherman as well), and the project appears to be feasible and necessary in the public interest.

The population figure for Sherman (230) would not support the claimed potential of 169 customers (third-year), on which depends the showing of peak day sales and the resulting operating income of $2,610. This may also explain why the projected gas usage per unit of population is more than double the

actual experience of the company on the peak day of 1960–1961.[3] However, Sherman cannot be considered as a community apart. It is a residential suburb, five miles from Springfield on the main highway, and, as testified by CILCO's Chairman of the Board, Mr. Babcock of Peoria,

> Sherman is located quite close to the Springfield suburban area. There are a number of subdivisions being planned in Section 25 and Section 36 with approximately 150 lots now recently planned for development there. The northern portion of Section 25 approaches the interchange now under construction on the interstate highway system and both residential and commercial development of that area is expected in the near future, which will increase existing demands for natural gas. Approximately 20 residences have been constructed in that area within the last 18 months, and realtors and subdividers are now contemplating additional subdividing. Other utility services are being expanded in that area. Sherman is so located that it is attractive for Springfield workers seeking suburban residences, and particularly in view of its strategic location on a four-lane highway and the new interstate highway. In addition to the promise of substantial expansion in urban residential and commercial development there is the possibility of some industrial development there.

Also, some customers are to be expected off the 1.7-mile lateral to the Panhandle line, and the new subdivisions may have as many as 500 houses (140T22,659–63).[3]

In any event, the Illinois Commerce Commission has jurisdiction of, and responsibility for, authorizing the new service by CILCO, and has issued its certificate of public convenience and necessity for each project. The demonstration before that Commission covered specifically a showing of economic feasibility (140T22,662) and, its certificate, stating there is a "present and anticipated demand in said area" (Ex. 34) and reciting that "the public convenience and necessity require" the project, should conclude examination of, and satisfy the need for establishing, economic feasibility, without the need for a rehearing *de novo* on the same issues, indeed, often on the same proofs. See the concurring opinion of Judge Miller in *Virginia Petroleum Jobbers Association* v. *F.P.C.* (CADC, 1961), 293 F. 2d 527, cert. den. (1961) 368 U.S. 940; see also 15 FPC 1421 at 1427.[4]

Citizens Gas Company of Illinois

This company now serves gas to ten small communities in Eastern Illinois, and in this case seeks pipeline connections from Panhandle Eastern to permit service to three new towns. The program calls for investment of $577 to $728

---

[3] CILCO, the distributor for both Peoria and Springfield, has a population of 315,000 and 104,879 customers in the area involved in this case. For its peak day last year (January 24, 1961) the actual gas usage compares (or, rather, contrasts) with the claims or predictions made for Sherman as follows:

	CILCO (PE area)	Predictions for Sherman
Total peak day Mcf, per population unit	.524	1.18
Peak day Mcf for residential use, per population unit	.451	1.07

Computed from exhibits 34, 111–A and 111–C, 140T22,660, 141T22,904.

[3] Springfield metropolitan area's population of 146,539 is nearly double that of the central city alone, and the outlying area has increased by 26.9 percent in the past ten years. Statistical Abstract of the United States (1961, H. Doc. 90, 87th Congress, p. 19).

[4] For the effect of the new F.P.C. regulations, see page 980 below.

per customer, which is lower than in Citizens' recent successful experience in adding service to four other nearby communities (32T5354). The total for the three new towns comes to $305,000, which they plan to finance, one-half from company funds internally generated, the rest by a loan from the State of Wisconsin Investment Board at 5½ percent, Exs. 7A, 235. In all three cases, the town authorities have issued to Citizens a 50-year franchise, and the Illinois Commerce Commission has issued its certificate of convenience and necessity, specifically certifying to the public need and demand for gas service and giving evidence of the feasibility of the project.

Pesotum, a town of 500, has over 200 houses and two new developments started, which will have 250 homes. Perhaps overconservatively, Citizens Gas estimates only 104 residential customers in the third year, 120 in the fifth. As the system grows, the third-year net return of about 2 percent may be expected to increase. The peak day usage to be allowed for (which Citizens will supply out of its present allotment—27T4457) is 324 Mcf/d, which is reasonable for the number of homes in the area. The high usage per customer (2.62 Mcf/d) become only 1.9 when the two institutional customers are subtracted, which compares with 1.84 for Citizens' present seven towns. Ex. 8.

Hume is a residential community of 500 population, located just off the main line of Panhandle. With only ninety customers in immediate prospect, it does not give promise of a sustaining operation until the fourth or fifth year of growth. (Income figures in the table above are for the fifth year; for the other towns, third-year figures are used.) But there is less than a quarter-mile of lateral to install, the customers count and usage figures appear to be quite conservative, and the company is well established, with annual receipts exceeding $1 million, and can well absorb the outlays required during the necessary developmental period. 27T4517, Ex. 7A. In any event, the Illinois Commerce Commission, which has the primary responsibility and which was confronted with the identical project exhibits (32T5346), has issued its certificate of public convenience and necessity, and the question of public demand (as distinguished from the numerical *quantity* needed) and the question of feasibility—if not regarded as determined—should be accepted as satisfactorily proved and established. See page 19, above.

Tolono is a substantial town of 1,550 population, located less than a mile from Panhandle's branch line. On the basis of the markets predicted by Citizens Gas, the staff expresses the view (as in the case of Pesotum and Hume), that Citizens' return on the investment "would not be compensatory at the proposed rates and that a rate increase may ultimately be necessary" (Brief, pp. 10A, 6A, 2A). Nevertheless, (a) it is evident from a comparison of the figures in the table above that the market figures may be considerably understated; (b) Citizens' exhibit claims only 227 house customers in three years, while their house-to-house survey elicited 327 favorable responses (27T4485); (c) the heating saturation predicted in all three towns is slightly less than Citizens Gas' experience in their present seven towns; and (d) the state commission's certificate should allay any doubts, if any such remain, as to feasibility.

Illinois Power Company: This major distributing utility, with $401 million in assets and serving an area 200 miles wide, seeks a "7(a)" order for 102 Mcf/d (third-year) to serve 81 customers in Savoy, Illinois, a small residential suburb with 100 homes located three or four miles out of Champaign-Urbana, in the direction of the growth of the University of Illinois (2T206). It is likened, in fact, to a new subdivision which, except for the detail that a tap is needed off the Panhandle line, would be for consideration by FPC only as included in the utility's overall needs—at the time of the hearing Illinois Power had 17,694 on the waiting list for space heating (8T1356). The town cannot sensibly be

considered apart from the entire Champaign-Urban metropolitan area of 132,436, which has grown 25 percent in ten years, according to the census report cited. In any event, the Company is in a position to finance the investment of $57,500, the customer count is reasonable, and the expected return is adequate. It has a franchise and a state certificate, and no doubt is suggested by the data shown as to economics and feasibility.

LaCygne, Kansas is a rural community of about 900 population, located 55 miles south of Kansas City. The City has applied for a "7(a)" order upon Panhandle Eastern, which, though 17.4 miles away, is the most feasible source of supply.

Differing from the nine utility projects discussed above, this is to be a municipal operation. It does not have the benefit of a state commission certification; in fact, it was testified the state does not control either the inception or the subsequent operation (2T310; 29T4812, and see Kansas General Statutes 66–104). This removes the application from the class of cases in which the state commission's certificate establishes *prima facie* the economic feasibility.

Hence full inquiry was undertaken, with testimony from the Mayor, the consulting engineer, and the finance underwriter. There were especially explored a number of particular circumstances, namely (a) the cost of the lengthy transmission lateral; (b) the claim that 94 percent of the potential market would be sold, and at virtually 100 percent heating saturation; (c) the legal and finance fees totalling 5.38 percent and engineering at 7 percent; (d) the low cost planned for the distribution system itself ($166 per customer); and (e) the validity of the plans for bond issues.

In all its phases the program has the benefit of experienced engineers and underwriters. The engineering witness has installed eleven comparable projects, all of which have proved successful, and the market usage, and cost figures were derived in part from that experience. The finance witness also testified to the City's credit standing, his firm's experience in many similar undertakings, and their agreement to purchase the bonds.

While the program calls for an unusually long transmission lateral (17.4 miles), there was presented a contractor's firm bid at only $1.57 per foot for a 4 inch line, much less than such costs for the Illinois projects. Right of way cost is to be inconsequential, and there will be some customers en route. The same contractor has furnished an equally favorable bid for the distribution system, and there is a comparative study showing that the bid prices about equal the experience of seven other small communities.

The unusually high ratio of heating customer attachments is supported by (a) the town vote for a gas system, which was approved 255 to 49; (b) the factor that most houses there now heat with propane, which is more expensive; (c) the engineering firm's consistent pattern of experience in other communities in the locality in some of which, in fact, the consumers have signed up 100 percent for space heating, (2T222; 29T4820); and (d) the cost study showing a favorable margin under oil heating costs.

The financing is arranged in the form of general obligation bonds, $180,705 at 4¾ percent for twenty years, and 5 percent revenue bonds of $70,000 for thirty years. The First Securities Company of Wichita will purchase both issues, for a 4 percent fee (2T283). The record is to the effect that the amount of the first issue will not exceed the statutory debt limit (2T293). The annual net revenues—based on the sales predicted—are ample to provide a satisfactory coverage of the debt service charges, at a ratio of 1.79. It is evident that, before the citizens' vote on the project, they were made fully aware of the conceivable call upon the general taxpayers for possible support of the general obligation bonds (2T281; 29T4865).

Upon the facts stated, the predictions employed, and the several favorable judgments recited, the feasibility of the project may be regarded as satisfactorily demonstrated, but there may be subjoined the reminder that, quoting from 15 FPC 1421, at 1429, footnote 1:

> Of course, these findings do not constitute an endorsement of the foregoing projects, nor is endorsement given to any estimates, fees, or projected method or manner of operation contained in the engineering reports or shown by the testimony. Investors in the securities to be issued must exercise their own judgment upon these questions. As we stated *In re Carolina Natural Gas Corp.*, 10 FPC at page 515, "the Commission can assume no responsibility to potential buyers of securities with respect to the success or failure of a (local) distribution system."

See also 67 Public Utilities Fortnightly 281 (1961).

Louisville, Illinois: This is a municipal project, calling for an order upon the Trunkline Gas Company to make a connection with its line and sell 506 Mcf/d for the use of that town. Since it is a public project, it does not have the benefit of a state commission's certificate of convenience and necessity. However, the facts were fully developed and, as shown in the table above, establish *prima facie* a satisfactory operation.

Experienced engineers were employed, and their predictions of gas usage are based on the records in 37 more or less comparable projects. The estimate of 202 residential gas heating customers out of 402 homes in the area is acceptable on its face (30T4962), and is based on substantially complete conversion of the present users of propane and upon the assumption that nearly ⅓ of the oil heating residents will convert to gas by the third year, since the gas will be 27 percent cheaper (30T4949, 5002).

The construction cost is not patently out of line in view of the population and the customer potential. The total estimated cost of the project is $250,000, to be raised through five percent, 30-year, gas revenue bonds. The estimates of construction costs were raised about 25 percent over current bids "as a factor of safety." However, Louisville will be obligated to issue bonds only sufficient to cover the cost of actual construction (30T5019). Midwest Securities Company of Chicago will purchase the issue (3T471, 30T5022), at a discount of not more than ten percent, depending upon the bond market at the time. It is estimated that the discount will be probably very close to the ten percent limit (30T5019, 5028–5030), thus the actual interest rate to Louisville would be at 6.30 percent (30T5053). The debt service coverage ratio is 2.23, based on 30 years (Ex. 38, p. 15).

The town vote taken in accordance with the Illinois statutes (Ch. 24: 49-3) was 384 to 5 in favor of the municipal project and it was testified that the proposed rates and conversion costs had been publicized before the vote (2T352; 30T4944, 5062). The financing firm which has undertaken to buy the bonds has had wide experience in Illinois municipal projects, all of which were said to have proved successful and in fact it was testified, "There never has been a default in Illinois on any natural gas municipal system." (3T466, 30T5042).

The evidence establishes satisfactorily the economic feasibility of the project, the legal capacity of the village to engage in the function, the need for the gas service, and its desirability in the public interest. Trunkline stated on the record that it "has no objection." (123T20,054).

North Central Public Service Company for service to West Point, Iowa

History of the Application Before F.P.C.: The proposal of this company to serve West Point, Iowa, is part of a program that first came before the Federal

Power Commission, in the very present docket, seven years ago, at which time the North Central Public Service Company requested allocation of gas for service to West Point and two other towns in Iowa. The services were not to be from the same lateral, but the program was considered as a joint one. The application was not then rejected, but there were expressed some doubts about feasibility because of the expense of the lateral required to be built. The result was that the Commission's order of September 4, 1956, in this docket (G–2306, 16 F.P.C. 897, 902, 910) "deferred" decision on the joint project pending consideration of the policy question which arose as to whether the pipeline (Michigan Wisconsin) should share the burden of the cost of the laterals leading from its line to the city gates of prospective new distributor customers. At page 902 it is said, "Accordingly, it is appropriate that the question whether Michigan Wisconsin should be required to construct the laterals involved in the projects of Iowa Electric, Iowa Southern and North Central and these parties' related applications be deferred pending such further consideration."

Thereafter North Central made another presentation in this same case, through testimony and exhibits presented on May 28, 1957, also on July 16, 1957. The present, or third, phase of G–2306 (and its related docket in the name of the Michigan Wisconsin Pipeline Co., G–2327) began with the Commission's order of December 1, 1960, which is discussed at pages 11 and 12 above. Following the direction contained on page 20 of that order, North Central reasserted its interest as an intervener and at the time of its opening testimony in this case on February 17, 1961, 14T2308, reintroduced its proposal to serve the town of West Point. The admission of the exhibit was objected to by Panhandle Eastern on the basis of (a) irrelevance, (b) the lack of formal "7(a)" application, and (c) the lack of notice of the issue raised by the exhibit, that is, the need of the new community (14T2321). The exhibit was admitted, and with it the issue it raises, on the basis that the West Point proposal had been considered as a result of North Central's previous intervention in G–2306, G–2327, and the order of December 1, 1960, permitted prior interveners to participate in the present proceeding merely on the basis of filing a notice to that effect, which requirement North Central had complied with. The "law of the case" is found in the Commission's 1956 decision in this docket, 16 F.P.C. 897, 898, stating that in passing upon the request here, "No distinction need be made between the request for natural gas of Section 7(a) applicants and interveners. All such requests may appropriately be judged under the requirements of Section 7(a)."

The Applicant: The intervener which is requesting an order for a supply from the Michigan Wisconsin line is the North Central Public Service Company of St. Paul, a private utility serving a number of areas in Iowa and Minnesota as well as the city of Fort Madison in southeastern Iowa on the Mississippi River. North Central's proposal is to serve the small, nearby community of West Point, population 750, which is located a few miles inland from Fort Madison. Since there will be required a 4.6-mile lateral from the Michigan Wisconsin pipeline to reach West Point, also a new tap off the pipeline, the matter becomes involved before the Federal Power Commission and requires a certificate or order under Section 7 of the Natural Gas Act. Originally, the applicant sought also an increase in its daily contract supply from the line in order to supply the new area, but at the present hearings it agreed specifically that it could and would serve West Point out of its present daily quantity provided in its agreement with Michigan Wisconsin (14T2326, 2343, 44T7700). However, since the tap and other facilities are to be covered under a Section 7 order, North Central's request remains in the case for determination.

Local Authority: A local franchise was secured in 1955 and another in 1961, affirmed by a popular vote of 72–7 (Ex. 145–B). With respect to a state cer-

tificate, it is agreed that Iowa no longer, at least, maintains a state commission with jurisdiction in the present matter (37T6,498). Rather, each town issues the authority in the form of a non-exclusive franchise, but with local control retained over the rates (37T6,509, 186T29,345). Cf. Iowa Code, sections 474.10 and 490; 397.

Feasibility: The markets anticipated, as set forth in the table above, are well within the range to be expected; they are quite close to the figures attained in other towns in the general area (44T7,688, Ex. 145); and they are supported in part by a showing that gas heating will cost somewhat less than oil (44T7,650). The company is prepared to finance the construction (Ex. 145, p. 17), which will be carried out by North Central or by an affiliate (14T2,362). The connecting line is to be 4.6 miles long, but under its lateral-sharing program (as discussed below), the Michigan Wisconsin Pipe Line Company will build one-third of the distance, for about $26,000. Deducting that figure from the total costs of the project, the resulting investment per customer becomes a very modest $312, and the ratio of gross return to investment is over 13%.[5] Feasibility is satisfactorily established.

Wisconsin Power and Light Company for service to McFarland, Wisconsin

McFarland is a small but fast-growing residential suburb five or six miles out of Madison, Wisconsin, and only two miles from the Michigan Wisconsin pipeline. The town has enfranchised Wisconsin Power and Light Company—already the local electric utility—and that company, having now obtained a State certificate of public convenience and necessity, has requested an order from the Federal Power Commission for an attachment to the pipeline in order to serve 496 Mcf/d to 374 customers out of the population of 1,293.

Wisconsin Power and Light Company is a very substantial utility, serving 40,000 gas customers in 16 areas (16T2,570) and is in a position to finance the extension of service into McFarland (16T2,582, 67T11,340). The distributor serving Madison offers no opposition, saying only, "They have the franchise." (61T10,435).

The usage factors predicted appear normal, are based on the company's experience elsewhere, and contemplate attaching 80% of the potential market in three years, three-fourths of them for space heat. (It is noted that over half of the present householders are already propane users.) The company computes a 5½% rate of return (16T2,587). As in the case of West Point, Michigan-Wisconson agrees to the request for service (116T18,968).

No question as to economic feasibility appears from the facts stated and figures in the above table; in any event the state commission required a demonstration of feasibility (67T11,311, 186T29,475) and its certificate would allay any question, if any such there were. Note in this connection, the recent amendment to the Federal Power Commission Regulations Under The Natural Gas Act which eliminates a number of the exhibits required for a "7(a)" application *when* there is presented a state commission's certificate of public convenience and necessity. Regulations, section 156.5(a)(15). While this change was effective after the present case began and after the interveners made known their requests for gas service, it is necessarily to be inferred that the state certificate will be looked

[5] The net revenue of $8,750, on which this percentage depends, was obtained by subtracting from the gross receipts a computed share of the combined costs of operation of West Point and of another town. These costs, shown jointly, have been pro-rated according to the ratio of the respective gross receipts (Ex. 145, p. 20).

upon, in an otherwise proper case, as supplying the basic or *prima facie* showing for the purpose of which the omitted financial exhibits would otherwise be required. (See also page 975, above.)

Michigan-Wisconsin's lateral-sharing formula

One detail remains affecting West Point and McFarland, which are to be served from the Michigan-Wisconsin line. It relates to the cost of the laterals from those towns to the line, 4.6 and two miles, respectively. Staff witness Johnson proposes the application of a formula, apparently peculiar to Michigan-Wisconsin but applied in quite a number of cases in recent years, under which the pipeline company is called upon to underwrite or contribute to the cost of the lateral up to a certain sum, as determined by the formula. Unclear—indeed eseteric—in its details, what it results in is a figure of two-thirds of a dollar for each Mcf in the annual sales to the distributor which are in view for third year of operation. For North Central this could mean about $26,000, or one-half of its lateral cost to West Point. For Wisconsin Power and Light, it may approximate $40,000, or about all of its cost.

North Central counts on this cooperation, to insure the project's feasibility (14T2,362, 37T6,522, Ex. 145, p. 22). The Wisconsin firm at first disclaimed interest in it, apparently feeling it would lead to controversy and delay, but later indicated it would accept the arrangement if offered (16T2,584, 67T11,321, 11,333).

Michigan-Wisconsin equivocates even more. At least one policy statement at the hearing disclosed that the formula was fully expected to apply (116T18,968). Other statements dispute its application here because the orders contemplate no direct, specific increase in the daily quantity which the distributor expects to sign up and pay for. (44T7,752, 186T29,498). Finally, in its reply brief filed March 29, 1962, Michigan-Wisconsin comes to the conclusion—as nearly as it can be divined—that it does not object to an order specifying the formula so long as it is not to be regarded as contradicting its objection in principle, as just noted.

It may be the objection has its proper place in a proper case, but not here. For both towns, the new taps and the new laterals will open up entirely new markets to the service of Michigan-Wisconsin, in areas not now served at all, with new customers in homes and establishments not now using natural gas, whose needs, modest though they be comparatively, will now have to be considered in the pipeline's total program. Thus the objection loses force and reality. Both distributors will be seeking higher contract quantities, and the new market areas will contribute to their proof of need and ability to pay.

Accordingly, in line with numerous precedents,[6] the formula will be here applied, but it cannot be stipulated that this action will not later be listed as a precedent for cases where the new laterals open up new and otherwise unreachable market areas and thus, in the long run, necessarily result in increased daily contract quantities.

FINDINGS AND CONCLUSIONS

Upon consideration of the evidence, it is further found and concluded that:

(1) Michigan Wisconsin Pipe Line Company, Panhandle Eastern Pipe Line Company and Trunkline Gas Company are "natural-gas companies" within the meaning of the Natural Gas Act. Each is respectively the most feasible source of supply for the several applicants herein.

---

[6] 21 FPC 552, 558; 22 FPC 1157; 24 FPC 177, 181; and see *Michigan Gas and Electric Company* v. *F.P.C.* (CADC 1961), 290 F. (2d) 374, n. 1.

(2) Each of the following applicants, namely:

Central Illinois Electric and Gas Company;
Central Illinois Light Company;
Citizens Gas Company;
Illinois Power Company;
North Central Public Service Company;
Wisconsin Power and Light Company;
City of LaCygne, Kansas;
Village of Louisville, Illinois,

is a "person or municipality legally authorized to engage in the local distribution of natural gas to the public" within the purview of Section 7 of the Natural Gas Act.

(3) The extension of transportation facilities, the establishment of physical connection, and the sale of natural gas by the companies set forth in finding No. (1) to the distributors or municipalities set forth in finding No. (2), will not place an undue burden upon the companies set forth in finding No. (1), or impair their ability to render adequate service to their customers.

(4) It is necessary and desirable in the public interest that Panhandle Eastern Pipe Line Company be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by and to sell up to the following natural-gas requirements to:

	Per day
	Mcf
Central Illinois Electric and Gas Company:	
Catlin, Illinois; Mt. Pulaski, Illinois; San Jose, Illinois, total	1,655
Central Illinois Light Company:	
Sherman, Illinois	271
Williamsville, Illinois	553
Citizens Gas Company:	
Hume, Illinois	143
Tolono, Illinois	584
Illinois Power Company: Savoy, Illinois	102
City of LaCygne, Kansas	524

(5) Panhandle Eastern Pipe Line Company should be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Citizens Gas Company for the delivery of natural gas in the Village of Pesotum, Illinois.

(6) Trunkline Gas Company should be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by and to sell up to the following quantity of natural gas to:

	Per day (Mcf)
Village of Louisville, Illinois	506

(7) Panhandle Eastern Pipe Line Company should be directed to decrease the volume of gas which it has been required to deliver to Michigan Consolidated Gas Company (by orders of the Federal Power Commission, issued July 28, 1961, and September 22, 1961, in these proceedings) by the volume of gas for new service which it is ordered to deliver to the persons or municipalities set forth in finding No. (4), and by the amount which Trunkline Gas Company is ordered to deliver to in finding No. (6).

(8) Michigan Wisconsin Pipe Line Company should be directed to establish physical connection of its facilities with those proposed to be constructed by North Central Public Service Company for the service of natural gas in West

Point, Iowa, and with those proposed to be constructed by Wisconsin Power and Light Company for the service of natural gas in McFarland, Wisconsin.

(9) Michigan Wisconsin Pipe Line Company should be directed to improve and extend its transportation facilities to the extent determined by the application of the lateral-sharing formula as herein provided, and to establish and maintain physical connection of its transportation facilities as set forth in finding No. (8) in accordance therewith.

ORDER

WHEREFORE, It is ordered, subject to review by the Commission, that:

(A) Panhandle Eastern Pipe Line Company establish physical connections of its transportation facilities with the facilities proposed to be constructed, as set forth in findings Nos. (4) and (5), sell and deliver the additional volumes of natural gas set forth in finding No. (4), and make the delivery for Pesotum referred to in finding No. (5).

(B) Panhandle Eastern Pipe Line Company decrease by 4,338 Mcf per day the volume of natural gas which it has been required to deliver to Michigan Consolidated Gas Company, as set forth in finding No. (7).

(C) Trunkline Gas Company establish physical connection of its transportation facilities with the facilities proposed to be constructed and sell and deliver the required volumes of natural gas, as set forth in finding No. (6).

(D) Michigan Wisconsin Pipe Line Company improve and extend its transportation facilities to the extent determined by the application of the lateral-sharing formula as herein provided and set forth in finding No. (9), establish and maintain physical connections of its transportation facilities with the facilities proposed to be constructed, and deliver and sell natural gas, as set forth in finding No. (8), but Michigan Wisconsin Pipe Line Company is not by this order required to sell additional quantities to those named in finding No. (8).

WILLIAM L. ELLIS,
Presiding Examiner.

ADDENDUM

On Friday, April 6, after the foregoing had been prepared and its distribution was in process, there was received the Staff's—

MOTION FOR LEAVE TO FILE ANSWER TO REPLY BRIEF OF MICHIGAN WISCONSIN PIPE LINE COMPANY, AND, IN THE ALTERNATIVE, MOTION TO STRIKE PORTIONS OF REPLY BRIEF OF MICHIGAN WISCONSIN PIPE LINE COMPANY

The motion is denied on the grounds—

(a) *Procedural:* The briefing schedule as arranged on March 1, 1962 (186T29,506, 29,509, 29,514, 29,521, 29,528 and 29,529), called for initial briefs by March 15 and any reply briefs by March 29. As particularly pointed out by the Staff, this program did not contemplate reply briefs *to* reply briefs (186T29,526). Also, the reply brief of Michigan Wisconsin does not raise its objection for the first time—in fact it was brought up at least as early as the hearing of the Staff witness on March 1, 1962, 186T29,498.

(b) *Substantive:* The motion appears to pertain to the lateral-sharing formula of Michigan Wisconsin. All parties are in agreement as to the application of the formula in this case, and that application is provided for in the conclusions above-stated. Hence any discussions about precedents or limitations are moot and immaterial.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–16235; EL PASO NATURAL GAS COMPANY DOCKET NO. G–16237; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–16904

ORDER DENYING MOTIONS TO OMIT INTERMEDIATE DECISION AND DIRECTING THE PRESIDING EXAMINER TO MAKE FINDINGS

(Issued May 17, 1962)

1. We have before us for consideration motions by El Paso Natural Gas Company and Colorado Interstate Gas Company, Idaho Public Utilities Commission, Washington Utilities and Transportation Commission, and Public Service Commission of Wyoming to omit the intermediate decision by the presiding examiner in the above proceeding. Those motions are supported by some of the interveners, namely Natural Gas Pipeline Company of America, Public Service Company of Colorado, Southern California Gas Company and Southern Counties Gas Company of California, City of Colorado Springs, and City of Pueblo; and they are opposed by other interveners, namely Tennessee California Gas Company (Tenn-Cal) and California Gas Transmission Company (CalGas), Southern California Edison Company, Transwestern Pipeline Company, the oil companies, and the Commission's staff.

We have given careful consideration to the arguments supporting and opposing waiver of the intermediate decision. We fully recognize the public interest which favors expediting the determination of this proceeding, particularly as it relates to the needs of Colorado Interstate Gas Company for early action to improve existing facilities for serving its customers in the Rocky Mountain area. But even assuming that we could legally waive the intermediate decsion, in view of the fact that the proceeding involves *inter alia* abandonment applications (See *Chotin Towing Corp.* v. *F.P.C.*, 250 F. 2d 394 (C.A.D.C.)), we do not believe that, even in the absence of the additional complications referred to below, this is the type of proceeding in which we could effectively perform our decisional function in the absence of a recommended decision by an examiner who is more familiar than we are with the extensive record in the case. We shall therefore deny the motions to omit the intermediate decision in this proceeding.

2. We believe, however, that we are in a position at this time to bring to a head for early determination the important question of whether this proceeding can be decided independently of the pending proceeding regarding the Pemex project, *Southern California Edison Co., et al.*, Docket Nos. CP61–172, *et al.* In our order of September 13, 1961, in this proceeding in which we permitted Tenn-Cal and CalGas to intervene, we made clear that we had not decided and were not then deciding the ". . . question of mutually exclusivity of the Rock Springs project and the Pemex project and of the applications involved in them, respectively." But we also made clear that since Southern California Edison Company (Edison) is one of the largest customers of the Southern California Gas Company (Southern) which would be served by the Rock Springs project, and since one of the major objectives of the Pemex project is to provide Edison with a source of gas supply independent of Southern, it would be necessary for El Paso to adduce evidence in the reopened Rock Springs proceeding showing whether or not that project would be economically feasible on the assumption that Edison might cease to be a customer of Southern. Evidence with respect to this issue has presumably been introduced into the record in this proceeding.

We have given further consideration to the relationship between the Rock Springs and Pemex projects in the light of the decisions of the courts in such

cases as *Ashbacker Radio Company* v. *F.C.C.*, 326 U.S. 327 : *Midwestern Gas Transmission Co.* v. *F.P.C.*, 258 F. 2d 660, 666–668 (C.A.D.C.) ; *Delta Airlines, Inc.* v. *C.A.B.*, 228 F. 2d 17 (C.A.D.C.) ; and *Delta Airlines, Inc.* v. *C.A.B*, 275 F. 2d 632, cert. denied, 362 U.S. 969. It is our opinion that, even assuming that we might grant the applications in the Rock Springs project if we should determine that that project would be economically feasible and otherwise consistent with the public interest were Edison to be lost as a customer to the companies receiving gas from the Rock Springs project, such action might prejudice the rights of the applicants in the pending Pemex proceeding by resulting in a changed factual situation having a substantial adverse impact upon the likelihood that we could subsequently grant the applications involved in the *Pemex* case. Specifically, we are of the opinion that if the record in Rock Springs indicates there would be a substantial excess capacity in the Rock Springs pipeline for a number of years following its completion (assuming that Southern California Edison is lost as a customer to Southern California Gas Company) this would be a factor which we would necessarily have to take into account in determining whether the public interest would be served by also granting the applications for the Pemex project.

Such a situation would, in our opinion, bring the present proceedings within the ambit of the *Ashbacker* rule, and require, or at least make advisable, simultaneous consideration of the two proceedings rather than any determination of Rock Springs in advance of Pemex. We recognize, of course, that it might eventually develop that either Rock Springs or Pemex, or both, should be denied on their own merits, irrespective of the impact of the other proceeding, or, conversely, we might eventually determine that both projects should be granted. But as we understand the *Ashbacker* rule, which is essentially a rule of basic fairness, it prescribes that there should be joint consideration of two applications not only where it can be determined in advance that they are in fact mutually exclusive, but also whenever it appears that prior action on one will seriously jeopardize the chance of the other being granted. As the court of appeals stated in *Midwestern Gas Transmission Co.* v. *F.P.C.*, *supra*, at p. 668, "The Commission should not adopt procedures that foreclose full inquiry into broad public questions, either patent or latent."

While there are a number of factors which might make a comparative determination necessary or advisable here, and while the *Midwestern* case, *supra*, at 670, emphasizes that this problem is not to be limited to "issues pressed by the applicants", there is one area where we believe we may be in a position to determine now that comparative consideration of Pemex and Rock Springs should be ordered. Accordingly, we shall direct the examiner to submit to the Commission and serve upon the parties and staff counsel within 30 days from the date of issuance of this order a special finding with respect to the extent and nature of the excess pipeline capacity, if any, now available to serve California. Such finding should deal also with the extent and nature of the excess capacity, if any, which could be expected to exist as a result of the certification by the Commission of the Rock Springs project, and also in the event that Edison ceases to be a customer of Southern and other companies which would be served from the Rock Springs project. Such finding should set forth the excess pipeline capicity, if any, which would exist at the time of the completion of contruction and at various periods thereafter to the extent that the record provides a basis for such estimates.

Since this finding is not to be used in deciding whether to grant or deny the applications in this proceeding, but merely to assist the Commission in determining whether or not to consolidate this proceeding, with the Pemex proceeding, it

is not believed that the provisions of Sections 7 and 8 of the Administrative Procedure Act are applicable. However, upon receipt of the examiner's special finding, which of course will be a part of the record in this proceeding, we shall afford all of the parties to the proceeding a period of 20 days within which to file such pleadings, statements of position or written argument as they may wish directed either to the factual finding made by the examiner or to the legal question of whether in the light of such finding a comparative consideration of the Rock Springs and Pemex projects is required.

3. In addition to the foregoing, a separate problem relating to the future of this proceeding has been raised by the decision of the Supreme Court on April 30, 1962, in *People of the State of California* v. *Federal Power Commission*, No. 187, October Term 1961. In that case the Court reversed the action of the court of appeals in affirming our granting approval of the acquisition by El Paso of the assets of Pacific Northwest Pipeline Corporation, holding that the Commission should have awaited the decision in the pending antitrust action against El Paso before concluding action on El Paso's application to acquire the assets of Pacific Northwest. We shall deal subsequently with the general problem of the manner in which the mandate of the court should be complied with pending resolution of the antitrust action. But insofar as the present proceeding is concerned, it is evident in the light of the Supreme Court's action in the *California* case, *supra*, that for the foreseeable future we will be unable to determine whether the Rock Rock Springs project should be considered as a project of El Paso Natural Gas Company (including Pacific Northwest), or whether it will have to be considered as a project of a reconstituted Pacific Northwest. For it seems clear that this project (which was initiated at a time when Pacific Northwest Pipeline Corporation was a corporate entity) relates directly to that part of the present El Paso system which previously was a part of Pacific Northwest, and, presumably, would be a part of a reconstituted Pacific Northwest.

We could, of course, await the final resolution of the status of the El Paso-Pacific Northwest merger before attempting to resolve that question. However, the Commission does not wish to add avoidable delays to the unavoidable ones. We believe, therefore, that it is in the public interest that to the extent feasible, we ascertain now whether the record in this proceeding is sufficient to serve as a basis for a decision on the merits of the applications here involved regardless of whether Pacific Northwest is reconstituted as a corporate entity or remains merged into El Paso.

We shall, therefore, direct the examiner to make and file with the Commission and serve on the parties and staff counsel at the same time he files his special finding described in paragraph 2 above, a finding in writing as to whether the record does contain sufficient information to form the basis of a decision on the merits of the applications, assuming that Pacific Northwest will be reconstituted as a separate corporation apart from the El Paso system. As in the case of the special finding, we shall permit the parties to the proceeding to submit pleadings, statements of position or written comments directed to the examiner's determination of this issue, as well as to submit comments relative to the feasibility and the advisability of reopening the record to introduce such further evidence as they might deem to be necessary with respect to the ability and willingness of a reconstituted Pacific Northwest to undertake the Rock Springs project, and also as to whether grant of any such authority to a reconstituted Pacific Northwest would serve the public interest.

Upon careful consideration of the arguments for and against the motions to omit the examiner's decision, we find that the public interest requires that said motions be denied.

The Commission orders:

(A) All motions to omit the examiner's intermediate decision in this proceeding are hereby denied.

(B) The presiding examiner to submit to the Commission and serve upon the parties hereto and the Commission's staff counsel, within 30 days after the issue date of this order, a special finding in writing with respect to excess gas pipeline capacity, if any, available to serve California markets as described in paragraph 2, above, and, simultaneously, a finding in writing as to whether the record in this proceeding is sufficient to form the basis of a decision on the merits of the applications in this proceeding, assuming that the Pacific Northwest Pipeline Corporation will be reconstituted apart from the El Paso system, as described in paragraph 3 above.

(C) All parties to the proceeding and staff counsel to file within 20 days of issuance of the examiner's special findings with the Commission and serve upon other parties and staff counsel such responses as they deem necessary, within the purview of this order, to the special findings of the examiner.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

KANSAS GAS AND ELECTRIC COMPANY, DOCKET NO. E-7033

ORDER AUTHORIZING ISSUANCE OF COMMON STOCK

(Issued May 17, 1962)

Kansas Gas and Electric Company (Applicant), a corporation organized under the laws of the State of West Virginia and doing business in the State of Kansas, with its principal business office at Wichita, Kansas, filed an application on April 3, 1962 for authority, pursuant to Section 204 of the Federal Power Act, to issue 2,350,000 additional shares of Common Stock, without par value, for a reclassification, or split, of the outstanding Common Stock of Applicant.

Applicant proposes, subject to the approval of its Common Stockholders: to increase the number of shares of Common Stock authorized to be outstanding from 4,000,000 to 8,000,000; and, to split on a two-for-one basis the Common Stock presently outstanding in the amount of 2,350,000 shares, without par value, through the issuance to each Common Stockholder of record at the close of business on May 23, 1962 of one additional share of Common Stock for each share held. The aggregate capital represented by Applicant's Common Stock will not be changed as a result of the proposed two-for-one split.

Applicant states that the proposed Common Stock split should result in a broadening of public interest in Applicant's Stock, an increase in the number of Stockholders, and a greater availability of shares of its Common Stock for purchase and sale.

Written notice of the application has been given to the State Corporation Commission of Kansas and to the Governor of that State. Notice has also been given by publication in the Federal Register on April 13, 1962 (27 F.R. 3574), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before May 2, 1962, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

736-330—64——65

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued December 31, 1959, *In the Matter of Kansas Gas and Electric Company*, Docket No. E–6914 (22 FPC 1191).

(2) The proposed issuance of Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204 (f) of the Act, and the proposed issuance of Common Stock, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(1) thereof.

(5) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Common Stock, as described above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized, subject to the provisions of this order.

(B) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever which is now pending or which hereafter may come before this Commission or any other regulatory body.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NOS. G–17296, G–19087, AND G–20109

ORDER DENYING APPEAL FROM RULING OF PRESIDING EXAMINER[1]

(Issued May 17, 1962)

Pursuant to Commission order issued herein on November 21, 1961, and upon a hearing date fixed by notice from the Secretary, the hearing in these consolidated proceedings in which 15 parties are participating began on May 1, 1962.

---

[1] Motion requesting recess and settlement conference is herein considered as an appeal from a ruling of the Presiding Examiner under Section 1.28 of the Commission's Rules of Practice and Procedure.

These proceedings under Section 4 of the Natural Gas Act involve determination of the just and reasonable rates and charges for natural gas supplied by New York State Natural Gas Corporation (New York Natural) to its customers from facilities extending 470 miles from the West Virginia-Pennsylvania border northeastward into New York State as far as Albany.

Conferences for the settlement of these proceeedings have heretofore been held and have failed to achieve settlement.

The prepared testimony and exhibits of New York Natural were served on March 1, 1962. As an aid to expeditious hearing, the staff serviced its prepared testimony and exhibits prior to the commencement of the hearing.

On May 2, 1962, at the outset of cross-examination of New York Natural's witnesses counsel for North Penn Gas Company (North Penn) adverting to the availability of the staff's case and the aid thereby afforded, moved by oral statement that the hearing be recessed for the purpose of entering upon a settlement conference. The Presiding Examiner denied said motion and stated his reasons therefor at transcript pages 579 through 582, which pages have been certified to the Commission.

On May 3, 1962, North Penn filed with the Commission its motion requesting recess and settlement conference. Thereafter on May 4, 1962, the Presiding Examiner further explained his reasons for denial of North Penn's oral motion at this time which Movant seeks to have overruled. The explanation is set forth on transcript pages 732 through 749 which have been certified to the Commission. North Penn's motion is here considered as an appeal to the Commission from a ruling of the Presiding Examiner under Section 1.28 of the Commission's Rules of Practice and Procedure.

In substance, the Presiding Examiner considered that upon the basis of the record then existing and his examination of the two cases served upon the parties, a settlement conference at that juncture was premature. It is the Examiner's view that more than dollars and the distribution of a cost of service among the customers is in issue; that the explanation of the failure of prior settlement conferences lay in certain ill-defined issues and neglect of issues; and that more could be accomplished in the way of expediting either settlement or conclusion of the hearing by continuing through the complete cross-examination of New York Natural's case.

It is the Commission's policy to encourage settlements which promote the public interest. However in this instance the Presiding Examiner evidently finds the inter-corporate relationships among New York Natural and its affiliates as well as the operating mechanism of New York Natural to be unusually complex. It appears that such complexity runs, among other things, to accounting matters, to past certifications of public convenience and necessity, and to problems of disparity in rates and charges to affiliated versus non-affiliated customers. In short, the Presiding Examiner finds need for discovery of issues, for clear definition of issues and for the development of evidence by formal procedure prior to any settlement conference. This objective promises to serve not only a settlement conference but also expeditious disposition of the case if any subsequent settlement conference were to fail. Thus it appears that the Presiding Examiner has properly set a course for either settlement or disposition of the case by hearing and decision.

The Commission finds:

Good cause has not been shown for overruling the Presiding Examiner's denial of North Penn Gas Company's oral motion for a recess and settlement conference and the appeal therefrom, filed with the Commission should be denied.

The Commission orders:

North Penn's motion requesting recess and settlement conference, filed herein on May 3, 1962 is hereby denied.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-132

ORDER DENYING MOTION TO OMIT INTERMEDIATE DECISION PROCEDURE

(Issued May 17, 1962)

On April 12, 1962, Northern Natural Gas Company (Northern) filed a motion to omit the intermediate decision procedure herein.

Said motion recites that the Commission has twice passed upon this matter. In its order of October 20, 1961, denying Northern's motion for the waiver and omission of the intermediate decision, we determined that there was shown no reason to depart from the practice we had followed in other proceedings presenting complex issues such as are involved herein. In such cases we found it preferable to have an initial decision by the Presiding Examiner. In our order of November 30, 1961, we denied Northern's motion for reconsideration of the denial of waiver and omission. Northern alleges that four and one-half months have elapsed since the Commission's order of November 30, 1961, and since that date the Presiding Examiner has had the case before him ripe for decision.

Northern alleges that its offer of settlement involving a reduction of $1,000,000 in the effective zoned demand charges for contract demand and pipeline service rendered by Northern under its effective FPC Gas Tariff still stands. Northern asserts that this benefit as well as other benefits flowing from the authorization to make deliveries to the Bushton extraction plant of Northern Gas Products Company cannot and will not accrue unless Northern is issued a certificate in this proceeding.

Northern also incorporates the reasons set forth in its two original motions.

Telegraphic responses favorable to said motion have been received from Iowa Electric Light and Power Company, Iowa Illinois Gas and Electric Company, and Minnesota Valley Natural Gas Company, which latter company thereby accepts Northern's proposed settlement, without prejudice to Minnesota Valley's position in this matter.

Mid-America Pipeline Company (Mid-America) on April 20, 1962, filed a response urging the Commission to deny Northern's motion and asserting that the motion is filed untimely under the Commission's Rule 1.30(c)(3) which provides as follows:

> (3) Requests for waiver and omission of the intermediate decision procedure shall be by motion filed with the Commission at any time during, *but not later than five days next following, the conclusion or adjournment sine die of the hearing;* shall be in writing under oath, subscribed and verified; and shall in all other respects conform to the requirements of §§ 1.12 and 1.15 to 1.17, inclusive . . . (Emphasis supplied.)

Mid-America also alleges that Northern's third motion states no reasons which have not already been considered and rejected by the Commission. It alleges further that Northern's proposed $1,000,000 reduction in rates is merely an offset to the customers for the reduced Btu value of the gas which will be delivered to them, should the Commission grant Northern a certificate.

The Commission, having fully considered Northern's motion and the responses thereto, finds:

Northern's motion sets forth no new facts or reasons for omission of the intermediate decision procedure which have not been fully considered by the Commission when it issued the previous orders on Northern's two earlier motions. The public interest will be best served by having an intermediate decision by the Presiding Examiner. In addition, said motion is filed out of time.

The Commission orders:

The motion to omit intermediate decision procedure filed by Northern Natural Gas Company on April 12, 1962, be and the same is hereby denied.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

ORDER DENYING APPLICATIONS FOR REHEARING AND STAY

(Issued May 17, 1962)

Applications for rehearing of our order issued in the above-captioned consolidated proceeding on March 21, 1962, 27 FPC 551, have been filed under Section 19(b) of the Natural Gas Act (Act) and Section 1.34 of the Commission's Rules of Practice and Procedure by The Atlantic Refining Company in Docket No. G–18572 on April 20, 1962, and jointly by Hunt Oil Company and Hassie Hunt Trust in Docket Nos. G–16737 and G–16763, respectively, on April 19, 1962.

Among other things, our order issued permanent certificates of public convenience and necessity to said Applicants in Docket Nos. G–16737, G–16763, and G–18572, pursuant to Section 7(c) of the Act, authorizing the sale of natural gas from North Louisiana in interstate commerce by Applicants at 16.5 cents per Mcf at 15.025 psia, plus tax reimbursement of 1.75 cents per Mcf, to United Gas Pipeline Company for resale.

Applicants object to the attachment of the condition to our order which reduces the initial price in their gas sale contracts from 18.5 cents per Mcf. at 15.025 psia, exclusive of tax, to 16.5 cents per Mcf at 15.025 psia plus 1.75 cents tax reimbursement. The contentions of Applicants are not new, are without merit and should be denied. The application for rehearing filed by The Atlantic Refining Company includes an unsupported motion for a stay of the effectiveness of our order of March 21, 1962, insofar as it relates to that company. This motion should be denied.

The Commission finds:

(1) The assignments of error and grounds for rehearing relied upon by Applicants in their applications for rehearing set forth no new facts or principles of

law which were not fully considered by the Commission when it issued its order or which, having now been considered or reconsidered, warrant any change or modification of said order or of the terms and conditions set forth therein.

(2) The motion of The Atlantic Refining Company for a stay should be denied as hereinafter ordered.

The Commission orders:

The applications for rehearing filed by Applicants and the motion for a stay filed by the Atlantic Refining Company are hereby denied.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NOS. CP61-328 AND CP62-86

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 17, 1962)

On June 19, 1961, as supplemented on June 19, 1961, and as amended on January 17 and February 26, 1962, Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP61-328 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 120 (amended figure) miles of transmission purchase lateral pipelines; one 4,320 (amended figure) horsepower compressor station; and six purchase meter and regulator stations, with appurtenant equipment, for the purpose of receiving and transporting natural gas to be purchased by Transco from certain independent producers thereof in Blocks 129 and 131, Vermilion Area, Blocks 23 and 48, South Marsh Island Area, and Block 169, Ship Shoal Area, all offshore Louisiana, as more fully set forth in the application, as supplemented and amended.

The estimated total capital cost of the aforesaid facilities to be constructed by Transco under the application in Docket No. CP61-328 as amended, is $17,670,000.

Said proposed facilities are intended to connect additional sources of natural gas to augment Transco's system supply available to serve existing customers.

On October 2, 1961, as amended on February 5, 1962, Transco filed in Docket No. CP62-86 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 198 miles of main transmission line loop pipeline; 46,800 horsepower of compression in existing main line stations; 28 miles of loop pipeline and 2,000 horsepower of compression in an existing station on the Central Louisiana Gathering System; 26 miles of loop pipeline and 7,900 horsepower of compression on the Southeast Louisiana Gathering System; and 4,320 horsepower of compression in a proposed new station on the McMullen Gathering System; together with appurtenant facilities; all to be utilized for the purpose of rendering additional natural gas service of 102,127 Mcf per day to 32 existing customers of Transco, all as more fully set forth in the application, as amended.

The estimated total capital cost of the facilities proposed to be constructed by Transco under the application in Docket No. CP62-86, as amended is $54,000,000.

Transco proposes to finance the projects in the subject Docket Nos. CP61-328 and CP62-86 through the issuance of $80,000,000 of long-term securities, a portion of the proceeds of which is to be used to finance other facilities authorized by or pending before the Commission.

Temporary authorization to construct certain of the facilities proposed under the application in Docket No. CP61–328 has been granted by the Commission.

Pursuant to due notice, a public hearing was held in Washington, D.C. on May 10, 1962, respecting the matters involved in and the issues presented by the applications herein. A number of petitions to intervene and notices of intervention in either or both of the subject applications have been filed by various interested companies and State commissions, some of which have been supplemented or amended. In all cases, the burden of such filings has been that the petitioners did not request formal hearings in these proceedings and did not object to the hearing and disposition of the subject applications of Transco under the shortened procedure provided for by the Commission's Rules, but that each petitioner desired to preserve its rights to appear and participate fully in the event that these matters should be set for formal hearing. Inasmuch as the abridged hearing procedure is being used herein, no further action on the various intervention petitions appears necessary.

No protests to the granting of the applications having been received, and no other appearances having been entered at the hearing, staff counsel moved orally that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The facilities to be constructed by Transco, as hereinbefore described and as more fully described in the applications, as supplemented and amended, in Docket Nos. CP61–328 and CP62–86, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Transco's existing pipeline system and the construction and operation thereof by Transco are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Transco is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Transco in Docket Nos. CP61–328 and CP62–86 are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Transco's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of such regulations (except that paragraphs (a) and (c)(1) do not apply to the temporarily authorized portion of Docket No. CP61–328). Transco should be required to complete and place in actual operation the facilities hereinafter authorized in Docket No. CP62–86 within one year from the date on which this order issues, and the facilities hereinafter authorized in Docket No. CP61–328 within two years from the date on which this order issues.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Transcontinental Gas Pipe Line Corporation to construct and operate the facilities hereinbefore described, all as more fully described in the respective applications, as supplemented and amended, in Docket Nos. CP61–328 and CP62–86, for the transportation and sale of natural gas in interstate commerce as therein set forth, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Transco's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations except that paragraph (a) and (c)(1) do not apply to the temporarily authorized portion of Docket No. CP61–328). Transco shall complete and place in actual operation the facilities hereinabove authorized in Docket No. CP62–86 within one year from the date on which this order issues, and the facilities hereinabove authorized in Docket No. CP61–328 within two years from the date on which this order issues.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP62–197

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 18, 1962)

On February 20, 1962, Alabama-Tennessee Natural Gas Company (Applicant) filed in Docket No. CP62–197 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation and operation of an additional 350 horsepower compressor unit on a standby basis in Applicant's Decatur Compressor Station in Limestone County, Alabama, all as more fully set forth in the application.

In the event of a breakdown of the existing compressor unit in the Decatur Compressor Station, the proposed facilities will insure continuity of service for those customers of Applicant located east of the compressor station.

No additional supply of natural gas is required and no increase in the peak day deliverability of Applicant's system is contemplated by the installation of the subject facilities.

The proposed facilities are estimated to cost $105,000, which will be financed from funds on hand or cash generated from internal sources.

Pursuant to due notice, a public hearing was held in Washington, D.C. on May 10, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Alabama-Tennessee Natural Gas Company, a Delaware corporation having its principal place of business in Florence, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 2, 1948, in Docket NO. G–585 (7 FPC 257).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the facilities as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Alabama-Tennessee Natural Gas Company, to construct and operate the proposed facilities and to transport natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within four months from the date on which this order issues.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP62-177

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 18, 1962)

On February 2, 1962, East Tennessee Natural Gas Company (Applicant) filed in Docket No. CP62-177 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 1.21 miles of 2-inch lateral pipeline and a meter station in order to render natural gas service on an interruptible basis, from its existing 12-inch transmission line to Olin Mathieson Chemical

Corporation (Olin) for use in Olin's new plant near the City of Charleston, Tennessee.

Pursuant to a contract, dated January 1, 1962, between Applicant and Olin, Applicant will deliver up to 360 Mcf[1] of natural gas per day. The application shows Olin's estimated annual requirements to be 50,000 Mcf and 60,000 Mcf of natural gas during the first and second years of service, respectively, and 70,000 Mcf per year thereafter.

Olin will use natural gas as a fuel in the production of liquid chlorine. Applicant states that natural gas was selected as the major fuel because of its availability at a steady reliable pressure.

The estimated cost of the proposed facilities is $23,100, which cost will be financed from general operating funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 7, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knox County, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 3, 1949, in Docket No. G–1065 (8 FPC 836).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant to Olin are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, East Tennessee Natural Gas Company, to construct and operate the proposed facilities and to transport and deliver to Olin Mathieson Chemical Corporation up to 360 Mcf of natural gas per day,

[1] At 14.9 psia and 1,000 BTU.

on an interruptible basis, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issue by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 3 months from the date on which this order issues.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP62-121; UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62-134

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 18, 1962)

On November 14, 1961, as supplemented on January 16 and March 30, 1962, Natural Gas Pipeline Company of America (Natural) filed in Docket No. CP62-121 an application pursuant to Section 7(c) of the Natural Gas Act (Act) for a certificate of public convenience and necessity authorizing the construction and operation of certain additions to its transmission pipeline facilities in order to make increased deliveries of natural gas to nine existing customers for resale in existing market areas beginning during the 1962-1963 winter heating season, all as more fully set forth in the application, as supplemented.

The proposed new facilities consist of approximately 167 miles of 30-inch pipeline partially looping existing pipeline in Texas, Arkansas, Missouri and Illinois; approximately 57 miles of 36-inch pipeline partially looping existing pipeline in Kansas, Nebraska, Iowa and Illinois; approximately 1.40 miles of 16-inch lateral supply pipeline in Polk County, Texas; approximately 15 miles of 6-inch lateral supply pipeline in Jim Hogg and Zapata Counties, Texas; two new booster compressor stations in Polk County, Texas, and Stephens County, Oklahoma, with a total of 1,610 BHP installed; one new compressor station in Will County, Illinois, with 6,000 BHP installed; and the necessary measuring and other appurtenant facilities.

The subject proposal would increase Natural's system capacity by 94,500 Mcf per day, at an estimated total cost of $26,891,000, which would be financed through funds to be derived from the issuance and sale of bonds, with bank loans providing interim funds as needed.

On November 27, 1961, as supplemented on January 15, 1962, United Gas Pipe Line Company (United) filed in Docket No. CP62-134 an application pursuant to Section 7(c) of the Act for a certificate of public convenience and necessity authorizing the construction and operation of certain minor pipeline and metering facilities at United's Goodrich Compressor Station, Polk County, Texas, and the sale and delivery by means of said facilities of up to 50,000 Mcf of natural gas per day to Natural Gas Pipeline Company of America for resale. The estimated total cost of United's proposed facilities is $35,270, to be financed from current working funds, and the proposed sales would be made pursuant to United's presently effective filed FPC Gas Rate Schedule PL-C.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 10, 1962, respecting the matters involved in and the issues presented by the applications herein. The City of Chicago on February 19, 1962, filed a petition to intervene in Docket No. CP62–121, which petition was permitted to be withdrawn pursuant to request filed on March 16, 1962. No other petitions to intervene or protests to the granting of the respective applications have been received. Staff counsel moved orally at the hearing that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(3) The facilities to be constructed by Natural, as hereinbefore described and as more fully described in the application, as supplemented, in Docket No. CP62–121, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Natural's existing pipeline system and the construction and operation thereof by Natural are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sale of natural gas by United to Natural, as hereinbefore described and as more fully described in the application, as supplemented, in Docket No. CP62–134, will be made for resale in interstate commerce, subject to the jurisdiction of the Commission, and such sale by United, together with the construction and operation of the facilities necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Natural and United, respectively, are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed by Natural in Docket No. CP62–121 and the sale and delivery of natural gas proposed by United in Docket No. CP62–134, together with the construction and operation by United of the facilities necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions (where applicable) set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations. Applicants should be required to complete and place in actual operation the facilities hereinafter authorized, as required by paragraph (b) aforesaid, by December 31, 1962.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Natural Gas Pipeline Company of America and United Gas Pipe Line Company to construct and operate the facilities hereinbefore described, all as more fully described in the respective applications, as supplemented, in Docket Nos. CP62–121 and CP62–134, for the transportation and sale of natural gas in interstate commerce as therein set forth, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions (where applicable) set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations. Applicants shall have completed and placed in actual operation the facilities authorized by paragraph (A) above, and United shall commence the sale and delivery of natural gas to Natural, by December 31, 1962.

(C) The grant of the certificate to United in Docket No. CP62–134 shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Parts 154 and 157 of the Commission's Regulations thereunder requiring the filing of a rate schedule for the service hereinabove authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against United. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP62–217

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 18, 1962)

On March 16, 1962, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP62–217 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing May 30, 1962, at a total cost not to exceed $3,000,000, with no single project to exceed a cost of $500,000, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

Applicant proposes to finance the subject facilities from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 9, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission enter

THE ARMY LIBRARY
Washington, D.C.

a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 228).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit on or before July 31, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual final costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing May 30, 1962, and the total expenditures for facilities authorized to be constructed thereunder should be limited to $3,000,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Texas Gas Transmission Corporation to construct during the 12-month period commencing May 30, 1962, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Texas Gas Transmission Corporation.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit, on or before July 31, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the actual final costs of said project or projects, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing May 30, 1962, and the total expenditures for facilities to be constructed thereunder are hereby limited to $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward

SOUTH TEXAS NATURAL GAS GATHERING COMPANY
DOCKET NO. CP62-206

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 18, 1962)

On February 28, 1962, South Texas Natural Gas Gathering Company (Applicant) filed in Docket No. CP62-206 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1962, at a total cost not to exceed $500,000, with no single project to exceed a cost of $50,000, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

Applicant proposes to finance the subject facilities from funds on hand, from cash generated by operations, and from internal sources.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 9, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, South Texas Natural Gas Gathering Company, a Texas corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 1, 1959, in Docket No. G-17050 (22 FPC 979).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of

natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual final costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed thereunder should be limited to $500,000, with no single project to exceed a cost of $50,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, South Texas Natural Gas Gathering Company, to construct during the calendar year 1962 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to South Texas Natural Gas Gathering Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the actual final costs of said project or projects, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(d) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities, to be constructed thereunder are hereby limited to $500,000, with no single project to exceed a cost of $50,000.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62-95

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 18, 1962)

On October 12, 1961, as supplemented on January 18, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP62-95 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a side tap, positive sales meter station, 0.0047 miles of 2-inch pipeline, and appurtenant facilities on its 16-inch Latex-Beaumount pipeline in Shelby County, Texas, and the sale and delivery of natural gas to Farmers Natural Gas Company (Farmers) for resale and distribution in and about Shelbyville, Texas, all as more fully set forth in the application, as supplemented.

Farmers estimates the gas requirements of Shelbyville as follows:

	Volumes in Mcf	
	1st year	3d year
Annual requirements	11,951	13,619
Peak day requirements	161	169

Farmers proposes to construct and operate the necessary distribution system in Shelbyville, a regular station, and approximately 5.5 miles of 2-inch pipeline to connect the distribution system to Applicant's main line. The estimated cost of Farmers' proposed project is $44,950.

The cost of the facilities which Applicant proposes to construct is estimated to be $2,851, to be financed from current working funds. The service to Farmers will be rendered under Applicant's presently effective rates on file with the Commission.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 10, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 2).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed sale and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities and the proposed sale of natural gas to Farmers Natural Gas Company for resale by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the facilities and to sell and deliver natural gas to Farmers Natural Gas Company for resale, as hereinbefore described, all as more fully described in the application, as supplemented in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The time within which the facilities hereby authorized shall be constructed and placed in actual operations as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, Charles R. Ross and Harold C. Woodward.

GULF STATES UTILITIES COMPANY, DOCKET NO. E-7030

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued May 21, 1962)

By order issued May 4, 1962, supra p. 902, in the above-entitled matter, the Commission authorized Gulf States Utilities Company (Applicant) to issue and sell at competitive bidding $17,000,000, principal amount of First Mortgage Bonds, due 1992, subject, among others, to the provisions set forth in paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on May 21, 1962, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, in which it states that it proposes to accept, as representing the lowest annual cost of money to it, the joint bid of Salomon Brothers & Hutzler and Eastman Dillon, Union Securities & Co. to purchase the proposed issuance of Bonds at the price of 100.78% of principal amount, with an interest rate of 4⅝% per annum.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of pargraph (B) of the Commission's order issued May 4, 1962, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized subject only to the provisions of paragraphs (A, (C), (D), and (E) of the Commission's order issued May 4, 1962 in the above docket.

Before Commissioner: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, *ET AL.*, DOCKET NO. G–17485, *ET AL.*; CITY OF GUTTENBERG, *ET AL. v.* NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62–140

ORDER GRANTING PETITION FOR MODIFICATION OF ORDER AND INDICATING SATISFACTION OR DISMISSAL OF COMPLAINTS

(Issued May 21, 1962)

On March 8, 1962, Northern Natural Gas Company (Northern), a Delaware corporation with principal place of business at 2223 Dodge Street, Omaha 1,

Nebraska, filed a "Petition for Modification of Order" issued November 1, 1961, in the above-entitled proceeding, 26 FPC 672, which had amended the order accompanying Opinion No. 324, issued July 31, 1959, 22 FPC 164, as amended August 26, 1960, 24 FPC 341. This petition requested that Northern be reauthorized to construct certain branch-line facilities which the order of November 1, 1961, had deleted from the certificate originally issued to Northern by the order accompanying Opinion No. 324.

At Northern's request, the order of November 1, 1961, *inter alia*, had deleted Northern's authorization to construct and operate the branch-line facilities required to initiate natural-gas service to the communities of Guttenberg, Clermont, Elgin, Elkader, and Lansing, Iowa. After the issuance of the aforesaid order of November 1, 1961, the City of Guttenberg, Iowa, and the Towns of Clermont, Elgin, Elkader, and Lansing,[1] Iowa,[2] filed on December 1, 1961, a "Joint Notice of Intervention", "Joint Application for Reconsideration, Modification, or Rehearing" in Docket Nos. G–17485, *et al.*, and a "Joint Complaint" in Docket No. CP62–140[3] in which they alleged, among other things, that they did not receive proper notice of Northern's intention to request that authorization to construct the facilities required to serve them be deleted from the certificate originally issued to Northern by the order acompanying Opinion No. 324. These Interveners also claimed that they were still feasible for natural-gas service. By order issued herein on December 22, 1961, 26 FPC 922, the Commission granted intervention and rehearing "* * * subject to the further action which will be required upon receipt and evaluation of Northern's answer to the Interveners' complaint".

On March 8 Northern and the Interveners jointly filed a document entitled "Satisfaction and Notice of Withdrawals of Complaint" in which they stated on page 3 thereof:

> * * * various discussions and negotiations have been conducted with representatives of all parties respecting the economic feasibility of providing gas service to these * * * Iowa communities. These meetings have resulted in a determination that natural gas service is economically feasible and desirable in the communities of Guttenberg and Elkader but that such service is not presently feasible for the communities of Elgin * * * [and Clermont].

The joint "Satisfaction and Notice" then states that if the Commission grants Northern's petition mentioned in the first paragraph of this order, requesting that it be reauthorized to construct and operate the branch-line facilities necessary to render natural-gas service to Guttenberg and Elkader, that the Interveners' complaints in Docket Nos. CP62–140 and IN–949 should "* * * be ordered satisfied as respects the communities of Guttenberg and Elkader and withdrawn without prejudice as respects the communities of Elgin [and Clermont]".

---

[1] On March 12, 1962, the Commission received a letter from Mr. William S. Hart, Jr., Attorney for the Town of Lansing, notifying the Commission that the Town of Lansing had been inadvertently included in the filings by the City of Guttenberg, *et al.*, and requesting that Lansing be allowed to remain "* * * in the same position it would have been in if no Appeal were ever taken from the Commission Order of November 1, 1961". Since the Town of Lansing seems to have been mistakenly included in these filings, no further mention will be made of Lansing in this order and the exclusion of Lansing from the Commission's considerations herein will necessarily culminate in the result requested by its attorney.

[2] The four communities of Guttenberg, Clermont, Elgin, and Elkader will hereinafter be referred to as "Interveners".

[3] Interveners had also filed on November 30, 1961, an informal complaint in Docket No. IN–949.

Northern's petition furnishes information regarding the miles of 4-inch and 3-inch branch lines and other facilities required to initiate natural-gas service to Guttenberg and Elkader, as well as an estimate of the costs associated with the construction of the requisite facilities.

Paragraph (C) of the Commission's order issued August 26, 1960, 24 FPC 341, amended the order accompanying Opinion No. 324 so as to extend the time within which Northern was required to construct all branch-line facilities authorized in Docket Nos. G–17485, *et al.* to and including October 31, 1961. Northern's petition herein requests that this provision, regarding the time within which facilities must be constructed, be extended to and including October 27, 1962, so as to permit Northern sufficient time to construct and place into operation the branch-line facilities required to serve Guttenberg and Elkader.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that:

(1) Northern's petition for modification of the order issued November 1, 1961, in Docket Nos. G–17485, *et al.*, and its request that extension of time within which to construct branch-line facilities as provided for in the order of August 26, 1960, issued in Docket Nos. G–17485, *et al.*, be granted.

(2) Interveners' informal complaint filed November 30, 1961, in Docket No. IN 949 and formal complaint filed December 1, 1961, in Docket No. CP62–140 should be ordered satisfied as to Guttenberg and Elkader and dismissed without prejudice as to Elgin and Clermont inasmuch as the action taken herein grants the relief requested by Interveners.

The Commission orders:

(A) Paragraph (A) of the Commission's order issued November 1, 1961, 26 FPC 672, amending the order accompanying Opinion No. 324 issued July 31, 1959, 22 FPC 164, 179, as amended August 26, 1960, 24 FPC 341, is hereby further amended so as to reauthorize Northern to construct and operate the branch-line facilities necessary to initiate natural-gas service to Guttenberg and Elkader, Iowa, as requested and described in Northern's "Petition for Modification of Order" filed March 8, 1962, in Docket Nos. G–17485, *et al.*

(B) Paragraph (C) of the Commission's order issued August 26, 1960, 24 FPC 341, 348, is hereby amended so as to extend the time within which Northern shall construct the branch-line facilities reauthorized herein to and including October 27, 1962.

(C) The complaints filed by The City of Guttenberg and the Towns of Clermont, Elgin, and Elkader in Docket No. IN 949 on November 30, 1961, and in Docket No. CP62–140 on December 1, 1961, are hereby considered satisfied as to Guttenberg and Elkader, Iowa, and dismissed without prejudice as to Elgin and Clermont, Iowa.

(D) All other provisions of the Commission's orders issued August 26, 1960, 24 FPC 341, and November 1, 1961, 26 FPC 672, shall remain unchanged.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

AMENDMENT OF PART 45 OF REGULATIONS UNDER THE FEDERAL POWER ACT—PRESCRIBING THE FORM FOR INTERLOCKING DIRECTORATE APPLICATIONS, DOCKET NO. R–208

ORDER NO. 246

ORDER PRESCRIBING REVISED FORM

(Issued May 21, 1962)*

The Commission has under consideration in this proceeding the amendment of Part 45 of its Regulations under the Federal Power Act by revising section 45.8 thereof entitled "Contents of Application" to read as set forth in the attachment hereto. The section prescribes the basic information which is to be submitted in support of applications for authorization, pursuant to section 305(b) of the Federal Power Act, to hold the positions of officer or director of more than one public utility, or of a public utility and a firm authorized to underwrite or participate in the marketing of public utility securities, or of a public utility and a firm engaged in supplying electrical equipment to such public utility.

The amendments herein adopted are designed to delete subsections requiring the submission of information already on file with or readily available to the Commission and to simplify the format in which the required information must be submitted, encouraging the use of tables and eliminating the necessity for repetition of information applicable to more than one corporation or firm. The adoption of the amendments will result in a substantial reduction in the time and effort required to prepare applications filed in the future and in a reduction in size of most applications by approximately 50 percent, particularly when a holding company system is involved.

General public notice of the proposed rulemaking was given by publication of notice in the Federal Register, on March 10, 1962 (27 F.R. 2325), and by mailing copies thereof to interested persons, including public utilities, and to State and Federal agencies. Several comments were received—all of them favoring the proposed revision. Pennsylvania Power & Light Company further suggested the adoption of a procedure which would provide for automatic approval by the Commission of interlocking directorates which fall within certain prescribed categories. We are of the opinion that a procedure for automatic approval of positions in interlocking directorates is not contemplated by section 305(b) of the Act, since it requires that the granting of such authorization shall be by order of the Commission only upon due showing that neither public nor private interests will be adversely affected. New England Power Service Company suggested that Item (a)(3) require the applicant to make reference only to the last application filed, rather than to all previous applications. We are changing Item (a)(3) accordingly, and, with that exception, adopting the revision as originally proposed in the notice.

The Commission finds:

Adoption and promulgation of the proposed amendments are necessary and appropriate for the purposes of administration of the Federal Power Act.

The Commission, acting pursuant to authority granted by the Federal Power Act, as amended, and particularly sections 305(b) and 309 thereof (16 U.S.C. 825d, 825h), *orders:*

*Published in Federal Register on May 25, 1962 (27 F.R. 4911).

(A) Section 45.8 entitled "Contents of application", of the Commission's Regulations under the Federal Power Act (18 CFR 45.8) is hereby amended to read as set forth in the attachment hereto.

(B) These amendments to the Commission's Regulations under the Federal Power Act, shall become effective June 20, 1962.

(C) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

ATTACHMENT

45.8 *Contents of application*

Each application shall state the following:

(a) *Identification of applicant.* (1) Full name, business address, and place of residence.

(2) Major business or professional activity.

(3) If former application or applications under section 305(b) of the Act have been made by the applicant, give date and docket number of the last application filed.

(4) If application is not filed with the Commission within 30 days after election or appointment, state reasons in full for the delay.

(b) *List of positions within the purview of section 305(b) of the act for which authorization is sought.* (Indicate by asterisk positions which were the subjects of previous authorizations.)

Position	Name of Corporation	Classification
		(1) Public utility, (2) authorized by law to underwrite, (3) supplying electrical equipment.

(c) *Data as to positions with each public utility mentioned in paragraph* (b) *of this section.* (The format should be adapted to the information submitted, in keeping with completeness and conciseness. In the case of public utilities of the same holding company system, brevity will generally be promoted by submitting the information for all of the utilities involved under each subsection progressively in the order of the subsections, utilizing tables when feasible.)

(1) Name, principal place of business, and a brief description of operations.

(2) Date elected or appointed, or anticipated date of election or appointment, to each position not previously authorized.

(3) Names of officers and directors; number of vacancies, if any, on Board of Directors.

(4) Description of applicant's duties: approximate amount of time devoted thereto; and, if applicant seeks authorization as a director, when and where directors meetings have been held during the past 12 months and number of such meetings attended by applicant.

(5) All other professional, contractual, or business relationships of applicant with the public utility, either directly or through other corporations or firms.

(6) Extent of applicant's direct or indirect ownership, control of, or beneficial interest in the public utility or the securities thereof. If ownership or interest is held in a name other than that of applicant, state name and address of the holder.

(7) Extent of applicant's indebtedness to the public utility, how and when incurred, and consideration therefor.

(8) All money or property received by applicant from the public utility or any affiliate during the past 12 months, and expected during the ensuing 12 months, whether for services, reimbursement of expenses, or otherwise. Specify in detail the amount thereof and the basis therefor. If applicant's compensation for services to the public utility is not paid directly by the public utility, give name of the corporation which does pay same, the amount allocated or allocable to the public utility or any affiliate, and the basis or reason for such allocation.

(9) Name and address of principal place of business of any corporation which renders management, construction or other service to the public utility pursuant to contract or other continuing arrangement.

(10) Whether during the past five years the public utility or any affiliate thereof or any security holders of either have commenced any suit against the officers or directors thereof for alleged waste, mismanagement or violation of duty, to which suit applicant was a party defendant. If so, give date of commencement of suit, court in which commenced, and present status.

(11) Whether the public utility or any affiliate thereof, during the past five years and while applicant held a position therein, has either voluntarily or involuntarily been the subject of any proceeding in bankruptcy (including 77(b), 48 Stat. 912; 11 U.S.C. 207), insolvency or equity receivership, either Federal or State. If so, give date of commencement of proceeding, court in which commenced, and present status.

(d) *Data as to positions with each bank, trust company, banking association or firm, mentioned in paragraph (b) of this section, that is authorized by law to underwrite or participate in the marketing of securities of a public utility.* (The applicant shall use a separate sheet for each corporation).

(1) Name of corporation, State and date of incorporation (if any) and address of principal place of business.

(2) States in which corporation is doing business or has qualified to do business.

(3) Positions which applicant holds or seeks authorization to hold therein and when and by whom elected or appointed to each position.

(4) Description of applicant's duties in each position and approximate amount of time devoted thereto, and, if applicant seeks authorization as director, where directors meetings are held.

(5) Extent of applicant's direct or indirect ownership, or control of, or beneficial interest in, the company or in the securities thereof, including common stock, preferred stock, bonds, or other securities. If such ownership or interest is held in a name other than that of applicant, state name and address of such holder.

(6) All money or property received by applicant from the company during the past 12 months, and expected during the ensuing 12 months whether for services, reimbursement for expenses, or otherwise. Specify in detail the amount thereof and the basis therefor.

(7) Names, titles, and residence addresses of directors, officers, or partners.

(8) Whether the corporation is now engaged in underwriting or participating in the marketing of the securities of a public utility; if so, to what extent.

(9) Whether the corporation, during applicant's connection therewith, has underwritten or participated in the marketing of the security issue of any public utility with which applicant was also connected; if so, the details with respect to every such transaction.

(10) (If the answer to subparagraph (8) of this paragraph is in the negative) Give excerpts from the charter, declaration of trust, or articles of partnership which authorize the underwriting or participating in the marketing of securities of a public utility.

(11) (If the answer to subparagraph (8) of this paragraph is in the negative) Give general requirements of and appropriate reference to, the laws of the State of organization and of States in which corporation is doing business or has qualified to do business, with which it must comply in order to engage in the business of underwriting or participating in the marketing of the securities of a public utility.

(12) What steps, if any, have been taken to comply with laws mentioned in subparagraph (11) of this paragraph.

(13) In lieu of subparagraphs (10), (11), and (12) of this paragraph, an opinion by counsel to the same effect and including the information in respect thereto may be filed with the application.

(14) Whether the corporation has registered with the Securities and Exchange Commission; if so, when and under what section of what act.

(e) *Data as to positions with each company, mentioned in paragraph (b) of this section, supplying electrical equipment to a public utility in which applicant holds a position. (Applicant shall use a separate sheet for each company.)*

(1) Name of company, State and date of incorporation (if any), and address of principal place of business.

(2) Positions which applicant holds or seeks authorization to hold therein and when and by whom elected or appointed to each position.

(3) Description of applicant's duties in each position and approximate amount of time devoted thereto, and, if applicant seeks authorization as director, when and where directors meeting have been held during the past 12 months and number of said meetings attended by applicant.

(4) Names, titles, and residence addresses of directors or partners.

(5) Name of each public utility, with which applicant holds or seeks authorization to hold a position, to which the company supplies electrical equipment; the frequency of such transactions; the approximate annual dollar volume of such business; and the type of equipment supplied.

(6) Nature of relationship between the company supplying electrical equipment and the public utility:

(i) Whether company manufactures such electrical equipment or is a dealer therein.

(ii) Whether company supplies electrical equipment to the public utility pursuant to construction, service, agency, or other contract with the public utility or an affiliate thereof, and, if so, furnish brief summary of the terms of such contract.

(7) Extent of applicant's direct or indirect ownership, or control of, or beneficial interest in, the company or in the securities thereof, including common stock, preferred stock, bonds, or other securities. If such ownership or interest is held in a name other than that of applicant, state name and address of such holder.

(8) All money or property received by applicant from the company during the past 12 months, and expected during the ensuing 12 months whether for services, reimbursement for expenses, or otherwise. Specify in detail the amount thereof and the basis therefor.

(f) *Data as to positions with public utility holding companies.* (Do not include here data as to corporations listed in paragraph (b) of this section which are also holding companies. A "holding company" as herein used means any corporation which directly or indirectly owns, controls, or holds with power to vote, ten per centum or more, of the outstanding voting securities of a public utility.)

(1) Name of holding company, State and date of incorporation (if any), and address of principal place of business.

(2) Positions which applicant holds therein, when and by whom elected or appointed to each position.

(3) Extent of applicant's direct or indirect ownership, or control of, or beneficial interest in, the holding company or in the securities thereof, including common stock, preferred stock, bonds, or other securities. If such ownership or interest is held in a name other than that of applicant, state name and address of such holder.

(4) All money or property received by applicant from the holding company during the past 12 months, and expected during the ensuing 12 months, whether for services, reimbursement for expenses, or otherwise. Specify in detail the amount thereof and the basis therefor.

(g) *Positions with all other corporations.* (Do not include here data as to any corporations listed in paragraphs (b) or (f) of this section.)

(1) All other corporations and positions therein, including briefly the information required in parellel columns as below:

Name of Corporation	Address: Kind of business	Position held therein

(2) Any corporate, contractual, financial, or business relationships between any of the corporations listed in subparagraph (1) of this paragraph and any of the public utilities listed in paragraph (b) of this section.

(h) *Data as to the public utility holding company system.* The names of the public utility holding company systems of which each public utility listed in paragraph (b) of this section is a part, with a chart showing the corporate relationships existing between and among the corporations within the holding company systems.

TEXAS EASTERN TRANSMISSION CORPORATION AND WILLIAM E. SNEE, ORVILLE EBERLY, ROBERT E. EBERLY & L. N. MURRAY, DOCKET NO. CP62-44

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued May 21, 1962)

On August 21, 1961, as supplemented on December 18, 1961,[1] Texas Eastern Transmission Corporation (Texas Eastern) and William E. Snee, Orville Eberly, Robert E. Eberly and L. N. Murray (Snee, *et al.*) (sometimes hereinafter referred to jointly as Applicants) filed pursuant to Section 7 of the Natural Gas Act a joint application for: (a) permission and approval for the abandonment by Snee, *et al.*, of the sale of natural gas to Cumberland and Allegheny Gas Company (C&A) from Accident Field, Garrett County, Maryland; (b) a certificate

[1] On March 29, 1962, Applicants filed a second supplement further extending the time specified between Applicants for obtaining necessary governmental authorizations.

of public convenience and necessity authorizing Texas Eastern to acquire by purchase from Snee, *et al.*, the latter's leasehold interests, together with appurtenant facilities, in the Accident Field; and (c) a certificate of public convenience and necessity authorizing the sale by Texas Eastern to C & A of up to 4,000,000 Mcf per year of natural gas from the Accident Field for a period ending May 1, 1964.

Snee, *et al.*, presently sell gas from the Accident Field to C & A under contracts, dated September 14, 1953, and November 26, 1954, which sales were authorized by the Commission's orders issued September 28, 1956, in Docket No. G–7682, and May 6, 1955, in Docket No. G–8381. The application shows that Texas Eastern desires to acquire the Accident Field for ultimate development as a gas storage field, which project will be the subject of a future application. Upon the consummation of the subject acquisition, Snee, *et al.*, will abandon the sale of gas to C & A from the subject's field, and Texas Eastern will commence the sale of natural gas to C & A in the same volumes and at the same price (27.5 cents per Mcf) as provided in the contracts between C & A and Snee, *et al.*, for a period ending May 1, 1964. The maximum deliveries are to be no more than 4,000,000 Mcf per year. Texas Eastern and C & A have entered into an agreement for such service on such terms.

C & A states that it has agreed to such arrangement because it anticipates the development of other gas supply in acreage bordering the Accident Field and from other nearby sources.

Texas Eastern will pay $11,006,000 as of January 1, 1961, for the interest of Snee, *et al.*, in the Accident Field; this price will be reduced by an amount equivalent to the value of the gas sold to C & A between January 1, 1961, and the date of consummation of the subject transaction. Texas Eastern will finance the cost from cash on hand or from proceeds secured under revolving credit agreements with certain banks.

The application shows an estimated sum of $8,058,262 for "depletion of gas reserves" which sum represents the adjusted purchase price less depreciated original cost of the properties to Snee, *et al.*, as of January 1, 1961. Texas Eastern will charge this amount to account 114, Gas Plant Acquisition Adjustment. The certificate hereinafter issued to Texas Eastern should be conditioned upon Texas Eastern charging the amortization of the acquisition adjustment to account 425, miscellaneous amortization, based on the proposed maximum annual sale of 4,000,000 Mcf to C & A. Further, Texas Eastern should not include the Accident Field transaction in any rate proceeding before the Commission prior to May 1, 1964, and, at the time Texas Eastern files for authorization to utilize Accident Field as a storage project, it should indicate, to the satisfaction of the Commission, its plan for disposition of the then remaining balance in account 114.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 10, 1962, respecting the matters involved in and the issues presented by the joint application, as supplemented, herein. On April 30, 1962, The Brooklyn Union Gas Company filed a petition requesting intervention in the event the subject proceeding should not be disposed of pursuant to the abridged hearing procedure. Since the subject proceeding is being disposed of pursuant to the provisions of Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure, no further action on the intervention petition of The Brooklyn Union Gas Company appears necessary. No appearance other than that of staff counsel was entered at the hearing. No other petitions to intervene or protests to the granting of the joint application having been received, staff counsel moved orally at the hearing that the intermediate decision procedure

be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G-880 (6 FPC 148).

(2) Applicants, Snee, *et al.*, independent producers of natural gas, are engaged in the sale of natural gas in interstate commerce for ultimate public consumption, subject to the jurisdiction of the Commission, and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The leasehold interests, together with appurtenant facilities, to be acquired by Texas Eastern from Snee, *et al.*, are subject to the jurisdiction of the Commission, and the acquisition and operation thereof by Texas Eastern are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sale of natural gas by Texas Eastern to C & A hereinbefore described, as more fully described in the joint application, as supplemented, in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Texas Eastern, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefore, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The acquisition of the subject leasehold interests, together with appurtenant facilities, and the sale of natural gas by Texas Eastern to C & A, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are all required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) The sale of natural gas proposed to be abandoned by Snee, *et al.*, as hereinbefore described and as more fully described in the joint application, as supplemented, in this proceeding, is subject to the jurisdiction of the Commission, and abandonment of said sale by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Snee *et al.*, as heretofore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(8) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) Public convenience and necessity require that the certificate issued hereinafter authorizing the proposed acquisition and the rights granted thereunder be conditioned upon Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of such Regulations.

(10) The certificate hereinafter issued to Texas Eastern should be conditioned upon:

(a) Texas Eastern charging the amortization of the acquisition adjustment to account 425, miscellaneous amortization, based on the proposed maximum annual sale of 4,000,000 Mcf to C & A;

(b) Texas Eastern not including the Accident Field transaction in any rate proceeding before the Commission prior to May 1, 1964; and

(c) Texas Eastern indicating, to the satisfaction of the Commission, at the time it files for authorization to utilize Accident Field as a storage project, its plan for disposition of the remaining balance in account 114.

(11) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Texas Eastern to acquire from Snee, *et al.*, and operate the latter's leasehold interests in the Accident Field, together with appurtenant facilities, as hereinbefore described, all as more fully described in the joint application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Texas Eastern of natural gas to C & A in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, as hereinbefore described, all as more fully described in the joint application, as supplemented, in this proceeding.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of such Regulations.

(D) The certificate issued to Texas Eastern by paragraph (A) above is hereby conditioned upon:

(a) Texas Eastern charging the amortization of the acquisition adjustment to account 425, miscellaneous amortization, based on the proposed maximum annual sale of 4,000,000 Mcf to C & A;

(b) Texas Eastern not including the Accident Field transaction in any rate proceeding before the Commission prior to May 1, 1964; and

(c) Texas Eastern indicating, to the satisfaction of the Commission, at the time it files for authorization to utilize Accident Field as a storage project, its plan for disposition of the remaining balance in account 114.

(E) The acquisition hereinabove authorized shall be consummated and operation begun by Texas Eastern within 3 months of the date hereof.

(F) The certificate granted in paragraph (B) above is not transferable and shall be effective only so long as Texas Eastern continues the operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificate issued in paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicant. Further, our action in this proceeding shall not foreclose or prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas sale contract herein involved.

(H) Permission for and approval of the abandonment by Snee, *et al.*, of the

sale of natural gas, as hereinbefore described and as more fully described in the joint application, as supplemented, in this proceeding, be and the same is hereby granted.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

UNION TEXAS PETROLEUM, A DIVISION OF ALLIED CHEMICAL CORPORATION (FORMERLY UNION TEXAS NATURAL GAS CORPORATION), DOCKET NOS. G–15833 AND G–16023

ORDER GRANTING EXTENSION OF TIME

(Issued May 22, 1962)

By its order issued March 5, 1962, in Texaco Inc., et al., Docket Nos. G–15546, *et al.*, 27 FPC 441, the Commission disposed of more than 400 proceedings, including those above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to the above-listed dockets, ordering paragraph (A) of the March 5 order directed Union Texas Petroleum, a Division of Allied Chemical Corporation (formerly Union Texas Natural Gas Corporation and hereinafter referred to as Union Texas) to refund tax-reimbursement amounts collected from its direct customer Texas Gas Transmission Corporation (Texas Gas). Ordering paragraph (C) of that order directed that within 90 days from the date of issuance thereof, Union Texas report to the Commission the details of its refund calculations and submit a copy of a release from Texas Gas respect to the required refunds. By order issued April 26, 1962 in *Texaco Inc. et al.*, Docket No. G–15546, *et al.*, the Commission denied applications for rehearing of the March 5 order in the above, as well as other, dockets. On May 15, 1962, Union Texas filed a motion seeking to stay the effectiveness of the March 5 order, insofar as applicable to the above dockets, until a date 30 days after the conclusion of judicial review of said order in those dockets. The motion recies that Union Texas intends promptly to seek judicial review of the March 5 order and that failure of the Commission to grant the stay pending such review would cause irreparable injury to Union Texas.

For reasons stated in our order of April 13, 1962[1] granting Pan American Petroleum Corporation an extension of time for compliance, we are disposed to extend the time within which Union Texas must comply with ordering paragraphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after the conclusion of judicial review of that order in the instant dockets.[2] The extension is conditional, however, upon the payment by Union Texas to Texas Gas of interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5.

The Commission finds:

(1) There is good cause for extending the time within which Union Texas must comply with the requirement of ordering paragraphs (A) and (C) of our

[1] Pan American Petroleum Corporation, Docket No. G–15641, Pan American Petroleum Corporation (Operator), *et al.*, Docket No. G–15650, G–15780.

[2] It should be understood that the 30th day after judicial review in the above dockets is the date upon which Union Texas must comply with the March 5 order; it is *not* the date upon which the 90-day period referred to in ordering paragraph (C) of the March 5 order commences to run.

order of March 5, 1962, for a period ending 30 days after the conclusion of judicial review of that order in the instant dockets.

(2) It is just and reasonable and in the public interest that Union Texas be required to pay Texas Gas interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after the issuance of the March 5 order.

The Commission orders:

(A) The time within which Union Texas must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962 is extended for a period ending 30 days after the conclusion of judicial review of the Commission's order of March 5, 1962 in the instant dockets.

(B) Union Texas shall pay Texas Gas interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962 order. The time within which Texas Gas must comply with ordering paragraphs (B) and (D) of the March 5, 1962 order, insofar as applicable to the instant dockets, is extended for a period ending 60 days after conclusion of judicial review of that order in said dockets.

(C) The preceding paragraphs (A) and (B) hereof shall not be deemed operative unless and until Union Texas shall have petitioned for review in the instant dockets. Thus, if within 90 days after the issuance of the March 5 order, Union Texas shall neither have complied with ordering paragraphs (A) and (C) thereof nor petitioned for review, it shall be deemed in default.

By the Commission.

JOSEPH H. GUTRIDE,
Secretary.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

GORDON STREET, INC., DOCKET NO. G–17722

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDING

(Issued May 23, 1962)

On May 1, 1962, Gordon Street, Inc. (Street) filed an Offer of Settlement of the suspension proceeding in Docket No. G–17722 involving its jurisdictional sale of natural gas to Tennessee Gas Transmission Company (Tennessee Gas) in the Lick Branch Field, Liberty County, Texas (Railroad Commission District No. 3). In the offer, Street proposes to reduce the increased rate of 16.16947 cents per Mcf, which is suspended herein and has not been made effective, to a settlement rate of 14.6 cents per Mcf at 14.65 psia.

Under the terms of the offer, the favored-nation and price redetermination provisions are to be eliminated from the rate schedule involved [1] and the tax reimbursement clause therein is to be revised to provide for reimbursement of three-fourths of any increase in tax levied after January 1, 1959. In addition, Street proposes that the 14.6 cent per Mcf settlement rate be effective from the date of Commission authorization until January 1, 1964 with a 1 cent per Mcf escalation then and thereafter on January 1, 1969.

In support of its offer, Street states, among other things, that it is willing to take the settlement rate in lieu of filing a motion to make effective its suspended

[1] The currently effective rate under Gordon Street, Inc.'s FPC Gas Rate Schedule No. 1 is 13.49751 cents per Mcf at 14.65 psia.

rate, cites the deletion of the flexible pricing provisions and indicated that such provisions were important components of the original contract. Tennessee Gas has concurred in the offer and has agreed to execute the contract amendment provided for therein. No comments or protests have been received with respect to the Offer of Settlement.

Since the proposed rate of 14.6 cents per Mcf at 14.65 psia is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1 [18 CFR, Chapter I, Part 2, Section 2.56], issued December 20, 1960, for jurisdictional sales of natural gas for Texas Railroad Commission District No. 3, it is believed that the public interest will best be served by accepting Street's proposed settlement as hereinafter set forth.

However, we desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Street under the periodic escalation provisions or otherwise.

The Commission finds:

The proposed settlement of this rate proceeding on the basis described herein, as more fully set forth in the Offer of Settlement filed by Street with the Commission on May 1, 1962, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Street with the Commission on May 1, 1962, is hereby approved in accordance with the provision of this order.

(B) Street shall execute with Tennessee Gas, and shall file within 30 days from the date of issuance of this order, an amendment to its FPC Gas Rate Schedule No. 1, in the form required for a change in rate in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act, which shall conform to Street's Offer of Settlement herein in all respects.

(C) Upon notification by the Secretary that Street has complied with the terms and conditions of this order, the rate and charge of 14.6 cents per Mcf specified in the Offer of Settlement shall be effective as of June 1, 1962 and the proceeding in Docket No. G–17722 shall be deemed terminated.

(D) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted against Street.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

METROPOLITAN EDISON COMPANY, PROJECT NO. 1888

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST; ACCUMULATED PROVISION FOR DEPRECIATION; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued May 23, 1962)

Metropolitan Edison Company, Licensee for Project No. 1888 (York Haven),[1] from time to time filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from January

[1] The project is located on the Susquehanna River in Dauphin, Lancaster and York Counties, Pennsylvania. It may be described generally as the York Haven Project. The license issued pursuant to Section 4(e) of the Federal Power Act is by its terms effective for the period January 1, 1938 to June 30, 1970.

1, 1950 through December 31, 1960, project additions and retirements resulting in a net increase in project cost for that period of $297,106.75 over the previously determined amount of actual legitimate original cost of the project of $3,095,019.45 as of December 31, 1949 [2] and a resulting claimed actual legitimate original cost as of December 31, 1960 of $3,392,126.20. The claimed net increase of $297,106.75 results from claimed and recorded project additions and retirements totaling $477,130.36 and $181,786.14, respectively, and debit adjustments of $1,762.53, as is more specifically shown in the attached Schedule I.

Licensee also from time to time recorded upon its books of account additional accumulated provision for depreciation applicable to project properties from January 1, 1938, through December 31, 1960, resulting in a net increase in the recorded project depreciation reserve of $839,732.97, over the previously determined amount of reserve for accrued depreciation applicable to project properties, $847,966.29 as of January 1, 1938 [3] and a total recorded project depreciation reserve in the amount of $1,687,699.26 as of December 31, 1960.

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the above claimed and recorded project costs and reserves for depreciation.

Following that examination an agreement, subject to Commission approval, was reached between the staff and representatives of the Licensee with respect to certain proposed adjustments involving: (1) reclassification of project costs in the amount of $4,620.51 within the project plant accounts; (2) the elimination of $4,103.71 from the claimed and recorded project costs for the period from January 1, 1950 through December 31, 1960; (3) a decrease in the recorded project reserve for accrued depreciation for the period from January 1, 1938 through December 31, 1960, in the amount of $965.17; and (4) the accounting dispositions of all amounts involved in the foregoing proposed adjustments.

The accounting dispositions of the amounts involved in the proposed adjustments are shown by the following composite journal entry: [4]

Account No.	Title	Debit	Credit
108	Accumulated provision for depreciation of electric plant in service project No. 1888:		
	Hydraulic production	$847.09	
	Hydraulic production	535.26	
	Transmission	735.60

	Hydraulic production		305.69
	General		847.09

[2] See Commission order issued January 31, 1957, 17 FPC 131.

[3] Ibid.

[4] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts Prescribed for Public Utilities and Licensees effective January 1, 1961, except Schedule I which employs the account numbers and titles effective prior to January 1, 1961. This reflects the fact that the project costs herein are recorded in Licensee's plant accounts as of dates prior to January 1, 1961. Schedule I also shows the accounts effective as of January 1, 1961.

Based upon the proposed adjustments, the staff recommends and Licensee concurs, that the Commission determine: (1) the net increase or change in project costs for the period from January 1, 1950 through December 31, 1960, to be $293,003.04 composed of gross additions of $474,297.51, gross retirements of $183,057.00, and a net debit adjustment of $1,762.53; (2) the project actual legitimate original cost as of December 31, 1960, to be $3,388,022.49, classified by primary plant accounts of the Commission's Uniform System of Accounts as shown by Schedule I; (3) the net increase in the accumulated provision for depreciation applicable to inservice project properties for the period January 1, 1938 through December 31, 1960, to be the net credit amount of $838,767.80; and (4) the project depreciation reserve as of December 31, 1960, to be $1,686,734.09 classified by functional groups as shown in the attached Schedule II.

By letters dated July 10 and August 2, 1961, Licensee confirmed its agreement with respect to the proposed adjustments, accounting dispositions and resulting project costs and depreciation reserve.

By letter of this Commission dated September 25, 1961 the Pennsylvania Public Utility Commission was advised of the staff recommendations herein and resulting proposed project costs and depreciation reserve applicable to in-service project properties, all as described above. By letter of October 2, 1961 that Commission indicated its approval of the adjustments to project original cost and stated it had no comment with respect to the reserve for accrued depreciation since that Commission makes no determinations of depreciation reserve requirements for accounting purposes.

The Commission finds:

(1) Licensee, by its agreement to the proposed adjustments, including the accounting dispositions and the resulting project costs and depreciation reserve as stated in its letters of July 10 and August 2, 1961, and the Pennsylvania Public Utilities Commission by its letter of October 2, 1961, have obviated the necessity for notice and opportunity for protest provided by Sections 4.4 and 4.5, of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act, and therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 1888 during the period from January 1, 1950 through December 31, 1960, is $293,003.04 consisting of gross additions of $474,297.51, gross retirements of $183,057.00, and debit adjustments of $1,762.53; and the resulting actual legitimate original cost of Project No. 1888 as of December 31, 1960 is $3,388,022.49, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees as more specifically shown in the attached Schedule I.

(4) The net increase or change in the accumulated provision for depreciation applicable to in-service project properties during the period from January 1, 1938 through December 31, 1960 is $838,767.80; and the resulting project depreciation reserve applicable to in-service project properties as of December 31, 1960 is $1,686,734.09 classified by functional groups as more specifically shown on the attached Schedule II.

*Commission Order issued January 31, 1957, 17 FPC 131.

( ) Denotes credit.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments including the accounting dispositions, as proposed by the Commission's staff and agreed to by Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall: (a) establish and maintain control and detailed accounts for Project No. 1888, showing the debit amount of $293,003.04 as net increase or change in the project cost for the period from January 1, 1950 through December 31, 1960; and the total debit balance of $3,388,022.49 as of December 31, 1960; all as more specifically shown by primary plant accounts as set forth in the attached Schedule I; and (b) establish and maintain an account for accumulated provision for depreciation applicable to in-service project properties of Project No. 1888, showing the credit balance of $847,966.29 as of January 1, 1938; the credit amount of $838,767.80 as the net increase or change in the project depreciation reserve applicable to in-service project properties for the period from January 1, 1938 through December 31, 1960; and the credit balance of $1,686,734.09 as of December 31, 1960; all classified by functional groups as shown in the attached Schedule II.

(D) Lincensee shall within 60 days from the issuance of this order file three certified copies of its adjusting journal entries showing compliance with this order.

SCHEDULE II

Accumulated provision for depreciation of electric plant in service, summary by functional groups, as of December 31, 1960

	Approved project plant	Approved project accumulated provision for depreciation	Percent of plant
Depreciable:			
Hydraulic Production	$2,981,009.66	$1,600,279.85	53.68
Transmission	296,532.10	85,607.15	28.87
General	4,620.51	847.09	18.33
Total Depreciable	3,282,162.27	1,686,734.09	51.39
Nondepreciable:			
Hydraulic production: Land and land rights	105,860.22		
Total project electric plant in service	3,388,022.49		

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 99

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued May 23, 1962)

Pacific Gas & Electric Company, Licensee for Project No. 99 (Canyon Creek),[1] from time to time filed statements, pursuant to section 4.1 of the Commission's

[1] The project is located on Canyon Creek in Humboldt and Trinity Counties, California, and affects lands of the United States within Trinity and Six Rivers National Forest and other lands of the United States. The license (issued pursuant to Section 4(d) of the Federal Water Power Act), authorizing the maintenance and operation of the project, is by its terms effective for a period commencing February 12, 1923 and terminating February 11, 1973.

Regulations under the Federal Power Act claiming for the period from February 13, 1923 through December 31, 1957, project additions and retirements resulting in a net increase in project cost for that period of $1,699,559.73 over the previously determined amount of actual legitimate original cost of the project of $705,839.00 as of February 12, 1923[2] and a resulting total claimed actual legitimate original cost of the project as of December 31, 1957 of $2,405,398.73. The claimed net increase of $1,699,599.73, results from claimed and recorded project gross additions, gross retirements, and credit adjustments totaling $2,444,899.21, $665,242.17 and $80,097.31,[3] respectively, and is more specifically shown in the attached Schedule I.

The Commission's staff made a field examination of the books and records of Licensee for the purpose of ascertaining the correctness of the claimed and recorded project cost changes and resulting project cost as of December 31, 1957.

Following that examination, an agreement, subject to Commission approval, was reached between the staff and Licensee's representatives with respect to certain proposed revisions in project plant accounts involving: (1) the elimination of $259,963.14 from the claimed project costs for the period from February 13, 1923 through December 31, 1957; (2) the addition to the project plant accounts of $59,755.85 to reconcile recorded costs with claimed costs as of December 31, 1957; (3) the reclassification within project plant accounts of a total of $11,004.61 which does not result in a change in over-all project costs; and (4) the accounting disposition thereof in the manner shown in the composite entry and in the attached Schedule II.

Based upon the foregoing, the resulting revised total net increase or change in project cost for the period February 13, 1923 through December 31, 1957, would be $1,439,596.59, consisting of gross additions of $2,256,897.04, gross retirements of $720,790.14 and a net credit adjustment of $96,510.31;[4] resulting in a total actual legitimate original cost of the project as of December 31, 1957 of $2,145,435.59.

The proposed revisions required to be made to the recorded costs as enumerated above are composed of the following items:

Nonproject items	$(96,043.81)
Overstated, understated and unrecorded retirements	(68,480.85)
Operating expenses and removal costs improperly capitalized	(72,782.05)
Excess interest during construction charges	(20,978.28)
Other improper charges	(1,678.15)
Total revisions to claimed cost	(259,963.14)
Reconcile recorded costs to claimed costs	59,755.85
Net revision required to bring recorded cost into agreement with recommended cost, as of December 31, 1957	(200,207.29)

[2] See Commission order *13th Annual Report of the F.P.C.* (1933) page 186. Article 13 of the license provides for Commission determination of the fair value of the project as of February 12, 1923.

[3] This amount consists of claimed credit adjustments of $79,220.76 and contributions in aid of construction-Federal in the credit amount of $876.55.

[4] This amount consists of: $95,633.76 transferred to nonproject plant which represents the cost of the Eureka Substation and 5.1 miles of transmission line from the Eureka to the Humboldt Substation; and contributions in aid of construction-Federal, in the credit amount of $876.55.

The proposed accounting disposition of all amounts involved in the proposed adjustments to bring Licensee's recorded project costs into agreement with the recommended project cost, as tentatively agreed to between Licensee and the staff are shown by the following composite journal entry:

	Accounts	Debit	Credit
[4] 101	Electric plant in service—nonproject	$23,660.27	
108	Accumulated provision for depreciation of electric plant in service—:		
	Project No. 99	53,154.92	
	Nonproject	13,133.99	
262	Injuries and damages reserve	17,861.21	
216	Unappropriated earned surplus	20,858.37	
400	Operating revenues	486.16	
401	Operation expense	49,681.44	
408	Taxes other than income taxes	392.65	
432	Interest charged to construction—Cr	20,978.28	
101	Electric plant in service—project No. 99		$200,207.29

After giving effect to the above adjustments, Commission staff recommends and Licensee, by letter dated April 7, 1961, confirms its agreement to the proposed adjustments, net change and resulting actual legitimate original project costs as of December 31, 1957, and that the Commission determine:

(1) The net increase or change in the actual legitimate original cost of Project No. 99 during the period from February 13, 1923 through December 31, 1957 to be $1,439,596.59, consisting of gross additions of $2,256,897.04, gross retirements of $720,790.14 and a net credit adjustment of $96,510.31.

(2) The resulting actual legitimate original cost of Project No. 99 as of December 31, 1957 to be $2,145,435.59, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees as shown in attached Schedule I.

The matter of accumulated provision for depreciation applicable to in-service properties, Project No. 99, is currently under study by the Commission's staff. Previously, the Commission in determining Licensee's net investment in Project No. 99 as of February 12, 1923 ($661,619), determined: "That the sum of $44,220 was the equitable proportion assignable to said project out of the credit balance in the depreciation reserve of Western States Gas and Electric Co. [original licensee] as of December 31, 1922, accumulated out of the earnings of said company prior to said date * * *." *Thirteenth Annual Report of the Federal Power Commission* p. 187. The recommendations of Commission's staff and Licensee here before the Commission contemplate that the matter of accumulated provision for depreciation applicable to in-service project properties accruing subsequent to February 12, 1923 will be presented for Commission consideration and determination at a later time.

The California Public Utilities Commission by letter of November 28, 1961 has advised that it has no objection to the proposed adjustments, accounting disposition and resulting project costs, all as described above.

[4] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961, except Schedules I and II which employ the account numbers and titles effective prior to January 1, 1961. This reflects the fact that the project costs herein are recorded in Licensee's plant accounts as of dates prior to January 1, 1961.

The Commission finds:

(1) Licensee, by its agreement to the proposed adjustments, including the accounting dispositions and the resulting project costs, as stated in its letter of April 7, 1961, and the California Public Utilities Commission by its letter of November 28, 1961 have obviated the necessity for notice and opportunity to protest provided by Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act, and therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 99 during the period from February 13, 1923, through December 31, 1957, is $1,439,596.59, consisting of gross additions of $2,256,897.04, gross retirements of $720,790.14, and a net credit adjustment of $96,510.31; and the resulting actual legitimate original cost of Project No. 99, as of December 31, 1957, is $2,145,435.59, classified by primary accounts as shown in attached Schedule I.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the matter of determining the accumulated provision for depreciation applicable to in-service project properties accruing subsequent to February 12, 1923 be reserved for future Commission consideration and decision as hereinafter ordered.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 99, showing the debit amount of $1,439,596.59 as the net increase or change in the project cost for the period from February 13, 1923 through December 31, 1957; and the total debit balance of $2,145,435.59 as of December 31, 1957; all as more specifically shown by primary plant accounts as set forth in the attached Schedule I.

(D) Licensee shall within 60 days from the issuance of this order file three certified copies of its adjusting journal entries showing compliance with this order.

(E) The matter of Commission determination of the amount of accumulated provision for depreciation applicable to in-service project properties accruing subsequent to February 12, 1923 is hereby expressly reserved for future Commission consideration and decision.

SCHEDULE 1

Summary by detailed plant accounts of agreed project cost as of February 12, 1923, claimed charges for the period February 13, 1923–December 31, 1957, adjustments thereto and balances allowed as of December 31, 1957

TAPOCO, INC., PROJECT NO. 2169

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued May 23, 1962)

Application was filed on March 5, 1962 by Tapoco, Inc., licensee for major Project No. 2169, for Commission approval of revised Exhibit K showing the proposed installation as part of the project works of remote control equipment which would permit operation of the Santeetlah power plant from the Cheoah power plant. Both of these plants are parts of Project No. 2169.

Installation of the remote control equipment will include the dismantling and elimination from the license of the telephone line now running between the Santeetlah and Cheoah powerhouses, and of the telephone line from the Santeetlah powerhouse to the Santeetlah dam. When the automatic control system is installed at Santeetlah, it will be operated by signals sent on carrier circuits over the Cheoah-Santeetlah power transmission line. The telephone line between Santeetlah powerhouse and Santeetlah dam was formerly used to telemeter water level and rainfall data. With its dismantlement, such data will be furnished to the system operators by cruising personnel and transmitted by radio-telephone over the power transmission line.

The Commission finds:

Revised Exhibit K-2, Sheets 11, 12, 13, 15 and 17 (FPC Nos. 2169-71 through -75) conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K-2 (FPC Nos. 2169-52, -53, -54, -56, and -58) now part of the license and which has been superseded, should be eliminated from the license for the project—all as hereinafter provided.

The Commission orders:

The revised Exhibit K described in the above finding is approved as part of the license for Project No. 2169, and the Exhibit K described in the same finding as being superseded is eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman: Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

AMERICAN GAS COMPANY OF WISCONSIN, INC., DOCKET NO. CP62-104; MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. G-18313

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS AND AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1962)

On October 23, 1961, American Gas Company of Wisconsin (American), a Wisconsin corporation having its principal office in Madison, Wisconsin, filed an application and on November 1, and December 12, 1961, supplements thereto, pursuant to Section 7(a) of the Natural Gas Act, for an order directing Midwestern Gas Transmission Company (Midwestern) to establish physical con-

nection of its transportation facilities with the facilities proposed to be constructed by American, and to sell and deliver to American up to 3500 Mcf of natural gas per day for resale and distribution to the public in the communities of Cadott, Boyd, Stanley, Jim Falls, and Cornell in Chippewa County; Thorp, Withee, Owen, Curtiss, and Dorchester in Clark County; Abbotsford, Colby, and Unity in Clark and Marathon Counties, and Stetsonville and Medford in Taylor County, all in the State of Wisconsin.

American proposes to construct and operate distribution systems in each community and approximately 5.9 miles of 6⅝-inch lateral transmission line extending northeast from an interconnection with Midwestern's main transmission line in Wisconsin, to the community of Cadott and approximately 61.6 miles of 4½-inch, 13.6 miles of 3½-inch, and 6.3 miles of 2⅜-inch transmission line extending from Cadott to the other 14 communities. American also proposes to construct and operate peak shaving plants at Medford and Cornell, Wisconsin. It is proposed that the deliveries of the gas requirements for all fifteen communities will be made at the point of interconnection with Midwestern's system.

The estimated natural gas requirements of said communities are as follows:

Year	Mcf at 14.73 psia and 1,000 Btu	
	Peak Day	*Annual*
1	2,474	915,152
2	3,711	1,210,605
3	4,574	1,520,782

American and Midwestern show that Midwestern has a sufficient supply of natural gas to meet the request of American for 3500 Mcf per day, and American shows that it will install peak shaving facilities at Medford for the second year of operation and at Cornell for the third year of operation.

Midwestern filed on November 24, 1961, an answer and on January 8, 1962, a supplemental answer to American's application, stating that its total unallocated gas supply was 3,537 Mcf and that it did not oppose said application. On January 22, 1962, Midwestern filed a supplemental answer to the application and also a motion to amend Opinion No. 331 issued on October 31, 1959, wherein Midwestern was issued a certificate of public convenience and necessity. Midwestern requests that in the event the Commission orders Midwestern to serve American the natural gas requirements requested in the application in Docket No. CP62-104, the Commission further amend Opinion No. 331, issued October 31, 1959, by reallocating the volumes of natural gas that Midwestern is obligated to deliver to its customers as proposed in "Analysis of Third Year Contract Demand Allocation" schedule attached to its said motion to amend as Exhibit A. Midwestern in notes attached to its motion explained the reasons for the proposed reallocation of volumes as follows:

(1) The Commission's Order dated August 19, 1960 allowed Northern States Power Company to increase its contract demand from 29,200 Mcf to 29,530 Mcf and United Petroleum Gas Company to reduce its contract demand from 1,847 Mcf to 1,517 Mcf. This transfer of 330 Mcf from United Petroleum to Northern States is the result of Northern States being granted authorization to render service to the Village of Dilworth instead of United Petroleum.

(2) The Commission's Order dated September 2, 1960 allowed United Petroleum Gas Company to increase its contract demand from 1,517 Mcf (as author-

ized in the Commission's Order dated August 19, 1960) to 2,117 Mcf. This increase is the result of United Petroleum rendering service to Ada, Minnesota. However, Opinion 331 allocated 992 Mcf to the City of Ada, Minnesota and United Petroleum requested an increase in contract of 600 Mcf for the city. The difference of 392 Mcf increased Midwestern's "Reserved for Future Sales" volume from 2,790 Mcf to 3,182 Mcf.

(3) The Commission's Order dated March 17, 1961 allocated to the City of Warren, Minnesota 818 Mcf and reduced the contract demand to United Petroleum Gas Company from 2,117 Mcf to 2,043 Mcf. Midwestern was able to render this service to Warren by reducing its "Reserved for Future Sales" volume by 742 Mcf and utilizing the 74 Mcf released by United Petroleum.

(4) The Commission's Order dated August 24, 1961 at Docket No. CP61–306 directed Midwestern to serve North Central Public Service Company 350 Mcf per day out of the unallocated gas supply of 2,438 Mcf. On September 15, 1961 Midwestern and the Village of Perham, Minnesota entered into a new contract for 600 Mcf which was 360 Mcf less than the original allocation to Perham. As a result of the Commission's Order and Perham's adjusted allocation, Midwestern had 2,450 Mcf of unallocated gas supply.

(5) As a result of the Commission's Order dated August 7, 1961 authorizing Midwestern to substitute three 1,700 horsepower compressor units, with an improved fuel factor design, for four 1,320 horsepower units, Midwestern now estimates its fuel requirements to be 544 Mcf less than the originally authorized 2,600 Mcf.

United Petroleum Gas Company has requested a reduction of 543 Mcf in its contract demand as a result of their planned loads not developing. The reduction in fuel requirements and the additional gas indicated as available from United Petroleum increased Midwestern's unallocated gas supply by 1,087 Mcf to a total of 3,537 Mcf.

The estimated total cost of American's proposed facilities is $3,142,410, which will increase to $3,499,160 in the third year of operation, and which will be financed by the issuance and sale of $1,150,000 of its common stock to its parent, American Gas Company, an Iowa corporation and by the sale of approximately $2,200,000 of its 6½ percent first mortgage bonds and from retained earnings.

Midwestern will install the necessary tap and measuring facilities at the proposed point of connection at an estimated cost of $20,000.

On April 6, 1962, the Public Service Commission of Wisconsin filed a notice of intervention herein. By letter dated March 6, 1962, said Public Service Commission of Wisconsin advised the Federal Power Commission that it had on December 7, 1961, issued an order authorizing American to operate as a gas public utility and to furnish natural gas to the public in the fifteen above-named communities. On May 4, 1962, the Wisconsin Commission transmitted to this Commission a copy of its said order of December 7, 1961, in its Docket No. CA–4034. A copy of said order has also been submitted by American on December 12, 1961, as a part of its application.

On March 26, 1962, Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., and Upper Lake Docks Coal Bureau, Inc., filed a joint petition for leave to intervene herein, but on May 15, 1962, said petitioners filed a notice of withdrawal of their joint petition to intervene.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 17, 1962, respecting the matters involved in and the issues presented by the application and motion to amend. No petition to intervene or protest to the

granting of the application and motion to amend, except the above-described joint petition, which joint petitioners now request to withdraw, and the notice of intervention, filed by the Public Service Commission, which does not oppose said application and motion. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Midwestern Gas Transmission Company, a Delaware corporation, having its principal office in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) American Gas Company of Wisconsin, Inc., a Wisconsin corporation, having its principal office in Madison, Wisconsin, is duly authorized to engage in the distribution of natural gas to the public in the State of Wisconsin and holds a certificate issued by the Public Service Commission of Wisconsin, authorizing it to install facilities and deliver and sell natural gas to the public in the above-named fifteen communities, and American also holds franchises from each of said communities authorizing the service proposed.

(3) It is necessary and desirable in the public interest to direct Midwestern Gas Transmission Company to establish physical connection of its transmission system with the facilities proposed to be contructed and operated by American Gas Company of Wisconsin, Inc., and to sell and deliver up to 3500 Mcf per day of natural gas to American Gas Company of Wisconsin, Inc., for resale and distribution in the communities of Cadott, Boyd, Stanley, Jim Falls, and Cornell in Chippewa County; Thorp, Withee, Owen, Curtiss, and Dorchester in Clark County; Abbotsford, Colby, and Unity in Clark and Marathon Counties and Stetsonville and Medford in Taylor County, all in the State of Wisconsin.

(4) The requirement that Midwestern serve American as proposed will not place an undue burden upon Midwestern nor impair its ability to render adequate service to its existing customers, nor will Midwestern be compelled to enlarge its transportation facilities.

(5) Good cause has been shown for granting Midwestern's motion to amend Opinion No. 331 issued on October 31, 1959, in Docket No. G–18313, as hereinafter ordered.

(6) A request during the public hearing having been made by staff counsel for omission of the intermediate decision procedure, and all requirements of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission to render its final decision in the instant proceeding.

The Commission orders:

(A) Midwestern Gas Transmission Company be and it is hereby directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed and operated by American Gas Company of Wisconsin, Inc., as hereinbefore described, and to sell and deliver up to 3,500 Mcf of natural gas per day to said American Gas Company of Wisconsin, Inc., under Midwestern's appropriate FPC rate schedule, for resale and distribution in the communities of Cadott, Boyd, Stanley, Jim Falls, and Cornell in Chippewa County; Thorp, Withee, Owen, Curtiss, and Dorchester in Clark County; Abbotsford, Colby, and Unity in Clark and Marathon Counties and Stetsonville and Medford in Taylor County, all in the State of Wisconsin.

(B) Midwestern shall report to the Commission in writing and under oath the date of commencement of service to American within 30 days after the commencement of such service.

(C) American shall be prepared to receive natural gas from Midwestern within one year from the date of issuance of this order.

(D) The motion of Midwestern Gas Transmission Company to amend the Commission's Opinion No. 331 issued October 31, 1959, be and the same is hereby granted and the present allocation of natural gas set forth in Opinion No. 331 is hereby revised in accordance with Exhibit A attached to Midwestern's motion. Accordingly, Midwestern is hereby authorized to sell natural gas to the following customers in the amounts stated:

	Contract demand (Mcf)
Argyle, Minnesota (Village of)	366
Frazee, Minnesota (Village of)	565
Hallock, Minnesota (Village of)	769
Hawley, Minnesota (Village of)	612
Lake Park, Minnesota (Village of)	355
Michigan-Wisconsin Pipe Line Company	158,000
Montana-Dakota Utilities Company	4,000
New York Mills, Minnesota (Village of)	537
North Central Public Service Company	350
Northern States Power Company—	
Chippewa Falls	2,390
Dilworth	330
East Grand Forks	1,160
Eau Claire	7,200
Fargo	8,900
Grand Forks	5,310
Menomonie	1,680
Moorhead	2,560
Total Northern States Power Company	29,530
Perham, Minnesota (Village of)	600
Stephen, Minnesota (Village of)	405
United Petroleum Gas Company—	
Ada	600
Detroit Lakes	900
Total United Petroleum Gas Company	1,500
Warren, Minnesota (City of)	818
American Gas Company of Wisconsin, Inc	3,500
Total contract demand	201,907
Fuel	2,056
Unallocated	37
Total supply	204,000

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7035

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued May 24, 1962)

Northern States Power Company (Applicant), incorporated under the laws of the State of Minnesota and doing business in the States of Minnesota, North Dakota and South Dakota, with its principal place of business in Minneapolis, Minnesota, filed an application, on April 26, 1962, for authority, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $15,000,000, principal amount of First Mortgage Bonds, due 1992.

Applicant proposes to issue the Bonds under a Trust Indenture, dated February 1, 1937 from Applicant to Harris Trust and Savings Bank of Chicago, Trustee, as heretofore supplemented and as to be further supplemented by a proposed new Supplemental Indenture to be dated as of June 1, 1962. The new Bonds will be dated as of June 1, 1962 and will mature on June 1, 1992. The interest rate of the Bonds will be determined by competitive bidding.

On or about June 5, 1962, Applicant proposes to invite sealed, written bids for the purchase of the Bonds by newspaper publication and by distribution of a Form of Proposal, together with a Statement of Terms and Conditions relating thereto and a Form of Purchase Contract. All bids, whether from a single bidder or a group of bidders, must be for the purchase of all of the Bonds and must be on the Form of Proposal provided by Applicant, signed by the bidder, or by the representative in the case of a group of bidders. Each bid must specify the interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛th of 1 percent; the price exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be not less than 99% and not more than 102¾% of the principal amount thereof; and, that Applicant shall be paid the amount of the accrued interest on the Bonds from June 1, 1962, to the date of payment therefor and delivery thereof.

Unless postponed, all bids for the purchase of the proposed issuance of Bonds must be presented to Applicant at Room 1100, 231 South LaSalle Street, Chicago 4, Illinois, at or before 10:00 a.m., CDST on June 12, 1962. Applicant, unless it rejects all bids, which it reserves the right to do, or excludes a bid or bids for reasons specified in the Statement of Terms and Conditions, will accept the bid which provides the lowest cost of money to Applicant. Each bid must be accompanied by a certified or bank cashier's check or checks, payable in Chicago or New York Clearing House funds, in the aggregate amount of $450,000.

Applicant states that the proceeds from the sale of the new Bonds will be added to Applicant's general funds and used to pay for a portion of Applicant's 1962 construction program, estimated to cost $39,340,000. The principal items of expenditure for Applicant's 1962 construction program are described, as follows: $5,638,000 for electric generating facilities, including $3,876,000 as Applicant's contribution to research and development costs of a 66,000 kw atomic power plant near Sioux Falls, South Dakota and $1,446,000 for continuing installation of the 200,000 kw Unit #8 at Applicant's Riverside steam electric generating plant in Minneapolis; $9,043,000 for electric transmission lines, including $1,539,000 for continuing construction of a 230 kv interconnection with Minneapolis Power & Light Company and $669,000 for construction of 115 kv

interconnections with Otter Tail Power Company and Minnesota Power & Light Company; $12,974,000 for electric distribution facilities; $2,182,000 for rebuilding steam heating plant, mains and feeder line in St. Paul; $6,943,000 for additions and improvements to propane gas plant and natural gas distribution facilities; and $2,560,000 for additions and improvements to telephone and general utility plant.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the North Dakota Public Service Commission, and the South Dakota Public Utilities Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on May 8, 1962 (27 F.R. 4400), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before May 22, 1962 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued September 1, 1955, *In the Matter of Northern States Power Company*, Docket No. E-6637 (14 FPC 946).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

CITY OF SEATTLE, WASHINGTON, PROJECT NO. 553

ORDER APPROVING EXHIBIT L DRAWING

(Issued May 24, 1962)

On April 16, 1962, City of Seattle, Washington, licensee for major Project No. 553, filed for Commission approval an Exhibit L drawing which, if approved, would authorize the construction of a minor diversion tunnel extending from Happy Creek to the project reservoir, known as Ross Lake.

The project is situated on Skagit River, County of Whatcom, State of Washington, and affects lands of the United States within the Mt. Baker National Forest. The proposed diversion is within the Mt. Baker National Forest.

Happy Creek now discharges its flow into the Skagit River below the Ross dam and reservoir. The plan for diversion of Happy Creek consists of a small unlined tunnel about 500 feet long, about 4 feet wide and 7 feet high, extending from Happy Creek to a ditch about 60 feet long and 10 feet wide, discharging into Ross Lake. According to the licensee's April 12, 1962 letter transmitting the drawing, the licensee estimates the diversion will result in an increase in the average annual energy generated at the Ross power plant of 1,540,000 kwhs with an annual value of approximately $3,800. The cost of the diversion based on bids will be $38,760. The licensee further estimates that the diversion will pay out in 16 years based on a cost of money of 4 percent.

The proposed diversion will act also as a means of diverting Happy Creek during the raising of Ross dam in the future, and constitutes a further step in the comprehensive development of Skagit River.

The Chief, Forest Service, by letter dated May 8, 1962, has stated that the proposed diversion is not incompatible with the purpose for which Mt. Baker National Forest was created or acquired and that the present terms and conditions of the license for the project are adequate.

The Commission finds:

The afore-mentioned Exhibit L drawing described as Exhibit L, Sheet R-399 (FPC No. 553-195) entitled "Happy Creek-Ross Lake Diversion Tunnel" conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

The Exhibit L drawing described in the above finding is approved as part of the license for Project No. 553.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

AREA RATE PROCEEDING, DOCKET NO. AR61-2; ALLADIN EXPLORATION COMPANY, INC., *ET AL.*, DOCKET NO. CI61-1564, *ET AL.*; AMERADA PETROLEUM CORPORATION, *ET AL.*, DOCKET NO. RI60-18, *ET AL.*

ORDER REQUIRING THAT CERTAIN DATA BE FILED, DIRECTING THAT SAID DATA BE PLACED IN PROPER FORM AND PRESENTED IN EVIDENCE

(Issued May 25, 1962)

These proceedings were instituted by our order of May 10, 1961, to determine the initial rates which the public convenience and necessity requires and the just and reasonable rates for sales, subject to our jurisdiction, of natural gas produced in the Southern Louisiana area. Following a prehearing conference and the filing of the examiner's report thereon, we issued our order of November 9, 1961, in which, among other things, it was determined that a single hearing should be held to determine both the initial producer area rate or rates required by the public convenience and necessity and the just and reasonable area rate or rates. In that order the respondents in these proceedings were advised that we would require submission by producers of economic and cost data along the line established by Appendices "A" and "B" (as revised) to our order of August 2, 1961, in Docket No. AR61-1. The same 1960 detail test year as in AR61-1 was to be used. The parties were also put on notice to begin the collection of the necessary data which would be required.

After considering the comments which were submitted respecting the forms and instructions used in Docket No. AR61-1, the Appendix "B" type forms were revised and are now ready for issuance together with instructions which have been expanded and clarified. Much of the data required has already been accumulated by many of the parties who are also respondents in Docket No. AR61-1, and presumably all of the parties herein have been actively collecting the necessary data since the time they were put on notice to do so in our order on November 9, 1961. Consequently it is considered that a three-month period for the filing of the material would be ample and consistent with the carrying out of the objective to proceed expeditiously herein. However, the filing of Appendix "B" material will not be required of all respondents. Based on our experience in Docket No. AR61-1 only those respondents having company-wide jurisdictional sales of more than 10 million Mcf of natural gas during the year 1960 will be required to file the data required by Appendix "B".

Appendices "A" and "C" as used in Docket No. AR61-1 are under continuing staff study. Upon conclusion of the study and revision of the forms and instructions, the Commission will issue an order in these proceedings, setting forth the procedure to be followed for the filing of the data which may be required by the appendices. Generally the data to be filed will be the same as were required in Docket No. AR61-1.

We are requiring the Commission staff to compile data with respect to each rate schedule on file with the Commission for the jurisdictional sale of gas from the Southern Louisiana area. Following generally the procedure adopted in Docket No. AR61-1, upon completion of the compilation it is intended to forward to each respondent the data compiled respecting such respondents' rate schedules with a request that same be checked for accuracy and certain information be furnished in connection therewith.

The Commission finds:

It is necessary and appropriate in the public interest, and to aid in the enforcement of the provisions of the Natural Gas Act, particularly Sections 4, 5, 7, 8, 10, 14 and 16 thereof, that the respondents herein be required to furnish certain data to the Commission and the Commission staff be directed to compile data, all as hereinafter ordered.

The Commission orders:

(A) All respondents to these consolidated proceedings having company-wide jurisdictional sales of more than 10 million Mcf of natural gas during the year 1960 shall complete and on or before August 24, 1962, shall file with the Secretary of the Commission three copies of the data required by Appendix "B" hereto, on the forms herein prescribed entitled "Costs and Statistics Pertaining to Oil and Gas Production, Exploration, Gas Gathering and Products Extraction Operations, Year 1960".

(B) The data furnished in compliance with paragraph (A) hereof shall be compiled in composite form by the Commission staff for introduction in these proceedings. Such data furnished by the respondents as ordered herein shall not be available to any party other than the Commission or its staff until the data in composite form have been prepared by the staff and distributed to the parties to these proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITIES SERVICE COMPANY (FORMERLY CALLED ARKANSAS FUEL OIL CORPORATION), DOCKET NO. G–15646; CITIES SERVICE PRODUCTION COMPANY, DOCKET NO. G–15653

ORDER GRANTING EXTENSION OF TIME

(Issued May 28, 1962)

By its order issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, the Commission disposed of more than 400 proceedings, including those above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to the above-listed dockets, ordering paragraph (A) of the March 5 order directed Cities Service Company (formerly called Arkansas Fuel Oil Corporation) and Cities Service Production Company (hereinafter called Petitioners), respectively, to refund tax-reimbursement amounts collected from their direct customer United Fuel Gas Company (United Fuel). Ordering paragraph (C) of that order directed that within 90 days from the date of issuance thereof, Petitioners report to the Commission the details of their refund calculations and submit copies of releases from United Fuel with respect to the required refunds. By order issued April 26, 1962 in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, the Commission denied applications for rehearing of the March 5, 1962 order in the above, as well as other, dockets. On May 15, 1962, Petitioners filed a joint and several motion seeking to stay the effectiveness of the March 5 order, insofar as applicable to the above dockets, until a date 30 days after conclusion of judicial review of said order in those dockets. The motion recites that Petitioners intend to seek judicial review of the March 5 order and that failure of the Commission to grant the stay pending such review would cause them irreparable injury.

For reasons stated in our order of April 13, 1962 granting Pan American Petroleum Corporation an extension of time for compliance, we are disposed to extend the time within which Petitoners must comply with ordering paragraphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after conclusion of judicial review of that order in the instant dockets.[1] The extension is conditional, however, upon the payment by Petitioners to United Fuel of interest at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5. In prior orders granting extensions of time in these proceedings,[2] we provided that such extensions should not become operable unless and until the applicant had petitioned for review of the March 5 order, and that if within 90 days after issuance of that order the applicant had neither complied therewith nor petitioned for review, it should be deemed in default. Petitioners have, in effect, requested a waiver of this requirement, advising that their petitions for judicial review could probably not be filed earlier than 60 days after the April 26 order denying rehearing. We are disposed to grant this request. Accordingly, the extensions of time granted herein shall be effective immediately, but shall be deemed inoperative if Petitioners have not petitioned for judicial review within the statutory 60 day period after our April 26 order denying rehearing.

The Commission finds:

(1) There is good cause for extending the time within which Petitioners must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after the conclusion of judicial review of that order in the instant dockets.

(2) It is just and reasonable and in the public interest that Petitioners be required to pay United Fuel interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5 order.

The Commission orders:

(A) The time within which Petitioners must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962 is extended for a period ending 30 days after the conclusion of judicial review of the Commission's order of March 5, 1962 in the instant dockets.

(B) Petitioners shall pay United Fuel interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962 order.

(C) The time within which United Fuel must comply with ordering paragraphs (B) and (D) of the March 5, 1962 order, insofar as applicable to the instant dockets, is extended for a period ending 60 days after conclusion of judicial review of that order in said dockets.

(D) If Petitioners shall not have filed petitions for review of the March 5 order in the instant dockets within the period prescribed by statute, the extension of time herein granted shall be deemed inoperative and of no effect.

---

[1] It should be understood that the 30th day after judicial review in the instant dockets is the date upon which Petitioners must comply with the March 5 order; it is *not* the date upon which the 90 day period referred to in ordering paragraph (C) commences to run.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP62-7

ORDER INSTITUTING INVESTIGATION AND PROVIDING FOR HEARING

(Issued May 28, 1962)

Midwestern Gas Transmission Company (Midwestern) was authorized to construct and operate the facilities which currently constitute its Northern System, subject to the terms and conditions set out in Opinion No. 331, and accompanying order issued October 31, 1959, *Midwestern Gas Transmission Company*, Docket Nos. G–18313, *et al.*[1] Among other things, paragraph (D) (iv) of that order required that Midwestern, at the end of one year's operating experience, file with the Commission "revised rate schedules based on the company's operating experience and supporting data" whereby the Commission could determine the propriety of the rate differential reflecting lateral line charge under Midwestern's Rate Schedule CD–1 and the propriety of the relative levels of the demand and commodity components of Midwestern's rate schedules.

On December 29, 1961, Midwestern, by letter, informed the Commission that it proposed to retain in effect the present rate schedules for sales on its Northern System and therewith filed certain cost data purporting to support the presently effective rates.

The Commission finds:

(1) Midwestern's tender of December 29, 1961 does not appear to meet the requirements imposed by Opinion 331, issued October 31, 1959 in Docket No. G–18313, *et al.*

(2) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that an investigation be instituted by the Commission, upon its own motion, into and concerning the rates, charges, or classifications demanded, charged, or collected by Midwestern for or in connection with any transportation or sale of natural gas subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges or classifications.

The Commission orders:

(A) An investigation of Midwestern be and it hereby is instituted under the provisions of the Natural Gas Act, for the purpose of enabling the Commission to determine with respect to Midwestern's operations, whether in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, any rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, or contracts affecting such rates, charges, or classifications are unjust, unreasonable, unduly discriminatory, or preferential.

(B) If after hearing has been had, the Commission finds that any rates, charges, or classifications, rules, regulations, practices, or contracts applicable to Midwestern's operations in its Northern System are unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall thereupon determine, fix and prescribe by appropriate order or orders, just, reasonable, non-dis-

[1] Opinion No. 331 (22 FPC 775), was modified by orders issued December 29, 1959 (22 FPC 1157) and January 20, 1960 (23 FPC 111), but such modifications are not material to this order.

criminatory, and non-preferential rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force in Midwestern's Northern System.

(C) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 5, 14, 15 and 16 thereof, and the Commission's Rules of Practice and Procedure, a public hearing be held at a date later to be designated by notice from the Secretary of the Commission in a hearing room of the Commission at 441 G Street, N.W., Washington 25, D.C., concerning the matters specified in paragraph (A) above.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Commission's Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before June 22, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. G–18148, G–18149, AND RP60–5

ORDER AMENDING ORDER APPROVING SETTLEMENT AGREEMENTS

(Issued May 28, 1962)*

On November 24, 1961, the Commission issued an Order Approving Proposed Settlement Agreements, As Conditioned, And Prescribing Interim Refunds in the above docketed proceedings relating to Natural Gas Pipeline Company of America (Natural). Paragraph (E)(IV) of that order stated as follows:

> (IV) In the event that the staff, upon completion of its field examination of the books and records of Natural for the locked-in period of time involved in these proceedings, shall conclude that items of cost of service, included in the settlement computations but in addition to and separate from the matters referred to in sub-paragraphs (II) and (III), above, are not acceptable, then, after conference, hearing and further order of the Commission, as necessary to a resolution of this matter, Natural shall be required to make such further refunds in these proceedings, with interest at 6% thereon, as may result from a consideration of such items of cost of service.

A question arising out of Natural's cost of service study involved the depreciation of transmission rights-of-way for which Natural made deductions in its tax filing and which deductions the Internal Revenue Service is at present contesting, notwithstanding the allowance of such deductions by the Court of Appeals in a purportedly similar situation.[1] In the settlement study Natural computed its taxes as though the deductions in question were not allowable, and the above quoted paragraph from the Commission's order was directed to Natural's obligations in the event that the IRS determine the tax amounts in question to be excludable.

The Commission staff conducted an investigation and upon completing its examination of Natural's books and records for the period of time involved concluded that Natural's cost of service reflecting certain amounts for claimed income taxes but which Natural was in fact contesting was overstated in the

---

*Modified; rehearing denied by order issued July 27, 1962, 28 FPC 233.

[1] *Northern Natural Gas Company* v. *O'Malley*, 277 F. 2d 128 (USCA 8).

amount of whatever reduction of Natural's tax liabilities the Internal Revenue Service should subsequently allow. Accordingly, by letter dated February 20, 1962, the Commission notified Natural that the settlement agreement referred to hereininabove should be modified to reflect the findings of Commission staff described. On March 5, 1962, Natural filed a letter accepting the conditions set forth in the Commission's letter, and requested, however, that it be exempted from interest obligation regarding such refunds as it may ultimately be required to make.

The Commission finds:

It is appropriate in view of the findings referred to above that in the event the Internal Revenue Service allows the depreciation of transmission rights-of-way as a proper expense in the computation of Natural's income tax for the period covered by the proceedings in the above dockets, Natural should refund in the manner prescribed by the Commission in paragraph (E) (IV) of the order issued November 24, 1961, such amounts as are indicated by a recomputation of Natural's income taxes for the periods involved, based upon the deduction of such depreciation. Further, it does not appear that Natural has shown good cause why such refunds should not include interest at 6% per annum on all amounts refunded as prescribed by said paragraph and as is consistent with the Commission's practice and the provisions of the Natural Gas Act.

The Commission orders:

(A) Natural shall refund all amounts, together with interest thereon at 6% per annum, as are indicated by a recomputation of the income tax allowance in its cost of service relating to the proceedings in Docket Nos. G–18148, G–18149, and RP60–5, such recomputation to be made upon a determination of the Internal Revenue Service that the depreciation of transmission right-of-way is an allowable expense for purposes of computing income taxes.

(B) All refunds as ordered above shall be made in accordance with the provisions of the Commission's order issued November 24, 1961.

(C) In all other respects this order of the Commission issued November 24, 1961, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

SENECA GAS COMPANY OF WEST VIRGINIA, INC., DOCKET NO. G–18442; ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP62–67; SENECA GAS COMPANY OF WEST VIRGINIA, INC., COMPLAINANT *v.* NAVGAS, INC., DEFENDANT, DOCKET NO. CP62–115; NAVGAS, INC., DOCKET NO. CP61–251

FINDINGS AND ORDER DISMISSING APPLICATION AND COMPLAINT AND ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 28, 1962)

On April 30, 1959, Seneca Gas Company of West Virginia, Inc. (Seneca), a West Virginia corporation having its principal office in Winchester, Virginia, filed an application in Docket No. G–18442, and on June 1, 1959, a supplement thereto, pursuant to Section 7(a) of the Natural Gas Act, for an order directing Atlantic Seaboard Corporation (Seaboard) to establish physical connection of its transportation facilities with the facilities which Seneca proposed to construct

and to sell and deliver to Seneca its natural gas requirements for resale to the United States Navy and public in Hardy and Pendleton Counties, West Virginia.

Seneca proposed to construct and operate approximately 24 miles of 6⅝-inch transmission pipeline extending from a connection with Seaboard's 26-inch transmission line at a point west of Mathias in Hardy County, West Virginia to the site of the Naval Radio Research Observatory at Sugar Grove, Pendleton County, West Virginia. Seneca alleged it planned to construct and operate a natural gas distribution system to serve the Naval facility near Sugar Grove and to serve other customers and unincorporated towns and villages along the route of the proposed transmission line.

Seneca estimated its fifth year gas requirements for the area it proposed to serve as follows: peak day, 1,050 Mcf, annual, 600,000 Mcf.

More than 90 percent of the annual volumes, and 40 to 60 percent of the peak day volumes were proposed to be utilized by the U.S. Naval Radio Research Station.

Seneca estimated the cost of its project would be $783,280.

Seneca alleged that it had been granted a certificate of public convenience and necessity by the Public Service Commission of West Virginia to construct and operate natural gas transmission distribution facilities in Hardy and Pendleton Counties.

Notice of Seneca's said application was issued by the Secretary of the Commission on December 2, 1959, and published in the Federal Register on December 8, 1959 (24 FR 9918) together with notice of hearing to commence on January 11, 1960. By notice of the Secretary of the Commission issued January 7, 1960, and published in the Federal Register on January 14, 1960 (25 FR 320), said hearing was continued, subject to further notice by the Secretary.

On March 22, 1961, Navgas, Inc. (Navgas) filed an application, in Docket No. CP61–251, pursuant to Section 7(a) of the Act, for an order directing Seaboard to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Navgas and to sell and deliver to Navgas its natural gas requirements for service to the Naval Radio Research Station near Sugar Grove, West Virginia. On March 16, 1962, Navgas filed an amendment to said application in Docket No. CP61–251 requesting, in lieu of relief under Section 7(a) of the Act, a finding and order that no certificate is required, or in the alternative, an order issuing a certificate of public convenience and necessity pursuant to Section 7(c) of the Act, authorizing the construction and operation of approximately 24.2 miles of 6⅝ inch pipeline and appurtenant facilities from a point of connection with the facilities of Seaboard in Hardy County, West Virginia, to the Naval Radio Research Station, near Sugar Grove, West Virginia, for the purpose of delivery and sale of natural gas to said station.

On September 15, 1961, Seaboard filed an application in Docket No. CP62–67, pursuant to Section 7(c) of the Act, for a certificate of public convenience and necessity authorizing the construction and operation of measuring and regulating facilities for the delivery and sale of natural gas to Navgas, Inc., a new customer, to permit Navgas, Inc., to render service to said Naval Radio Research Station.

Seneca filed on November 3, 1961, in Docket No. CP62–115 a complaint against Navgas, Inc., alleging, *inter alia*, that Navgas, Inc., is not exempt from the provisions of the Natural Gas Act by virtue of Section 1(c) thereof because Navgas, Inc.'s proposed rates and service are not regulated by the Public Service Commission of West Virginia. Seneca alleged further that Navgas, Inc., was then in the process of constructing facilities for the purpose of engaging in the transportation and sale of natural gas to the Navy, and, in so proceeding, Navgas, Inc., had violated the Natural Gas Act in that it had neither made application

with nor been granted a certificate of public convenience and necessity by this Commission, authorizing said construction.

Notice of the application in Docket No. CP62–67, and the complaint in Docket No. CP62–115 was issued by the Acting Secretary of the Commission on February 2, 1962, and published in the Federal Register on February 9, 1962 (27 FR 1232), setting said matters, including the application of Seneca in Docket No. G–18442, for consolidated hearing on a consolidated record for April 9, 1962.

Notice of the application in Docket No. CP61–251 was issued by the Acting Secretary of the Commission on March 21, 1962, and published in the Federal Register on March 27, 1962 (27 FR 2819), setting said docket for consolidated hearing on a consolidated record with Docket Nos. G–18442, CP62–67 and CP62–115, for April 9, 1962.

By notice issued by the Secretary of the Commission on March 29, 1962, and published in the Federal Register on April 4, 1962 (27 FR 3216), the hearing date for all the aforesaid consolidated dockets was postponed from April 9, 1962, to April 16, 1962.

By order issued April 9, 1962, Seneca was permitted to intervene in Docket No. CP61–251; the United States Department of the Navy, acting through the Chief of the Bureau of Yards and Docks, was permitted to intervene in Docket Nos. G–18442, CP62–67 and CP62–115; and Navgas, Inc. was permitted to intervene in each of the Docket Nos. G–18442, CP62–67 and CP62–115. By order issued January 15, 1960, Blue Ridge Gas Company was permitted to intervene in Docket No. G–18442.

Pursuant to the aforesaid notice of hearing, all the aforesaid consolidated matters came on for hearing before the Chief Presiding Examiner of the Commission on April 16, 1962. Neither any officer nor any representative of Seneca appeared at said hearing. The Chief Presiding Examiner read into the record a telegram from an officer of Seneca received by the Commission on the morning of said April 16, 1962, requesting a general continuance without a date named. The United States Navy Department, Navgas and Seaboard proceeded with the introduction of evidence in support of the applications of Navgas and Seaboard.

The undisputed evidence from witnesses on behalf of the Navy discloses that the U.S. Navy is constructing a Naval Radio Research Station near the town of Sugar Grove, West Virginia.

The Navy estimates that its annual requirements will be 549,000 Mcf and its peak day demand will be 2,000 Mcf. Since the area is sparsely settled, the Navy will construct support facilities at the Station, and natural gas will also be used at such facilities for cooking, water heating, space heating and similar uses.

The evidence on behalf of Navgas shows that it has a contract with the Department of the Navy (United States of America) dated as of June 15, 1960, to supply the natural gas requirements for the Naval Radio Research Station at Sugar Grove, West Virginia under the terms and conditions therein set forth.

The evidence further shows that on a complaint filed by Seneca against Navgas before the Public Service Commission of West Virginia, the West Virginia Commission found and concluded that Navgas in serving the Navy only and no other customers is not a public utility subject to the jurisdiction of the Public Service Commission of West Virginia and dismissed the complaint of Seneca against Navgas for lack of jurisdiction (*Seneca Gas Co. of W. Va., Inc.* v. *Navgas, Inc.*, Case No. 5169, order issued March 17, 1961). On appeal to the Supreme Court of Appeals of West Virginia, that Court sustained the West Virginia Commission and denied the appeal. *Seneca Gas Company of West Virginia, Inc.* v. *The Public Service Commission of West Virginia*, order issued June 19, 1961 (W. Va. Sup. Ct. of Appeals).

Navgas has constructed 24.6 miles of 6⅝-inch pipeline from a point of connection on Seaboard's main 26-inch pipeline in Hardy County, West Virginia southerly to Navgas' meter-regulator station, approximately 5,000 feet northeast of the United States Navy's electric generating plant at the Naval Radio Research Station near Sugar Grove, West Virginia. This line is not in operation, but one of the Navy's witnesses testified that the Navy would like to be able to use natural gas on November 1, 1962, when the power plant is completed.

The 24.6 miles of pipeline constructed by Navgas has sufficient capacity under the pressures indicated on the flow diagram (Exhibit 6) to deliver the required peak day volume of gas to the Naval Radio Research Station. There is no question as to the adequacy of Navgas' supply of gas, which will be received from Seaboard.

The total overall cost of the facilities constructed and to be constructed is $794,590, to be financed by temporary bank loans. The Navy is obligated to provide $650,000 as a connection charge, which, in turn will be refunded by equal monthly repayments over a twenty-year period. The evidence shows that the revenues received from the Navy will be sufficient to pay the operating expenses of Navgas, including cost of purchased gas[1] and depreciation.

Seaboard's evidence in Docket No. CP62–67 shows that Seaboard is a subsidiary of Columbia Gas System, Inc. and that it seeks to serve Navgas the natural gas requirements for said Naval Radio Research Station. Seaboard has sufficient capacity in its system at the point of interconnection with Navgas' facilities to serve the aforesaid peak day and annual requirements. The only facilities to be constructed by Seaboard consist of measuring and regulating facilities estimated to cost $19,600.

The evidence shows that the sale and delivery of natural gas to the Naval Radio Research Station will be a direct sale by Navgas, Inc. pursuant to the contract between the United States of America and Navgas, Inc. and that this sale will be the only sale and delivery made by Navgas Inc. The entire transmission line of Navgas is situated within the State of West Virginia.

With reference to the construction of facilities prior to obtaining a certificate, the President of Navgas testified that the Navy Department insisted that the construction of the pipeline take place as soon as possible, and the contract between the parties provided that Navgas proceed with construction in accordance with the time schedule therein set forth. In view of the relation of the Naval Radio Research Station to the national defense, and the then pending proceedings in West Virginia on the determination of the status of Navgas, he stated that there was no intent on the part of Navgas or any of its officers or employees willfully and knowingly to violate the provisions of the Natural Gas Act.

Navgas was in a no-man's land so far as its jurisdictional status was concerned pending final determination by the West Virginia authorities, since if West Virginia asserted jurisdiction, Navgas would be exempted from this Commission's jurisdiction under Section 1(c) of the Act, the witnsss said. Upon final disposition by the West Virginia Commission and Court, holding that Navgas is not a public utility subject to the jurisdiction of the West Virginia Public Service Commission, Navgas amended its original Section 7(a) application before us in the manner heretofore indicated.

At the conclusion of the hearing, counsel for Navgas, Inc. moved orally on the record that the intermediate decision procedure be omitted, and that the Commission forthwith render a decision herein pursuant to Section 1.30(c)(1) of

[1] Computations based upon Seaboard's currently effective tariff of $3.00 per Mcf, demand charge and 29.91 cents per Mcf, commodity charge.

the Commission's Rules of Practice and Procedure. All counsel present, including Staff Counsel, concurred in said motion. All parties waived the filing of briefs and, in lieu thereof, the Chief Presiding Examiner fixed May 14, 1962, as the date for the submission of the order herein.

On May 4, 1962, the Commission issued an order denying Seneca's request for a continuance. In said order we pointed out that from Seneca's application, it appears that more than 90 percent of the annual volumes and 40 to 60 percent of the peak day volumes of the estimated requirements of Seneca were proposed to be utilized to supply gas service for the United States Naval Radio Research Station, Sugar Grove, West Virginia.

We also set forth the situation relating to Seneca's application as follows: The Department of the Navy advised the Commission, by letter dated December 14, 1959, that due to the number and complexity of the proposals to supply gas service for said naval facility, it did not appear that any decision would be reached as to the selection of a company and negotiation of a contract for service by January 11, 1960. On December 30, 1960, the Commission addressed a letter to Counsel for Seneca stating in substance that in view of the fact that the Navy had not yet awarded a contract for furnishing gas service, it appeared appropriate to continue the hearing then set for January 11, 1960, until a contract had been awarded. Accordingly, on January 7, 1960, said hearing was continued subject to further notice by the Secretary.

By letter dated September 29, 1960, the Department of the Navy, Bureau of Yards and Docks, advised the Commission that on June 15, 1960, a contract for natural gas service to its said radio research station was awarded to Navgas, Inc., Charleston, West Virginia, and that a contract was then being finalized for execution by the parties. In view thereof, the Department of the Navy wrote, an allocation of gas to Seneca, as required by Seneca, in order to provide service to the said Naval Radio Research Station, was no longer required. On October 11, 1960, the Commission addressed a letter to Seneca pointing out that Seneca's application for a Section 7(a) order in Docket No. G–18442 indicated that the feasibility of its project depended directly on revenues to be derived from the sale of natural gas to the Naval Research Station at Sugar Grove, and suggesting that Seneca review its proposal, and, if it was determined that the matter should not be further prosecuted, that Seneca consider withdrawal of its application. No action was taken by Seneca.

The Commission finds:

(1) Seneca Gas Company of West Virginia, Inc., applicant in Docket No. G–18442, and complainant in Docket No. CP62–115, not appearing at the regularly scheduled and properly noticed hearing, its application in said Docket No. G–18442 and complaint in said Docket No. CP62–115 should be dismissed.

(2) Atlantic Seaboard Corporation, a Delaware corporation, having its principal place of business at Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 16, 1943, in Docket No. G–284 (3 FPC 941).

(3) Navgas, Inc., a West Virginia corporation, having its principal place of business at Charleston, West Virginia, not being subject to the jurisdiction of the West Virginia Public Service Commission, upon commencement of the transportation and sale of gas for which certificate authorization is requested herein will be engaged in the transportation of natural gas in interstate commerce, and will become a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The facilities which Seaboard and Navgas propose to construct and operate, as described in their respective applications, for the sale and transportation of natural gas in interstate commerce, respectively, are subject to the jurisdiction of the Commission, and therefore, subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of the facilities by Atlantic Seaboard Corporation, together with the proposed sale and transportation of natural gas, subject to the jurisdiction of the Commission, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) The proposed operation of the facilities constructed by Navgas, Inc., is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Applicants, Seaboard and Navgas, are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20) should apply to the certificates issued hereinafter and to the exercise of the rights granted thereunder.

(9) A request during the public hearing by counsel for Navgas, Inc. for omission of the intermediate decision procedure, and all requirements of Section 1.30(c)(1) [(18 CFR 1.30(c)(1))] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission to render its final decision in the instant proceeding.

The Commission orders:

(A) The application of Seneca Gas Company of West Virginia, Inc., in Docket No. G–18442, and the complaint filed by Seneca Gas Company of West Virginia, Inc. against Navgas, Inc., in Docket No. CP62–115 be and the same are each hereby dismissed.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Atlantic Seaboard Corporation, authorizing the construction and operation of the natural gas facilities for the sale and transportation of natural gas, as described in the application in Docket No. CP62–67, upon the terms and conditions of this order.

(C) A certificate of public convenience and necessity be and the same is hereby issued to Navgas, Inc., authorizing the operation of the facilities constructed by Navgas, Inc., as described in the application in Docket No. CP61–251, upon the terms and conditions of this order.

(D) The general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificates granted herein and to the exercise of the rights thereunder.

(E) The time within which the facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of said Section 157.20 of the Commission's Regulations is hereby fixed at twelve (12) months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

UNION OIL COMPANY OF CALIFORNIA, DOCKETS NOS. G–15846, G–15847, AND G–16074

ORDER GRANTING EXTENSION OF TIME

(Issued May 28, 1962)

By its order issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 441, the Commission disposed of more than 400 proceedings, including those above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to Docket No. G–15846, ordering paragraph (A) of the March 5 order directed Union Oil Company of California (Union) to refund tax-reimbursement amounts collected from its direct customer United Fuel Gas Company (United Fuel). With respect to Docket No. G–15847, said paragraph required Union to make such refund to Transcontinental Gas Pipe Line Corporation (Transco), Texas Gas Transmission Corporation (Texas Gas), and United Fuel.[1] Ordering paragraph (C) of the March 5 order directed that within 90 days from the date of issuance thereof, Union report to the Commission the details of its refund calculations and submit copies of releases from Transco, Texas Gas, and United Fuel as to the required refunds. By order issued April 26, 1962 in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, the Commission denied applications for rehearing of the March 5 order in the above, as well as other, dockets. On May 18, 1962 Union filed a motion seeking to stay the effectiveness of the March 5 order, insofar as applicable to the above dockets, and requesting an extension of time for compliance therewith, for a period ending 30 days after conclusion of judicial review of said order in those dockets. The motion recites that Union intends to seek judicial review of the March 5 order and that failure of the Commission to grant the stay pending such review would cause it irreparable injury.

For reasons stated in our order of April 13, 1962 granting Pan American Petroleum Corporation an extension of time for compliance,[2] we are disposed to extend the time within which Union must comply with ordering paragraphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after conclusion of judicial review of that order in the instant dockets. The extension is conditional, however, upon the payment by Union to Transco, Texas Gas, and United Fuel of interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5.

The Commission finds:

(1) There is good cause for extending the time within which Union must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after conclusion of judicial review of that order in the instant dockets.

---

[1] In Docket No. G–16074, no refunds were ordered. Accordingly, the motion for stay and extension of time herein considered shall be deemed applicable only to Docket Nos. G–15846 and G–15847.

[2] Pan American Petroleum Corporation, Docket No. G–15641; Pan American Petroleum Corporation (Operator), *et al.*, Docket Nos. G–15650 and G–15780.

(2) It is just and reasonable and in the public interest that Union be required to pay Transco, Texas Gas and United Fuel interest, at a rate of 7% upon the amounts to be refunded, for the period commencing on the 91st day after issuance of the March 5 order.

The Commission orders:

(A) The time within which Union must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962 is extended for a period ending 30 days after the conclusion of judicial review of the Commission's order.

(B) Union shall pay Transco, Texas Gas and United Fuel interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962 order.

(C) The time within which Transco, Texas Gas, and United Fuel must comply with ordering paragraphs (B) and (D) of the March 5, 1962 order, insofar as applicable to the instant dockets, is extended for a period ending 60 days after conclusion of judicial review of that order in said dockets.

(D) If Union shall not have filed petitions for review of the March 5 order in the instant dockets within the 60 day period prescribed by statute, the extension of time herein granted shall be deemed inoperative and of no effect.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

THE BRADLEY PRODUCING CORPORATION, DOCKET NO. G-19401; TEXACO INC., DOCKET NO. CI62-335 [1]

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, ACCEPTING RELATED FPC GAS RATE SCHEDULES, AMENDING PRIOR CERTIFICATE ORDERS, AND CANCELLING DOCKET NUMBER

(Issued May 29, 1962)[2]

Each of the above Applicants has filed an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas in interstate commerce as hereinafter described, all as more fully described in the respective applications (and any supplements or amendments thereto) which are on file with the Commission and open to public inspection.

The Applicants herein produce and propose to sell natural gas for transportation in interstate commerce for resale as indicated below:

Docket No.	Field and Location	Purchaser
CI62-335	Carter-Knox Field, Stephens County, Okla.	Lone Star Gas Co.[3]

Each Applicant in this consolidated proceeding has filed a related rate schedule for the proposed service. Such Applicants have been advised of the acceptance and designation of these related rate filings with the exception of the Applicants in Docket Nos. CI62-117 and CI62-170 whose related rate schedules are accepted hereinafter. None of the proposed rates exceeds the announced ceiling rates for the respective areas involved.

[1] Remaining applicants and docket numbers omitted in printing.

[2] Letter-order issued July 27, 1962 dismissing application for rehearing, 28 FPC 236. Petition for Review dismissed, *Texaco Inc.* v. *F.P.C.*, 317 F. 2d 796 (CA10-1963).

[3] Remaining purchasers, fields, etc., omitted in printing.

Austin Brady proposes in Docket No. G–20264 to sell natural gas from the W. H. Robinson Leases, Section 14, T28S, R32W, Haskell County, Kansas, (to certain depths), acquired by assignment from The Cooperative Refinery Association, which Association received certificate authorization in Docket No. G–9650 (Docket Nos. G–9650, *et al.*) covering said acreage, *inter alia.*

Braden Drilling, Inc. proposes in Docket No. G–20294 to sell natural gas from the Robbins and Irwin Leases, SE/4 of Section 21 and SW/4 of Section 14, respectively, T27S, R15W, Pratt County, Texas, acquired by assignment from Tatlock Oil Company, which Company received certificate authorization in Docket No. G–17858 (Docket Nos. G–11495, *et al.*) covering said acreage, *inter alia.*

Bonray Oil Company proposes in Docket No. CI60–306 to sell natural gas from the NE/4 of Section 7, T28N, R8W, Grant County, Oklahoma, acquired by assignment from Viersen & Cochran who received certificate authorization in Docket No. G–10690 (Docket Nos. G–10934, *et al.*) covering said acreage, *inter alia.*

Tower Oil & Gas Company of Texas proposes in Docket No. CI60–665 to sell natural gas from the Lela Hill Lease, SE/4, Section 31, Block D of the E.L. & R.R. RY. Co. Survey, Upton County, Texas, acquired by assignment from Hunt Oil Company, successor to Rutter and Wilbanks Brothers, Operator, who received certificate authorization in Docket No. G–8002 covering said acreage, *inter alia.*

Glen A. Martin (Operator), *et al.* propose in Docket No. CI61–1013 to sell natural gas from the P. H. Breeden Lease covering a portion of the Jos. Simons 1/3 League, Goliad County, Texas, to depths between the top of the Reklaw Sand Formation and 8,362 feet, acquired by assignment from Sunray Mid-Continent Oil Company, which Company received certificate authorization in Docket No. G–4948 (Docket Nos. G–2975, *et al.*) covering said acreage, *inter alia.*

The application of Graham-Michaelis Drilling Company (Operator), *et al.* in Docket No. CI62–179 covers additional acreage pursuant to an amendatory agreement to the basic contract between Graham-Michaelis and Northern Natural Gas Company for which certificate authorization was originally granted in Docket No. G–11570, hence the subject application will be treated as an application to amend said authorization in Docket No. G–11570 and the docket designation No. CI62–179 will be cancelled.

Pursuant to due notice, a public hearing was held in Washington, D.C. on May 10, 1962, respecting the matters involved in and the issues presented by the respective applications herein. No petition to intervene or protest to the granting of any of said applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules and Practice and Procedure.

The Commission finds:

(1) Each Applicant herein is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission, or will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and will, therefore, be a "natural-gas company" within the meaning of said Act upon the commencement of the service under the respective authorizations granted hereinafter.

(2) The sales of natural gas hereinbefore described, as more fully described in the respective applications, and any amendments and/or supplements thereto, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by the respective Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the

Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sales of natural gas by the respective Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(4) The respective Applicants herein are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The orders of the Commission granting certificates of public convenience and necessity to The Cooperative Refinery Association, Tatlock Oil Company, Viersen & Cochran, Hunt Oil Company and Sunray Mid-Continent Oil Company in Docket Nos. G–9650, G–17858, G–10690, G–8002 and G–4948, respectively, should be amended by deleting therefrom certain authorization as hereinafter ordered.

(6) The order of the Commission granting a certificate of public convenience and necessity to Graham-Michaelis Drilling Company (Operator), *et al.* in Docket No. G–11570 should be amended by adding thereto certain authorization as hereinafter ordered.

(7) The docket designation, Docket No. CI62–179, should be cancelled as hereinafter ordered.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued, upon the terms and conditions of this order, authorizing the sales by the respective Applicants herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sales, all as hereinbefore described and as more fully described in the respective applications, and any amendments and/or supplements thereto, in this proceeding.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customers involved imply approval of all of the terms of the respect' e contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the

imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(D) The orders of the Commission granting certificates of public convenience and necessity to The Cooperative Refinery Association, Tatlock Oil Company, Viersen & Cochran, Hunt Oil Company and Sunray Mid-Continent Oil Company in Docket Nos. G–9650, G–17858, G–10690, G–8002 and G–4948, respectively, are hereby amended by deleting therefrom so much of the authorization for the sale of natural gas as is the subject of the instant applications in Docket Nos. G–20284, G–20294, CI60–306, CI60–665 and CI61–1013, respectively, as more particularly set forth hereinabove.

(E) The order of the Commission granting a certificate of public convenience and necessity to Graham-Michaelis Drilling Company (Operator), *et al.* in Docket No. G–11570 is hereby amended by adding thereto authorization to sell natural gas from the additional acreage which is the subject of the instant application in Docket No. CI62–179.

(F) The docket designation, Docket No. CI62–179, is hereby cancelled.

(G) The related rate schedules listed below are accepted for filing to be effective on the date of initial delivery. Such acceptance for filing shall not be construed as constituting approval by this Commission of any service, rate, charge, classification, nor any rule, regulation or practice affecting such service or rate; nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate; and such acceptance is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicants involved. Further, in the event that any document comprising the listed rate schedules was executed on or after April 3, 1961, and contains provisions, either therein or by adoption of the terms and provisions of other agreements, for a change in rate other than those permitted by Section 154.93 of the Commission's Regulations under the Natural Gas Act, such rate change provisions shall be inoperative and of no effect at law and any tendered rate change under such provisions will be rejected.

Docket No.	Rate Schedule Designation	Description and Date of Document
CI62–117	Davisson A. Benson, Jr. FPC Gas Rate Schedule No 2	Contract, 6–30–61
CI62–170	George L. Yaste d.b.a. Oil States Sales Co. FPC Gas Rate Schedule No. 3.	Contract, 4–10–61

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

PUGET SOUND POWER & LIGHT COMPANY AND PUBLIC UTILITY DISTRICT NO. 1 OF CHELAN COUNTY, WASHINGTON, PROJECT NO. 943; PUBLIC UTILITY DISTRICT NO. 2 OF GRANT COUNTY, WASHINGTON, PROJECT NO. 2114

ORDER ON QUESTION CERTIFIED BY PRESIDING EXAMINER

(Issued May 29, 1962)

The Commission's order of September 5, 1961 setting hearing in the above-entitled proceeding specified two issues upon which evidence was to be pre-

sented. On May 10, 1962, the Presiding Examiner, on his own motion, certified a question to the Commission concerning that order. The Examiner asks whether he should: (1) issue an initial decision, including findings, conclusions, and order on all of the material issues of fact and law; or (2) limit his decision to findings on the two specific factual issues referred to in the order of September 5, 1961.

Paragraph (D) of the September 5, 1961 order states that the Commission's Rules of Practice and procedure shall apply in this proceeding except to the extent that they are modified or supplemented therein. Section 1.30(a) of the Rules of Practice and Procedure requires an initial decision by the Presiding Examiner unless an exception is made pursuant to subsections (b) or (c) of Section 1.30. There has been no request for an exception in this proceeding. The Commission's order of September 5, 1961 did not modify the requirements of Section 1.30(a) of the Rules of Practice and Procedure. Therefore, the Presiding Examiner should proceed to make an initial decision, including such findings, conclusions, and order as he deems appropriate for disposition of the questions presented.

The Commission orders:

This matter is returned to the Presiding Examiner for an initial decision.

CERTIFICATION OF QUESTION AS TO SCOPE OF PRESIDING EXAMINER'S INITIAL DECISION

TO THE COMMISSION:

Pursuant to Section 1.27(b)(8) of the Commission's Rules of Practice and Procedure, and in order to avoid the problems and delays that may result from an erroneous interpretation of the language of limitation in the Commission's Order, the Presiding Examiner certifies the question set out below to the Commission for its consideration and disposition.

The Commission's Order Fixing Hearing in the above-entitled proceeding issued September 5, 1961, limited the presentation of evidence to the following issues:

(1) What specific adverse effects, if any, will operation of the Wanapum Development have on the three fishways at Rock Island Dam?

(2) What specific construction would be necessary to modify the three existing fishways at Rock Island Dam to correct any adverse effects that will be caused by operation of the Wanapum Development?

The hearing concluded January 29, 1962, and all briefs have now been submitted.

The Staff brief contains a complete set of proposed findings, conclusions, and suggested order on all the material issues of fact and law before the Commission, including the question of the Commission's jurisdiction and the liability of the parties for any modification that may be required. The briefs of the parties, however, including the interveners, limit their proposed findings to the two factual issues set forth in the Commission's Order and do not include findings and conclusions or a proposed Commission Order on the legal issues of jurisdiction and liability.

The Presiding Examiner can, of course, issue an intial decision, as suggested by the Staff, including findings, conclusions, and order on all of the material issues of fact and law. On the other hand, the Presiding Examiner may limit his decision to findings on the two specific factual issues referred to in the Commission's Order setting the hearing.

The ambiguity in the language of the Order, together with the different interpretations of its scope implicit in the briefs, raises a question as to the appropriate scope of the initial decision herein.

Accordingly, further guidance from the Commission is sought.

Respectfully submitted this 10th day of May 1962.

WILLIAM C. LEVY,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. G-9174, G-9387, G-11039, G-11081, G-13427, G-13431, G-15074, G-15452, G-15508, G-16485, G-16650

ORDER ACCEPTING OFFER OF SETTLEMENT, TERMINATING PROCEEDINGS AND PROVIDING FOR REFUNDS

(Issued May 29, 1962)*

On April 19, 1962, Tennessee Gas Transmission Company (Tennessee) [1] submitted an Offer of Settlement in the above-designated proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure.

The above dockets relate to consolidated rate proceedings arising from proposed increased rates tendered for filing by Tennessee pursuant to Section 4 of the Natural Gas Act. The increased rates were suspended and subsequently placed in effect subject to refund. Hearings concerning the lawfulness of such proposed increased rates were begun on February 9, 1960, and after recesses, were concluded on June 7, 1960.

Three parties had intervened in one or more of the respective proceedings namely, Mississippi River Fuel Corp., the Public Service Commission of the State of New York, and United Fuel Gas Company. The first two of said intervenors did not appear at the hearing. United Fuel Gas Company entered an appearance but its participation was limited to a statement of position agreeing to Tennessee's increased rates.

The presiding examiner rendered a decision in January, 1962, denying all of Tennessee's proposed increased rates except that an increased rate of 17.55¢ per Mcf was held to be proper under its FPC Gas Rate Schedule No. 33-A. Extensive exceptions to the examiner's decision were filed by Tennessee.

The rates that Tennessee proposes in its Offer of Settlement as the effective rates for the rate schedules in the above respective dockets are as follows:

---

[1] Successor in interest to Middle States Petroleum Corporation which in turn was successor in interest to Midstates Oil Corporation.

*Amended by order issued August 27, 1962, 28 FPC 336.

[1] At a pressure base of 15.025 PSIA in Louisiana and 14.65 PSIA in Texas.
[2] Includes a 1.0¢ per Mcf Louisiana severance tax reimbursement.
[3] Includes a 1.75¢ per Mcf Louisiana severance tax reimbursement.

All of the proposed settlement rates for the sale of gas in East Texas and North Louisiana area are at or below the area ceiling rates as set forth in the Commission's Statement of General Policy No. 61–1, as amended. The rate proposed by Tennessee for the sale of gas to United Fuel Gas Company in South Louisiana is at the base initial contract rate plus applicable tax reimbursement, which is below the initial rate for the area as contained in such Policy Statement as amended.

Tennessee is to refund to its purchasers the monies collected, under its corporate agreements and undertakings, at the rates which are in excess of the above stated settlement rates. Additionally, Tennessee states that the settlement rates set forth hereinabove are acceptable to the pipeline purchasers who purchase gas from Tennessee pursuant to the designated rate schedules. No party has objected to the offer of settlement.

In view of the foregoing and without passing on the validity of the exceptions to the decision of the presiding examiner, it appears that the public interest will best be served by accepting Tennessee's Offer of Settlement as hereinafter provided, the decision of the Presiding Examiner thereby becoming moot.

The Commission finds:

(1) The proposed settlement of these consolidated proceedings on the basis described herein, as more fully set forth in the Offer of Settlement filed by Tennessee on April 19, 1962, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

(2) Good cause exists for disallowing all increased rates in excess of the settlement rates and for terminating the consolidated proceedings in the above-captioned dockets.

The Commission orders:

(A) The Offer of Settlement filed by Tennessee on April 19, 1962, is hereby approved in accordance with the provisions of this order.

(B) Tennessee shall execute with the purchasers under the rate schedules designated herein amendments to the gas purchase contracts to implement the provisions of the Offer of Settlement and file with the Commission within 45 days of the issuance of this order such amendments as supplements to the contracts involved.

(C) Within 45 days from the date of issuance of this order, Tennessee shall refund to its purchasers the difference between the amounts collected from such purchasers and the settlement rates in the Offer of Settlement, together with simple interest at the rate of 6 percent per annum from the respective dates of receipt of said excess amounts by Tennessee to the dates of refund. Tennessee shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this order, Tennessee shall report to the Commission in writing and under oath the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with copies of releases from its purchasers with respect to such refunds.

(E) All increased rates in the above dockets in excess of the settlement rates are disallowed and upon full compliance by Tennessee with all terms and provisions of this order the consolidated proceedings in such dockets will be terminated.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings which are presently being heard, or in any other proceedings now pending, or hereinafter instituted by or against Tennessee.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

LAKE SHORE PIPE LINE CO., DOCKET NO. RP60-1

ORDER APPROVING OFFER OF SETTLEMENT

(Issued May 31, 1962)

On February 4, 1960, Lake Shore Pipe Line Co. (Lake Shore) tendered for filing Third Revised Sheet No. 8-H, Sixth Revised Sheet No. 8-B, Ninth Revised Sheet Nos. 4 and 6 and Eleventh Revised Sheet Nos. 5 and 7 to its FPC Gas Tariff, Original Volume No. 1, proposing an increase in rates in excess of $830,000 per year to its affiliate, and only wholesale customer, East Ohio Gas Company (East Ohio).

Subsequent to a suspension order issued March 3, 1960, in this proceeding, the Commission permitted said revised sheets to become effective as of April 5, 1960, subject to the terms and conditions set out in the order issued herein on June 1, 1960. By order issued June 24, 1960, the City of Cleveland, Ohio, was permitted to intervene.

Following several pre-hearing conferences, Lake Shore placed an offer of settlement in the record.[1] The offer includes the filing of a proposed FPC Gas Tariff, First Revised Volume No. 1, to supersede as of January 1, 1962, Lake Shore's existing Tariff, under which Lake Shore has been collecting the increased rates involved in this proceeding.

---

[1] Transcript pp. 11-23. On May 15, 1962 Lake Shore filed and served on the parties to this proceeding a corrected Exhibit No. 2 to the settlement which makes no changes to the proposed settlement, but merely corrects an inadvertent error in the computation reflected in original Exhibit No. 2.

The aforementioned First Revised Volume No. 1 is composed of a cost-of-service form of rate schedule and appropriate General Terms and Conditions under which Lake Shore proposes to sell and deliver gas to East Ohio in lieu of the currently effective contract-demand form of rate herein under review. Said cost-of-service rate schedule provides that East Ohio shall have a continuing option to take any quantities of natural gas resulting from new production developed by Lake Shore in Ohio and in event such option is not exercised, Lake Shore shall credit to its total cost of service all revenues received from the sale of natural gas or oil realized from such production.

The proposed settlement also provides that Lake Shore makes refunds in the amount of $146,508 for the period from April 5, 1960 through December 31, 1961, plus interest at 7% per annum from the date of receipt of the excess amounts by Lake Shore until refunded. For the period from January 1, 1962 to the date of the issuance of this order, Lake Shore is required by the proposal to re-compute its charges to East Ohio in accordance with the aforementioned cost-of-service rate schedule. Any revenues collected under the filed rate in excess of such re-computed statements are to be refunded, with interest as hereinbefore set out and as required by order issued June 1, 1960.

Lake Shore, on the record, also advised the Commission that the managements "of Lake Shore and its affiliates are presently engaged in studying . . . plans under which the facilities of Lake Shore would be absorbed into other companies in the Consolidated Natural Gas System."

The aforementioned proposed settlement is based (1) upon costs-of-service, which our staff has found to be appropriate, and (2) upon a corporate realignment which contemplates a limited life for the Respondent in this proceeding. No party to the proceeding has objected to the proposed settlement. We are of the view that the settlement as proposed is in the public interest.

The Commission finds:

(1) The increased rates and charges contained in Lake Shore's Third Revised Sheet No. 8–H, Sixth Revised Sheet No. 8–B, Ninth Revised Sheet Nos. 4 and 6, and Eleventh Revised Sheet Nos. 5 and 7 to its FPC Gas Tariff, Original Volume No. 1, have not been shown to be just and reasonable or otherwise lawful under the provisions of the Natural Gas Act, and should be disallowed as hereinafter provided and ordered.

(2) The refund and rate proposal embodied in the settlement proposal appear to be in the public interest and therefore should be approved as hereinafter provided.

(3) Good cause exists for waiving the 30-day notice requirement provided in Section 154.22 of the Commission's Regulations under the Natural Gas Act so that the cost-of-service form of rate contained in the proposed tariff may become effective as of January 1, 1962, as hereinafter ordered.

The Commission orders:

(A) The increased rates and charges contained in Lake Shore's tariff sheets referred to in paragraph (1) above are disallowed and denied.

(B) The refunds and the cost-of-service form of rate embodied in the settlement proposal, hereinbefore noted, are approved and made effective, subject to the terms and conditions hereinafter ordered.

(C) Within 30 days from the date of this order, Lake Shore shall file, subject to acceptance by the Commission, its revised tariff containing the cost-of-service form of rate and the general terms and conditions applicable thereto, all as set out in the hearing record of this proceeding.

(D) The 30-day notice provisions set out in Section 154.22 of our Regulations is hereby waived and the revised tariff required by paragraph (C) is hereby

permitted to become effective as of January 1, 1962, subject to the terms and conditions of this order and of the settlement proposal as set out in the record of this proceeding.

(E) Within 45 days from the date of this order, Lake Shore shall refund to East Ohio the principal amount of $146,508, for the period from April 5, 1960, through December 31, 1961, plus interest at 7% per annum, from the date of payment of such excess until date of refund.

(F) In addition to the refunds required by paragraph (E), within 45 days from the date of this order, Lake Shore shall re-compute its billing statements to East Ohio for sales from and after January 1, 1962, in accordance with the aforementioned cost-of-service form of rate and shall refund the difference between the revenues actually collected and those which would have been collected pursuant to the re-computed billing statements, plus interest at 7% per annum.

(G) Within 15 days after refunding the excess revenues required by paragraphs (E) and (F), Lake Shore shall report to the Commission, in writing and under oath, the amount of the refund made, showing separately the amount of principal and interest so paid, and shall serve a copy of such report upon East Ohio. Concurrently, therewith, Lake Shore shall file with the Commission a release from East Ohio which shows the receipt of the aforementioned principal and interest.

(H) Upon full compliance by Lake Shore of all the terms and conditions of this order, and acceptance by the Commission of the rate filing required by paragraph (C) the proceeding shall be considered terminated.

(I) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, the Commission Staff, Lake Shore, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Lake Shore or any other company, person or party affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

THE MONTANA POWER COMPANY, PROJECT NO. 2188

ORDER APPROVING SUPPLEMENTAL EXHIBIT L DRAWING

(Issued May 31, 1962)

On April 10, 1962, The Montana Power Company, licensee for major Project No. 2188, filed for Commission approval a supplemental Exhibit L drawing for the spillway of the constructed Hauser Lake development of the project.

Our approval of the supplemental drawing would authorize the licensee to install 20 spillway gates to replace existing flashboards in 5 of the 24 bays (4 gates in each bay) in the spillway of the Hauser Lake dam. Each gate will be 4 feet 7 inches wide by 6 feet 10 inches high. Flashboards will be retained in the remaining 19 bays.

The licensee states that installation of the gates will improve control of reservoir levels and reduce the amount of water wasted each year. It will no longer be necessary to drawdown the reservoir to allow removal of flashboards preceding the spring runoff, except during years of high flow.

While the total spillway capacity will be reduced, our studies show that such reduction will not be sufficient to endanger project structures during spillway design flood flows, and we consider the modified spillway as adequate.

The Commission finds:

Exhibit L, Sheet 4A (FPC No. 2188–89) entitled "Hauser Lake Hydro Electric Development, Spillway Gate Installation", supplementing Exhibit L, Sheet 4 (FPC No. 2188–72), now part of the license for Project No. 2188, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

The supplemental Exhibit L drawing described in the above finding is approved as part of the license for Project No. 2188.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–13780

ORDER AMENDING ORDER GRANTING MOTION FOR STAY

(Issued May 31, 1962)

On March 30, 1962, this Commission issued an order in this proceeding granting in part a motion for stay filed by the Applicant herein on March 12, 1962. By said order we stayed ordering paragraphs (A), (C) and (D) of the order of February 9, 1962, herein, for a period of 60 days following the Commission's final action upon the application for rehearing filed herein.

On May 15, 1962, the Applicant filed a motion requesting the Commission to amend its order of March 30, 1962, so as to extend the stay of said ordering paragraphs to (a) "30 days after conclusion of judicial review of the Commission's Order * * *, issued February 9, 1962", or (b) "90 days after final action by the Commission upon the Application for Rehearing * * * filed in these proceedings."

We do not believe that the public interest will be adversely affected by deferring payment of the refunds, with interest, which we have found to be proper in the order of February 9, 1962, for a period of 30 days after conclusion of judicial review of the said order, and by extending to Applicant a stay of 90 days from the date of our final action in these proceedings, i.e., the date of the issuance of our order denying rehearing which was April 6, 1962, to place into effect the rate set forth in ordering paragraph (C) of the said order of February 9, 1962, aforementioned, as hereafter provided.

The Commission finds:

Good cause exists for granting, in part, the motion filed by Applicant on May 15, 1962, for an amendment to the order issued herein on March 30, 1962, so as to stay the actions required by ordering paragraphs (A) and (D) for a period of 30 days after conclusion of judicial review of the order issued February 9, 1962, aforementioned, and to stay the effect of the conditions set forth in ordering paragraph (C) of said order until 90 days from the date of our order of April 6, 1962, aforementioned, subject to the reporting condition hereinafter imposed by the *proviso* to ordering paragraph (B) below.

The Commission orders:

(A) The conditions and requirements set forth in ordering paragraph (C) of the order issued February 9, 1962, to and as a part of the permanent certificate of public convenience and necessity issued thereby, are hereby stayed until 90 days from the date of the order denying rehearing issued herein on April 6, 1962.

(B) The completion of the acts and compliance with the requirements set

forth in ordering paragraphs (A) and (D) of the said order, are hereby stayed for a period of 30 days after conclusion of judicial review of said order issued February 9, 1962, *provided, however*, that Applicant shall file with the Commission, no later than June 15, 1962, an officially certified statement computing and reporting the principal amount of the refunds which have been ordered by ordering paragraph (A) of the order issued February 9, 1962, for all volumes delivered in the period from initial delivery through March 31, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHWESTERN POWER ADMINISTRATION, DOCKET NO. E-6582

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued May 31, 1962)

The Assistant Secretary of the Interior, on behalf of the Southwestern Power Administration (SWPA), pursuant to the Flood Control Act of 1944 (58 Stat. 887), on April 30, 1962, filed a request for confirmation and approval of its presently effective rates and charges for the sale of electric power generated at the Whitney Project to Brazos Electric Power Cooperative, Inc. (Cooperative) for the five-year period beginning June 1, 1962. Those rates and charges are contained in an agreement dated November 17, 1953, between SWPA and the Cooperative, and represent a continuation for an additional five-year period of rates and charges which were approved by the Commission's order issued December 23, 1954, in the above-entitled docket (13 FPC 1632) for an initial five-year period commencing December 23, 1954, and subsequently were extended for a period ending May 31, 1962, by the Commission's order issued February 5, 1960 (23 FPC 310).

The afore-mentioned agreement, which extends for 35 years from the date of the commencement of service, provides that the rates and charges contained therein shall remain in force for a period of five years from the date of initial approval by the Commission, at which time and at the end of each succeeding five-year period thereafter they shall be reviewed and redetermined.

The agreement provides *inter alia* for the delivery to Cooperative of the entire output of the Whitney Project, which includes 30,000,000 kwh per year of primary energy and an average of 51,760,000 kwh per year of secondary energy. Cooperative will pay an annual charge of $441,000 in equal monthly payments of $36,750, and will receive the following credits to that charge: (a) 12.49 mills for each kwh of primary energy which SWPA is unable to deliver because of lack of water; (b) 11.21 mills for each kwh of primary energy which SWPA is unable to deliver for any reason except scheduled outages or lack of water; and (c) 1.28 mills for each kwh of energy which could have been generated by the use of water spilled through no fault of Cooperative.

Under an agreement dated November 17, 1953, with Texas Power & Light Company (Texas Power), Cooperative resells the power and energy received from the Whitney Project to that Company, and in turn Texas Power makes available a maximum of 28,000 kw of firm power and associated energy to Cooperative.

A current repayment study submitted by SWPA in support of the continued application of the present rates and charges indicates that all costs associated

with the Whitney Project power operations will be repaid within a 53-year period beginning with the fiscal year 1956, the first full year of commercial operation under the afore-mentioned long-term contract with Cooperative.

Notice of the proposed rates and charges was sent to interested State officials and published in the Federal Register on May 11, 1962 (27 F.R. 4538), stating that any person desiring to make comments or suggestions with respect thereto should submit the same on or before May 21, 1962. No comments or suggestions have been received.

The Commission finds:

The continued application of the rates and charges contained in the agreement dated November 17, 1953, between SWPA and Cooperative for the sale of electric power produced at the Whitney Project to Cooperative for a period of five years beginning June 1, 1962, will not be inconsistent with the purposes of the Flood Control Act of 1944.

The Commission orders:

The proposed rates and charges contained in the agreement dated November 17, 1953, between SWPA and Cooperative for the sale of electric power produced at the Whitney Project, and referred to above, hereby are confirmed and approved for a period of five years beginning June 1, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NOS. G-5471, G-11982, G-17218 AND G-19984

ORDER SETTING ORAL ARGUMENT, PROVIDING FOR PARTICIPATION OF AMICI CURIAE AND FOR FILING OF BRIEFS

(Issued June 1, 1962)*

Among other matters, there is in issue in these rate proceedings the question of the treatment of liberalized depreciation deductions in the computation of income taxes to be allowed Alabama-Tennessee Natural Gas Company for rate-making purposes. The existing precedent as set out in Opinion No. 326, *El Paso Natural Gas Company*, Docket No. G-4769, 22 FPC 260, 266-267, is to the effect that a natural-gas company will be permitted to include in its cost of service income taxes on the basis of straight line depreciation, while paying such taxes on the basis of liberalized depreciation. In Opinion No. 342, *Northern Natural Gas Company, et al.*, Docket Nos. G-19040, etc., 25 FPC 431, it is concluded that the aforementioned use of liberalized depreciation should be taken into consideration in fixing a rate of return for the pipeline company by including the amounts in the deferred income tax account resulting therefrom as part of the company's capitalization and providing for an allowance of 1.5 percent return thereon.

This Commission has indicated in a number of recent orders that it proposes to reexamine this matter.[1]

It is appropriate, in the circumstances, that we provide for oral argument in these proceedings on the question of the treatment for rate-making purposes to be accorded the use of liberalized depreciation deductions by a pipeline company in the computation of its income taxes and of accumulated deferred taxes in the determination of rate of return.

Specifically, we desire to hear arguments directed toward the several possibilities for handling this matter, namely, use of the present procedure with rates of return at 0, 1.5, or such higher rate as may be deemed to be in the public interest, or, alternatively, use of the so-called "flow-through" principle under which the reduction in taxes through the use of liberalized depreciation instead of straight-line depreciation, would be reflected in income taxes included in the pipeline's cost of service. We believe we would be aided in our consideration of this problem by the participation as *amici* either in the oral argument, or by the filing of written briefs, by any person, company, association or governmental authorities having an interest in the problem. In order, however, to keep the proceeding within manageable bounds we shall direct all such persons to state the position which they wish to advocate in their requests for participation, and we reserve the right to specify by subsequent order that persons taking the same position file joint briefs or designate a single member of their group to present the oral argument.

---

*Reconsideration denied by order issued July 30, 1962, 28 FPC 240.

[1] See orders issued February 13, 1962, in *Idaho Power Company*, Project Nos. 18 and 503, 27 FPC 349; *Minnesota Power & Light Company*, Project Nos. 346 and 419, 27 FPC 354; *Southern California Edison Company*, Project Nos. 67, 120 and 382, 27 FPC 360; order issued February 28, 1962, *In the Matter of New England Power Company*, 27 FPC 404; and order issued April 2, 1962, in *California Electric Power Company*, Project No. 344, *et al*, 27 FPC 658.

The Commission orders:

(A) Oral argument before the Commission on the issue of the treatment to be accorded for rate-making purposes of liberalized depreciation deductions under Section 167 of the Internal Revenue Code used by a pipeline company in the computation of its income taxes and of accumulated deferred taxes in the determination of the rate of return and the alternatives specifically set forth above, shall be held on July 10, 1962, at 10:00 a.m. (EDT) in a Hearing Room of the Federal Power Commission, 441 G Street, NW., Washington, D.C.

(B) Any person, company, association, or governmental authority having an interest in the problem shall file on or before June 14, 1962, a request to participate either as *amicus* in the oral argument or to file written briefs and shall, in that request, specify the position it proposes to advocate in this matter.

(C) Any parties to these proceedings who intend to participate in the oral argument and any *amici* granted permission to present oral argument shall notify the Secretary of the Commission on or before June 29, 1962, of the time requested for presentation of such argument.

(D) Any party to these proceedings or any *amici* granted permission by the Commission to do so may file a written brief on the issue herein set for oral argument on or before July 3, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

THE ATLANTIC REFINING COMPANY, DOCKET NOS. G–15678 AND G–15719

ORDER GRANTING EXTENSION OF TIME

(Issued June 1, 1962)

By its order issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 441, the Commission disposed of more than 400 proceedings, including those above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to the instant dockets, ordering paragraph (A) of the March 5 order directed The Atlantic Refining Company (Atlantic) to refund tax-reimbursement amounts collected from its direct customer Texas Gas Transmission Corporation (Texas Gas). Ordering paragraph (C) of the March 5 order directed that within 90 days from the date of issuance thereof, Atlantic report to the Commission the details of its refund calculations and submit copies of releases from Texas Gas as to the required refunds. By order issued April 26, 1962 in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 847, the Commission denied applications for rehearing of the March 5 order in the above, as well as other, dockets. On May 22, 1962 Atlantic filed a motion seeking to stay the effectiveness of the March 5 order, insofar as applicable to the above dockets, until 30 days after conclusion of judicial review of said order in those dockets. The motion recites that Atlantic intends to seek judicial review of the March 5 order and that failure of the Commission to grant the stay pending such review would cause it irreparable injury.

For reasons stated in our order of April 13, 1962 granting Pan American Petroleum Corporation an extension of time for compliance,[1] we are disposed to

[1] Pan American Petroleum Corporation, Docket No. G–15641; Pan American Petroleum Corporation (Operator), *et al.*, Docket Nos. G–15650 and G–15780, 27 FPC 686.

extend the time within which Atlantic must comply with ordering paragraphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after conclusion of judicial review of that order in the instant dockets.[2] The extension is conditional, however, upon the payment by Atlantic to Texas Gas of interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5.

The Commission finds:

(1) There is good cause for extending the time within which Atlantic must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after conclusion of judicial review of that order in the instant dockets.

(2) It is just and reasonable and in the public interest that Atlantic be required to pay Texas Gas interest, at a rate of 7% upon the amounts to be refunded, for the period commencing on the 91st day after issuance of the March 5 order.

The Commission orders:

(A) The time within which Atlantic must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962 is extended for a period ending 30 days after the conclusion of judicial review of the Commission's order.

(B) Atlantic shall pay Texas Gas interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962 order.

(C) The time within which Texas Gas must comply with ordering paragraphs (B) and (D) of the March 5, 1962 order, insofar as applicable to the instant dockets, is extended for a period ending 60 days after conclusion of judicial review of that order in said dockets.

(D) If Atlantic shall not have filed petitions for review of the March 5 order in the instant dockets within the 60 day period prescribed by statute, the extension of time herein granted shall be deemed inoperative and of no effect.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–20521

ORDER ADOPTING PRESIDING EXAMINER'S DECISION ON RATE FORM

(Issued June 1, 1962)*

Syllabus

1. Interpreting Tariff provision, Commission *holds* that no applicant is deemed to have waived any rights it may have under Section 7(a) of the Natural Gas Act by reason of such provision; moreover it is not construed as an encroachment on Commission's power to act under Section 7(a) of the act. P. 1066.
2. Natural Gas Act does not require company to generally supply additional gas to customers at a loss, nor does it give Commission power to compel the pipeline to make a blanket stipulation in its tariffs to the effect that it will supply additional gas. P. 1072.

[2] It should be understood that the 30th day after judicial review in the instant dockets is the date upon which Atlantic must comply with the March 5 order; it is *not* the date upon which the 90 day period referred to in ordering paragraph (C) commences to run.

* Initial Decision appears on Page 1066.

3. Commission *approves* Colorado Interstate's use of contract demand form of gas tariff and *terminates* proceeding initiated under Section 4(e) of the Natural Gas Act. P. 1066; 1077.

Duke W. Dunbar and *Jacob Goldberg* for Colorado Public Utilities Commission.

E. A. Stansfield for Public Service Company of Colorado, Colorado-Wyoming Gas Company, and The Pueblo Gas & Fuel Company.

Ishier Jacobson, Reuben Goldberg, and *George Spiegel* for Citizens Utilities Company.

E. A. Stansfield for Greeley Gas Company.

Raymond D. Nixon and *Louis Johnson* for Colorado Springs Department of Public Utilities.

Donald E. Kelly, Charles S. Rhyne, Hersel H. E. Plaine, and *Thomas P. Brown, III* for City and County of Denver.

C. H. Ross, Charles C. McDugald, Lowell E. Sachnoff, and *William W. Brackett* for Natural Gas Pipeline Company of America.

John E. Miles, Hilton A. Dickson, Jr., and *Fredeirck G. Von Huben* for New Mexico Public Service Commission.

K. W. Kissick and *O. F. Adams* for City of Trinidad, Colorado.

James L. White, John Fleming Kelly, and *W. Russell Gorman* for Colorado Interstate Gas Company.

Edmund M. Sciullo for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

The Presiding Examiner's decision upon Colorado Interstate Gas Company's proposed revision of the rate form of its tariff to a "standard form of contract demand" was issued and served upon all the parties on May 2, 1962. No exceptions thereto have been filed by any party to the proceeding.

However, a number of parties have raised a question of interpretation with respect to Section 17(d)(2) of the General Terms and Conditions in the proposed tariff which provides, in part:

> Seller shall not be obligated to supply the requested additional gas if Seller determines in its judgment that it cannot do so economically.

Notwithstanding the foregoing provision of the tariff, no applicant for gas supply or additional gas supply is deemed to have waived any rights it may have under Section 7(a) of the Natural Gas Act. Moreover, that provision is in no manner construed as an encroachment on this Commission's power to act upon any application filed under that section.

With the foregoing interpretation, the examiner's decision hereby is adopted as the final decision and order in this proceeding.

DECISION

ACCEPTING SUBSTITUTE GAS TARIFF AND TERMINATING PROCEEDING

(Issued May 2, 1962)

WESTON, *Presiding Examiner:* On December 31, 1959, the Commission approved a settlement of Colorado Interstate's rate-increase filings in Docket No. G–13541. (See 22 FPC 1180.) The settlement, to which all parties and customers agreed, contemplated the restatement of Colorado Interstate's existing G–1 and P–1 tariffs to the "standard form of contract demand" gas tariff.

Such restatement had been proposed in a new tariff filing tendered September 28, 1959, and revised on December 21, 1959, to reflect the "settlement rates restated on an equivalent basis to the contract demand form." (22 FPC at 1182.)

The settlement was intended to, and did, resolve all questions as to the level of rates to be charged by Colorado Interstate to its customers beginning with the calendar year 1959. Beginning with January 1, 1960, however, the contemplated restatement of the G–1 and P–1 tariffs in the contract demand form necessarily also contemplated and required a recomputation of demand charges as set out in the superseded tariffs. The settlement specified that instead of $1.50 per Mcf demand charge in the former G–1 rate schedule, the "demand charge of the G–1 rate shall be $1.36 to reflect the new contract demand form of tariff proposed" by the September 28, 1959, filing mentioned above; similarly, the former P–1 charge of $1.04 would be 94 cents to reflect such change in rate form. (21 FPC at 1186.) And the parties to the settlement reserved "all rights as to all matters with respect to said filing of September 28, 1959, except as to the level of rates contained therein as herein provided." (*id.*)

By separate order also issued on December 31, 1951, 22 FPC 1180, the Commission instituted the proceeding at bar by suspending the above-mentioned new tariff filing, on the basis of findings that the new tariff sheets "represent a filing relating only to rate form, not rate level," but that Colorado Interstate's customers "have indicated some objection to the change in rate form." On June 1, 1960, the new tariff became effective, subject to refund, and has since been applied to Colorado Interstate's customers. By order issued June 14, 1960, the Commission permitted the new tariff to become effective as of June 1, 1960, subject to refund of any excess charges collected thereunder. On August 16, 1960, the Commission set the proceeding down for hearing September 21, 1960, on a recital that—

> The proposed tariff revisions in principal part relate to a change in Colorado Interstate's G–1 and P–1 rate schedules to a "standard form of contract demand," and to inclusion of an SG rate schedule for small distribution companies. Because of the settlement of Docket No. G–13541, the proposed tariffs represent a filing relating only to rate form, not to rate level. [Footnote omitted.]

Many of the customer objections to the new form of tariff were settled in informal conferences prior to and during the course of the proceeding. There is no customer objection in principle to the contract demand form of rate, which is used by substantially all of the regulated pipelines serving, as does Colorado Interstate, several distribution company customers. The customers have since June 1, 1960, regularly nominated and settled their contract demand quantities for the heating seasons 1960-1961 and 1961-1962. In the meantime, since the closing of the record herein on October 26, 1960, we have had the benefit of two heating seasons of experience under the new form of tariff. We can now judge the results of such new tariff on the basis of the dollars-and-cents realities, without prejudice to any party to this record, or any consumers, on account of the delay. As will be seen, the results during the 1960-1961 heating season were inconclusive on the matter of customer claims that Colorado Interstate would profit unduly from the new tariff; the January 1962 peaks, however, furnished important factual data.[1]

The issues not resolved in informal conferences will be taken up in the separate sections which follow.

[1] In view of current emphasis on speeding the decisional process, it may be noted that the case at bar is one of many cases in which "policy delay," *i.e.*, deliberate delay in considering and deciding issues, is the proper course to be followed by the decision-maker.

Change in Billing Demand

Under Colorado Interstate's prior G–1 and P–1 tariffs, applicable until June 1, 1960, the customer's monthly Billing Demand was "the greater of the following—

"(1) The measured demand, or

"(2) 90% of the highest measured demand for the 11 months immediately preceding the current billing period."

This meant that each of the customers paid demand charges on the basis of the highest single day's actual take of Mcf's of gas during the given current month, but not less than 90 percent of the highest single day's actual take of Mcf's of gas during the preceding eleven months.

Under Colorado Interstate's new tariff, the customer's monthly Billing Demand is—

> * * * the highest day's delivery during the twelve months ended with the current billing month but not less than 90% of the Contract Demand nor more than the Contract Demand. (Exh. 4, original sheets 5 and 10.)

This means that each of the customers pay demand charges on the basis of the highest single day's actual "take" of Mcf's of gas during the twelve months ended with the current month, but not less than 90 percent of the amount nor more than the amount of the Contract Demand, which is the amount nominated each year by the customer and settled between the customer and Colorado Interstate, representing—

> * * * the maximum quantity of natural gas Seller is obligated to deliver on a firm basis to Buyer and Buyer is entitled to receive on a firm basis from Seller on any day. (Exh. 4, Original Sheet 22.)

The Public Service group of customers,[2] the Colorado PUC, and the Staff propose that the Billing Demand be the highest day's delivery during the current billing month, but not less than 90 percent of the Contract Demand nor more than the Contract Demand. This proposal thus eliminates, in the event of "takes" in the bracket between 90 percent and 100 percent of the Contract Demand, eleven months of Billing Demand charges in respect of such percentage of gas as is within the bracket.

Factors In Evaluating Contentions. A decision on the opposing contentions as to the proper computation of Billing Demand must accord with two basic principles applicable to this case:

First, we should note that the level of the rates which were arrived at in the settlement proceedings and agreed to by all of the parties, were determined on the basis of the test year costs and operations which were considered as representative of prospective costs and operations. Consequently, in this proceeding, any proposal which would result in a change in the level of rates, either up or down, would be in conflict with the terms of the settlement agreed to by the parties and approved by the Commission. Simply stated, the *status quo* must be preserved, and we must focus only on the question whether or not the new form of tariff accomplishes that goal.

Second, we should remember that demand charges are by definition associated primarily with the fixed costs of the pipeline system—costs of capital outlay and relatively constant operating expenses. Those costs are incurred to install and maintain Colorado Interstate's capacity to meet firm requirements, which

[2] Public Service Company of Colorado, a distribution company serving the Denver area, and its two wholly-owned subsidiaries Colorado-Wyoming Gas Company (a pipeline serving Northern Colorado and southeastern Wyoming), and Pueblo Gas and Fuel Company (a distributor in the Pueblo area). This group takes 83 percent of the gas involved in this tariff filing.

are substantially the firm requirements of Colorado Interstate's resale customers taking gas under the G–1 and P–1 rate schedules. Under the "Atlantic Seaboard Formula" (*Atlantic Seaboard Corp.*, 11 FPC 43, 54), 50% of the fixed costs are classified as demand cost, and such demand cost is allocated between jurisdictional and nonjurisdictional customers on a peak responsibility basis. In pipeline rate-making, demand charges are not quoted in terms of the peak take on an annual basis; rather, demand charges are quoted on a monthly basis in terms of the Billing Demand of the several customers as defined in their tariff. It is essential therefore that the Billing Demand provided in the tariff be computed pursuant to a method which fairly and equitably apportions among the various customers the demand cost related to the peak load imposed by those customers on the system. Moreover, the method of determining the Billing Demand should provide a reasonable and proper basis for the pipeline company to efficiently and economically build capacity additions. The new form of tariff assures more realistic market estimates than the old tariff, and provides "a means by which Colorado Interstate can recover a portion of its fixed costs incurred in supplying its customers with the delivery capacity they require on a more assured and stable basis. * * *" (Tr. 41.)

Factual Results of New Tariff. In order to have a basis for computing its possible refund obligations in the proceeding at bar, Colorado Interstate has, for each month since June 1, 1960, filed statements showing a comparison of actual billings to its customers under the contract demand form of tariff in effect since that date, with billings that would have been made under the old tariff. The statements as amended show the name of the customer, the applicable G–1[3] or P–1 Rate Schedule, the actual peak day "takes" during each month, the revenues at rates in effect immediately prior to June 1, 1960, the revenues actually collected, the difference in revenues (current month and total), and the applicable monthly contract demands. The statements are part of the public records of the Commission, subject to the safeguards applicable to documents of which official notice may be taken, and official notice is taken thereof.

We thus have available the actual and computed results of the new and old tariffs in operation for an adequate period of time to base a determination in the light of actual experience as to whether the Billing Demand provisions of the new tariff operate (a) to increase rate levels as established by the settlement agreement, (b) to otherwise disadvantage Colorado Interstate's customers in the respects advanced as potentials on brief. We can also compute the effect on Colorado Interstate of the application of the form of billing demand suggested by Staff and intervenors.

The monthly figures have been reviewed for the period from June 1, 1960, through January 31, 1962—a period which covers the 1960–61 and 1961–62 winter season.[4]

From all eleven of its resale customers using the G–1, SG–1, and P–1 Rate Schedules, Colorado Interstate realized from June 1, 1960, to January 31, 1962, the amount of $65,449 *less* revenues than would have been realized under the old tariff. In comparison to the $50,395,226 of total revenues involved (including commodity revenues) under the old tariff, the difference is .13 percent, or insignificant.[5] As to *each* of the eleven resale customers, the differences between

[3] Some of the customers, for small volumes, use an optional "SG–1" schedule about which there is no issue in this proceeding.

[4] The peak day for the 1961-62 winter season occurred on January 19, 1962, for Colorado-Wyoming Gas Co., and on January 10, 1962, for all other customers.

[5] To December 31, 1961, prior to the peak January month, the difference was only $15,996 less revenues, or .03 percent of revenues involved. Each month the total difference has been in the insignificant range.

the revenues collected under the new tariff and the revenues which would have been collected under the old tariff have also been insignificant. As of January 31, 1962, the range of difference was between Public Service Company of Colorado on the one hand, which had to that time incurred $107,207 *less* in charges than would have been payable under the old tariffs, and City of Colorado Springs on the other hand, which had incurred $53,720 *more* in charges on the same basis. Looking at the results of the new tariff on individual customers over the recent months since June 1, 1960,[6] there has, as in the case of the consolidated figures, been some variance in the plus or minus figures, but always in the relatively insignificant category when related to total charges.

Eliminating commodity charges and focussing exclusively on demand revenues from G–1 and P–1 customers, it is clear that overall in the period June 1, 1960, through January 1962, the effective new tariff is slightly more equivalent to the old tariff, in terms of revenues to Colorado Interstate, than the tariff charges proposed by intervenors and Staff would have been if in operation—and no individual customer was significantly prejudiced by the effective Billing Demand of the new tariff. Thus:

Colorado Interstate Gas Company, comparative summary of demand revenues: G–1 & P–1 customers, June 1, 1960–Jan. 31, 1962

Customer	Old tariff	New tariff	Proposed tariff
P.S. Co. of Colo.	$9,045,517	$8,938,310	$8,922,074
Pueblo G. & F. Co.	1,154,610	1,170,768	1,169,412
City of Colo. Springs	1,873,163	1,926,883	1,926,883
Greeley Gas Co.	134,631	130,996	123,721
Citizens Util. Co.	274,624	271,788	269,580
Colo-Wyo. Gas Co.	2,682,071	2,654,365	2,571,094
Kans-Colo. Utils. Inc.	1,227	1,094	1,094
SUMMARY			
Total revenues	$15,165,843	$15,094,204	$14,983,858
Over (under) old tariff	----------	[1](71,649)	[2](181,985)

[1] Amounts to ½ of 1% of revenues under old tariff.
[2] Amounts to 1.2% of revenues under old tariff.

It is noted that had the tariff proposed by the intervenors and Staff been in effect during the above 20-month period, the $181,895 difference in revenues to Colorado Interstate would also be insignificant. This is because the actual monthly peak day "takes" of gas by each of the G–1 and P–1 customers, up to December 1961, were less than 90 percent of the Contract Demand of each such customer, with three minor exceptions.[7] Thus conservative nominations of Contract Demand, favorable weather conditions, or a combination of these factors, up to the 1961–1962 heating season, made for inconclusive results in respect of the various contentions as to the proper basis for Billing Demand.

However, projecting results for 1962 on the basis of the January 1962 peaks produced highly significant results. Based on (1) current Contract Demand, (2) the peak day quantities actually used, and the (3) Billing Demand quantities computed under (a) the old tariff, (b) the new tariff, and (c) the intervenor-Staff proposed tariff, the estimated revenues would be as follows:

[6] *I.e.*, after a sufficient period of experience under the new tariff.

[7] In December 1960, Public Service Company of Colorado took 333,905 Mcf (90 percent of their Contract Demand = 332,820), Greeley Gas Co. took 4,671 Mcf (90 percent of their Contract Demand = 4,523), and Colorado-Wyoming Gas Co. took 131,735 Mcf (90 percent of their Contract Demand = 123,930).

Colorado Interstate Gas Company, 1962 estimated demand revenues: G–1 & P–1 customers

Customer	Old tariff	New tariff	Proposed tariff
P.S. Co. of Colo	$5,838,657	$5,827,937	$5,464,649
Pueblo G. & F. Co	790,068	788,615	725,454
City of Colo. Springs	1,349,384	1,338,240	1,215,568
Greeley Gas Co	93,939	85,272	77,463
Citizens Util. Co	178,114	171,456	155,739
Colo-Wyo. Gas Co	1,695,651	1,687,274	1,610,954
Kans-Colo. Utils. Inc	6,977	6,768	6,148
SUMMARY			
Total revenues	$9,952,790	$9,905,562	$9,255,975
Over (under) old tariff		[1](47,228)	[2](696,815)

[1] Amounts to ½ of 1% of revenues under old tariff.
[2] Amounts to 7% of revenues under old tariff.

The 1962 estimated demand revenues are significantly affected by the fact that the actual peak day "takes" of gas by G–1 and P–1 customers in January were substantially in excess of 90 percent of their contract demand quantities.[8] As heretofore noted ("Change in Billing Demand," *supra*), under the old tariff, such customers would have had a new "floor" on Billing Demand at 90 percent of the actual January 1962 peak day "takes" for the subsequent eleven months in 1962. Under the tariff proposed by intervenors and Staff, the "floor" would remain at 90 percent of Contract Demand for such months. Under the effective tariff now in issue, the "floor" for customers which in January took over 90 percent of Contract Demand is the actual amount of deliveries, but not more than Contract Demand.

Conclusion. The computation of Billing Demand as contained in Colorado Interstate's currently effective tariff is reasonable and proper, and Colorado Interstate's contingent obligation to make refunds on account of charges made and collected under such computation should be discharged. The computation of Billing Demand proposed by intervenors and Staff would result in a substantial reduction in Colorado Interstate's level of rates as agreed to in the settlement made in Docket No. G–13541, and should not be adopted.

Customer Requests For Additional Gas

Section 17 of the proposed General Terms and Conditions applicable to service by Colorado Interstate covers "Changes in Contract Demand." Paragraph 17.1(d) covers "Procedure If Additional Supplies or Facilities Required." Starting with the premise that Colorado Interstate (Seller) either (a) does not have additional supply available, or (b) must construct additional facilities, to serve a requested increase in Contract Demand, a procedure is set up "to attempt to make such additional supply available." Subparagraph 17.1(d)(2) provides—

> Seller shall not be obligated to supply the requested additional gas if Seller determines in its judgment that it cannot do so economically.

The Colorado PUC objects to this clause, as one implying Colorado Interstate's "unilateral right to refuse to supply increased nominated contract demands,"

[8] Colorado Springs, Greeley, Citizens, and Kansas-Colorado "takes" exceeded contract demands. Payments for unauthorized overruns were, however, excluded from computations because of the history of waivers of such payments by Colorado Interstate. Inclusion of such payments would add $10,514 to revenues under the New Tariff and the Proposed Tariff Summary above.

and ask for its elimination from the tariff. The City and County of Denver go further, and say that Colorado Interstate—

> should be obligated by a provision in its tariff to apply for a certificate of public convenience and necessity required for construction or extension of facilities under Section 7(c) of the Natural Gas Act if a customer requires more gas, is willing to pay a contract demand charge for a twenty year period, and this service cannot be granted without a certificate. * * * (Br. 1–2.)

1. The subject-matter field, "extension of facilities," is at least substantially occupied by the provisions of Section 7(a) of the Natural Gas Act, to the exclusion of provisions intended to govern such field and incorporated into the tariffs or contracts of private parties. Section 7(a) provides, in pertinent part and in effect, that the Commission may direct a pipeline to improve its facilities on a finding that such improvement will not place an "undue burden" on the pipeline, but that the Commission may not "compel the enlargement of transportation facilities" or new connections or sales which would impair the pipeline's "ability to render adequate service to its customers."

2. Colorado Interstate's customers have the rights and the Commission has the powers which are set forth in the Natural Gas Act, and no more. The Act does not require Colorado Interstate to generally supply additional gas to its customers at a loss, nor does the Act give the Commission power to compel the pipeline to make a blanket stipulation in its tariffs to the effect that it will supply additional gas to meet the needs of its customers. The Commission has no authority to exact in advance "some assurance that Colorado Interstate will supply the increased requirements of the Rocky Mountain Area." (Colorado PUC Br. 5.) Under the Natural Gas Act this matter is in the first instance left up to Colorado Interstate's management, which may or may not serve additional gas. or construct additional facilities as requested (on the basis of voluntarily filed Section 7(c) applications). In the event that such management does not meet its public service or reasonable obligations, the matter can be presented to the Commission under Section 7(a) of the Act or other provisions for relief.[9]

3. Subparagraph 17.1(d)(2) of the proposed tariff should be read in the light of the Natural Gas Act and the decided cases, including *Waynesboro Gas Co.*, 8 FPC 464; *Warwick Gas Corp.*, 11 FPC 667, 1496; *City of Red Bud* v. *Mississippi River Fuel Corp.*, 22 FPC 1081; and *Central West Utility Co.* v. *F.P.C.*, 247 F. 2d 306 (CA3).

Under the gloss of these cases, and of this present decision, it is unnecessary to add phraseology to tariff provision 17.1(d)(2) concerning non-waiver of customer rights granted by Section 7(a) of the Act (Denver Br. 10) or Colorado Interstate's obligation to act in good faith (Staff Br. 8). The provision is not deemed one which puts Colorado Interstate "in a position of 'picking and choosing' its customers * * * contrary to public law and regulation" (Staff Br. 7), but one which merely restates an aspect of the company's basic rights under the Natural Gas Act, without adding thereto. Colorado Interstate must, and presumably will, act in good faith in attempting to make required additional gas available; no form of words to that effect in the tariff is needed. It is concluded that it is unnecessary and undesirable to spell out in more detail the procedure for attempting to make additional gas to customers available, or to add such further detail to paragraph 17.1(d) of Colorado Interstate's General Terms and Conditions.

---

[9] The present or future history of Colorado Interstate customer service relations, much referred to but immaterial here, might be of importance in such proceedings.

Decreases In Contract Demand

Staff suggests that Section 17.2 of the tariff's General Terms and Conditions should be "liberalized to allow a permissive reduction of contract demand to those customers which have a substantial amount of military sales" (Br. 18). The Colorado PUC suggests that all customers should have "the right to decrease the then effective contract quantity by not more than five percent over the life of the service agreement" (Br. 20).

Under Section 17.2 as proposed by Colorado Interstate, "Buyer may decrease the Contract Demand" on one of two conditions, viz., either (a) when and to the extent that "the capacity so released can be made available to and offset by increases in the Contract Demand of other Buyers," or (b) "when and to the extent that Seller in its judgment can otherwise utilize the released capacity."

The factual background for the suggested revision is the existence in the Colorado Springs area of a large military installation (Fort Carson) which might be abandoned or reduced in size at some indefinite time in the future. Such an occurrence would substantially reduce the contract requirements of the City of Colorado Springs and Plateau Natural Gas Company.

The Colorado PUC points out that percentage-wise its revision would not cast a large burden on Colorado Interstate or its other customers, since any buyer reducing its volumes would still be obligated to pay at least 90 percent of 95 percent of the prior (higher) Contract Demand. Cf. *e.g.*, Section 5 of Rate Schedule G–1.

Staff's proposed revision of Section 17.2 would as a matter of degree incorporate too much vagueness and uncertainty ("substantial amount of military sales") into Terms and Conditions which would be definite and concrete. In order to make an appropriately concrete revision to meet the Fort Carson stipulation, the new provision would have to define with particularity the "military sales" which, when and if curtailed, would give the customer the right to decrease its Contract Demand. Such a revision, however, would not really be in the nature of a General Term and Condition to a tariff of uniform application, but would have to be a special one-company tariff predicated upon findings that Colorado Springs is a unique customer. The facts do not support such findings. Colorado Springs is a growing market. If and when Fort Carson is likely to be abandoned, with adverse effects on the Colorado Springs distributors, such distributors will no doubt come in for appropriate relief on an adequate factual presentation.

The suggestion of the Colorado PUC would entitle any or all of Colorado Interstate's customers to one five percent decrease in Contract Demand over the (20-year) life of the service agreement. Of such a uniform provision, Colorado Interstate's vice-president cogently says (Tr. 285–286):

> * * * the 5 percent decrease in their case would amount to 24 percent, as I have already testified, of all our remaining customers' requirements. We are entitled to recover our cost of service, and if such a decrease required the filing by us of a rate application all of our customers would have to pay for the decrease in capacity by one customer. Secondly, we have no control over our customers' estimates. They are going to make the estimates and we are going to do our best to meet them. As you realize, that requires long-term gas contracts. It may require considerable facilities, and once having done so and changed our position to meet estimates of customers, we should not be required to take on the burden if some of those estimates are not realized. Thirdly, as the situation stands now we are not insulated in any respect because of the provisions of this tariff. The minimum bill

> provisions will return us about 30 percent of our total jurisdictional cost of service. We have no requirements on annual takes, total takes, either on an annual or monthly basis, and if for some reason our customer's business falls off we are going to feel it just as much as they do. I might sum up by saying that in many respects this reduction provision to me seems somewhat illusory. As long as we are permitted to get our cost of service, it might possibly shift costs from one customer to another, but over-all it would not save any customer any money in the long run.

It is uncontroverted that a number of major pipeline tariffs contain no provision at all for decreasing the Contract Demand, and that of those tariffs making such provision, the majority are in terms generally similar to the terms of Section 17.2.[10] On the other hand, two pipeline components of the Columbia System authorize their buyers to make two successive annual five percent reductions in Contract Demand, and further reductions provided that the capacity so released can be otherwise used by the pipeline seller. *Central Kentucky Natural Gas Co. et al.*, 15 FPC 700, 715, 730, 731 footnote 2.

The problem of what is equitable, in regard to this highly speculative future risk, cannot be resolved by application of rules or principles since there is no basis for a general rule or principle. In the *Central Kentucky* case just cited, the Commission, after discussing the benefits of the Contract Demand rate form, continued (15 FPC at 732)—

> Yet, the CD rate form does not impose an undue burden upon the distribution company customers. Considerable leeway is granted in the 90 percent ratchet provision. Furthermore, the billing demand may be reduced to 81 percent of the contract amount nominated through two successive 5 percent reductions. * * *

Thus, the Commission has specifically given favorable notice in one case to a provision for a small reduction of Contract Demand at the buyer's option. However, in all other cases, no such provision was apparently sought, and no such provision was required. On balance, there is insufficient showing that a general permissive reduction should be required in the tariff at bar. The arguments to the contrary focus on the generality that some of the risks of cold weather (high peak days) are being assumed by Colorado Interstate's customers under the new Contract Demand tariff form. The generality is true, but irrelevant.

Colorado-Wyoming Gas Co. Billing

Pursuant to notice given by Colorado Interstate under the new tariff, Colorado-Wyoming's Contract Demand was established as 137,700 Mcf, effective June 1, 1960. Under the applicable new P–1 Rate Schedule, the Billing Demand payable by Colorado-Wyoming is the highest day's delivery during the twelve months ended with the current billing month, but not less than 90 percent of the Contract Demand nor more than the Contract Demand. On February 27, 1960, Colorado-Wyoming had taken 138,673 Mcf. On the basis that the highest day's delivery during the prior period thus exceeded the specific Contract Demand, Colorado Interstate computed Billing Demand for the period June 1, 1960, to January 1, 1961, on the Contract Demand figure of 137,700 Mcf.

Colorado-Wyoming claims that this computation is incorrect. Colorado-Wyoming reasons that since the new tariff effective June 1, 1960, brought into being an entirely new set of circumstances, unrelated to the past, the use of its

[10] The tariffs of Northern Natural Gas Co., Mississippi River Fuel Corp., Southern Natural Gas Co., and Texas Gas Transmission Corp., require that decreases be predicated on seller's ability to dispose of the capacity, as here. (Tr. 223.)

February 27, 1960, actual "take" of gas in computing Billing Demand was retroactive and improper. Colorado-Wyoming contends that 90 percent of the 137,700 Mcf Contract Demand, or 123,930 Mcf, should be its Billing Demand for the period in question.[11]

From the Colorado Interstate "Statement of Revenues Subject to Further Order" in the docket at bar, heretofore referred to, we may first note the revenue effect of the Colorado-Wyoming contention.

For the period June through December 26, 1960, in question, revenues to Colorado Interstate would amount to $822,795 if the contention were allowed, as compared to $906,066 as computed and collected by Colorado Interstate. It is important to note that this last figure is very close to the amount, $915,792, which would have been realized under a continuation of the old tariff.

To January 31, 1962, counting realizations for the June-December 1960 period as computed and collected by Colorado Interstate, the new tariff as applied to Colorado-Wyoming has brought $28,710 less revenues to the supplier than revenues would have been under the old tariff. Related to collections totalling $935,739, this is a comparatively insignificant difference.

On the facts, then, acceptance of the Colorado-Wyoming contention would result in a level of rates payable by it to Colorado Interstate which would for the period June 1–December 31, 1960, be considerably lower than the level agreed upon in the settlement described in the opening paragraphs of this opinion. Certainly, in entering and approving the settlement, neither the participants nor the Commission contemplated a $92,997 windfall resulting to Colorado-Wyoming.

The change in rate form is not, as a matter of law under the applicable Commission and other authority, a basis for the results claimed by Colorado-Wyoming. The new Contract Demand form of rates, in presently pertinent part, was intended only to restate the revenue realizations under the prior rate form effective before June 1, 1960. It has accomplished this result under Colorado Interstate's use of the immediately prior period in the determination of Colorado-Wyoming's billing demand. The Colorado-Wyoming contentions on this issue are therefore disallowed.

Unexecuted Service Agreements

The Public Service group of companies and Citizens Utilities Company have not executed the new form of service agreement which is a part of the new tariff. These companies still operate vis-a-vis Colorado Interstate on the basis of contracts executed in the late nineteen forties. All these companies have established and changed from time to time their Contract Demand quantities, pursuant to agreements with Colorado Interstate.

Questions of general importance are raised by the Colorado PUC, the Public Service group, and the Staff concerning the present vitality and the public interest aspects of the old contracts. Broad issues of substance between Colorado Interstate and its customers are alluded to in the briefs in this proceeding as to whether (a) such customers must execute new service agreements, or may rely on their old contracts under the *Mobile* rule (*United Gas Pipeline Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 322); (b) Colorado Interstate has violated the Act by failing to file certain letter agreements with its customers establishing their initial contract demand quantities; (c) the old contracts are discriminatory.

[11] Beginning December 26, 1961, Colorado-Wyoming's contract demand was raised to 158,000 Mcf, and therefore its contention relates only to the period June 1—December 26, 1960.

These questions are abstract, and do not involve actual dollars-and-cents current issues between Colorado Interstate and its customers. The questions have not ripened into actual controversies between the pipeline and the distributors, or other conflictual situations properly basing complaints or investigations. The facts behind the questions were not substantially developed in the record herein. The questions are not properly presented on brief herein.

Under the order authorizing the proceeding at bar, the issues are limited to the propriety of Colorado Interstate's form of tariff, including the "lawfulness of the rates, charges, classifications, and services contained" therein.[12] In pertinent part, that tariff contains a form of service agreement. Section 154.13 of the Regulations Under the Natural Gas Act provides that:

> The term "service agreement" means an unexecuted form of agreement for service under a natural-gas company's tariff.

The form of unexecuted service agreement presented conforms to such regulations (Sections 154.14, 154.38(3), and 154.40) as is uncontroverted. No other issue in this connection was authorized to be litigated, or was actually litigated, in the proceeding at bar. No opinion is or should be expressed herein on the questions mentioned in the foregoing section of this opinion.

Boiler Fuel Sales

Colorado Interstate sells gas directly, and not under any FPC tariff, to Public Service Co. of Colorado, City of Colorado Springs, and City of Trinidad for use in firing boilers in the electric generating plants of these customers. The gas is priced at 21.5 cents per Mcf. If the customers could buy the gas under their G–1 Rate Schedules, the price would be 18.5 cents per Mcf. The situation existed under Colorado Interstate's old tariff, and is continued in the new tariff because no special new provision is written therein to allow for gas consumed in the generation of electricity.

The City and County of Denver, but none of the mentioned customers, claims that the Commission should in this proceeding require such a special new provision as an incident of the Colorado Interstate change in rate form. Denver claims discrimination and prejudice to the customers' load factor resulting from continuation of the direct sales method of boiler fuel supply; Colorado Interstate claims that the suggested change would impair its own load factor and is beyond the Commission's jurisdiction.[13]

The record does not contain the facts as to how the direct sale connections and capacity to serve the same were constructed by Colorado Interstate, nor the facts on which the jurisdictional or nonjurisdictional character of the sales could be determined in this proceeding. Such facts would not properly be a part of this record, because we are not here considering substantive complaints about Colorado Interstate's methods of doing business with its boiler fuel customers and we are not engaged in a general investigation of Colorado Interstate's jurisdictional business with the named three customers or other customers.[14] The issues in the proceeding at bar relate only to the proper

[12] In regard to rates, charges and classifications, dealt with in prior sections hereof, note that because of the settlement of Docket No. G–13541 "the proposed tariffs represent a filing relating to rate form, not to rate level." Order of August 16, 1960, herein.

[13] Citing *Colorado Interstate Gas Co.* v. *F.P.C.*, 185 F. 2d 357 (CA3), and *Colorado Interstate Gas Co.*, 19 FPC 1012, 1022, rehearing granted and settled, 20 FPC 70.

[14] Were issues of substance involved, load factor of customer companies and other consumer considerations would be of high importance. See *Southern Natural Gas Co.*, 25 FPC 925, 931 *et seq.*

translation of Colorado Interstate's former tariff into a contract demand tariff producing revenues at Commission-approved settlement levels. We now deal only with the formal aspects of Colorado Interstate's new tariff, and should express no opinion as to the jurisdictional or nonjurisdictional character of the boiler fuel sales made by this natural gas company to the Public Service Company, City of Colorado Springs, and City of Trinidad.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

(A) The objections to Colorado Interstate Gas Company's FPC Gas Tariffs, First Revised Volume No. 1 and Second Revised Volume No. 2, are hereby dismissed.

(B) The undertaking to assure refunds of excess charges entered into by Colorado Interstate Gas Company pursuant to order of the Commission issued June 14, 1960, is hereby discharged.

(C) This proceeding is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

CONTINENTAL OIL COMPANY, DOCKET NO. G–15571

ORDER GRANTING EXTENSION OF TIME

(Issued June 1, 1962)

By its order issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 441, the Commission disposed of more than 400 proceedings, including that above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to the instant docket, ordering paragraph (A) of the March 5 order directed Continental Oil Company (Continental) to refund tax-reimbursement amounts collected from its direct customer Transcontinental Gas Pipe Line Corporation (Transco). Ordering paragraph (C) of the March 5 order directed that within 90 days from the date of issuance thereof, Continental report to the Commission the details of its refund calculations and submit copies of releases from Transco as to the required refunds. By order issued April 26, 1962 in *Texaco Inc., et al.*, Docket Nos. G–155546, *et al.*, 27 FPC 847, the Commission denied applications for rehearing of the March 5 order in the above, as well as other, dockets. On May 29, 1962 Continental filed a motion seeking to stay the effectiveness of the March 5 order, insofar as applicable to the above docket, until 30 days after conclusion of judicial review of said order in that docket. The motion recites that Continental intends to seek judicial review of the March 5 order and that failure of the Commission to grant the stay pending such review would cause it irreparable injury.

For reasons stated in our order of April 13, 1962 granting Pan American Petroleum Corporation and extension of time for compliance,[1] we are disposed to extend the time within which Continental must comply with ordering para-

[1] Pan American Petroleum Corporation, Docket No. G–15641; Pan American Petroleum Corporation (Operator), *et al.*, Docket Nos. G–15650 and G–15780, 27 FPC 686.

graphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after conclusion of judicial review of that order in the instant docket.[2] The extension is conditional, however, upon the payment by Continental to Transco of interest, at a rate of 7%, upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5.

The Commission finds:

(1) There is good cause for extending the time within which Continental must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after conclusion of judicial review of that order in the instant docket.

(2) It is just and reasonable and in the public interest that Continental be required to pay Transco interest, at a rate of 7% upon the amounts to be refunded, for the period commencing on the 91st day after issuance of the March 5 order.

The Commission orders:

(A) The time within which Continental must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962 is extended for a period ending 30 days after the conclusion of judicial review of the Commission's order.

(B) Continental shall pay Transco interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962 order.

(C) The time within which Transco must comply with ordering paragraphs (B) and (D) of the March 5, 1962 order, insofar as applicable to the instant docket, is extended for a period ending 60 days after conclusion of judicial review of that order in said docket.

(D) If Continental shall not have filed petitions for review of the March 5 order in the instant docket within the 60 day period prescribed by statute, the extension of time herein granted shall be deemed inoperative and of no effect.

HUMBLE OIL & REFINING COMPANY, DOCKET NO. CI62-627

ORDER ADOPTING AND MODIFYING DECISION OF PRESIDING EXAMINER

(Issued June 1, 1962)*

Syllabus

1. It is unnecessary here to determine whether there are circumstances in which stock acquisition of one natural gas company by another would constitute, or be part of, acquisition of facilities under Section 7(c) of the Act, or explore reach of dictum in *California v. F.P.C.*, raising question of existence of such authority. P. 1079.
2. Commission *finds* it has no jurisdiction over stock acquisition as such, and could at most reach such purchases where they are an integral part of transaction in which stock purchase is to be followed either by "consequent

[2] It should be understood that the 30th day after judicial review in the instant docket is the date upon which Continental must comply with the March 5 order; it is *not* the date upon which the 90 day period referred to in ordering paragraph (C) commences to run.

* Initial decision appears on P. 1080.

transfer of assets from the acquired subsidiary to the acquiring parent," *California v. F.P.C.*, 295 F.2d 348, or integration with acquiring corporation. P. 1080.

3. Commission *holds* that stock acquisition here is not preliminary to a facility acquisition upon which it will be called to pass, whose terms and consequences should not be ignored in exercise of its responsibilities under Sec. 7(c) of the Act. P. 1080.
4. In light of evidence as to future operation of acquired jurisdictional facilities, Commission *finds* it is without jurisdiction to determine whether such acquisition is in public interest. P. 1080.
5. Commission *concludes* it does not have jurisdiction over Humble's acquisition of stock and *terminates* proceeding initiated under Sections 14, 15 and 16 of the Natural Gas Act. P. 1080.

Carl Illig, Jesse H. Foster, Jr., and *Bernard A. Foster, Jr.* for Humble Oil & Refining Company.

David S. Lichtenstein for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

On December 13, 1961, 26 FPC 854, the Commission issued an order requiring Humble Oil and Refining Company (Humble) to show cause why it should not file an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act to acquire by stock ownership the facilities of Olin Gas Transmission Corporation (Transmission). On January 16, 1962, Humble filed a motion to terminate the proceeding and dismiss the Commission's order on the ground that the acquisition of all outstanding stock of Olin Gas Transmission by Humble does not constitute an "acquisition of facilities" within the meaning of Section 7 of the Natural Gas Act. On February 5, 1962, the Commission denied the motion for termination without prejudice. A hearing on the order to show cause was held before a Presiding Examiner of the Commission.

The decision of the Presiding Examiner in the above proceeding was issued on May 14, 1962. Staff counsel has indicated by letter of May 29, 1962, that he will not file exceptions to the decision.

The Commission has considered the entire record before the Presiding Examiner and concludes that the order to show cause should be dismissed. It was clearly stated by the Commission at the time of issuance of the order to show cause that the proposed acquisition of the facilities of Transmission through ownership of all of the outstanding stock of that company *may be* subject to the Commission's jurisdiction under Section 7(c) of the Act. We recognized the difficulty of any a priori determination of whether a proposed acquisition of facilities through stock control should be subjected to the surveillance of the Commission.

The Examiner has found that Humble will have as complete control of Transmission's facilities indirectly through the ownership of the latter's stock as it would have were it purchasing the facilities directly. In short, Transmission will be controlled and operated virtually as a Humble subsidiary. Nevertheless, the Examiner concluded on the basis of his independent reading of Section 7(c) of the Natural Gas Act that the Commission has no jurisdiction over this or any other stock acquisition.

We do not believe it necessary to the resolution of the present case to determine whether there are any circumstances in which an acquisition of stock of one natural gas company by another would constitute, or be part of, an acquisi-

tion of facilities within the meaning of Section 7(c) of the Natural Gas Act, or to explore the reach of the dictum in *California* v. *Federal Power Commission*, No. 187, Oct. term, 1961, which raises questions of the existence of any such authority. For we think it clear that the Commission has no jurisdiction over stock acquisition, as such, and could at most reach such purchases where they are an integral part of a transaction in which the stock purchase is to be followed either by a "consequent transfer of assets from the acquired subsidiary to the acquiring parent", *California* v. *Federal Power Commission*, 296 F. 2d 348, or integration with the acquiring corporation. There is no evidence, however, that this is the situation here or that Humble has any present intention of utilizing its stock ownership of Olin to acquire Olin's facilities for use as part of Humble's existing jurisdictional business or otherwise to terminate the existence of Olin as an operating company fully subject to our jurisdiction. The stock acquisition herein is thus not preliminary to a facility acquisition upon which we will be called to pass, whose terms and consequences should not be ignored in exercising our responsibilities under Section 7(c) of the Act.

Since we find that under the facts of this case, we have no jurisdiction to pass upon the Humble acquisition of Olin's stock we do not believe it appropriate either to affirm or reject the examiner's further finding and conclusion that if a certificate of convenience and necessity were necessary under the provisions of Section 7(c), Humble would be a qualified applicant able and willing to do the act proposed and that the acquisition will not impair competition and is or will be required by the present or future public convenience and necessity. Our failure to affirm these findings should not of course be taken as any indication that we would necessarily reach any different conclusion if the matter were properly before us.

The Commission finds:

In light of the evidence as to the future operation of the jurisdictional facilities acquired by Humble herein the Commission is without jurisdiction to determine whether such acquisition is in the public interest.

The Commission orders:

The order to show cause issued by the Commission on December 13, 1961, should be, and hereby is, dismissed.

DECISION

UPON ORDER TO SHOW CAUSE

(Issued May 14, 1962)

MARSH, *Presiding Examiner:* This is a proceeding upon an order to show cause issued by the Federal Power Commission on December 13, 1961, 26 FPC 854, directing Humble Oil & Refining Company (Humble or Respondent) to show cause, if any there be, why it should not be required forthwith to comply with all of the provisions of the Natural Gas Act, including particularly Section 7(c) thereof[1] and why it should not file an application for a certificate of public convenience and necessity to acquire by stock ownership the facilities of Olin Gas Transmission Corporation (Transmission) as more particularly hereinafter

[1] The relevant portions of which are as follows:

"No natural-gas company * * * shall engage in the transportation or sale of natural gas, subject to the jurisdiction of the Commission, or undertake the construction or extension of any facilities therefor or acquire * * * any such facilities * * * unless there is in force with respect to such natural-gas company a certificate of public convenience and necessity issued by the Commission authorizing such acts or operations. * * *"

described. The order directed that a public hearing be held beginning on March 27, 1962.

Appearing specially and solely in response to the Commission's "Order to Show Cause and Fixing Date of Hearing," issued on December 13, 1961, Humble filed on January 16, 1962, a response to the order of December 13, 1961, in which the Respondent asked alternatively that (1) the Commission terminate its show-cause proceeding and issue an order declaring that Section 7(c) of the Natural Gas Act does not require Humble to obtain a certificate of public convenience and necessity before acquiring all of the outstanding capital stock of Transmission; (2) the Commission issue forthwith a certificate of public convenience and necessity authorizing Humble to acquire all of the outstanding capital stock of Transmission if such a certificate is deemed required by Section 7(c). Humble requested therein that the Commission advance the date of hearing to February 19, 1962.

On February 5, 1962, 27 FPC 193, the Commission issued an order denying without prejudice the motion just referred to but advancing the hearing date to March 2, 1962. No persons other than Humble and the Staff of the Commission sought the right, or were authorized, to participate in the proceeding. Pursuant to the order of February 5, 1962, the matter came on for hearing and was heard beginning on March 2, 1962, and concluding on March 22, 1962, with the undersigned presiding. Thereafter, briefs were filed by Humble and by Staff counsel and the matter is now ready for decision. At the conclusion of the hearing Humble renewed its motion to terminate these proceedings for lack of jurisdiction. Humble also asked, but only if Section 7(c) of the Natural Gas Act lawfully requires it, that the Commission grant to Humble a certificate of public convenience and necessity authorizing it to acquire all of the outstanding capital stock of Transmision "conditioned so as to assure that Humble shall not thereby be subjected to any of the Commission rules, requirements or regulations other than those now applicable to Humble as an 'independent producer.'"

The Proposed Acquisition

Humble proposes to acquire all of the assets, properties, privileges, franchises and business of Olin Oil & Gas Corporation (Olin Oil) including, without limitation, all of the outstanding stock of Transmission and with certain limitations, all of Olin Oil's debts and liabilities existing as of the closing date. However, Transmission would continue to exist as a corporation and would continue as such to own all of the facilities which it presently owns and operates. The acquisition would be accomplished by the transfer to Olin Oil of a number of whole shares of the capital stock of Standard Oil Company (New Jersey) equal in value (based on the closing price on the New York Stock Exchange on November 13, 1961) the sum of $68,054,056.[2] The transaction contemplates the redemption by Olin Oil of the 49,325 shares of its four percent preferred stock, Series A, plus accrued dividends, if any. Olin Oil would then distribute the stock received by it to its stockholders entitled thereto in exchange for the stock of Olin Oil and then dissolve and terminate its corporate existence.

In the contract of purchase and sale Humble agreed that immediately after the closing date it would cause the name Olin Gas Transmission Corporation to be changed to a name not including the word "Olin." The obligations of the parties to the "agreement and plan of reorganization" are subject to the condition, among others, that:

[2] The reason why the acquisition was to be accomplished by means of Standard Oil Company stock rather than cash was because this procedure makes a non-taxable transaction for the seller.

> The Federal Power Commission shall have found that it does not have jurisdiction over the transactions contemplated by this Agreement, or in the alternative, the Federal Power Commission shall have granted a certificate of public convenience and necessity satisfactory to Humble with regard to the transactions contemplated by this Agreement.

Olin Oil agreed to cause a meeting of its stockholders to be held not later than May 31, 1962, for the purpose of authorizing the conveyance to Humble and the voluntary dissolution of Olin Oil. The closing date was to be fixed by the mutual consent of the parties to the agreement but in no event subsequent to July 31, 1962.

The Parties to the Proposal

Transmission is a corporation organized under the laws of the State of Delaware and it has its principal place of business in New Orleans, Louisiana. Transmission is a natural-gas company[3] within the purview of the Natural Gas Act and is, therefore, subject to the jurisdiction of this Commission. *Olin Gas Transmission Company*, 17 FPC 685, 1959. Transmission is the wholly owned subsidiary of Olin Oil. Olin Oil was the wholly owned subsidiary of Olin Industries, Inc. (Olin).[4]

Olin Oil's principal assets consist of all of the outstanding capital stock of Transmission, and mineral interests consisting of producing properties and undeveloped leases located principally in the States of Arkansas, Louisiana and Oklahoma.

In 1960 these mineral holdings totaled approximately 510,000 acres. The principal fields in which Olin Oil owned producing wells as at December 31, 1960, were located in Okfuskee County, Oklahoma, Lafourche, Lafayette, Vermilion, Catahoula, and Union Parishes, Louisiana and Union and Bradley Counties, Oklahoma. The evidence is that most of the production from this acreage consists of crude oil. What gas is produced therefrom comes principally from the oil wells and is sold not in interstate, but in intrastate, commerce. Olin Oil's 1961 budget amounted to $5,679,000 which included $2,939,000 for exploration, $1,711,000 for exploitation (pool development) and $1,029,000 for fixed capital additions to the capital system.

As of December 31, 1960, Olin Oil had outstanding 49,325 shares of four percent cumulative Series A preferred stock which was recorded on the company's books at $2,466,250, and 2,829,628 shares of common stock of a par value of $1 per share. Long-term debt (less current portion—$1,778,000), represented by a 4½ percent note (to Prudential Insurance Company), amounted to $17,776,000. Paid-in surplus was $8,183,267 and earned surplus was $9,008,669. In 1954 the debt to equity relationship for Olin Oil was 31 to 9.6 whereas in 1960, it was 19.6 to 22.5, or approximately one to 1.15. Olin Oil had paid no dividends until 1959 and since then there has been a yield of only approximately 2½ percent on the stockholders' investment. During the years 1954 through 1961 Olin Oil's common stock has ranged in market price from a low of $13 to a high of $32 per share.

---

[3] Through intercorporate transactions Transmission became in 1954 the owner of the facilities and business of Interstate Natural Gas Company, Inc., a natural-gas company. On April 30, 1954, at Docket No. G–2335, 13 FPC 1012, the Commission authorized the acquisition and operation by Transmission of Interstate's facilities subject to certain conditions.

[4] The evidence shows that "on January 22, 1954, substantially all of the outstanding capital stock of Olin Oil & Gas Corporation was distributed ratably to the holders of the outstanding capital stock of Olin Industries, Inc. There is today no corporate tie or connection between either Olin Oil & Gas Corporation or Olin Gas Transmission Corporation and any successor to Olin Industries, Inc."

Transmission is engaged in the production and purchase of natural gas, in the gathering and transportation of such gas and in the sales and deliveries thereof. In 1960 this company owned and operated approximately 763 miles of gas transmission lines having a capacity of about 550,000 Mcf per day. In addition, Transmission operates 364 miles of gathering lines in which its interest ranges from seven percent to 100 percent. It also owns an operating interest of approximately 10 percent in an intrastate natural gas transmission system in the vicinity of New Orleans which is operated by United Gas Pipe Line Company. In addition, Transmission had in 1960 mineral interests in approximately 89,000 gross acres of lands lying principally in Arkansas, Louisiana and Texas. Natural gas is transported by Transmission from the Monroe and various other natural-gas fields in Louisiana to markets where it is sold at wholesale under long-term contracts to large industries, municipalities and pipeline companies.

The transmission facilities operated by Transmission presently comprise three separate systems, one of which is characterized as "jurisdictional" and the other two as "non-jurisdictional." With the exception of about 103 miles of transmission lines lying within the State of Mississippi, all of Transmission's facilities are within the State of Lousiana. The first of the three systems extends in a southeasterly direction from the Monroe field in north central Louisiana to a point on the Mississippi River (the Louisiana-Mississippi boundary) near Natchez, Mississippi. From thence it extends in a southerly direction through the State of Mississippi reentering the State of Louisiana at a point about five miles west of the Helena Meridian. From that point it continues in a southerly direction to Baton Rouge, Louisiana. These facilities were constructed by Transmission or its predecessor in interest. They are concededly employed for the transportation in interstate commerce, and the sale in interstate commerce, of natural gas for resale. Total sales from these facilities in 1960 amounted to 40,217,140 Mcf.

The Monroe-Baton Rouge system is not interconnected with either of the other two systems. Sales for resale in interstate commerce from the Monroe-Baton Rouge line in 1960 amounted to 9.4 million Mcf or six percent of Transmission's total transmission sales in that year of 157.2 million Mcf. In 1961 the total transmission sales from that system were 152.7 million Mcf of which about 9 million Mcf were jurisdictional.

Total purchases for the interstate system in 1960 were 16,859,624 Mcf. Transmission produced in that year in the Monroe field 23,493,000. The total sales from the interstate line in 1960 were about 40,217,140, which represents about 25 percent of Transmission's sales. Humble sold Transmission 671,948 Mcf during 1960 and purchased from that line 5,071,672.

Production from the Monroe field is available only to the Monroe-Baton Rouge system and is the principal source of supply for that system. The testimony is that the Monroe field is a very rapidly depleting field. There are in the Monroe field many producers but there is with respect to the field no requirement or provision for ratable takes therefrom. In 1954 Transmission owned and operated in the Monroe field 339 wells which were capable of producing at a rate of 99,142 Mcf per day. In 1961 those wells were producing at a rate of only 48,040 Mcf a day. In 1961 all of Transmission's wells in the field, then 473 in number, were capable of producing only 80,213 Mcf a day, which was substantially less than the 99,142 Mcf per day which the 339 were capable of producing six years earlier. Even though 134 additional wells were drilled during the period 1954 to 1961 the production rate at the beginning of 1954 was not equaled in 1961. Obviously, unless some new supply of gas should become

736-330—64——71

available to the Monroe-Baton Rouge system it will be unable to supply any substantial new customers.

Another of Transmission's systems, referred to as the Baton Rouge-West system, extends in a westerly direction from Baton Rouge to the North Tepetate field with a line extending therefrom in a southerly direction to the Pecan Island field. This system gathers and transports gas from southern Louisiana fields. About 83.8 billion cubic feet of gas was transported through these lines in 1960.

The Baton Rouge-South system extends in a southerly direction to the Sweet Bay Lake field. This system is supplied by reserves from south central Louisiana fields. About 38.1 billion cubic feet were in 1960 transported through that system.[5]

The testimony is that during 1960, approximately 124,000,000 Mcf of gas was transported through the three above described systems and other smaller non-jurisdictional facilities. This volume represented about 80 percent of all gas transported through facilities operated by Transmission. In 1961 the comparable volume was 123,000,000 Mcf and the comparable percentage was 81 percent. On the other hand, the testimony is that in 1961 only about 32 percent of the gas transmitted through the jurisdictional system was sold for resale and, therefore, that only about six percent of the total volume of gas transported by Transmission was subject to the jurisdiction of this Commission. Over 90 percent of the 1959 volumes of gas sold from the three systems was sold to large industrial consumers.

Of all the gas sold by Transmission in 1954, it produced about 25 percent and purchased about 75 percent. In 1959 Transmission produced about 14 percent of its requirements and purchased the remainder from others.

In 1960 Olin Oil and Transmission together drilled a total of 12 gross exploratory and 80 gross development wells in the United States, 63 of which were in Louisiana. Of the Louisiana wells, 29 were drilled in the Monroe field. The two companies drilled or participated in the drilling of a total of 76 net wells.

Total purchases for the jurisdictional systems in 1960 were 16,859,624 Mcf. Transmission produced in the Monroe field for that year about 23,493,000 Mcf so that the total intake of the jurisdictional line, including gas purchased and produced by Transmission amounted to some 40,000,000 Mcf. Sales of the jurisdictional line for 1960 were likewise about 40,000,000 Mcf, or about 110,000 Mcf average daily. This represents approximately 25 percent of the total volume of sales of Transmission.

Humble supplied the jurisdictional line with 671,948 Mcf during 1960 and purchased in that year 5,071,672 Mcf from the Monroe line. Humble's total purchases from Transmission, including the jurisdictional and non-jurisdictional systems in 1960 amounted to 64.9 million Mcf.

Humble is a corporation organized under the laws of the State of Delaware and it has its principal place of business at Houston, Texas. This corporation is a wholly owned subsidiary of Standard Oil Company (New Jersey). Its assets totaled over $3 billion at the end of 1960 and it had a debt to equity ratio of $44.1 million to $2,664.6 million, or approximately one to 60. The Respondent is authorized to do business in each and all of the United States and in the District of Columbia. Humble is engaged in all phases of the petroleum business throughout the United States including exploration for and the production, refining, distribution and sale of oil and gas. Humble owns and operates a refinery at Baton Rouge, Louisiana which refines crude oil into various products and which produces petro-chemical products from hydro-

[5] Another 2.2 billion cubic feet were transported through the Natchez-East system.

carbons. Humble also manufactures, distributes and sells petroleum products derived from oil and gas. It operates extensive research facilities conducting diversified research through the petroleum industry. The Respondent rank as a leader in the United States in the production of crude oil and natural gas, in the refining of crude oil into refined products, in the sale of natural gas and petroleum products, and in other phases of the petroleum business.

Humble is an independent producer of natural gas as defined in the Commission's Regulations for natural gas companies and is, therefore, a natural-gas company as defined in the Natural Gas Act. Thus, Humble is subject, as an independent producer, to the jurisdiction of the Federal Power Commission. Humble's net jurisdictional sales in 1960 involved approximately 212,000,000 Mcf involving total revenues of $33,2 million.

Traditionally, Humble has carried on large exploration and development operations in Louisiana and Mississippi. The Respondent owns lease interests in Bossier, Webster, Claiborne, Lincoln, Bienville, Ouachita and Tensas Parishes in northern Louisiana, and a large number of such lease operations in south Louisiana. Humble also owns interests of this kind in Jefferson and Adams Counties in Mississippi. In 1960 Humble produced approximately 163 billion cubic feet of gas and approximately 24 3/10ths million barrels of oil and condensate from wells in Louisiana. In the same year, Humble drilled or participated in the drilling of some 23 net exploration wells and some 132 net development wells in Louisiana at a total direct cost of over $49,000,000.

Humble is a substantial supplier of natural gas for Transmission from various fields in Louisiana and Mississippi. The Respondent is the purchaser of substantial volumes of natural gas from Transmission principally for use in Humble's Baton Rouge refinery. In 1960 Humble supplied about 32,300,000 Mcf to Transmission and purchased from Transmission about 64,900,000 Mcf.

Humble has properties in nearly all areas in which Transmission buys gas but Humble has no uncommitted gas reserves of any significant size located close to Transmission's pipelines.

Humble owns and operates a small gas pipeline five miles in length which extends from the Lirette field in Terrebonne Parish to Montegut. The line serves only a sugar mill which buys about 700 Mcf a day. Respondent owns all of the stock of a small gas pipeline system extending from the Lake Boeuf field to a point, near Gramercy in St. James Parish, a distance of approximately 30 miles away. Humble also owns 48 percent of the stock of a company which proposes to own and operate a gas transmission system from the King Ranch Plant near Kingsville in southwest Texas to Alexandria, Louisiana, at which point it would sell gas to United Fuel Gas Company. None of the pipeline systems which Humble owns or operates, or in which it owns stock, purchase gas from the same fields as does Transmission.

Humble proposes that Transmission shall continue to exist and be operated as a separate corporate entity; that it will continue to have its own separate management and its own employees. It is not proposed that Transmission abandon any of its facilities but that it continue to serve all of its present customers and make every effort to add new ones and expand the service.

The transaction here proposed does not involve a merger or combination of any of the facilities of Transmission with those of Humble. Nor is it proposed or anticipated that Transmission will abandon any facilities or services. On the contrary, it is expected that Transmission's facilities and operations will be expanded.

Humble regards the acquisition of Transmission's stock as an investment in the gas transmission business. Respondent expects that it can obtain a reason-

able return on the money it proposes to invest through continued operation of the producing properties, the development of undeveloped leases and through dividends on the stock in Transmission. One of Humble's reasons for acquiring the assets of Olin Oil is to obtain the latter's undeveloped properties.

The Benefits Expected

Benefits expected to result to the public from the acquisition by Humble of the common stock of Transmission are:

1. The financial strength of Humble will better enable Transmission to finance effectively and, thereby, will benefit the latter's customers and the public.

2. The "know-how" possessed by Humble personnel in the business of producing, processing and transportation of natural gas would be available for the use of Transmission.

3. Humble's engineering staff and research facilities would be available for consultation.

4. The large number of persons employed by Humble would afford a pool from which Transmission might recruit needed key personnel.

5. Humble's knowledge and experience respecting existing reserves of gas and future exploration prospects will be available to Transmission.

6. Transmission's relationship to Humble should enable the former to better compete with other purchasers in negotiations leading to the purchase of additional supplies of gas.

7. It is asserted that Transmission's present jurisdictional rates are lower than the area prices fixed in the Commission Policy Statement No. 61-1 for south Louisiana. The advantages which the acquisition of the stock of Transmission by Humble would afford the former would tend to offset pressures to increase rates.

8. Through affiliation with Humble, Transmission should have greater flexibility in obtaining new supplies for its system.

These factors, Staff counsel concedes, should ultimately benefit the consumer of natural gas. The evidence unquestionably shows that if the acquisition were consumated certain benefits would accrue, at least some of which should flow through to Transmission's customers.

What of Detriments?

Assuming that the Commission has jurisdiction in the premises, a question which will be considered later, is there an adverse impact upon the public interest which outweighs those several benefits? The proposal here under consideration requires inquiry into whether there would result a conflict with the fundamental national policy expressed by the Congress in the anti-trust area. (*Cf. People of the State of California* v. *Federal Power Commission*, 296 F. 2d 348, 353) Thus, as is conceded by the Respondent, it is appropriate to inquire into any effect on competition stemming from Humble's acquisition of the stock of Transmission. There are, of course, in this context two aspects of competiton which require consideration, one, the competition between buyers for the purchase of natural gas and two, competition between sellers of natural gas. Either too much of the former or too little of the latter might well adversely affect the interests of the public and the ultimate consumers of natural gas.

The testimony here is that the acquisition by Humble of the stock of Transmission will have no impact on competition. Humble and Transmission do not presently compete in connection with the purchase or sale of natural gas. Trans-

mission will continue to be a purchaser of natural gas in its area of operations. Transmission purchases gas for its interstate operations from 10 suppliers, five of whom, including Humble, are major oil and gas companies, and one is a major oil pipeline company. Where Transmission buys over two-thirds of its purchased gas supply there are some 32 substantial purchasers of natural gas. Some of them are major interstate pipelines and others are large intrastate purchasers, which include industrial buyers and local pipeline systems. In north Louisiana there were in 1960 20 purchasers who purchased substantial quantities of gas there. Several pipelines purchase more gas in Louisiana than does Transmission. Humble purchases no gas in north Louisiana and is not a significant purchaser of gas from producers in the fields in south Louisiana. Humble has no uncommitted gas reserves of significant size located close to Transmission's system, nor does Humble have at the present time any substantial reserves which Transmission might expect to purchase. The testimony is that in no area can the acquisition of Transmission's stock by Humble adversely affect competition in connection with sales by producers. The evidence shows too that if any significant gas discoveries are made near the systems of Transmission, there will be prompt competition between pipelines to purchase that gas.

Many of the buyers of natural gas in north Louisiana now have, because, among other things of superior financial strength, an advantage over Transmission. The evidence shows as has been pointed out that the proposed acquisition will place Transmission in a better position to compete for additional supplies of gas. On the other hand, it shows too that Humble's financial resources would not give Transmission a potential competitive advantage over other buyers which might lead to the domination by Transmission of the Louisiana market in the future. In any event, Transmission must purchase gas on terms which are representative of market conditions.

There is no evidence here that Humble's acquisition of Transmission's stock will in any respect restrict or limit the ability of Louisiana producers to find markets for their gas. As has been said, Transmission will have to continue to purchase gas from others. Humble's acquisition of the stock of Transmission will not lessen competition by reducing the number of pipelines in the market for gas in the area. The small pipelines presently owned by Humble or its affiliates do not operate in the same areas as Transmission's.

So far we have considered only the evidence relevant to the effect of the acquisition upon competition under present conditions of facility ownership and operations. It is desirable to inquire, too, into the possible impact in the future of the proposed acquisition upon the public and the customers of both Humble and Transmission. In this connection, it should be repeated that both Humble and Transmission are "natural-gas" companies within the purview of the Natural Gas Act, Humble as an independent producer of natural gas and Transmission without qualification. Thus, the sales of gas in interstate commerce by either Humble or Transmission are subject to the jurisdiction of this Commission.

With respect to the ownership and operations of facilities with which Transmission engages in the transportation and sale of natural gas in interstate commerce, these facilities too are fully subject to regulation by the Commission.

In his brief, under the heading "Competitive Aspects of the Proposed Merger," Staff counsel asserts that:

> The prime business motivation for the merger apparently was to acquire the gas and oil producing assets of the parent corporation, Olin Oil & Gas. The pipeline apparently came along as part of the package.

Staff counsel found the danger of potential abuse of economic power which might arise from the acquisition so remote as not to warrant opposition to the granting of the certificate and, furthermore, that:

> * * * the evidence does not indicate that there will be any substantial lessening of competition as a result of the acquisition.
> We cannot, on the basis of mere conjecture as to potential abuse of economic power, oppose the acquisition of Transmission's facilities by Humble.
> It may also be noted in this case that the Commission will retain its surveillance over the jurisdictional line in terms of rates, services, etc.

Upon consideration of all of the evidence herein and the briefs filed, it is found and concluded, subject to a determination that a certificate of convenience and necessity as necessary under the provisions of Section 7(c), that Humble is a qualified applicant within the purview of Section 7(c), that the proposed acquisition is or will be required by the present or future public convenience and necessity, and that Humble is able and willing properly to do the acts proposed to be done in the premises.

Applicability of Section 7(c)

There remains for consideration, however, the question whether the proposed transaction requires a certificate of public convenience and necessity under the provisions of Section 7(c) of the Natural Gas Act. In its brief the Respondent states this issue as follows:

> (A) Does the Federal Power Commission have jurisdiction under Section 7(c) of the Natural Gas Act to require that Humble obtain a certificate of public convenience and necessity before it can acquire all of the outstanding capital stock of Transmission?

Humble then proceeds to argue that the Commission has no such jurisdiction. Nothing in Section 7(c), the Respondent contends, purports either expressly or implicity, to empower the Commission to control an acquisition of *stock*, as distinguished from the power granted to the Commission to control the acquisition of *facilities*. There follows an analysis of the Act, the legislative history of Section 7(c), the practice of the Commission, the decisions of the Supreme Court and the decision of the Court of Appeals for the District of Columbia in *People of the State of California* v. *Federal Power Commission*, 296 F. 2d 348, 1961, all of which appear to support the Respondent's contention that Section 7(c) conferred jurisdiction upon the Commission over the acquisition of *facilities* but not over the acquisition of *stock*.

If, then, the Respondent has correctly stated the jurisdictional issue involved in this proceeding, a certificate of public convenience and necessity authorizing the proposed transaction is not required.

But, it was asserted by the Commission in its order of December 13, 1961, that:

> * * * The proposed acquisition by Humble of the facilities of Olin Gas Transmission through the purchase of the assets of Olin Oil & Gas may be subject to the Commission's jurisdiction under Section 7(c) of the Act.

The word "stock" does not here appear. The order further recites that:

> Humble has not filed an application pursuant to Section 7 of the Natural Gas Act for permission to acquire the facilities of Olin Gas Transmission, which acquisition will result from the exchange of stock between Humble and Olin Oil & Gas.

The Commission then ordered that:

Humble Oil & Refinery Company shall show cause, if any there be, at the hearing directed in paragraph (B) hereof, why it should not be required forthwith to comply with all of the provisions of the Natural Gas Act, including, particularly, Section 7(c) thereof and why it should not file an application for a certificate of public convenience and necessity to acquire by stock ownership the facilities of Olin Gas Transmission.

This language is taken to mean that since the stock is merely the evidence of ownership, the practical effect of the acquisition thereof is the acquisition of the facilities themselves. Thus, the jurisdictional question presented by the Commission's order may be more correctly stated, it is believed, as follows:

Does the Federal Power Commission have jurisdiction under Section 7(c) of the Natural Gas Act to require that Humble obtain a certificate of public convenience and necessity before it can acquire, through the device of acquiring the common capital stock of the corporation owning such facilities, the facilities with which Transmission engages in the transportation and sale of natural gas subject to the jurisdiction of this Commission?

In its brief the Respondent appeared to recognize the implications inherent in the language above set out but made no attempt to argue the point as so stated.

It is quite clear that upon the acquisition of all of the stock of Transmission, Humble will have complete control of that corporation, will in effect select the management as it sees fit and will control and manage the company as a wholly owned subsidiary of Humble. The officers and the management of the acquired corporation will be appointed and elected by the acquiring corporation. Thus, Humble will have as complete control of Transmission's facilities indirectly through the ownership of the latter's stock as it would have were it purchasing the facilities directly.

That that which lawfully cannot be done directly should not be allowed to be done indirectly is a generally accepted regulatory policy, and certainly no fault can be found with it. Undoubtedly the acquisition of all of the stock of a corporation results in the acquisition of all of the assets of that corporation and, therefore, the acquisition of all of such stock affords a means by which there may be achieved indirectly that which Section 7(c) states may not be done directly without authorization. It does not necessarily follow, however, that Congress intended the words "acquire any such facilities" to mean the acquisition thereof by the "device" of the acquisition of all of or the controlling stock in the corporation. It is not believed that it was so intended.

In drafting Section 7(c) Congress could not have been unaware that a natural-gas company's facilities could be acquired by the acquisition of the stock of the corporation. Staff counsel contends that no method of acquisition of facilities was specified for the simple reason that the statute intended to grant the Commission jurisdiction over all acquisition of facilities regardles of how achieved. It is the opinion of this examiner, however, that the converse is true. Had Congress so intended it could have made this quite clear simply by the insertion of the words "directly or indirectly" after the word "acquire." To attribute to Congress in the drafting of this legislation such ineptitude and unawareness of the meaning of words is unrealistic and illogical. The fact that Congress did not include the words "directly or indirectly" is pursuasive that it did *not* so intend. It is not the function of an administrative agency to rewrite the laws which it is charge with enforcing. This is the function of Congress. (*Cf. Atlanta Trading Corporation* v. *Federal Trade Commission*, 258 F. 2d 365, 374)

Although it too has been fully aware of this indirect method of acquiring facilities during the 23 years which have passed since the passage of the Natural Gas Act, the Commission has not up to now sought to assert control over acquisition of stock although there have been numerous occasions when the opportunity to do so has presented itself.

Nor has there been cited a single court decision which supports a different view. On the contrary, the decisions of the courts bearing upon the subject clearly distinguish between the acquisition of stock as such and the acquisition of facilities as such. In his brief Staff counsel quotes from the decision of the Court of Appeals in *People of the State of California* v. *Federal Power Commission* (*supra*). That case involved an acquisition of substantially all of the stock, but it also involved an application for authorization for the merger of facilities.

The reasonableness of the view that Congress did not intend the meaning Staff counsel attributes to Section 7(c) can be demonstrated, it is believed, by simply asking the rhetorical question, at what point in percentage of stock acquired does the acquisition of the stock of a corporation become the acquisition of "the facilities" of the corporation.

Under the Staff's theory would a certificate be required only in those instances in which all of the stock of the corporation is to be purchased by a person, group of persons or a corporation in a single transaction? Or going to the other extreme, would such authorization be required for the purchase of a single share of stock? A sufficient number of purchases of single shares could conceivably, and would ultimately, result in complete control of a corporation. Would authorization be required only when the accumulation of shares develop to the point of control? And, by what criteria would that point be determined? Obviouly, control may be achieved at a different point and under different circumstances and at different times with different corporations.

Staff counsel contends that unless authorization is required for the acquisition of facilities by the device of stock purchase "a company could acquire jurisdictional facilities without surveillance by the Commision." It is certainly true that under the concept here adopted, persons, firms or corporations acquiring facilities subject to the Commission's jurisdiction are not themselves, as individuals or as a corporation, subject to the "surveillance" of this Commission. To make them so would indeed create an anomalous situation. But the corporation owning and operating such facilities and the facilities themselves would be subject to the control and regulation of this Commission both before and after such acquisition. Nor can that jurisdiction be evaded by the abandonment of such facilities without the authorization of this Commission. This is acknowledged by Staff counsel in the quotation set out above (*Supra*, P. 1087). It is not at all clear, then, what the nature of the surveillance is which Staff counsel contends may be evaded by the "device" here under consideration.

Upon the briefs filed and the arguments therein presented it is found and concluded that Humble has made the showing required by Paragraph (A) of the Commission's order of December 13, 1961, and that Section 7(c) of the Natural Gas Act does not require the authorization of this Commission for the acquisition by Humble of Transmission's stock as proposed herein.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

The proceedings herein be and the same are herewith terminated.

EDWARD B. MARSH,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

MAGNA OIL CORPORATION (SUCCESSOR TO THE GRANDE CORPORATION DOCKET NO. G–16072

ORDER GRANTING EXTENSION OF TIME

(Issued June 1, 1962)

By its order issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 441, the Commission disposed of more than 400 proceedings including that above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to the instant docket, ordering paragraph (A) of the March 5 order directed Magna Oil Corporation (Magna) to refund tax-reimbursement amounts collected from its direct customer Texas Gas Transmission Corporation (Texas Gas). Ordering paragraph (C) of the March 5 order directed that within 90 days from the date of issuance thereof, Magna's predecessor report to the Commission the details of its refund calculations and submit copies of releases from Texac Gas as to the required refunds. By order issued April 26, 1962 in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 847, the Commission denied applications for rehearing of the March 5 order in the above, as well as other, dockets. On May 24, 1962 Magna filed a motion seeking to stay the effectiveness of the March 5 order, insofar as applicable to the above docket, until 30 days after conclusion of judicial review of said order in that docket. The motion recites that Magna intends to seek judicial review of the March 5 order and that failure of the Commission to grant the stay pending such review would cause it irreparable injury.

For reasons stated in our order of April 13, 1962 granting Pan American Petroleum Corporation an extension of time for compliance,[1] we are disposed to extend the time within which Magna must comply with ordering paragraphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after conclusion of judicial review of that order in the instant docket.[2] The extension is conditional, however, upon the payment by Magna to Texas Gas of interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5.

The Commission finds:

(1) There is good cause for extending the time within which Magna must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after conclusion of judicial review of that order in the instant docket.

(2) It is just and reasonable and in the public interest that Magna be required to pay Texas Gas interest, at a rate of 7% upon the amounts to be refunded, for the period commencing on the 91st day after issuance of the March 5 order.

The Commission orders:

(A) The time within which Magna must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962 is extended for a

[1] Pan American Petroleum Corporation, Docket No. G–15641: Pan American Petroleum Corporation (Operator), *et al.*, Docket Nos. G–15650 and G–15780, 27 FPC 686.

[2] It should be understood that the 30th day after judicial review in the instant docket is the date upon which Magna must comply with the March 5 order; it is *not* the date upon which the 90 day period referred to in ordering paragraph (C) commences to run.

period ending 30 days after the conclusion of judicial review of the Commission's order.

(B) Magna shall pay Texas Gas interest, at a rate of 7% upon the amounts required to be refundsd, for the period commencing on the 91st day after issuance of the March 5, 1962 order.

(C) The time within which Texas Gas must comply with ordering paragraphs (B) and (D) of the March 5, 1962 order, insofar as applicable to the instant docket, is extended for a period ending 60 days after conclusion of judicial review of that order in said docket.

(D) If Magna shall not have filed petitions for review of the March 5 order in the instant docket within the 60 day period prescribed by statute, the extension of time herein granted shall be deemed inoperative and of no effect.

ORDER GRANTING MOTIONS FOR EARLY ADOPTION OF EXAMINER'S DECISION AND FOR SUBSTITUTION OF PARTY

(Issued June 1, 1962)*

Syllabus

1. While few gas prices are available for comparison in area here involved, such prices, together with record, sufficiently support 16-cent price proposed by Hunt-Herbert and TXL [now Texaco, Inc.]. P. 1101.
2. Applications of Amerada and Signal severed from proceeding for subsequent decision as to disputed issues of price and jurisdiction. P. 1104.
3. Commission *issues* certificates of public convenience and necessity to Montana-Dakota and producer applicants under Section 7 of the Natural Gas Act. Pp. 1093; 1103.

Earl H. A. Isensee and *Armin Johnson* for Montana-Dakota Utilities Co.

William R. Allen and *Cecil E. Munn* for Signal Oil & Gas Co.

N. Kenneth Scott, Jr., *Cecil E. Munn* and *Joseph W. Morris* for Amerada Petroleum Corp.

Robert W. Henderson and *Robert Kennedy* for Lyda Hunt-Herbert Trusts, et al.

George B. Mickum, III, *Richard B. Taylor* and *James R. Townsend* for TXL Oil Corp.

Martin Vaaler, *Bruce Hagen* and *Wallace Owen* for North Dakota Public Service Commission.

Richard C. Steffey for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

On May 21, 1962, Texaco Inc. (Texaco) filed a motion in the above-entitled consolidated proceeding requesting that the Commission adopt as its final decision at the earliest possible date the examiner's decision, issued May 16, 1962, which granted certificates of public convenience and necessity to all appli-

[1] Successor to the TXL Oil Corporation.

* Initial decision appears on P. 1094.

cants except Amerada Petroleum Corporation (Amerada) and Signal Oil and Gas Company (Signal) whose applications were severed by the examiner from the consolidated proceeding for a subsequent decision regarding two contested issues which are described on page 1094 of the examiner's decision and which involve only the applications of Amerada and Signal.*

Texaco states as grounds for its motion (1) that immediate action by the Commission will enable Montana-Dakota Utilities Co. (MDU) to reduce the amount of gas which is being flared at the present time to the extent that MDU's existing facilities have capacity to take gas from the Lignite gasoline plant of Texaco and the North Tioga gasoline plant of Lyda Hunt-Herbert Trusts, *et al.* (Hunt-Herbert) and (2) that the relatively short construction season which prevails in North Dakota makes it essential that MDU receive prompt authorization in order that all requisite facilities may be constructed in time to provide the additional service proposed in MDU's applications by the 1962-63 heating season.

Hunt-Herbert, MDU, and the North Dakota Public Service Commission have filed telegrams in support of Texaco's motion for early adoption of the examiner's decision. Under Section 1.12(c) of the Commission's Rules of Practice and Procedure, any party or staff counsel has ten days within which to answer or object to a motion filed with the Commission. Since the ten-day period within which answers or objectives to Texaco's motion has expired without objection or answer having been filed by any party or staff counsel, it appears that no party to the consolidated proceeding objects to the early adoption by the Commission of the examiner's decision prior to the expiration of the twenty-day period allowed for the filing of exceptions to examiner's decisions as provided for in Section 1.31 of the Commission's Rules of Practice and Procedure.

On April 27, 1962, Texaco also filed motions requesting that it be substituted for The TXL Oil Corporation as the party in interest in Docket No. CI61–1687 and as the applicant in the application filed by The TXL Oil Corporation in Docket No. CI61–1687. Texaco's motions are accompanied by copies of a general indenture and conveyance, assignment and transfer, executed by TXL and Texaco on April 12, 1962. Texaco's motion to substitute party also states that "Effective April 19, 1962, TXL transferred and conveyed to Texaco all of its assets, properties and rights, and Texaco assumed all of the liabilities of TXL".

The Commission finds:

It is appropriate and necessary in carrying out the provisions of the Natural Gas Act that Texaco's motions for substitution of party and for early adoption of the examiner's decision issued herein be granted.

The Commission orders:

(A) Texaco's motions to substitute party and amend the application in Docket No. CI61–1687 are hereby granted so as to substitute Texaco Inc. for The TXL Oil Corporation as the applicant in the application filed in Docket No. CI61–1687 and as the party in interest in the proceeding in Docket No. CI61–1687.

(B) Texaco's motion for early adoption of the examiner's decision issued May 16, 1962, in this consolidated proceeding is hereby granted, and such decision as to the non-contested aspects of the consolidated proceeding is hereby adopted as the final decision of the Commission herein.

* Order issued August 28, 1962, severing price issue and issuing certificates to Amerada and Signal, 28 FPC 367.

DECISION ON THE FIRST ISSUES

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY IN NONCONTESTED DOCKETS

(Issued May 16, 1962)

WESTON, *Presiding Examiner:* In this proceeding, Staff Counsel has presented by appendix to the Staff brief the proposed decision and order disposing of two uncontested dockets. There have been no suggestions concerning, or objections to, the Staff proposal. Work on the facilities involved in the uncontested dockets must be completed during the current 1962 summer season, which, of course, is relatively short in the North Dakota construction area. Therefore, the decision thereon should be expedited. The form and substance of the proposed decision and order as drafted by Staff Counsel is entirely satisfactory, and is adopted in the following text as the decision of the Presiding Examiner.

In this consolidated certificate proceeding, all of the above-named producers, except Continental Oil Company (Continental),[1] seek certificates of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act, authorizing them to sell residue gas produced from the Nesson Anticline in northwestern North Dakota to Montana-Dakota Utilities Co. (MDU) at a price of 16 cents per Mcf in the applications of Lyda Hunt-Herbert Trusts *et al.* (Hunt-Herbert) and the TXL Oil Corporation (TXL)[2] and 17 cents per Mcf in the applications of Amerada Petroleum Corporation (Amerada) and Signal Oil and Gas Company (Signal). All gas to be sold to MDU by Hunt-Herbert, TXL, Amerada, and Signal will be delivered to MDU from the tailgates of three gasoline plants which will process casinghead gas resulting from the production of oil except that Amerada is obligated to produce some nonassociated gas from deep reservoirs when called upon to do so by MDU. This nonassociated gas will also be processed in a gasoline plant prior to delivery to MDU.

In its two interrelated applications, MDU requests certificates of public convenience and necessity authorizing it to construct and operate the pipeline facilities, at an estimated cost of $5,353,480,[3] necessary to transport and deliver the additional volumes of gas, to be acquired from the producers, to both its existing and proposed new customers, and to integrate an extant intrastate pipeline[4] with its interstate gas transmission system.

A hearing was held on January 22, 24, 25, and 26, 1962, and February 26, 1962, during which MDU presented two witnesses, the producers presented 13 witnesses, and the Staff presented one witness. At the conclusion of the hearing, the Staff and the applicants entered into a joint statement in which it was agreed that the only disputed issues raised by the applications were: (1) whether certain sales which Amerada and Signal propose to make are jurisdic-

[1] Continental filed an application to amend a certificate previously issued to it in Docket No. G–14440 under which Continental is authorized to sell to MDU gas produced from leases in Park County, Wyoming. Continental's gas, under an amendment to its FPC Gas Rate Schedule No. 156, is intended to be sold at a price of 10 cents per Mcf at a pressure base of 15.025 pounds per square inch absolute.

[2] Texaco, Inc. has succeeded to TXL as of April 19, 1962, and a motion to substitute parties pends before the Commission.

[3] Of this estimated total cost, an amount of $455,700 in Docket No. CP61–234 and an amount of $178,380 in Docket No. CP61–297 are related to the construction of distribution systems in several communities and are consequently nonjurisdictional facilities.

[4] MDU's application gives the value of the intrastate pipeline and the branch lines, city-gate stations and distribution systems related to the intrastate sysem at $5,152,846.92 as of December 31, 1960.

tional under the Commission's Opinion No. 348, issued October 23, 1961, in *Lo-Vaca Gathering Company, et al.*, Docket Nos. C161–693, *et al.*, 26 F.P.C. 606, as claimed by the Staff, or nonjurisdictional under *State of North Dakota* v. *F.P.C.*, 247 F. 2d 173 (CA8), as claimed by Amerada and Signal, and (2) whether *all* producers, including Amerada and Signal, should be allowed a price of 16 16 cents per Mcf for their gas, as advocated by the Staff, or whether a price differential should be permitted allowing Amerada and Signal to charge 17 cents per Mcf for their gas and TXL and Hunt-Herbert 16 cents per Mcf for their gas, as advocated by Amerada and Signal.

When it became obvious that the only contested issues in this consolidated proceeding involved the applications of Amerada and Signal, counsel for the other applicants requested that the Examiner issue an early decision as to the noncontested applications. As grounds for this request, they stated that a final decision as to the noncontested applications would permit MDU to get its facilities constructed during the relatively short construction season prevailing in North Dakota and would reduce to a minimum the amount of gas which would otherwise have to be flared if decision on all of the applications were to be delayed until the Commission has reviewed and decided the contested issues regarding Amerada's and Signal's applications. This procedure is supported by the Staff and unopposed by any party to the proceeding. Therefore, this decision will sever Amerada's and Signal's applications from this consolidated proceeding and will issue certificates to all other applicants, subject to such terms and conditions as may be required by the public convenience and necessity and subject to the Commission's approval of this procedure.

MDU's application, filed March 7, 1961, in Docket No. CP61–234, as supplemented May 23, 1961, June 26, 1961, August 24, 1961, September 28, 1961, and December 15, 1961, proposes to integrate with its existing interstate system an 80-mile, 12-inch intrastate line which extends from Tioga, North Dakota, to Minot, North Dakota. The intrastate line would be interconnected with the existing system at the terminal point of one of MDU's existing main lines which extends from eastern Montana to Tioga, North Dakota. MDU also proposes to construct and operate a 106-mile, 12-inch line from Minot to Bismarck, North Dakota, the terminal point of another of MDU's main lines extending from eastern Montana into North Dakota. After MDU has interconnected the aforesaid 12-inch lines, its NorthDakota system will be integrated with its facilities in Montana to form a continuous pipeline encompassing a large area in western North Dakota.

At various points along the aforementioned 106-mile interconnecting line, MDU proposes to extend five 2-inch branch lines, having a total length of about 19.5 miles, in order to initiate retail natural-gas service to the Minot Radar Base near Minot and to the four communities of Max, Turtle Lake, Washburn, and Wilton, North Dakota. Additionally, two 3-inch branch lines, totaling approximately 22 miles in length, are proposed to be extended from the 106-mile interconnection to provide service in the communities of Garrison and Underwood, North Dakota. In conjunction with serving natural gas in these communities and the radar base, MDU proposes to construct and operate the necessary city-gate stations and the required measuring and regulating station at the terminus of the 106-mile interconnecting line near Bismarck. The estimated third-year maximum daily requirements of all six communities and the radar base[5] total 2,640 Mcf and the estimated annual requirements are 308,590 Mcf.

[5] On September 14, 1961, the North Dakota Public Service Commission issued an order in Case No. 6082 granting MDU a certificate to construct and operate distribution systems in Max, Garrison, Turtle Lake, Underwood, Washburn, and Wilton and to serve the Minot Radar Base.

MDU's application in Docket No. CP61–297, filed May 23, 1961, as supplemented June 29, 1961, and October 2, 1961, seeks authorization to construct the facilities necessary to initiate natural-gas service to three North Dakota communities and to one new industrial customer in Montana. The North Dakota communities of Watford City, Arnegard, and Alexander are proposed to be served by the construction of a lateral, composed of 11.7 miles of 6-inch pipe and 17 miles of 4-inch pipe, in a southeasterly direction from one of MDU's main lines extending from Cabin Creek, Montana, to Tioga, North Dakota. The 4-inch portion of this lateral will terminate at the city-gate station to be constructed for delivering gas to Watford City, Two branch lines, each about one mile in length and two inches in diameter, will be constructed from the Watford City lateral, together with the necessary city-gate stations, to initiate natural-gas service in Alexander and Arnegard. The third-year maximum daily requirements of these three communities are estimated to be 980 Mcf and the annual requirements are estimated at 114,390 Mcf.[6]

The new industrial customer MDU proposes to serve in Docket No. CP61–297 is the Holly Sugar Corporation, whose plant is located near Hardin, Montana. MDU will serve Holly Sugar's plant by constructing 1.6 miles of 4-inch lateral in a northwesterly direction from one of MDU's main lines which extends southwestward from the Cabin Creek Compressor Station through Montana to Worland, Wyoming. Gas will be used by Holly Sugar in the sugar beet pulp dryer which is being installed in its plant. The maximum daily requirements of the dryer are estimated at 2,000 Mcf and it is contemplated that the annual requirements will not exceed 122,000 Mcf because the dryer will be operated only about 100 days each year, beginning in October of each year.

MDU's application in Docket No. CP61–297 also proposes the installation of a 298-horsepower compressor unit[7] and rearrangement of existing facilities in its extant South Elk Basin Compressor Station in Park County, Wyoming, so as to receive additional solution gas from Continental. The solution gas will be purchased under an amendment dated March 1, 1961, of MDU's contract with Continental pursuant to which MDU presently purchases solution gas produced from the Frontier and Middle Frontier formations. The amendatory agreement covers the purchase of solution gas to become available from the Torchlight formation which occurs at a depth of 5626 to 5648 feet above the Mid-Frontier formation in Continental's Well No. 31.

Continental expects to offer MDU about 4,500 Mcf of solution gas per day. Since the present capacity of the South Elk Basin facilities is only 3,200 Mcf per day, about 1,300 Mcf of solution gas would have to be flared if the additional compression were not installed. The 298 horsepower of compressor facilities which MDU proposes to add will increase the capacity of the South Elk Basin Station to about 6,000 Mcf per day and will enable MDU to compress non-associated gas which Continental will produce from the Cloverly-Morrison formation and continue to sell to MDU under a contract with the latter dated January 1, 1960. This contract has been designated Continental's FPC Gas Rate Schedule No. 200 and supersedes Continental's FPC Gas Rate Schedule

---

[6] On November 13, 1961, the North Dakota Commission issued an order in Case No. 6117 granting MDU a certificate to construct and operate distribution systems in Watford City, Alexander, and Arnegard.

[7] On November 13, 1961, MDU reported that it had completed this 298-horsepower unit and placed it in service on November 1, 1961, pursuant to temporary authority granted October 6, 1961.

No. 2, a prior 10-year contract dated January 23, 1951,[8] covering sales of gas to MDU from the Cloverly-Morrison formation.

The additional gas which MDU proposes to acquire in Docket No. CP61–297, pursuant to its gas purchase contracts with Hunt-Herbert and TXL, will be obtained from two gasoline plants which are located northeast of Tioga, a North Dakota community presently served by MDU's existing intrastate system. Hunt-Herbert's North Tioga plant is located about 13½ miles northeast of Tioga and TXL's Lignite plant is situated approximately 25 miles northeast of Hunt-Herbert's plant. MDU proposes to receive deliveries of gas from the tailgate of Hunt-Herbert's plant by constructing 13.6 miles of 8-inch transmission line[9] from the site of the plant to a point on MDU's existing pipeline near Tioga. MDU will not have to construct any facilities in addition to the aforesaid 13.6-mile line in order to receive residue gas from TXL's plant because the latter's application states that TXL will[9] construct about 24 miles of 8-inch line southwestward from its Lignite plant in order to deliver its gas into MDU's 13.6-mile line which terminates near Hunt-Herbert's North Tioga plant.

The fields which will supply the raw gas to be processed in TXL's Lignite plant are the Portal, Rival, Lignite, Flaxton, Woburn, Black Slough, Foothills, N. E. Foothills, and Rennie Lake fields, which are located in Burke County, North Dakota. MDU's application shows that the residue gas committed to MDU under the TXL contract is estimated to be 49,691 MMcf. Hunt-Herbert will obtain raw gas from producers in the North Tioga and McGregor fields in Burke, Williams, and Divide Counties, North Dakota, for processing in its North Tioga plant. The residue gas available to MDU under the Hunt-Herbert contract is estimated to be 28,443 MMcf, making a total volume of 78,134 MMcf available to MDU under both TXL's and Hunt-Herbert's contracts, as of January 1, 1961, at a pressure base of 14.73 pounds per square inch absolute.

Under Article 3 of MDU's contract with Hunt-Herbert, MDU is obligated to take, or pay for, the entire output of surplus residue gas from Hunt-Herbert's plant. If the volume of residue gas offered by Hunt-Herbert should exceed 5,000 Mcf per day for a period of 90 days, MDU is entitled to a reasonable time within which to install additional facilities to permit it to take gas in excess of 5,000 Mcf per day. MDU's estimated purchases from the North Tioga plant for the first five years of operation are based on estimates made by the Ralph E. Davis Associates and are given in the following tabulation:

MDU's estimated purchases from Hunt-Herbert

Year of estimate	Annual purchases (Mcf)	Average daily purchases (Mcf)
1962	1,715,500	4,700
1963	1,825,000	5,000
1964	2,080,500	5,700
1965	2,190,000	6,000
1966	2,591,500	7,100

Article 3 of MDU's contract with TXL provides for MDU to take, or pay for, the entire output of surplus residue gas from TXL's Lignite plant. If the volume of residue gas offered by TXL should exceed 10,000 Mcf per day for

[8] Continental was authorized February 6, 1956, to sell gas produced from the Cloverly-Morrison formation in *Continental Oil Co. et al.*, Docket Nos. G–6590 *et al.*, 15 FPC 641, affirmed *Continental Oil Company* v. *F.P.C.*, 247 F. 2d 904 (CA5).

[9] On March 1, 1962, MDU reported that construction of this 13.6-mile line had been completed on November 30, 1961, pursuant to temporary authority granted November 1, 1961. TXL also received a temporary certificate to sell gas to MDU on November 1, 1961.

a period of 90 days, MDU is entitled to a reasonable time within which to install additional facilities to permit it to take gas in excess of 10,000 Mcf per day. MDU's estimated purchases from the Lignite plant for the first five years of operation are given in the following tabulation:

MDU's estimated purchases from TXL

Year of estimate	Annual purchases (Mcf)	Average daily purchases (Mcf)
1962	2,591,500	7,100
1963	2,774,000	7,600
1964	3,139,000	8,600
1965	3,285,000	9,000
1966	3,869,000	10,600

TXL's introductory witness stated that 30 additional wells had been drilled in the Lignite area since the time of the Davis reserve studies which served as the basis for the foregoing MDU estimates. This witnss expected the Lignite plant to be producing average daily quantities of residue gas in the amount of 9,153 Mcf in the first year of operation, 12,800 Mcf by the second year, 13,300 Mcf by the third year, and 13,500 Mcf thereafter. The contracts of the producers supplying the Lignite plant have a 15-year term and the contracts supplying the Hunt-Herbert plant have a 20-year term. Neither the TXL witness nor the Davis reports placed the combined deliverability of gas from these two plants at less than 10,000 Mcf per day until after ten years of production.

The foregoing facts indicate that MDU has enhanced its system gas supply by contracting for the purchase of the surplus residue gas to become available from the North Tioga and Lignite plants. The third-year peak daily requirements of all the new service MDU is proposing in both Docket Nos. CP61–234 and CP61–297 amount to 5,620 Mcf and the annual requirements total 544,980 Mcf. As compared with this new service, MDU is proposing to attach a gas supply capable of delivering from about 17,000 Mcf to 20,000 Mcf per day and an annual volume ranging from approximately 6,500,000 Mcf to over 7,500,000 Mcf. These figures indicate that the additional gas to be acquired from Hunt-Herbert and TXL will be sufficient to meet the requirements of the proposed new customers and augment the gas supply available to MDU for maintaining consistent service to its existing customers.

As hereinbefore indicated, MDU proposes in Docket No. CP61–234 to construct and operate a new 106-mile, 12-inch pipeline between Minot and Bismarck. While some new service is proposed to be rendered by means of this interconnecting line, its primary purpose is to enable MDU to increase its capacity sufficiently to enable it to take the full output of residue gas from the gasoline plants. MDU originally proposed to construct this line in order to take additional volumes of gas from Amerada's and Signal's Tioga plant, but MDU's policy witness stated during the hearing that regardless of whether Amerada, Signal, Hunt-Herbert, and TXL were *all* authorized to make sales to MDU, or whether Hunt-Herbert and TXL *only* were authorized to make sales to MDU, there would not be, under either of the foregoing assumptions, sufficient capacity in MDU's system, without construction of the 106-mile line, to take the entire output of gas from the gasoline plants as required under the gas purchase contracts.

Since acquirement of the Hunt-Herbert and TXL gas will generally improve MDU's system gas supply, it appears to be in the public interest for MDU

to be authorized at this time to construct all of the facilities, including the 106-mile interconnecting pipeline, requested by MDU in both Docket Nos. CP61–234 and CP61–297 despite the fact that decision regarding the sale of gas to MDU by Amerada and Signal will have to be deferred for subsequent decision pending further consideration of the two issues regarding price and jurisdiction which have been raised solely as to Amerada's and Signal's applications.

MDU's application indicates that about 90 days will be required for MDU to construct the 106-mile interconnecting line and place it into operation. This means that MDU's capacity during the summer of 1962 will be just as limited as it was shown to be in MDU's request for temporary authority which was filed on October 2, 1961, in Docket No. CP61–297. On pages 39–41 of its brief the Staff points out that MDU's ability to take gas from the North Tioga and Lignite plants will be considerably limited in the summer months, prior to the construction of the 106-mile line, because MDU has very little demand for gas in North Dakota in the warm months and consequently has to transport most of the gas delivered to it from North Dakota gasoline plants into Montana for injection into storage fields. MDU is presently taking about 30,000 Mcf of residue gas per day from Amerada's and Signal's Tioga plant under contracts in effect prior to this proceeding. Consequently, MDU's ability to take additional gas with existing capacity is apparently limited to as little as 1,300 Mcf per day during the month of July.

The lowest estimate given for the volume of residue gas which will be available for delivery to MDU from both the North Tioga and Lignite plants when they begin initial operations is 10,000 Mcf per day. There can be no doubt, therefore, but that the volumes of gas which will be produced by Hunt-Herbert and TXL will be in excess of MDU's pipeline capacity until such time as the 106-mile line has been completed. Because of MDU's inability to take the entire output of the residue gas from TXL's plant, MDU and TXL entered into an agreement dated August 31, 1961, amending TXL's basic gas sales contract so as to remove MDU's obligation to take, or pay for, the entire output of the Lignite plant during the months of March through October, inclusive.

When MDU and TXL filed their requests for temporary authority, MDU stated that it proposed to take gas *proportionately* from Hunt-Herbert's and TXL's plants *if* both Hunt-Herbert and TXL were given temporary certificates. However, MDU made this assumption as to proportionate takes of gas from the two plants on the premise that Hunt-Herbert would amend its contract, in the same manner as TXL did, to remove MDU's obligation to take the entire output of the Hunt-Herbert plant during the months of March through October, inclusive.

Inasmuch as Hunt-Herbert has never amended its contract with MDU so as to remove MDU's obligation to take the entire output of residue gas from the North Tioga plant, the staff proposes that a condition be attached to the certificate issued to Hunt-Herbert and TXL so as to provide for proportionate takes from Hunt-Herbert's and TXL's plants during the period between the issuance of the permanent certificates and the time MDU is able to complete its 106-mile line and place it into operation. It has been shown, of course, that once MDU has started operating this proposed 106-mile line that it will be able to take the entire output of all the gasoline plants. Such a condition appears to be required by the public convenience and necessity to protect MDU from having to pay for gas it can't take prior to the completion of its facilities and to provide for equitable takes of gas it can't take prior to the completion of its facilities and to provide for equitable takes of gas from both Hunt-Herbert's North Tioga plant and TXL's Lignite plant.

736–330—64——72

By way of summary and in order to state the facts specifically, the total facilities which MDU proposes to construct in both Docket Nos. CP61–234 and CP61–297 are given in the tabulation below, together with the estimated costs, including allowance for contingencies and interest during construction:

Proposed facilities	*Estimated cost*
106-Mile, 12-Inch Interconnecting Line	$3,400,000
Branch Lines to Serve Six Communities and Radar Base and Bismarck Regulation Station	359,070
City-Gate Stations for Six Communities and Radar Base	73,610
Distribution Systems in Six Communities of Max, Turtle Lake, Washburn, Wilton, Garrison, and Underwood, North Dakota	455,700
Total Cost for All Proposals in Docket No. CP61–234	4,288,380
13.6-Mile, 8-Inch Extension to North Tioga Plant to Receive Gas from Hunt-Herbert and TXL plus Metering and Regulating Stations	319,480
Installation of 298-Horsepower Compressor Unit and Rearrangement of Facilities in South Elk Basin Compressor Station	71,060
Lateral Line to Serve Watford City and Branch Lines to Serve Alexander and Arnegard	438,560
City-Gate Stations to Serve Alexander, Arnegard, and Watford City	25,480
Distribution Systems in Alexander, Arnegard, and Watford City	178,380
Lateral Line and Metering and Regulating Station to Serve Holly Sugar Corporation	32,140
Total Cost for All Proposals in Docket No. CP61–297	1,065,100
Total Estimated Costs in Both Dockets	5,353,480

There appears to be no questions as to MDU's ability to finance the projects proposed in both Docket Nos. CP61–234 and CP61–297. MDU expects to finance its projects by the issuance of preferred stocks and from short-term bank loans and working capital.

Even though this is a preliminary decision to be issued prior to a determination as to the real price issue in this proceeding, some consideration should be given to the initial rates which Hunt-Herbert and TXL propose to charge. Scrutiny is required under *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378, and a review of the initial rates is especially important in view of the fact that no initial price is given for the North Dakota area in the Commission's *Statement of General Policy No. 61–1*, issued September 28, 1960, 24 FPC 818, 18 CFR 2.56. Of course, any discussion of initial prices in this preliminary decision must be limited to matters which will not be prejudicial to the positions taken by Amerada and Signal in connection with the price and jurisdictional issues involved in their applications which are being severed for separate decision.

Prior to the filing of the applications in this proceeding, MDU was purchasing gas from Amerada and Signal under four contracts executed in 1955. Two of these contracts provide for intrastate sales at an initial price of 16 cents per Mcf with one-cent price escalation provisions every five years, the first escalation having gone into effect on January 1, 1961. The other two contracts provide for interstate sales on a "dump" basis, in that Amerada and Signal offer residue gas under the "dump" contracts only when such gas would otherwise have to be flared. The "dump" contracts provide for an initial price of 9 cents per Mcf at the same pressure base used in the firm con-

tracts, that is, 14.73 pounds per square inch absolute. The "dump" contracts have no price escalation provisions and have an indefinite term.

In this proceeding Amerada and Signal propose to sell gas to MDU under two intrastate contracts and two interstate contracts which would displace the aforementioned intrastate and "dump" contracts under which gas is presently being sold to MDU.[10] These four contracts provide for an initial price of 17 cents per Mcf at a pressure base of 14.73 pounds, with one-cent escalation provisions each five years thereafter for the 20-year terms of the contracts.

Hunt-Herbert's and TXL's contracts have already been discussed fairly extensively. They provide for interstate sales at a proposed initial price of 16 cents per Mcf at a pressure base of 14.73 pounds, with one-cent escalation provisions each five years thereafter for their 20-year terms.

Amerada's and Signal's witnesses have testified that the "dump" contracts were negotiated with MDU in order to prevent the flaring of gas and to sell gas at whatever price could be obtained. These "dump" contracts are not considered firm in that they fail to provide for the sale of specific quantities of gas or for the commitment of any reserves to MDU.

The foregoing discussion shows that in the North Dakota area the only prices which can be compared in this proceeding are 16 cents and 17 cents. Each of these prices relates to pipeline quality gas delivered to MDU at high pressure from the tailgates of gasoline plants. All "pipeline quality" gas delivered to MDU under any of the contracts must contain no more than one-fourth grain of hydrogen sulphide or more than twenty grains of total sulphur per 100 cubic feet or more than one pound of water per million cubic feet. The Btu content can be no less than 988 Btu. Because gas with a higher Btu content than 1040 per cubic foot is not compatible for mixing with other gas in MDU's system for use in the appliances of MDU's customers, each of the contracts provides for the seller to inject air into the residue gas to ensure that the Btu content does not exceed 1040 Btu's per cubic foot.

From the foregoing discussion, it can be seen that few gas prices are available for comparison in the area involved in this proceeding. Such prices, however, together with the record herein, sufficiently support the price at which Hunt-Herbert and TXL propose to sell their gas. Further discussion of the prices involved in this proceeding will be deferred for consideration in the subsequent decision concerning Amerada's and Signal's applications.

Formal Findings

(1) Montana-Dakota Utilities Co., a Delaware corporation, having its principal place of business at Minneapolis, Minnesota, is engaged in the transportation of natural gas in interstate commerce, and the sale in interstate commerce of natural gas for resale for ultimate public consumption, and therefore is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order in Docket Nos. G–220 and G–402, 5 FPC 64.

(2) Lyda Hunt-Herbert Trusts *et al.*, a group of trusts created under the laws of Texas, with principal office at Dallas, Texas, and The TXL Oil Corporation, a Delaware corporation with principal place of business at Dallas, Texas, upon commencement of the service hereinafter authorized, will be engaged in the sale of natural gas in interstate commerce for resale for ultimate

[10] Even if their applications in this proceeding are granted, Signal and Amerada have indicated that they do not contemplate filing for permission to abandon this "dump sales" service because a situation might arise in the future when they would need to resort to selling "dump gas" rather than having to flare it.

public consumption, subject to the jurisdiction of the Commission, and will therefore be "natural-gas companies" within the meaning of the Natural Gas Act.

(3) The facilities to be constructed or integrated into its interstate system by MDU, as hereinbefore described and as more fully described in the applications in Docket Nos. CP61–234 and CP61–297 as supplemented, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of MDU's existing pipeline system and the construction, integration, and operation thereof by MDU are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas by Hunt-Herbert and TXL to MDU, as hereinbefore described and as more fully described in the applications in Docket Nos. CI61–1621 and CI61–1687, respectively, will be made for resale in interstate commerce, subject to the jurisdiction of the Commission, and such sales by Hunt-Herbert and TXL, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Hunt-Herbert and TXL, respectively, are able and willing to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and to the requirements, rules, and regulations of the Commission thereunder.

(6) The construction, integration, and operation of the facilities proposed by MDU in Docket Nos. CP61–234 and CP61–297 and the sales of natural gas proposed by Hunt-Herbert and TXL in Docket Nos. CI61–1621 and CI61–1687, respectively, together with the construction and operation by Hunt-Herbert and TXL of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the general terms and conditions set forth in paragraphs (a), (b), (c)(4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20) should attach to the issuance of the certificates hereinafter granted to MDU and to the exercise of the rights granted thereunder, and that the time within which construction of the facilities authorized by this order shall be completed and placed in actual operation should be fixed at six months from the date on which this order issues.

(8) MDU's existing capacity is not sufficient to take the entire output of Hunt-Herbert's and TXL's gasoline plants pending the completion of the 106-mile interconnecting line hereinafter authorized, and consequently MDU's, Hunt-Herbert's and TXL's certificates should be conditioned to provide that MDU shall take residue gas from Hunt-Herbert's and TXL's plants to the extent that its existing pipeline capacity permits; further, pending such time as MDU is able to complete the 106-mile line and place it into operation, MDU should not be liable to pay for any gas offered to it by Hunt-Herbert or TXL above the quantity which its existing facilities are actually able to transport on any given day.

(9) Pending the time when MDU's facilities are capable of taking the full output of residue gas from both Hunt-Herbert's and TXL's plants, MDU shall take gas proportionately from both plants so that its limited capacity is equitably used to take gas from each plant.

(10) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificate issued to Continental Oil Company, Operator, *et al.*, in Docket No. G–14440, be amended as hereinafter provided.

(11) In order that MDU may commence construction of its facilities as soon as possible so as to reduce the amount of gas which would otherwise have to be flared, and in order that sufficient time may be allowed for completion of construction prior to the 1962–63 heating season, it is appropriate for Amerada's and Signal's applications to be severed from this consolidated proceeding for a subsequent decision as to the two disputed issues of price and jurisdiction which have been raised regarding Amerada's and Signal's applications.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission pursuant to its Rules of Practice and Procedure, that:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Montana-Dakota Utilities Co. to construct, integrate, and operate the facilities hereinbefore described, all as more fully described in the applications in Docket Nos. CP61–234 and CP61–297, for the transportation and sale of natural gas in interstate commerce as therein set forth, upon the terms and conditions of this order.

(B) The general terms and conditions set forth in paragraphs (a), (b), (c)(4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificates granted in paragraph (A) above and to the exercise of the rights granted thereunder.

(C) The time within which the facilities authorized in paragraph (A) above shall be completed and placed in actual operation is hereby fixed at six months from the date on which this order issues.

(D) Certificates of public convenience and necessity be and the same are hereby issued authorizing the sales by Lyda Hunt-Herbert Trusts *et al.*, and The TXL Oil Corporation to MDU of natural gas in interstate commerce for resale, together with the construction and operation by Hunt-Herbert and TXL of any facilities subject to the jurisdiction of the Commission necessary therefor, as hereinbefore described and as more fully described in the applications in Docket Nos. CI61–1621 and CI61–1687, respectively.

(E) The certificates granted in paragraph (D) above are not transferable and shall be effective only so long as Hunt-Herbert and TXL continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission thereunder.

(F) The certificates issued in paragraphs (A) and (D) above are hereby conditioned to provide that, prior to the completion of MDU's proposed 106-mile line, MDU shall take residue gas from Hunt-Herbert's and TXL's plants to the extent that its existing pipeline capacity permits; further, pending the time when MDU is able to complete the 106-mile line and place it into operation, MDU shall not be liable to pay for any gas offered to it by Hunt-Herbert or TXL above the quantity which its existing facilities are actually able to transport on any given day.

(G) The certificates issued in paragraphs (A) and (D) above are hereby further conditioned to provide that pending the time when MDU's facilities are capable of taking the full output of residue gas from both Hunt-Herbert's and TXL's plants, MDU shall take gas proportionately from both plants so that its limited capacity is equitably used to take gas from each plant.

(H) The certificate issued to Continental on July 17, 1958, in Docket No. G–14440 in *Montana-Dakota Utilities Co. et al.*, Docket Nos. G–13965 *et al.*, 20 FPC 50, is hereby amended to grant authorization for the additional sales which Continental proposes to make to MDU as hereinbefore described and as more fully described in Continental's application to amend the certificate previously issued to it in Docket No. G–14440.

(I) The grant of the certificates in paragraph (D) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's Regulations thereunder requiring the filing of a rate schedule for the service herein authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Hunt-Herbert or TXL. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provision in the gas purchase contracts herein involved.

(J) The certificates issued to Hunt-Herbert and TXL in paragraph (D) above shall be accepted in writing and under oath within 30 days from the date of issuance of this order.

(K) Amerada's application in Docket No. CI61–1133 and Signal's application in Docket No. CI61–1271 are hereby severed from this consolidated proceeding for a subsequent decision as to the disputed issues hereinbefore described on page 1094 of this decision.

ROBERT M. WESTON,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NATURAL GAS STORAGE COMPANY OF ILLINOIS
DOCKET NO. CP62–79

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 1, 1962)

On September 27, 1961, as supplemented on October 9, and December 8, 1961, Natural Gas Storage Company of Illinois filed in Docket No. CP62–79 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas storage facilities at the Herscher Storage Field, Kankakee County, Illinois, all as more fully set forth in the application, as supplemented.

The additional facilities required for the proposed operation are:

(1) One additional 6,500 BHP gas turbine centrifugal compressor unit at Compressor Station No. 201;

(2) Approximately 6,200 feet of 20-inch gathering lines, of which approximately 3,400 feet will be used to replace existing 10-inch and 12-inch gathering lines that will be retired;

(3) Approximately 2,200 feet of 10-inch, 2,600 feet of 12-inch, and 1,900 feet of 30-inch gathering lines;

(4) Six injection-withdrawal Galesville Reservoir wells;

(5) One Galesville Reservoir observation well;

(6) Three Mt. Simon Reservoir observation wells; and

(7) Additional cushion gas, and miscellaneous facilities necessary or convenient to the operation of the above described facilities.

The total estimated cost of Applicant's proposed facilities is $3,360,860, which will be financed from funds on hand and from short-term loans from Natural Gas Pipeline Company of America or from banks.

The proposed facilities will be used to provide a maximum peak-hours withdrawal capacity of 40,000 Mcf and to increase the maximum daily withdrawal from storage by 75,000 Mcf to a total of 800,000 Mcf of natural gas by using all three reservoirs, namely the Galesville and Mt.Simon Reservoirs at the Herscher Field and the Cooks Mills Field. Such gas will be stored for the accounts of existing customers of Natural Gas Pipeline Company of America.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 24, 1962, respecting the matters involved in and the issues presented by the Application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omittd and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Storage Company of Illinois, an Illinois corporation having its principal place of business of Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its opinion and order of September 11, 1952, in Docket No. G–1757 (11 FPC 366).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, will be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof, and the increased storage service by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities, and the proposed increased storage service by Applicant, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(6) The submission of reports required of Applicant by applicable orders of the Commission in dockets involving the Herscher Galesville, Herscher Mt. Simon, and Cooks Mills gas storage projects should be continued.

(7) The total combined reservoir withdrawals of natural gas from the Herscher and Cooks Mills Fields should be limited to a maximum of 40,000 Mcf per hour and 800,000 Mcf per day.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Storage Company of Illinois, to construct and operate the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, and to render the additional storage service as proposed, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(C) The time within which the facilities hereby authorized shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at 12 months from the date on which this order issues.

(D) The submission of reports required of Applicant by applicable orders of the Commission in dockets involving the Herscher Galesville, Herscher Mt. Simon, and Cooks Mills gas storage projects shall be continued.

(E) The total combined reservoir withdrawals of natural gas from the Herscher and Cooks Mills Fields are hereby limited to a maximum of 40,000 Mcf per hour and 800,000 Mcf per day.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TEXACO INC. (SUCCESSOR TO TEXACO SEABOARD INC.) DOCKET NOS. G–15680, G–15739

ORDER GRANTING EXTENSION OF TIME

(Issued June 1, 1962)

By its order issued March 5, 1962, in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 441, the Commission disposed of more than 400 proceedings including those above listed, involving rate increases based upon the additional gathering tax of 1¢ per Mcf imposed by the State of Louisiana and later invalidated by the Louisiana courts. With respect to Docket No. G–15680, ordering paragraph (A) of the March 5 order directed Texaco Inc., successor to Texaco Seaboard Inc., (Texaco) to refund tax-reimbursement amounts collected from its direct customer Transcontinental Gas Pipe Line Corporation (Transco). Ordering paragraph (C) of the March 5 order directed that within 90 days from the date of issuance thereof, Texaco report to the Commission the details of its refund calculations and submit copies of releases from Transco as to the required refunds. With respect to Docket No. G–15739, no refunds were required of Texaco. By order issued April 26, 1962 in *Texaco Inc., et al.*, Docket Nos. G–15546, *et al.*, 27 FPC 847, the Commission denied applications for rehearing of the March 5 order in the above, as well as other, dockets. On May 28 Texaco filed a motion seeking to stay the effectiveness of the March 5 order, insofar as applicable to the above dockets, until 30 days after conclusion of judicial review of said order in those dockets. The motion recites that Texaco intends to seek judicial review of the March 5 order and that failure of the Commission to grant the stay pending such review would cause it irreparable

injury. Inasmuch as no refund obligations were imposed upon Texaco in Docket No. G–15739, we shall deem the motion for stay to be addressed solely to the Commission's order in Docket No. G–15680.

For reasons stated in our order of April 13, 1962 granting Pan American Petroleum Corporation an extension of time for compliance,[1] we are disposed to extend the time within which Texaco must comply with ordering paragraphs (A) and (C) of the Commission's March 5 order, for a period ending 30 days after conclusion of judicial review of that order in Docket No. G–15680.[2] The extension is conditional, however, upon the payment by Texaco to Transco of interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the order of March 5.

The Commission finds:

(1) There is good cause for extending the time within which Texaco must comply with the requirements of ordering paragraphs (A) and (C) of our order of March 5, 1962, for a period ending 30 days after conclusion of judicial review of that order in the instant docket.

(2) It is just and reasonable and in the public interest that Texaco be required to pay Transco interest, at a rate of 7% upon the amounts to be refunded, for the period commencing on the 91st day after issuance of the March 5 order.

The Commission orders:

(A) The time within which Texaco must comply with ordering paragraphs (A) and (C) of the Commission's order of March 5, 1962 is extended for a period ending 30 day after the conclusion of judicial review of the Commission's order.

(B) Texaco shall pay Transco interest, at a rate of 7% upon the amounts required to be refunded, for the period commencing on the 91st day after issuance of the March 5, 1962 order.

(C) The time within which Transco must comply with ordering paragraphs (B) and (D) of the March 5, 1962 order, insofar as applicable to the instant docket, is extended for a period ending 60 days after conclusion of judicial review of that order in said dockets.

(D) If Texaco shall not have filed petitions for review of the March 5 order in the instant docket within the 60 day period prescribed by statute, the extension of time herein granted shall be deemed inoperative and of no effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION DOCKET NO. CP62–142

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 1, 1962)

On December 8, 1961, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP62–142 an application pursuant to Section 7(c) of the

[1] Pan American Petroleum Corporation, Docket No. G–15641; Pan American Petroleum Corporation (Operator), *et al.*, Docket Nos. G–15650 and G–15780, 27 FPC 686.

[2] It should be understood that the 30th day after judicial review in the instant docket is the date upon which Texaco must comply with the March 5 order; it is *not* the date upon which the 90 day period referred to in ordering paragraph (C) commences to run.

Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Texas Gas Transmission Corporation (Texas Gas) from four of Applicant's units in the Calhoun Field, Ouachita Parish, Louisiana.

The gas to be sold will be Applicant's share of the Clara Hodge, J. B. Brown No. 1, R. R. Fuller No. 1 and T. A. Grant No. 1 Units in the Calhoun Field.

The proposed sale is to be made pursuant to Applicant's FPC Gas Rate Schedule F–5, which Rate Schedule consists of a gas sales contract, dated September 3, 1958, between Texas Gas and Southwestern Gas Producing Company, Inc., and Applicant's agreement, dated November 22, 1961, ratifying the foregoing contract, to provide for the subject sale, as it basic contract in Docket No. CP62–142.

The proposed sale will be made at an initial price of 16.5 cents per Mcf at 15.025 psia plus 1.75 cents per Mcf tax reimbursement, or a total initial price of 18.25 cents per Mcf.

By letter, dated February 23, 1962, Applicant was granted temporary authorization to make the proposed sale of natural gas.

Pursuant to due notice, a public hearing was held in Washington, D. C., on May 24, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(2) The sale of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Applicant, together with the contruction and operation of any facilities subject to the jurisdiction of the Commission necessity therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provision of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Because of the nature of the service herein proposed and hereinafter authorized, Section 154.93 of the Commission's Regulations should be applicable; accordingly, in the event that any document comprising the subject Rate Schedule F–5 was executed on or after April 3, 1961, and contains provisions, either therein or by adoption of the terms and provisions of other agreements, for a change in rate other than those permitted by said Section 154.93 of the Commission's Regulations, such rate change provisions shall be inoperative and of no effect at law and any tendered rate change under such provisions will be rejected.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Applicant, Texas Eastern Transmission Corporation, of natural gas to Texas Gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, as hereinbefore described, all as more fully described in the application in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicant. Further, our action in this proceeding shall not foreclose or prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved.

(D) Because of the nature of the service herein proposed and authorized, Section 154.93 of the Commission's Regulations shall be applicable; accordingly, in the event that any document comprising the subject Rate Schedule F–5 was executed on or after April 3, 1961, and contains provisions, either therein or by adoption of the terms and provisions of other agreements, for a change in rate other than those permitted by Section 154.93 of the Commission's Regulations, such rate change provisions shall be inoperative and of no effect at law and any tendered rate change under such provisions will be rejected.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

CALIFORNIA-PACIFIC UTILITIES COMPANY PROJECT NO. 1985

ORDER ACCEPTING SURRENDER OF LICENSE (MAJOR) AND TERMINATING PROCEEDING

(Issued June 4, 1962)

Application was filed October 31, 1960, by California-Pacific Utilities Company, licensee for major Project No. 1985, for surrender of its license for the project pursuant to Section 6 of the Federal Power Act.

The license for the project—which was located on the North and South Forks of Mill Creek in Union County, Oregon, and affected lands of the United States within the Whitman National Forest, Minan Division—was issued June 28, 1951, effective as of June 30, 1946, to California-Pacific Utilities Company for a period of 50 years.

The application stated that the project had become uneconomical to operate and maintain; that it was in need of costly repairs; and that it had not operated since August 1, 1960, when the generator was damaged by lightning and the project was taken out of service.

On January 3, 1961, the State of Oregon, through its Fish and Game Commissions, filed a petition for leave to intervene in this proceeding on the application for surrender. The petition requested that any order issued by the Commission accepting surrender of the license require the removal of diversion structures which obstructed the passage of fish. Intervention was permitted by Commission order issued February 10, 1961. The licensee has furnished the Commission a copy of a letter dated December 26, 1961, addressed to the licensee by the Oregon State Game Commission, stating that obstructions on Mill Creek have been removed sufficiently to permit uninterrupted upstream migration of fish.

By letter dated April 18, 1962, the Forest Service, United States Department of Agriculture, informed the Commission that the project works had been removed and that the restoration of the lands of the United States involved to a condition satisfactory to the Service was completed on November 3, 1961. The Forest Service stated further that the removal of the diversion dam on Mill Creek is also satisfactory to the Oregon State Game Commission.

The annual charges under the license for the project have been paid through the calendar year 1960 and the licensee's copy of the license instrument has been returned.

The Commission finds:

(1) Public notice has been given of the filing of the application for surrender of the license and no protests thereon have been received except the above-mentioned petition for leave to intervene.

(2) Acceptance of surrender of the license for the project is not inconsistent with the public interest.

The Commission orders:

Surrender of the license for major Project No. 1985 is accepted, effective as of November 3, 1961, subject to the payment of the annual charges under the license for the project through said date, in the amount of $33.72, and this proceeding is terminated.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NEW YORK STATE NATURAL GAS CORPORATION AND THE MANUFACTURER'S LIGHT & HEAT COMPANY, DOCKET NO. G–16011

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 4, 1962)

On February 12, 1962, New York State Natural Gas Corporation (New York) and The Manufacturers Light and Heat Company (Manufacturers) (sometimes hereinafter referred to jointly as Petitioners) filed in Docket No. G–16011 a joint petition to amend the Commission's order issued February 20, 1959, in Docket No. G–16011, 21 FPC 262.

The order of February 20, 1959, issued a certificate of public convenience and necessity authorizing Petitioners to exchange natural gas, pursuant to an exchange agreement, dated July 28, 1958, and to construct and to operate facili-

ties necessary therefor. Presently New York delivers natural gas produced in the Armagh Section of the Nolo Field, Indiana County, to Manufacturers and Manufacturers delivers to New York equivalent volumes of gas produced in the Benezette Field, Elk County, and the Rockton Field, Clearfield County, all in Pennsylvania.

Under the subject proposal, New York will construct 2,200 feet of 2-inch pipeline from its Learn Well No. 1 in the Jacksonville Field, Indiana County, Pennsylvania, to connect with Manufacturers' 3-inch pipeline near the Learn Well, and Manufacturers will construct and operate a measuring station at the point of interconnection. The Learn Well is not in the Armagh Section and is not, therefore, part of the presently authorized exchange arrangement. Petitioners seek to have the February 20, 1959, order amended so as to include said Learn Well production in the exchange arrangement. Petitioners have entered into an amendatory agreement, dated January 29, 1962, to provide for the Learn Well production.

The estimated cost of New York's and Manufacturers' proposed facilities is $3,000 and $1,600, respectively.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on April 28, 1962, (27 FR 4108). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued February 20, 1959, in Docket No. G–16011, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 20, 1959, in Docket No. G–16011, is hereby amended so as to authorize Petitioners, New York State Natural Gas Corporation and The Manufacturers Light and Heat Company, to construct and operate the proposed facilities and to authorize the inclusion of gas from New York's Learn Well No. 1 as part of the gas exchanged between Petitioners.

(B) In all other respects, said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

OAKDALE IRRIGATION DISTRICT AND SOUTH SAN JOAQUIN IRRIGATION DISTRICT PROJECT NO. 2005

ORDER WAIVING IMPOSITION OF PENALTY FOR DELINQUENCY IN PAYMENT OF ANNUAL CHARGES

(Issued June 4, 1962)

On March 5, 1962, a statement of the annual charges for the calendar year ended December 31, 1961 under the license for Project No. 2005 was mailed to Oakdale Irrigation District and South San Joaquin Irrigation District, joint licensees for the project. It was noted on the statement that the charges should be paid "within 30 days of rendition of a bill therefor".

Since payment was not received within the period specified, the licensees were reminded by letter of April 20, 1962 of the delinquency in payment, whereupon

payment, in the amount of $3,621.92 was made on April 25, 1962. Such prompt action to our reminder would indicate that the delay was unintentional.

Annual charges for Project No. 2005 did not commence until May 5, 1957 and no statement for the 1957 and 1958 charges was rendered until March 27, 1959. By our order issued July 20, 1960, 24 FPC 60, the license for Project No. 2005 was amended effective as of January 1, 1958 to substitute the new charge formula for State and municipal licensees determined in Docket No. R–129 by our Order No .205 dated June 6, 1958. Since application of the new charge formula to Project No. 2005 substantially reduced the administrative charges under the license for that project back to January 1, 1958, payment of the 1957 and 1958 charges on the old basis created a credit balance in favor of the licensees. Accordingly, no statement requiring payment of the 1959 and 1960 charges was rendered, and our statement for the 1961 charges was only the second rendered that required payment. The charge of $3,621.92 reflected the balance due after exhausting the remaining credit against th 1961 charges. (The licensees also hold the license for Project No. 2067 which has a credit balance remaining after deducting 1961 annual charges applicable thereto.)

The Commission finds:

In the circumstances, it will not be inconsistent with the public interest to waive imposition of any penalty by reason of the licensees' delay in payment of the annual charges.

The Commission orders:

The imposition of any penalty by reason of the delay of the joint licensees in the payment of the annual charges under the license for Project No. 2005 for the calendar year 1961 is waived.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY DOCKET NO. CP61–213

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 5, 1962)

On March 2, 1962, Northern Natural Gas Company (Petitioner) filed a petition to amend the Commission's order issued November 6, 1961, in Docket No. CP61–213, 26 FPC 709, so as to authorize Petitioner to sell and deliver to Public Service Corporation of Texas (Public Service) up to 3,500 Mcf of natural gas per day, on an interruptible basis, rather than the 1,500 Mcf per day, on an interruptible basis, authorized by said order.

The 1,500 Mcf per day authorized in the order of November 6, 1961, was to assist Public Service in meeting the increasing peak period requirements of its customers. The subject Petition indicates that the authorized volumes have proved inadequate and that in order to alleviate future peak day deficiencies in gas supply, Public Service has requested Petitioner to supply up to 3,500 Mcf per day in lieu of 1,500 Mcf per day.

Petitioner and Public Service have entered into an amendatory agreement, dated February 9, 1962, providing for the increased service. Such service is to be rendered under the same terms and price as the presently authorized service.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 4, 1962,

(27 FR 4316). No protest or petition to intervene has been field in this proceeding.

The Commission finds:

It is necessary and appropriate to carry out the provisions of the Natural Gas Act, and the public convenience and necessity requires that the Commissioner's order issued November 6, 1961, in Docket No. CP61–213, be amended as hereinafter ordered.

The Commission orders:

(A) Ordering paragraph (A) of the Commission's order issued November 6, 1961, in Docket No. CP61–213, as hereby amended to read as follows:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to sell and deliver up to 3,500 Mcf of interruptible natural gas per day, to Public Service Corporation of Texas as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) In all other respects, said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

SOUTHERN NATURAL GAS COMPANY; TENNESSEE GAS TRANSMISSION COMPANY DOCKET NO. G–4715

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 5, 1962)

On March 14, 1962, Southern Natural Gas Company (Southern) and Tennessee Gas Transmission Company (Tennessee) filed in Docket No. G–4715 a joint petition to amend the certificate of public convenience and necessity heretofore issued in said docket, all as more fully set forth in the joint petition.

By order of the Commission issued February 25, 1955, 14 FPC 577, in the subject docket, Petitioners were authorized to exchange natural gas. Southern was authorized to deliver gas from production owned or controlled by it in the Franklin Field, St. Mary Parish, Louisiana, to Tennessee's lines in that field, and Tennessee was authorized to return gas by delivering equivalent quantities to Southern at a point approximately 12 miles south of the Franklin Field, near Tennessee's gas receiving station at the end of its Bayou Sale lateral line.

Petitioners request the Commission to amend the certificate issued to them in the subject docket as follows:

(1) To authorize a new delivery point in the immediate vicinity of Southern's existing Eloi Bay receiving station; and to authorize Tennessee to deliver to Southern at the Eloi Bay delivery point, pursuant to the Franklin Exchange Agreement, up to 4,000 Mcf of gas per day, with a corresponding reduction in the amount of gas redelivered by Tennessee to Southern under the Franklin Exchange Agreement at the Bayou Sale delivery point; and

(2) To authorize Southern to tap its Eloi Bay lateral and to construct and operate measuring and receiving facilities at the Eloi Bay delivery point for the receipt of said gas from Tennessee.

Construction, operation, and maintenance costs for the measuring and regulating station will be borne by the producers.

Notice of the petition was published in the Federal Register on May 11, 1962 (27 FR 4537).

The Commission finds:

It is required by the public convenience and necessity and is appropriate in carrying out the provisions of the Natural Gas Act that the Commission's order of February 25, 1955, in Docket No. G–4715 (14 FPC 577) should be amended to authorize the additional exchange point for natural gas and the construction and operation of facilities therefor, as hereinbefore described and as more fully described in the joint petition herein.

The Commission orders:

(A) The Commission's order of February 25, 1955, in Docket No. G–4715 (14 FPC 577) be and the same is hereby amended to authorize the additional exchange point for natural gas and the construction and operation of facilities necessary therefor, as hereinbefore described and as more fully described in the joint petition herein.

(B) In all other respects said order of February 25, 1955, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

REVISION OF ANNUAL REPORT FORM PRESCRIBED FOR CLASS C AND CLASS D NATURAL GAS COMPANIES SUBJECT TO THE NATURAL GAS ACT, F.P.C. FORM NO. 2–A DOCKET NO. R–211

ORDER NO. 249

ORDER PROMULGATING A REVISED ANNUAL REPORT FORM FOR CLASS C AND CLASS D NATURAL GAS COMPANIES

(Issued June 6, 1962)*

The Commission has under consideration in this proceeding the revision of its F.P.C. Form No. 2–A, Annual Report Form Prescribed for Class C and Class D Natural Gas Companies[1] Subject to the Provisions of the Natural Gas Act and § 260.2, Part 260, Subchapter G, Approved Forms, Natural Gas Act, Chapter I, Title 18, Code of Federal Regulations (CFR), prescribing F.P.C. Form No. 2–A. That Report Form, as revised, is prescribed hereinafter effective for use in reporting for the calendar year beginning January 1, 1961 or subsequently during the calendar year 1961 if an established fiscal year is other than the calendar year, and years thereafter.

The various schedules comprising F.P.C Form No. 2–A now prescribed in § 260.2 (18 CFR 260.2), correspond to, and appear as pages 1–19 of the Commission's F.P.C. Form No. 2–A, Natural Gas Companies, Class C and Class D.[2]

---

* Published in the Federal Register on June 13, 1962, (27 F.R. 5606)

[1] Commission Order No. 231 issued December 21, 1960 (24 FPC 1117) (25 F.R. 13882, December 29, 1960), prescribed F.P.C. Form Nos. 301–A and 301–B as the annual financial report for independent producers of natural gas.

[2] Form No. 2–A was prescribed by Order No. 90 of February 7, 1942 (7 F.R. 1018, February 17, 1942). It was thereafter amended by Order No. 150 of November 22, 1949 (14 F.R. 7248, December 2, 1949) and by Order No. 171–A of May 17, 1954 (10 FPC 1051) (19 F.R. 2965, May 21, 1954).

This proceeding was commenced by notice of proposed rule making served upon interested parties, including States and Federal regulatory agencies, and by publication in the Federal Register on April 4, 1962 (27 F.R. 3207). As proposed, the subject matters and revisions in § 260.2, and the General Instructions and other Schedules comprising F.P.C. Form No. 2–A were set forth in the notice of proposed rule making and attached forms of proposed revised Schedules served upon the aforesaid interested parties and filed as a part of the notice submitted to the Federal Register for publication. The notice of proposed rule making invited the submission to the Commission of written data, views, comments and suggestions concerning the proposed revisions of F.P.C. Form N. 2–A and Part 260 on or before April 20, 1962. No filing responsive to the notice of proposed rule making has been received.

The exact nature of each of the revisions in Form 2–A is fully set forth in the respective accompanying schedule pages. The changes would be accomplished mainly through modification of existing schedules. Six new schedules would be added: Security Holders and Voting Powers; Officers and Directors; Capital Stock; Long-Term Debt; Sales of Natural Gas for Resale; and Gas Purchases. Two existing schedules will be omitted: Gas Plant in Process of Reclassification, and System May (Class C Natural Gas Companies). The revised Annual Report Form has been adapted to changes prescribed in the Uniform System of Accounts, prescribed for Natural Gas Companies effective January 1, 1961.

The Commission finds:

(1) The notice and opportunity to comment in this rule making proceeding with respect to the matters presently before the Commission in the manner as described above are consistent and in accordance with the procedural requirements of Section 4 of the Administrative Procedure Act.

(2) In view of the foregoing, and upon consideration of all relevant matters presented it is necessary and appropriate for the purposes of the Natural Gas Act that:

(a) The revised Annual Report Form as set forth in annexed Appendix A be adopted and promulgated as this Commission's F.P.C. Form No. 2–A effective for use in reporting for the calendar year beginning January 1, 1961 or subsequently during the calendar year if an established fiscal year is other than the calendar year, and years thereafter; all as hereinafter provided.

(b) Section 260.2, Part 260, Subchapter G, Approved Forms, Natural Gas Act, Chapter I, Title 18, Code of Federal Regulations be amended to read as hereinafter provided.

(3) Good cause exists for the adoption and promulgation of the matters referred to above immediately upon issuance of this order; all as hereinafter provided.

The Commission acting pursuant to the Natural Gas Act, as amended, particularly Sections 8, 9, 10 and 16, thereof (52 Stat. 825, 826, 826; 830; 15 U.S.C. 717g, 717h, 717i and 717o) *orders:*

(A) The revised Report Form as set forth in annexed Appendix A is adopted and promulgated as this Commission's F.P.C. Form No. 2–A effective for use in reporting for the calendar year beginning January 1, 1961, or subsequently during the calendar year 1961 if an established fiscal year is other than the calendar year, and years thereafter.

(B) Sction 260.2, Part 260, Subchapter G, Approved Forms Natural Gas Act, Chapter I, Title 18, Code of Federal Regulations, is amended to read as follows:

§ 260.2 *Form No. 2–A; Annual report for natural gas companies (Class C and Class D).*

(a) The form of Annual Report for natural gas companies, Class C and Class D, designated as F.P.C. Form No. 2–A in the Commission's Regulations under the Natural Gas Act is prescribed for the year 1961 and thereafter.

(b) Each natural gas company, as defined in the Natural Gas Act which is included in Class C or Class D as defined in the Commission's Uniform System of Accounts Precribed for Natural Gas Companies, effective January 1, 1961, shall prepare and file with the Commission for the year beginning January 1, 1961, or subsequently during the calendar year 1961 if its established fiscal year is other than the calendar year, and for each year thereafter, on or before the last day of the third month following the close of the calendar year or other established fiscal year (except that such reports for the calendar year 1961 or a fiscal year beginning during 1961 may be filed on or before July 16, 1962 or one month after the end of the fiscal year whichever is later) an original and one conformed copy of the above-designated F.P.C. Form 2–A, all properly filled out and verified. One copy of said report should be retained by the correspondent in its files. The confirmed copy may be a carbon copy if legible

(c) This annual report contains the following schedules:

Identification
General Instructions
General Information
Security Holders and Voting Powers
Officers and Directors
Comparative Balance Sheet
Accumulated Provision for Depreciation, Depletion and Amortization of Utility Plant
Capital Stock
Long-Term Debt
Condensed Income Statement for the Year
Earned Surplus
Gas Sales Data for the Year
Gas Operation and Maintenance Expenses
Sales for Resale—Natural Gas
Gas Purchases
Utility Plant Natural Gas Companies
Gas Account—Natural Gas
General Information Concerning Plant and Operations
Verification

[Authority: Sections 8, 9, 10 and 16, 52 Stat. 825, 826, 826, 830; 15 U.S.C. 717g, 717h, 717i and 717o.]

(C) This order shall be effective upon the date of issuance thereof.

(D) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–104

ORDER AUTHORIZING EXPORTATION OF NATURAL GAS

(Issued June 7, 1962)

El Paso Natural Gas Company (El Paso), a Delaware corporation with principal place of business in El Paso, Texas, filed an application for an order

in Docket No. G–104 on May 7, 1962, pursuant to Section 3 of the Natural Gas Act (Act), authorizing it to continue the exportation of natural gas from the United States to Mexico as hereinafter described, subject to the jurisdiction of the Commission, all as more fully set forth in said application which is on file with the Commission.

El Paso is the holder of a Presidential Permit which was issued to it on September 5, 1940, pursuant to Executive Order No. 8202 of July 13, 1939. This Presidential Permit is presently in full force and effect and authorized the continued operation, maintenance and connection of the presently existing facilities at the border of the United States and Mexico, at or near Monument 90 on the International Boundary which is located approximately 7¾ miles east of Naco, Cochise County, Arizona.

By order issued on September 10, 1940 (unreported), El Paso was authorized, pursuant to Section 3 of the Act and subject to the terms and conditions set forth in said order, to continue the exportation of natural gas from the United States to Mexico in accordance with a gas sale contract between Western Gas Company (seller), a Delaware corporation, and The Cananea Consolidated Copper Company, S.A. (buyer), a Mexican corporation, dated August 6, 1930, as amended December 18, 1934, which was acquired by El Paso from the Western Gas Company through assignment on June 11, 1936. At the time of issuance of that order, The Cananea Consolidated Copper Company, S.A. was a subsidiary of the Greene Cananea Copper Company. This order was superseded, and not amended, by an order subsequently issued on November 12, 1947, which is reported at 6 FPC 1005. The order of November 12, 1947, which is presently in effect, was based upon an agreement between El Paso and the Greene Cananea Copper Company, dated February 4, 1947, which, in effect, renewed the El Paso-Cananea Consolidated Copper Company contract "for a period of fifteen years from June 8, 1947". This order authorized El Paso, pursuant to Section 3 of the Act and subject to the terms and conditions set forth in said order, to continue the exportation of natural gas from the United States to Mexico in accordance with the contract, as renewed, "for a period not to exceed 15 years from June 8, 1947". This Section 3 authorization to export natural gas will expire, along with the contract involved, on June 8, 1962.

Under the existing export operation, El Paso delivers natural gas at the border of the United States and Mexico, near Monument 90, to Compania Occidental de Gas, S.A., de Capital Variable (Occidental) for the account of The Cananea Consolidated Copper Company. Occidental, a Mexican corporation and a wholly-owned subsidiary of El Paso, owns and operates an 8⅝-inch natural gas pipeline which is located entirely within Mexico. Occidental's line, which is approximately 39 miles in length, connects with the natural gas facilities of El Paso at the border, near Monument 90, and extends from that point in a southwesterly direction to the municipality of Cananea, Sonora, Mexico. After taking delivery of the gas from El Paso at the border, Occidental transports it through its line and delivers the same to The Cananea Consolidated Copper Company at or near the municipality of Cananea pursuant to a transportation agreement between Occidental and The Cananea Consolidated Copper Company, dated June 1, 1931, and otherwise having a term co-extensive with the aforesaid contract for the sale of gas between El Paso and The Cananea Consolidated Copper Company.

The Cananea Consolidated Copper Company uses the gas at its mine, smelter and plants located at or near Cananea and also supplies gas to the Compania de Gas de Cananea, S.A., a Mexican corporation unaffiliated with El Paso or The Cananea Consolidated Copper Company, for distribution in the town of Cananea, Sonora, Mexico.

By its present application, El Paso proposes to continue the exportation of natural gas from the United States to Mexico by means of existing and authorized facilities, as hereinbefore described, in accordance with a gas sale contract between El Paso, as seller, and Compania Minera de Cananea, S.A. de C.V., as buyer, hereinafter referred to as Minera. Minera, a Mexican corporation, is successor in interest to The Cananea Consolidated Copper Company and is a subsidiary of, and controlled by, the Greene Cananea Copper Company, a Minnesota corporation. This contract, dated June 9, 1962, will expire on June 1, 1972, unless terminated sooner in accordance with its provisions and deliveries are to commence thereunder on June 9, 1962. The agreement provides for the sale by El Paso of all of the natural gas fuel requirements for Minera's smelter and related mining operations in Cananea, Sonora, Mexico, plus such additional amounts of gas as Minera may take from time to time for domestic and industrial use by third parties in the vicinity of Cananea, Sonora, Mexico. El Paso's total obligation to deliver gas under the agreement is limited to amounts not in excess of 10,000,000 cubic feet per day. As under the earlier arrangement heretobefore described, El Paso will make deliveries of the gas through its existing facilities at the border, near Monument 90, to Occidental for the account of Minera. The El Paso-Minera contract provides for the sale of natural gas at the rate now or hereafter provided for gas delivered under Rate Schedule B–1 of El Paso's FPC Gas Tariff, Original Volume #1. The present rate applicable for the instant gas under this rate schedule is stated to be 35.65 cents per Mcf at 14.9 psia.

El Paso has also entered into a contract with the Greene Cananea Copper Company (Greene), dated June 9, 1962, whereunder El Paso guarantees the performance of Occidental under a transportation agreement btween Occidental and Minera, also dated June 9, 1962, as long as El Paso controls Occidental and whereunder Greene guarantees the performance of Minera under the El Paso-Minera gas sale contract as long as Greene controls Minera. The Occidental-Minera transportation agreement supersedes the Occidental-Cananea Consolidated Copper Company transportation contract hereinbefore described.

Natural gas has been exported continuously since June 8, 1931, to The Cananea Consolidated Copper Company, S.A., the predecessor of Minera. No additional facilities will be required for the continued exportation of natural gas, as proposed. The continued exportation and sale of natural gas, as proposed, will not impair El Paso's ability to render natural gas service to its customers in the United States.

Notice of the filing of the instant application was issued on May 23, 1962. This notice fixed June 5, 1962, as the last day for filing protests or petitions to intervene. No protests, petitions to intervene or notices of intervention have been filed or received. Opportunity for hearing has been given by the issuance of said notice and the publication thereof in the Federal Register on May 29, 1962 (27 FR 5015).

The Commission further finds:

The continued exportation of natural gas by El Paso from the United States to Mexico in accordance with the Minera contract will not be inconsistent with the public interest within the meaning of Section 3 of the Act provided that said exportation be continued on the terms and conditions hereinafter set forth, to wit:

(a) El Paso shall file statements or reports with the Commission from time to time under oath and in such details as the Commission may require with respect to the whole or any part of the instant export operation.

(b) The authorization granted herein is not transferable or assignable and shall remain in full force and effect only so long as El Paso continues the acts or operations herein authorized in accordance with the terms and conditions herein set forth.

(c) The authorization granted herein shall automatically terminate upon the termination or expiration of the contract between El Paso Natural Gas Company (seller) and Compania Minera De Cananea, S.A. de C.V. (buyer), dated June 9, 1962, and attached as an exhibit to the application filed in Docket No. G–104 on May 7, 1962, and which provides for the sale and exportation of natural gas to Mexico, and, upon the termination of said contract by discharge as a result of performance or completion, El Paso shall forthwith notify the Commission in writing of the fact and date of said termination.

(d) El Paso shall not, during the term of the authorization granted by this order, materially change or alter its export operations without first obtaining the permission and approval of the Commission.

(e) In the event that El Paso should abandon or permanently cease for any reason whatsoever all or any part of the instant export operation prior to the termination date of the contract described in (c) hereof, El Paso shall forthwith notify the Commission of said fact and the reason therefor.

The Commission orders:

(A) An order be and the same is hereby issued to El Paso in Docket No. G–104, pursuant to the aforesaid finding and subject to the terms and conditions set forth in subsections (a) through (e) thereof, authorizing El Paso to continue the exportation of natural gas from the United States to Mexico in accordance with the contract between El Paso and Compania Minera De Cananea, S.A. de C.V., dated as of June 9, 1962.

(B) The order issued in paragraph (A) hereof shall become effective upon the expiration of the order of the Commission issued in Docket No. G–104 on November 12, 1947, so that no interruption of service will occur.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Harold C. Woodward.

GAS PURCHASE FACILITIES—BUDGET-TYPE CERTIFICATE APPLICATIONS, PIPELINE COMPANIES, DOCKET NO. R–216

ORDER NO. 247

STATING GENERAL POLICY

(Issued June 7, 1962)*

The Commission has before it for consideration the issuance of a statement of general policy by the addition of a new § 2.58 to Part 2, Subchapter A, General Rules, Chapter I of Title 18, Code of Federal Regulations.

After considering certain suggestions made in a rulemaking proceeding, Docket No. R–145, then pending before it, the Commission issued its Order No. 185 on February 8, 1956 (15 FPC 793; 21 F.R. 1485) stating therein that

> . . . the Commission advises any interested natural gas company, subject to the Natural Gas Act, that it may file under Section 157.6 of the Rules, a single certificate application covering in general outline along the lines

* Published in the Federal Register on June 13, 1962 (27 F.R. 5606).

of a budget estimate the proposed routine construction intended to be undertaken by it during the current or ensuing fiscal year, listing the facilities proposed, the estimated cost of each item, the capacity, purpose and time of intended construction, customers affected by each facility proposed, effect of proposals upon gas supply and deliverability, rates, service and other pertinent information. A hearing could then be held on such a proposal and certificate issued in accordance with the general application. At the end of the period, a statement shall be filed, showing the action taken under the certificate and any authority thereunder which was not exercised. (Id. at 794.)

Pursuant to our suggestion in that order, natural gas pipeline companies have filed applications for budget authority to construct and operate gas purchase facilities. Authorizations have been issued during the past several years on a case-by-case basis. It is believed that the industry should now be informed as to the factors we will consider in the issuance of such budgetary authorizations based upon our experience in disposing of such applications. Accordingly, we are issuing the statement adopted herein.

The Commission finds:

(1) The amendment to Part 2 of the Commission's Rules herein adopted represents matters of policy and procedure which do not require notice or hearing under section 4(a) of the Administrative Procedure Act.

(2) Adoption and promulgation of the proposed amendment is necessary and appropriate for the purpose of administration of the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly section 7 and 16 thereof (52 Stat. 824, 830; 56 Stat. 83; 15 U.S.C. 717f, 717o), *orders:*

(A) Part 2, Subchapter A, General Rules, Chapter I of Title 18 of the Code of Federal Regulations is amended by adding a new § 2.58 to read as set out in the attachment hereto.

(B) The statement and amendment herein prescribed shall become effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Attachment

Part 2—General Policy and Interpretations

* * *

§ 2.58 *Budget-type certificate applications—gas purchase facilities.*

In accordance with the Commission's advise in Order No. 185, issued February 8, 1956 (15 FPC 793 at 794) and unless prevented by other factors, such as interventions in opposition, we will issue budget-type authorizations to natural gas pipeline companies covering the construction and operation of gas purchase facilities, after hearing under the abridged procedure, upon applications for certificates of public convenience and necessity, filed under § 157.6 of this chapter, provided that:

(a) The total estimated cost of the facilities to be installed in a given twelve-month period does not exceed 1½ percent of the applicant company's plant account or $5,000,000 whichever is the lesser.

(b) The total cost of any single project facilities to be installed during the authorization period does not exceed 25 percent of the total budget amount or $500,000, whichever is the lesser.

(c) The applicant agrees to file with the Commission, within sixty days after expiration of the authorization, a statement showing for each individual project:

(1) Description of facilities installed, i.e., miles and size of pipelines, compressor horse-power, metering facilities.

(2) Location of facilities.

(3) Actual installed cost of facilities subdivided by size of pipe, compressing, metering and appurtenant facilities.

(4) Estimated recoverable gas reserves in Mcf at 14.73 psia made available to applicant by means of the facilities.

(5) Names of fields connected.

(6) The names of the independent producers from whom the gas is being purchased together with the respective dates of the gas sales contracts and the docket number of the related seller.

(d) "Gas purchas facilities" means those facilities necessary to connect the applicant's system with the facilities of a seller authorized by this Commission to make a sale for resale in interstate commerce to the applicant.

[Authority: Sec. 7, 56 Stat. 83; sec. 16, 52 Stat. 830; 15 U.S.C. 717f, 717o]

CUSTODY, AUTHENTICATION AND CERTIFICATION OF DOCUMENTS, DOCKET NO. R-217

ORDER NO. 248

AMENDING THE COMMISSION'S RULES OF PRACTICE AND PROCEDURE

(Issued June 7, 1962)*

This order amends sections 1.2(a) and 1.14(b), respectively, of the Commission's Rules of Practice and Procedure so as to reflect certain procedures previously established by administrative order.

The Commission finds:

(1) The adoption of appropriate amendments will correlate pertinent sections of the Rules of Practice and Procedure with Administrative Order No. 89.

(2) The promulgation and adoption of the following amendments are necessary for the purposes of administration of both the Federal Power Act and the Natural Gas Act.

(3) Since the amendments herein adopted involve matters of practice and procedure, notice or hearing under section 4(a) of the Administrative Procedure Act is not required.

The Commission, acting pursuant to authority granted by the Federal Power Act, particularly sections 308 and 309 thereof (49 Stat. 858; 16 U.S.C. 825g, 825h), and the Natural Gas Act, as amended, particularly sections 15 and 16 thereof (52 Stat. 829, 830; 15 U.S.C. 717n, 717o), *orders:*

(A) Part 1, Rules of Practice and Procedure, of Subchapter A, General Rules, Chapter I of Title 18 of the Code of Federal Regulations, is amended as follows:

1. In § 1.2 *The Secretary*, subsection (a) is amended to read as follows:

"(a) *Official records* (1) The Secretary shall have custody of the Commission's seal, the minutes of all action taken by the Commission, its rules and regulations and its administrative orders.

---

* Published in the Federal Register on June 13, 1962 (27 F.R. 5605).

(2) The Records Officer shall have custody of all records of the Commission except those designated in paragraph (1) hereof."

2. In § 1.14 *Filings; docket; hearing calendar*, subsection (b) *Docket* is amended by changing "Secretary" to read "Records Officer".

[Authority: Sections 308, 309, 49 Stat. 858, sections 15, 16, 59 Stat. 829, 830; 16 U.S.C. 825g, 825h; 15 U.S.C. 717n, 717o.]

(B) These amendments shal lbecome effective upon issuance of this order.

(C) The Secretary shall cause publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. CP60-122 AND CP61-203; ALGONQUIN GAS TRANSMISSION CORPORATION, DOCKET NOS. CP60-124 AND CP61-220; UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP61-151; SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-206; TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP61-247; ARKANSAS MISSOURI POWER COMPANY, DOCKET NO. CP62-20

ORDER PROVIDING FOR FILING OF BRIEFS

(Issued June 7, 1962)

Formal hearings in the above-captioned consolidated section 7(c) applications were concluded on May 16, 1962. Dates for filing of briefs have been set as follows: Applicants' Initial Briefs, June 11, 1962; Answers by Staff and interveners, July 9, 1962; Reply Briefs by Applicants, July 23, 1962.

On April 18, 1962, applications for temporary authority to construct certain facilities and to make additional sales were filed by Texas Eastern Transmission Corporation (Texas Eastern) in Docket No. CP61-203, Algonquin Gas Transmission Company (Algonquin) in Docket No. CP61-220 and Texas Gas Transmission Corporation (Texas Gas) in Docket No. CP61-247. United Gas Pipe Line Company(United), filed an application for temporary authority in Docket No. CP61-151 on April 18, 1962, to make additional sales. Southern Natural Gas Company filed an application on April 23, 1962 in Docket No. CP61-206, for temporary authority to construct facilities and make additional sales to Texas Eastern. Each of the above-mentioned Applicants claims that an emergency exists which requires the issuance of the temporary authority sought, as more fully set out in the applications on file with the Commission and open to public inspection.

A statement in support of the temporary authorizations requested by Texas Eastern and Algonquin was filed by the New England Distributor Interveners[1] on May 7, 1962. A statement in support of all of the temporary authorizations requested was filed by the Consolidated Edison Company of New York, Inc. on

The Connecticut Gas Company
The Hartford Electric Light Company
The Hartford Gas Company
New Haven Gas Company
City of Norwich, Department of Public Utilities
Norwood Gas Company
Providence Gos Company
Worcester Gas Light Company

May 10, 1962. An answer in opposition to all of the above requests for temporary authority was filed by the Coal Interveners[2] on April 27, 1962.

In order for the Commission to properly dispose of these interrelated applications for temporary authorizations it is desirable that all parties file briefs directed to the questions as to whether these requests should be granted in whole or in part, or be denied.

The Commission orders:

All parties to the above-captioned proceedings are hereby provided an opportunity to file briefs on or before June 18, 1962, directed to the question whether the applications for temporary authority above referred to should be granted in whole or in part, or be denied.

FLORIDA GAS TRANSMISSION COMPANY,[1] DOCKET NOS. G–9262, RP61–3, RP62–4; COASTAL TRANSMISSION CORPORATION, DOCKET NO. G–9960, RP61–4

ORDER ACCEPTING PROPOSED SETTLEMENT, MODIFYING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, SEVERING AND TERMINATING CERTAIN PROCEEDINGS, TERMINATING OTHER PROCEEDINGS IN PART, AND DISCHARGING REFUND OBLIGATIONS

(Issued June 8, 1962)

On April 18, 1962, Florida Gas Transmission Company (Florida Gas) and Coastal Transmission Corporation (Coastal) submitted a proposed settlement in the above-listed consolidated proceedings. The hearing on the consolidated proceedings was recessed on April 2, 1962, for the purpose of holding conferences, looking towards limitation and settlement of issues. On April 30, 1962, the Presiding Examiner certified to the Commission the stipulation and agreement (Tr. 4586 to 4617) which resulted from said conferences, and which, in part, is attached hereto as Exhibit I.[2] No objections to the proposed settlement have been received from any party to these proceedings.

The proceeding in Docket No. RP61–3 involves proposed increases in rates by Florida Gas under its Rate Schedules G, T–1, and T–2, and a discount under its Rate Schedule G for gas used by consumers for winter heating and summer cooling. The proceedings in Docket Nos. G–9262 and G–9960 involve proposed modifications of the certificates of public convenience and necessity issued to Florida Gas and Coastal (16 FPC 118) to eliminate specific requirements as to rate of return, form of tariff, an dseparation of charges for sales and transportation. Coastal's proposed amendment to its certificate resulted in an increase in its cost of service tariff for sales of natural gas for resale to Florida Gas, which proposed increase was suspended in Docket No. RP61–4. The pro-

[1] Formerly Houston Texas Gas and Oil Corporation.

[2] For convenience only, the text of the agreement and Appendix B are attached hereto. Appendices A, C and D, not here reproduced, are comprised of revised tariff sheets to be filed by the companies pursuant to the terms of the settlement. [Exhibit I, omitted in printing.]

ceeding in Docket No. RP62–4 involves a proposed waiver of the minimum bill provisions under Florida Gas' Rate Schedule I.

The offer of settlement provides that Florida Gas will file with the Commission revised tariff sheets proposed to be effective as of May 1, 1962, containing the following base rates:

Rate Schedule G	57.0 cents per MMBtu base price
	15.0 cents per MMBtu air conditioning discount
Rate Schedule T–1	14.5 cents per MMBtu
Rate Schedule T–2	18.5 cents per MMBtu

In addition, the revised tariff sheets would change the present application of the minimum bill provision in Rate Schedule G from a monthly basis to a calendar year basis, include a one-year make up provision for gas paid for but not taken by the buyer under such rate schedule provision, and would reduce the minimum bill in Florida Gas' Rate Schedule I to zero. It is further stipulated that Florida Gas will not file for increases in its Rate Schedules G, I, T–1 and T–2 above the rates contained in the agreement, which would be made effective (after suspension) prior to January 1, 1964, except to recoup increased costs resulting from purchased gas costs and increased taxes where the aggregate effect could result in an annual increase of $200,000 or more in costs applicable to resale jurisdictional sales.

The aforesaid stipulation and agreement provide that two issues be reserved for further conference and hearing, if necessary, in the proceedings in Docket Nos. RP61–3 and RP61–4. Those issues involve: (1) the proper cost for accounting purposes under the Uniform System of Accounts of constructing the facilities of Florida Gas and (2) the accrual for Federal income taxes on the books of Coastal for accounting purposes under the Uniform System of Accounts.

The offer of settlement also provides that the rate conditions set forth in the Commission's order and opinion issued December 28, 1956 in Docket Nos. G–9262 and G–9960 (16 FPC 118) be amended so that the words "in accordance with usual Commission standards and based on an annual rate of return of not in excess of 6 percent" be deleted from ordering clause (B)(1) and that ordering clause (C)(3) be changed by substituting 6.5 for 6 percent in such clause on and after May 1, 1962. The modification of Florida Gas' certificate will enable it to file a tariff change, under Section 4 of the Natural Gas Act and the Regulations with respect thereto, without requesting or obtaining prior concurrent modification under Section 7 of the Natural Gas Act of its certificates of public convenience and necessity presently outstanding.

In their offer of settlement, Florida Gas and Coastal state and agree that they will diligently prosecute their application, filed on April 2, 1962 in Docket No. CP62–232, to merge Coastal into Florida Gas.

Our review of the terms of the settlement agreement and the studies in support thereof indicates that said agreement and settlement of these proceedings is in the public interest and should be approved.

The Commission finds:

The proposed settlement submitted by Florida Gas and Coastal on April 18, 1962 in these proceedings and which, in part, is attached hereto as Exhibit I, is reasonable and proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be approved as hereinafter provided.

The Commission orders:

(A) The increased rates and charges filed by Florida Gas and Coastal in these consolidated proceedings are hereby disallowed and denied, as of May 1, 1962.

(B) The settlement of these proceedings on the basis of the stipulation and agreement set forth in the transcript of these proceedings (Tr. 4586 to 4617), is approved and made effective, subject to the terms and condition hereinafter specified.

(C) Within 30 days after the date of issuance of this order, Florida Gas shall file, in a form satisfactory to the Commission, revised tariff sheets in conformity with the requirements of the said stipulation to be effective as of May 1, 1962.

(D) Ordering Clause (B) (1) of the order issued December 28, 1956 (16 FPC 118 at p. 114) is amended to read as follows:

The rates set forth in the tariffs for firm sales for resale, interruptible sales, and for transportation, shall be commensurate with the cost of service determined on a reasonable allocation of costs between these services.

(E) Ordering Clause (C) (3) of the order issued December 28, 1956 (16 FPC 118 at p. 145) is hereby modified to the extent and only to the extent of substituting "6.5" percent for "6" percent in such clause, effective on and after May 1, 1962.

(F) Within 60 days from the date of issuance of this order, the Commission staff shall convene a conference between the parties and interveners in Docket Nos. RP61–3 and RP61–4 at a convenient date and place for the purpose of discussing and deciding upon the procedure to be followed in disposing of the reserved issues set forth in Article VI of said stipulation and, if possible, to define and reduce said reserved issues.

(G) Upon full compliance by Florida Gas and Coastal with all the terms and provisions of this order and the said stipulation, each of the above-entitled proceedings are hereby severed from the above-entitled consolidated proceedings and shall be deemed terminated, except as to the reserved issues defined in Article VI of said stipulation, which issues remain outstanding in Docket Nos. RP61–3 and RP61–4.

(H) Upon compliance with paragraph (C) above, Florida Gas and Coastal are hereby released and discharged from any and all obligations under their respective bonds filed in these proceedings.

(I) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Florida Gas, Coastal or any other part affected by this order, in any proceeding now pending or hereafter instituted by or against Florida Gas and/or Coastal or any other person.

NATURAL GAS STORAGE COMPANY OF ILLINOIS, DOCKET NO. CP62-144; NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP62-145

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 8, 1962)

On December 11, 1961, as supplemented on January 8, 1962, Natural Gas Storage Company of Illinois (Storage) filed in Docket No. CP62-144 an application for a certificate of public convenience and necessity authorizing the acquisition of underground storage rights and the construction and operation of facilities for the evaluation of the characteristics and capabilities of an underground natural gas storage reservoir, described as the Cairo Storage Area, in Louisa County, Iowa, all as more fully set forth in the application as supplemented.

The proposed storage project would be utilized to meet storage requirements of Storage's customers in addition to or supplementary to the service now provided. Authorization to commence the supplementary service will be requested when the capabilities of the reservoir are determined.

Storage estimates the cost of the proposed project to be $2,637,150. Storage presently contemplates financing the project with funds borrowed from The Peoples Gas Light and Coke Company or with funds borrowed from banks. No plan for permanently funding these loans has yet been determined. The application states that Storage desires to reserve the right to make changes in its proposed plan of financing.

Storage proposes to inject approximately 2,800,000 Mcf of gas into the Lower St. Peter formation in the Cairo Storage Area which gas will be purchased from Natural Gas Pipeline Company of America.

On December 11, 1961, Natural Gas Pipeline Company of America (Natural) field in Docket No. CP62-145 an application for a certificate of public convenience and necessity authorizing the construction and operation of a side tap and meter station on its existing transmission facilities in Louisa County, Iowa, and the sale and delivery of approximately 2,800,000 Mcf of natural gas to Natural Gas Storage Company of Illinois.

Natural estimates that the cost of the proposed facilities will be $18,300, which will be financed from funds on hand.

The proposed sale will be made under Natural's FPC Gas Rate Schedule X-1. Natural proposes to make the gas available to Storage during off-peak periods when deliveries to other customers will not be affected and also during other than off-peak periods when gas may be available by reason of curtailment by customers of Natural of their purchase of gas for interruptible sales.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 29, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the applications or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Storage Company of Illinois, an Illinois corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its opinion and order of September 11, 1952, in Docket No. G–1757 (11 FPC 366).

(2) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(3) The facilities hereinbefore described, as more fully described in the respective applications, as supplemented, in this proceeding, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the act and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The proposed construction and operation of facilities are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditiond.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(7) The time within which the facilities authorized in Docket No. CP62–145 should be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act should be fixed at 90 days from the date on which this order issues.

(8) Applicant in Docket No. CP62–145 should be permitted to sell and deliver natural gas to Natural Gas Storage Company of Illinois under the authorization hereinafter granted until December 31, 1963, and said sale should be limited to 2,800,000 Mcf of gas.

(9) The maximum inventory of gas stored in the Cairo Storage Area should be limited to 2,800,000 Mcf of 1,000 Btu gas at 14.65 psia.

(10) Applicant in Docket No. CP62–144 should submit monthly reports containing the following information on the proposed testing operations:

(a) The volumes of natural gas injected or withdrawn together with the corresponding total volumes in the reservoir;

(b) The maximum daily injection or withdrawal rate experienced during the month;

(c) The average working pressure on such maximum days taken at a central measuring point where the total volumes injected or withdrawn is measured;

(d) The water level in each observation well;

(e) The stabilized shut-in wellhead pressure of each observation and active well when pressure stabilization exists. A graph shall accompany the report showing the injection and withdrawal rates by days, the water levels, and stabilized shut-in wellhead pressures for each observation well by days;

(f) All gamma ray, neutron, or other electric log surveys;

(g) All core analyses;

(h) For each well the date on which gas was first noted during injection and the date on which water seriously encroached during withdrawal;

(i) A map showing the latest concept of structure based on development and the pressures requested in (e) above shall be shown when taken together with the area occupied by the gas bubble, as indicated by the information requested in (h) above;

(j) Status of acreage control for storage purposes;

(k) Status of permits required by State agencies having jurisdiction;

(l) Back pressure data and curves;

(m) Discussion of current operations and conclusions with respect to input capacity of various inventories, input pressure at wells and the ability of the storage reservoir to retain gas; and

(n) Any other data which may aid the Commission in the evaluation of the Cairo Storage project.

(11) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing the respective Applicants to construct and operate the facilities hereinbefore described, as more fully described in the applications and supplement in this proceeding, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(C) The time within which the facilities authorized in Docket No. CP62–145 shall be completed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at 90 days from the date on which this order issues.

(D) Applicant in Docket No. CP62–145 is hereby permitted to sell and deliver natural gas to Natural Gas Storage Company of Illinois under the authorization granted in paragraph (A) above until December 31, 1963, and said sale is hereby limited to a maximum of 2,800,000 Mcf of gas.

(E) The maximum inventory of gas stored in the Cairo Storage Area is hereby limited to 2,800,000 Mcf of 1,000 Btu gas at 14.65 psia.

(F) Applicant in Docket No. CP62–144 shall submit monthly reports containing the following information on the proposed testing operations:

(a) The volumes of natural gas injected or withdrawn together wtih the corresponding total volumes in the reservoir;

(b) The maximum daily injection or withdrawal rate experienced during the month;

(c) The average working pressure on such maximum days taken at a central measuring point where the total volume injected or withdrawn is measured;

(d) The water level in each observation well;

(e) The stabilized shut-in wellhead pressure of each observation and active well when pressure stabilization exists. A graph shall accompany the report showing the injection and withdrawal rates by days, the water levels, and the stabilized shut-in wellhead pressures for each observation well by days;

(f) All gamma ray, neutron, or other electric log surveys;

(g) All core analyses;

(h) For each well the date on which gas was first noted during injection and the date on which water seriously encroached during withdrawal;

(i) A map showing the latest concept of structure based on development and the pressure requested in (e) above shall be shown when taken together with the area occupied by the gas bubble, as indicated by the information requested in (b) above;

(j) Status of acreage control for storage purposes;

(k) Status of permits required by State agencies having jurisdiction;

(l) Back pressure data and curves;

(m) Discussion of current operations and conclusions with respect to input capacity at various inventories, input pressure at wells, and the ability of the storage reservoir to retain gas; and

(n) Any other data which may aid the Commission in the evaluation of the Cairo Storage project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA
DOCKET NO. CP62-162

FINDING AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 8, 1962)

On January 8, 1962, as supplemented on January 26, 1962, and April 24, 1962, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP62-162 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction of certain unspecified "budget-type" facilities during the calendar year 1962 at a total cost not to exceed $132,000, with no single project to exceed a cost of $20,000, and the operation thereof for the delivery of natural gas to existing customers, all as more fully set forth in the application, as supplemented.

No increase over presently authorized volumes is requested. Applicant proposes the establishment of additional delivery points to enable existing customrs to provide gas service in areas heretofore without such service. The proposed service would be subject to the following conditions:

(1) Applicant's customers proposing service through the new facilities will not require an increase in their contract volumes presently available from Applicant.

(2) The service will be in an area not heretofore served with natural gas.

(3) Applicant' customers proposing service will have obtained such authorization therefor as may be required.

(4) The estimated peak day delivery requirement in the first and third years of operation for the new area or areas will be less than two and five percent, respectively, of the total peak day supply of natural gas available from Applicant and its affiliate, Natural Gas Storage Company of Illinois, to the customers proposing such service, or 5,000 Mcf, whichever is less.

(5) Applicant's customers proposing the service do not propose to serve any industrial consumers in the new area that would use in excess of 10,000 Mcf of gas per month.

Applicant has not requested any change in the design or operation of its pipeline system or in the rates now charged by it by reason of the construction and operation of the facilities proposed in the subject application.

The subject facilities will be financed from funds on hand.

There is no question as to gas supply.

Pursuant to due notice, a public hearing was held in Washington, D. C., on May 29, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application has been received. A petition to intervene was filed on March 30, 1962, by the coal interests[1] and was withdrawn on April 24, 1962. Staff counsel moved orally at the hearing that that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware Corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are prposed to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provision of the Natural Gas Act and the requirements, rules. and regulations of the Commission thereunder.

(4) The construction during the calendar year 1962 of facilities and the operation thereof for the delivery of natural gas to existing customers to serve new areas as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing by project: (a) a description of the project or projects constructed pursuant to the authorization hereinfater granted, (b) the location of said project or projects, (c) the names of resale customers served through the operation of the subject facilities, (d) the new areas served by the subject facilities, (e) the actual final cost of the facilities built under the authorization hereinafter granted, and (f) the estimated annual and peak day requirements of the new areas in the third year of operation.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1962, and the total expenditures for facilities authorized to be constructed thereunder should be limited to a maximum of $132,000, with no single project to exceed a cost of $20,000.

[1] Fuels Research Council, Inc.; National Coal Association; United Mine Workers of America; Mid-West Coal Producers Institute, Inc.

(8) The certificate hereinafter granted should be subject to the following Conditions:

(a) Applicant's customer or customers proposing service in the new area will not require an increase in the contract volume presently available from Applicant.

(b) The service will be in an area not heretofore served with natural gas.

(c) Applicant's customer or customers proposing service will have obtained such authorization therefor as may be required.

(d) The estimated peak day delivery requirement in the first and third years of operation for the new area or areas will be less than two and five percent, rspectively, of the total peak day supply of natural gas available from Applicant and its affiliate, Natural Gas Storage Company of Illinois, to the customers proposing such service, or 5,000 Mcf, whichever is less.

(e) Applicant's customers proposing the service do not propose to serve any industrial consumers in the new area that would use in excess of 10,000 Mcf of gas per month.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of its Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Natural Gas Pipeline Company of America to construct during the calendar year 1962 the proposed facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, and to operate such facilities only for delivery of natural gas to existing customers for service in new areas as proposed by Applicant.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) a description of the project or projects constructed pursuant to the authorization granted in paragraph (A) above, (b) the location of said project or projects, (c) the names of the resale customers served through the operation of the subject facilities, (d) the new areas served by the subject facilities, (e) the actual final costs of the facilities built under the authorization hereinbefore granted, and (f) the estimated annual and peak day requirements of the new areas in the third year of operation.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $132,000, with no single project to exceed a cost of $20,000.

(E) The certificate issued by paragraph (A) above is subject to the following conditions:

(a) Applicant's customer or customers proposing service in the new area will not require an increase in the contract volume presently available from Applicant.

(b) The service will be in an area not heretofore served with natural gas.

(c) Applicant's customer or customers proposing service will have obtained such authorization therefor as may be required.

(d) The estimated peak day delivery requirement in the first and third years of operation for the new area or areas will be less than two and five percent, respectively, of the total peak day supply of natural gas available from Applicant and its affiliate, Natural Gas Storage Company of Illinois, to the customers proposing such service, or 5,000 Mcf, whichever is less.

(e) Applicant's customers proposing the service do not propose to serve any industrial consumers in the new area that would use in excess of 10,000 Mcf of gas per month.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-207

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued June 8, 1962)

On March 2, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP62-207 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon in place 35.1 miles of 18-inch pipeline east of its Otis compressor facilities in Barton and Ellsworth Counties, Kansas, all as more fully set forth in the application.

The Otis gas field which the subject facilities served is depleted and Applicant therefore has no further use for the pipeline. Service to certain farm tap customers from this pipeline will be abandoned.

The subject facilities were authorized by Applicant's "grandfather certificate" issued in Docket No. G-280.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 31, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities proposed to be abandoned as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment of Applicant is permitted by the public convenience and necessity, and an order permitting and approving same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1:30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for an approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission of the date of the abandonment within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-210

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT

(Issued June 8, 1962)

On March 8, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP62-210 an application pursuant to Section 7 (b) of the Natural Gas Act for permission and approval to abandon four 1,320 horsepower compressor units at its Pembrook Station located in Upton County, Texas, all as more fully set forth in the application.

It appears that due to a decline in the volumes of gas delivered at the Pembrook Station, the subject four 1,320 horsepower units can be removed and relocated at Applicant's proposed Eunice Compressor Station in Lea County, New Mexico (Docket No. CP61-186). Applicant states that no sales or services will be abandoned and that the relocation of the four units will avoid an expenditure of approximately $600,000 in new equipment at the Eunice Station.

The subject four compressor units were originally certificated by the Commission's order accompanying Opinion No. 249 issued on May 1, 1953, in Docket No. G-1928, *et al.*, 12 FPC 85.

Pursuant to due notice, a public hearing was held in Washington, D.C., on May 31, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant is permitted by the public convenience and necessity, and an order permitting and approving same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Northern Natural Gas Company of the facilities hereinbefore described, and as more fully described in the application in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission of the date of the removal of the equipment within ten days after completion thereof.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP60-72; PAN AMERICAN PETROLEUM CORPORATION, G-19277; HUMBLE OIL & REFINING COMPANY, CI60-65 AND CI60-66; BELCO PETROLEUM CORPORATION, CI61-475; BENEFICIAL OIL COMPANY, CI61-729

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 11, 1962)

*Syllabus**

1. To accept producers' contract price on theory advanced by them—based upon economic evidence—would be tantamount to abdication of Commission's regulatory responsibility under the Natural Gas Act. P. 1137.
2. To preside over rising spiral of prices as dictated by competition in open market and trends associated therewith, would be to forego regulation of producer prices in public interest, and be inconsistent with "real administrative effort to hold back prices" demanded of Commission by CATCO. P. 1137.
3. Evidence presented by producers offers no substantial, let alone compelling, proof of public's need to have gas supplies certificated at proposed contract price, or any initial price in excess of in line price of 15.384-cents. P. 1138.
4. Value of trend evidence discussed; Commission *finds* no evidence which compels a finding that producers' initial contract price is required by public convenience and necessity; *concludes* certificates should be conditioned upon filing of initial price not in excess of in line area price of 15.384-cents. P. 1138.
5. Absent a finding of its liability to perform, Pan American's certificate application is *denied* and temporary authorization rescinded. P. 1138.
6. Commission *states* that *Glassell* Case in no way bears upon use of trend evidence in either rate or certificate proceeding for purpose of justifying rates on some basis other than traditional rate base cost of service approach. P. 1139.
7. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act. P. 1140.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

Ross, *Commissioner:*

This is a certificate proceeding under Section 7 of the Natural Gas Act. Applicants Humble Oil & Refining Company, Belco Petroleum Corporation, Beneficial Oil Company, and Pan American Petroleum Corporation seek certificates of public convenience and necessity for the sale of natural gas from various units in the Tip Top-Hogsback Field of the Big Piney area of Sublette and Lincoln Counties in southwestern Wyoming to El Paso Natural Gas Company. El Paso seeks a certificate for the construction of 13.1 miles of pipeline and related metering and dehydration equipment at an estimated cost of $449,000 to connect its existing Big Piney lateral to the producers' wells. Gas taken into El Paso's main line from the Big Piney lateral flows north and west to markets served by El Paso in the Pacific Northwest. The gas dedicated to El Paso under its contracts with the producers in this case is gas-well gas produced from the Muddy and Frontier formations at depths ranging from 7500 to 8000 feet. The total of original reserves dedicated under the contracts is estimated to be in excess of 240 million Mcf.

The initial contract price proposed by the producers is 17.5 cents per Mcf at 15.025 psia for gas delivered at 500 pounds pressure (gauge) plus an additional one cent per Mcf for gas which is capable of being delivered into an 860 pound gathering system. The contracts also provide for periodic increases of one cent per Mcf every five years during the 20-year term of the contracts, as well as for renegotiations of a reasonable market price every five years.[1] At the end of ten years, the minimum pressure requirement becomes 250 pounds and the provision for an additional one cent per Mcf for 860 pound gas expires; provided, however, that El Paso agrees to continue payment of the additional one cent if it is being paid at the end of the ten-year period. The contracts contemplate the installation of wellhead separators by the producers, and delivery to El Paso at the wellmouth or at the outlet of the separators, as the case may be. The gas thereafter is to be transported by El Paso to its Opal processing plant, and El Paso agrees to pay the producers 30 percent of its "net realization f.o.b. the plant for liquids saved and sold". The contracts contain no upward Btu adjustment provisions, but do provide for a percentage reduction in price if El Paso elects to take gas below the minimum Btu content prescribed. There is no provision for reimbursement of current taxes. El Paso, however, is required to reimburse the producers for 75 percent of any new or increased taxes, except *ad valorem* taxes on properties and net income taxes,

[1] Under Section 154.93 of the Commission's Regulations under the Natural Gas Act, as amended effective April 3, 1961, and April 2, 1962, this renegotiation provision would be inoperative and of no effect as part of applicants' rate schedules if their contracts were executed on or after April 3, 1961, and the contracts themselves would be rejected as rate schedules if the contracts with this provision were executed on or after April 2, 1962. Inasmuch as the contracts in this case were executed prior to April 3, 1961, the renegotiation provision is here allowed, although contrary to present Commission policy; and its allowance is not to be construed as a waiver or exception to that policy.

imposed after the execution of the contracts. The contracts provide for El Paso to take or pay for 75 percent of the aggregate daily stabilized producing capacity of the producers' wells, and in the case of Belco, not more than one Mcf for each 10,000 Mcf of dedicated reserves.

Pending determination of their applications in this proceeding, temporary authorizations were issued to each of the applicants upon request. In authorizing the producers to commence deliveries to El Paso on a temporary basis, the Commission conditioned the initial price to be charged to 15 cents per Mcf at 14.65 psia (15.384 cents per Mcf at 15.025 psia), the Wyoming Area ceiling level for new contracts as set forth in the Commission's *Statement of General Policy No. 61–1*, issued September 28, 1960, 24 FPC 818. Gas is now being sold to El Paso in accordance with the temporary authorizations as so conditioned.

On August 25, 1961, the hearing examiner presiding in this proceeding issued an initial decision granting permanent certificates of the public convenience and necessity to El Paso and to Humble, Belco and Beneficial, but conditioning the producer certificates upon the filing of an initial price of 15 cents per Mcf at 14.65 psia in lieu of the proposed contract price of 18.5 cents per Mcf at 15.025 psia (17.5 cents plus one cent for gas delivered at 860 pounds pressure). The conditioned certificate price of 15 cents would apply to gas delivered either at 500 pounds pressure or at 860 pounds pressure. The examiner dismissed Pan American's application and rescinded its temporary authorization to sell to El Paso for want of a showing of its ability to perform. Subsequent to the filing of the applications in this proceeding, Pan American transferred all of its interest in the producing formations involved to Belco, retaining only its interest in certain shallow formations from which no gas is now being produced, or is contemplated to be produced, and with respect to which Pan American has no installed facilities for the delivery of gas to El Paso. In the absence of a finding that Pan American is able and willing to do the acts and perform the services proposed, as required by Section 7 of the Act, the examiner rejected Pan American's claim to a certificate.

Exceptions to the examiner's initial decision were filed by the producers and by the intervening Southern California Gas Company and Southern Counties Gas Company of California. In substance, and insofar as they are material, these exceptions take issue with the price condition imposed by the examiner on the certificates issued to Humble, Belco and Bneficial, and with the denial of a certificate to Pan American. Upon review of the record in this proceeding. the parties' briefs and their exceptions to the examiner's decision, we are of the opinion that the examiner's findings and order are correct.

As noted above, the initial price ceiling for the Wyoming Area, set forth in *Statement of General Policy No. 61–1*, is 15 cents per Mcf at 14.65 psia, or 15.384 cents per Mcf at 15.025 psia. This ceiling represents an administrative judgment of the initial price line which the courts have admonished this Commission to hold in certificate proceedings under Section 7 in order that the consuming public may be protected until just and reasonable prices can be determined in normal adjudicatory rate proceedings under Section 4 or Section 5 of the Act.[2] The appropriateness of the ceiling level set by the Commission for Wyoming is confirmed by the evidence in this case. The record shows that an estimated 58 million Mcf of gas is being sold annually in Wyoming under 36 contracts with permanently certificated initial prices of 10 cents per Mcf and above
